

January-March Observation Activity – Orion Changes!

SAFETY: Always bring a parent with you when you go outside at night. Do not go out alone.

The constellation Orion rises high in the sky during the Winter. Go outside after sunset and locate Orion in the sky. Put a check mark by Orion on chart below. Do you think it will be in the same spot all night? Let's see!

Go outside 30 minutes to an hour later and locate Orion again. Is he in the same place or did he move?

Did Orion move? Why or why not? If he moved, draw him where he is now in the sky chart below.
