

Toes and Toenails

10-31-24

Seneca

Each toe has a mini wind mill on the top, in the center of the toe, and when they walk they collect energy. There are outlets on all of the toenails, and when people come to it, it stops, and people can plug in there devices.

Matthew
10-31-24

Arms

when wind blows it waves
the arms. When the arms
blow they make energy.
They conserve that energy,
then it pumps it out and
warms the place up.

Matthew
10-21-24

Feet

The feet will blow heat out.
They are able to do this
because when the feet drag
against the floor/ground
causes exstream friction.

The masters feet traps the
heat, and when it wants to
it can blow it out.

Hair

The hair has little solar panels that are connected to small batteries that store the energy till it needs to be used. You plug in a small chord that runs down the back into the bangs and use the energy. The mohawks can also act as reflectors to reflect sunlight onto the solar pannels. The batteries are also removeable.

Toothbrush

The handles can be storage for energy. The bristles can have little windmills that can transform electricity to the other body parts. Then, the bristle head can have a bunch of wires that allow energy to flow through all the parts of the toothbrush.

Devin

10-31-24

HORN

The Horn could be a some electric energy that gets stored by the tip of it so that it would get turned to store the energy.

The horn would be a electric energy storer that gets spined to save electricity. It gets the energy by sticking the point into a tube that gives it energy.

Matthew
10-31-24

Eye brows

The eyebrows drop fluff that is warm and acts like a blanket. So the inventors (us) have to fill a small thing on the master full of fluff whenever the monster needs new eyebrows.

Davin

10-31-24

Ears and earrings

The ears could be a solar panel that sucks up energy and stores it so when they need energy the earrings shoot out energy in to a tube.

The ears will be solar panels that get there energy and then the earrings store them and shoots the energy out.

Necklace

The gems inside the stars can
be used to cook food for people by
using solar energy.

Seneca

Belly Button

10-31-24

The Belly button will have a giant stove installed in it. People can use solar heat made by other body parts to use the stove.

Camila Lin
10-31-24

Body

The body can store energy when eaten, and then turned into battery's that can be taken from the flaps.

The battery's are super charged, so they can be used for a long time. The monster walks a lot, so that's how it works.

Legs

Hannah:3
10-31-24

The eyes on the legs open up and absorb water from the atmosphere. The water is put through a system that generates kinetic energy to power the rocket boosters. The water is then released back into the atmosphere to prevent environmental harm. The rocket boosters are powered by the kinetic energy, and they are used both for transportation, and for helping people make fire. The ~~kin~~ ^{kin} ~~Al~~ ^{Al} ~~portion~~ ^{portion} of the energy is also donated to local power plants or used in other parts of his body.

Camila Lin
10-31-24

Wings

When the wings fly, they create wind energy. The energy is transferred to an giant battery, the battery can be used for 6 months.

Miles Gass
10-31-24

Mouth

The spit in the inside of the mouth can
swish around, go down the throat while
the water is making kinetic energy!
The kinetic energy flows through
to the hands. (check out 'the hands next')

Miles Gass
10-31-24

Hands and Fingers

The hands then receive the energy from which the mouth created.

The hands carry the energy, so it can charge anything it touches.

Pet Bat
