

# IV Tech I

Job LocationsUS-CA-Fremont

## Overview

Central Admixture Pharmacy Services, Inc. (CAPS®) is the nation's largest network of outsourcing admixture pharmacies. CAPS, a pioneer in the outsourcing of compounded sterile preparations was founded in 1991.

State-licensed and FDA-registered, CAPS pharmacies deliver solutions from more locations than any other national compounder. CAPS provides both custom and standard solutions to hospital and outpatient providers from our 25 locations across the United States. Making over 300,000 local deliveries annually, CAPS pharmacies operate 365 days a year to dispense labeled, patient-specific and anticipatory IV prescriptions to our health system pharmacy customers.

CAPS believes safety is job one. Our goal is to provide the most comprehensive and continuous quality assurance program in the industry. We perform environmental monitoring, regular process validations, and daily process sterility testing as part of our routine Continuous Quality Assessment and Improvement Program.

The CAPS service is focused on the daily admixing, dispensing, and delivery of a variety of CSPs. CAPS uniquely trained and licensed pharmacy personnel compound a broad range of patient and non-patient specific CSPs embracing the latest compounding technology, including proprietary software for ordering prescriptions and barcode safety checks for automated and manual compounding processes.

Each CAPS pharmacy is managed by a pharmacist with well-established compounding expertise. These directors manage a team of licensed pharmacists and certified technicians trained on CAPS Standard Operating Procedures. CAPS employs a QA team of chemists, microbiologists, and on-site quality assurance personnel who are accountable independently from the admixture staff. Quality Assurance reports are provided to our clients on a quarterly basis.

Orders are sent via CAPSLink, a web-based proprietary ordering software that can manage both complex and patient-specific prescriptions like Parenteral Nutrition (PN) and anticipatory compounded (AC) non-patient-specific order requests. CAPS ordering system can also interface with your pharmacy management software for convenience and broader custom service options. Pharmacists review orders upon receipt and prepare your order using an automated compounding process and a bar coded manual-add-system (MAS) to verify ingredient accuracy.

CAPS mixes to order so you can be assured your order is freshly compounded and has maximum beyond use dating (BUD) when delivered. CAPS has a variety of delivery options including same day and next day services.
