

HIGHER LEVEL COMMUNITY OUTREACH INC.

Non-For-Profit organization - 501c3: 83-2175104

130 Kline Village Suite 60, Harrisburg, PA 17104

BUSINESS OVERVIEW

WHO ARE WE

Higher Level Community Outreach Inc. is a Non-For-Profit organization that has a board of over 100+ years collectively with experience in numerous businesses around Pennsylvania. Our purpose is to empower those in our society so that they will be better equipped to be an asset to our communities, society, and themselves. In addition, through structured programs, we will meet the needs of our community by promoting good and healthy self-esteem, character building and stability. We are committed to aiding in the development of self-awareness, independence/interdependence, community stability and good quality of life. We've serviced the youth in our community for years. One of the many things We've done were providing life skills for computer training for adults and children entering and advancing in the workforce.

OUR MISSION

Our mission is to work with the district and lease the abandon property William Penn located at 2915 N 3rd St, Harrisburg, PA 17110. HLCO is looking to renovate the property and create a Training Academy to build up the community by providing jobs, as well as offering life skill training to the community. We want to work with the district of Harrisburg to save millions of dollars by keeping and retaining the historical value of the property to transitioning it into a training academy for the community.

THE PLAN

SAVE THE LANDMARK. Our goal is to restore the main portion of the building by keeping it on the "preservation list" which allows the land to keep its Historical Value with the Historic Harrisburg Association. Also, saves the district millions of dollars by covering the cost of the building we want to preserve. How? The cost to demolish the building would be cut in half and the remaining portion would go back to the district. The back portion of the property would be demolished by the district and the front portion would be completely renovated by our organization which we would cover the cost for removal of asbestos and decay from the building. Then transforming the building into a training academy that will support the community.

The opportunities this will bring the community is over 100+ jobs for employment. Also gives the community something to join and be a part of while also receiving the life skills to succeed. Proves training for the ROTC Military, CADET Training, IT computer engineering, and GED/College credits, Adult Education screenings, Army, trade school, band training, plumbing/Electrical training, and NASA & Robotic science. Also, use the land to build a sports Arena for training camps for sports like football and basketball/fitness programs, and an aquatic center. This training will get the community ready for the workforce.

Our plan to execute this project is to raise money via private funding, grants, donations, the historical association, and the Blind People association. In doing so we hope to complete the renovations in under 2 years after the first year of the demolition of the back portion of the building is complete.
