

School-based health center to be placed at PCSH

Provide input on service offerings

After further review, the school-based health center mentioned as part of Crest View's repurposing is going to be placed at Park Center Senior High School instead. There are a variety of reasons for this change, including easier access for more scholars and their families and a more district-centralized location.

Why it matters:

- A school-based health center is a great way for our schools to help with day-to-day needs of our scholars so that the focus can be on classroom learning.
- Your feedback is also needed to ensure that the services offered are the most fitting for our community today and in the years ahead. Please take two minutes to share what you and your family would be most interested in utilizing the clinic for via this anonymous Google Form: district279.org/clinic

Partnership is making this possible:

- Our school district was awarded a grant to plan from the Minnesota Department of Health. These dollars will cover start up costs and exploration of the scope of services.

What is expected in the months ahead:

- The thoughts you share in the Google Form will help our district health team and community partner, Park Nicollet/Health Partners, with next steps. Expect to see the clinic up and running, ready to serve any community member in the Osseo Area Schools attendance area, by fall 2026. Stay tuned to district279.org for the latest on the process.
