

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of the checklist for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Walkthrough Inspection Checklist

Ves No N/A

1. GROUND LEVEL

la.	Ensured that ventilation units operate properly	🛛	
1 b.	Ensured there are no obstructions blocking air intakes	🕅	
1c.	Checked for nests and droppings near outdoor air intakes	🕅	
1d.	Determined that dumpsters are located away from doors, windows, and outdoor air intakes	🛛	
le.	Checked potential sources of air contaminants near the building (chimneys, stacks, industrial plants, exhaust from nearby buildings)	🕅	
1f.	Ensured that vehicles avoid idling near outdoor air intakes	🕅	
lg.	Minimized pesticide application	🛛	
lh.	Ensured that there is proper drainage away from the building (including roof downspouts)	🖾	
1 i.	Ensured that sprinklers spray away from the building and outdoor air intakes	🖸	Ø
1 j .	Ensured that walk-off mats are used at exterior entrances and that they are cleaned regularly	🛛	

2. ROOF

While on the roof, consider inspecting the HVAC units (use the Ventilation Checklist).

2	ATTIC	
2g.	Ensured that air from plumbing stacks and exhaust outlets flows away from outdoor air intakes	
	Checked for nests and droppings near outdoor air intakes	
2e.	Ensured that air intakes remain open, even at minimum setting	
2d.	Ensured that exhaust fans operate properly (air flows out)	
2c.	Checked that ventilation units operate properly (air flows in) \square	
2b.	Checked for evidence of water ponding	
2a.	Ensured that the roof is in good condition	

3. ATTIC

3a,	Checked for evidence of roof and plumbing leaks	
3b.	Checked for birds and animal nests	

4. GENERAL CONSIDERATIONS

4a.	Ensured that temperature and humidity are maintained within	
	acceptable ranges	
	Ensured that no obstructions exist in supply and exhaust vents	
4c.	Checked for odors	
4d.	Checked for signs of mold and mildew growth	

4. GENERAL CONSIDERATIONS (continued)

4e.	Checked for signs of water damage	
4f.	Checked for evidence of pests and obvious food sources	
4g.	Noted and reviewed all concerns from school occupants	

5. BATHROOMS AND GENERAL PLUMBING

5a.	Ensured that bathrooms and restrooms have operating exhaust fans	
5b.	Ensured proper drain trap maintenance:	
	Water is poured down floor drains once per week (approx. 1 quart of water)	
	Water is poured into sinks at least once per week (about 2 cups of water)	
	Toilets are flushed at least once per week	

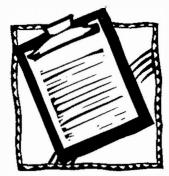

6. MAINTENANCE SUPPLIES

ба.	Ensured that chemicals are used only with adequate ventilation and when building is unoccupied		Q
бс.	Ensured that vents in chemical and trash storage areas are operating properly		
	been serviced and mannamed according to manufacturers guidennes		
7.	COMBUSTION APPLIANCES		
	COMBUSTION APPLIANCES Checked for combustion gas and fuel odors	a	
7a.			
7a. 7b.	Checked for combustion gas and fuel odors		
7a. 7b. 7c.	Checked for combustion gas and fuel odors		

8a.	Checked for peeling and flaking paint (if the building was built before		
	1980, this could be a lead hazard)		
8b.	Determined date of last radon test		

NOTES

Our last Radon Reevaluation Report was performed in November of 2022 and submitted to DPH via email in December of 2022. We are currently scheduled for a bi-annual retesting of previously elevated rooms in November of 2024.

Yes No N/A

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of the checklist for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Building and Grounds Maintenance Checklist

Name:	Vito Esparo	
School:	Beecher Road School	
Room or .	Area BRS Date Completed:	9/4/24
Signature		

1. BUILDING MAINTENANCE SUPPLIES

••		Yes	No	N/A
la.	Developed appropriate procedures and stocked supplies for spill control			Ö
1b.	Reviewed supply labels			
lc.	Ensured that air from chemical and trash storage areas vents to the outdoors	🛛		
1 d.	Stored chemical products and supplies in sealed, clearly labeled containers			
le.	Researched and selected the safest products available		ā	
	Ensured that supplies are being used according to manufacturers' instructions			
1g.	Ensured that chemicals, chemical-containing wastes, and containers are disposed of according to manufacturers' instructions	🖾		
lh.	Substituted less- or non-hazardous materials (where possible)	🛛		
1i.	Scheduled work involving odorous or hazardous chemicals for periods when the school is unoccupied	🛛		
lj.	Ventilated affected areas during and after the use of odorous or hazardous chemicals	🛛		Q
2.	GROUNDS MAINTENANCE SUPPLIES			
2a.	Stored grounds maintenance supplies in appropriate area(s)	🖬		
2b.	Ensured that supplies are used and stored according to manufacturers' instructions	🛛		
2c.	Established and followed procedures to minimize exposure to fumes from supplies			D
2d.	Reviewed and followed manufacturers' guidelines for maintenance		ā	ū
	Replaced portable gas cans with low-emission cans			

2f. Stored chemical products and supplies in sealed, clearly-labeled containers
2g. Ensured that chemicals, chemical-containing wastes, and containers are disposed of according to manufacturers' instructions

3. DUST CONTROL

3a.	Installed and maintained barrier mats for entrances	
3b.	Used high efficiency vacuum bags	
3c.	Used proper dusting techniques	۵
3d.	Wrapped feather dusters with a dust cloth	Ň
3e.	Cleaned air return grilles and air supply vents	

4. FLOOR CLEANING

4.	FLOUR CLEANING	Yes	No	N/A	
4a.	Established and followed schedule for vacuuming and mopping floors	🛛			
4b.	Cleaned spills on floors promptly (as necessary)	🕅			
4c.	Performed restorative maintenance (as necessary)	🛛			

5. DRAIN TRAPS

5a.	Poured water down floor drains once per week (about 1 quart of water) 🛛	
5b.	Ran water in sinks at least once per week (about 2 cups of water)	Q
5c.	Flushed toilets once each week (if not used regularly)	

6. MOISTURE, LEAKS, AND SPILLS

6a.	Checked for moldy odors	X		
6b.	Inspected ceiling tiles, floors, and walls for leaks or discoloration (may indicate periodic leaks)	. 🖄		
6c.	Checked areas where moisture is commonly generated (e.g., kitchens, locker rooms, and bathrooms)	. 33		Q
6d.	Checked that windows, windowsills, and window frames are free of condensate	. 🛛		
6e.	Checked that indoor surfaces of exterior walls and cold water pipes are free of condensate			
6f.	Ensured the following areas are free from signs of leaks and water damage:			
	Indoor areas near known roof or wall leaks			
	Walls around leaky or broken windows			D
	Floors and ceilings under plumbing			
	Duct interiors near humidifiers, cooling coils, and outdoor air intakes			
7.	COMBUSTION APPLIANCES			
7a.	Checked for odors from combustion appliances	. 🛛		
7b.			X	
7c.	Inspected exhaust components for leaks, disconnections, or deterioration			
	Inspected flue components for corrosion and soot			Q
8.	PEST CONTROL			

8a.	Completed th	he Integrated Pest	Management	Checklist	X		
-----	--------------	--------------------	------------	-----------	---	--	--

NOTES

For day-to-day cleaning, the Facilities Department only stocks and uses Green Seal certified products. Our dusters are microfiber and washable. In addition to daily visual inspections via our custodial crew we also utilize as work order system to report and track any suspected moisture or leak issues.

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of the checklist for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Waste Management Checklist

Name: Vito Esparo	
School: Beecher Road School	
Room or Area	Date_Completed:9/3/24
Signature:	

1. WASTE MANAGEMENT

Yes No N/A

1a.	Ensured that waste containers are appropriate for use (for example, food waste containers should have lids)	a
1 b.	Ensured that waste containers are lined	
lc.	Ensured that waste from art, science, vocational classes, etc., are	
	handled separately	X
1 d,	Labeled recycling bins clearly	
1e.	Ensured number of bins and dumpsters is adequate	
1f.	Ensured appropriate location of dumpsters (i.e., away from air intakes,	
	doors, and operable windows in relation to prevailing winds)	
1g.	Ensured waste containers are emptied regularly	
1h,	Ensured appropriate waste removal schedule	
1 i.	Ensured waste is stored in a well-ventilated room	
1 j .	Ensured any exhaust fans in the room are operating properly	
1k.	Checked waste storage areas for odors, contaminants, or signs of vermin 🛛	

NOTES

We bring out all waste on a daily basis. We do not store waste inside.

We have a 1 science lab and 2 art rooms. The waste is generally handled in the same manner as classroom waste on a day-to-day basis, barring a something out of the ordinary. Our science and art classrooms rarely, if ever, produce hazardous waste.

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of the checklist for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Integrated Pest Management Checklist

Name: Vito Esparo		
School: Beecher Road School		
Room or Area BRS	Date Completed:	9/3/24
Signature:	•	

1. OFFICIAL POLICY STATEMENT

Yes	No	N/A
162	UND.	IN/A

la.	Developed or located the school's official policy statement for integrated	
	pest management (IPM)	

2. DESIGNATING PEST MANAGEMENT ROLES

2a.	Assigned and trained a qualified person to be the pest manager		
2b.	Involved decision makers in the IPM program		Q
2c.	Educated students and staff (the occupants of the building) about IPM and asked them to keep their areas clean and free of clutter		a
2d.	Encouraged parents to learn about IPM practices and implement them		
	at home	X	
2e.	Developed a program to educate and train all IPM participants	D	
2f.	Included language about IPM into contracts with pest management professionals	۵	D

3. SETTING PEST MANAGEMENT OBJECTIVES

3a.	Set appropriate pest management objectives for school buildings (such as preventing pests from interfering with students' learning environment	
	and preserving the integrity of the building structure)	
3b.	Set appropriate pest management objectives for school grounds (such as providing safe playing areas and the best athletic surfaces possible)	

4. INSPECTING, IDENTIFYING, AND MONITORING

4a.	Inspected all buildings and grounds for pest evidence, entry points, food, water, and harborage sites	D	a
4b.	Identified potential pest habitats in buildings and grounds		
4c.	Pinpointed the source of any current pest problems	D	
4d.	Monitored to determine the extent of pest problems and to estimate pest populations		
4e.	Developed plans to modify habitat (for example, exclusion, repair, and sanitation efforts) to prevent or resolve any pest problems		
4f.	Established a monitoring program that consists of routine inspections to		
	estimate pest population levels and identify evidence of pests and potential habitat		

5. SETTING ACTION THRESHOLDS

	Evaluated all available data obtained through inspecting, identifying, and monitoring		N/A
	Determined how many pests the school buildings, grounds, and		
	occupants can tolerate	. 🛛	
5c.	Set action thresholds	. 🛛	

6. PREVENTIVE STRATEGIES

INDOOR SITES

6a. Implemented appropriate strategies to prevent pests from inhabiting the following areas:

• Entryways	
• Classrooms	
• Gymnasiums 🛛	
• Locker rooms	
• Offices	
• Staff lounges	
• Bathrooms	
• Food preparation and serving areas	
• Rooms with extensive plumbing	
• Maintenance areas	
• Other	

OUTDOOR SITES

6b. Implemented appropriate strategies to prevent pests from inhabiting the following areas:

• Playgrounds	
• Parking lots	
• Lawns and athletic fields	1 🗆
• Teaching gardens or greenhouses 🕅 🕻	
• Loading docks) 🗆
• Dumpsters 😡 🕻) 🗆
• Areas with ornamental shrubs and trees	1 0
• Other	

7. PESTICIDE USE AND STORAGE

7a.	Explored alternative pest management methods before concluding that pesticides were necessary	П	П
7b.	Ensured that pest management professionals integrate IPM into their		
70	pest management methods		u
10.	formulation) that is the most effective to address the pest problem,		
	preferably as baitsand granules		
7d.	Reviewed and followed all label instructions on pesticides and learned how to properly apply and handle these chemicals	۵	
7e.	Used spot-treatment (or bait, crack, and crevice applications) to apply pesticides whenever possible and only treated the obviously infested		
	plants in the area		
7f.	Used protective clothing or equipment when applying pesticides		X
7g.	Placed all pesticides in tamper-resistant bait boxes or locations that are		
	inaccessible to children and non-target species		

7. PESTICIDE USE AND STORAGE (cont.)

7h.	Locked or fastened lids of all bait boxes and placed bait away from the runway of the box		No	N/A ⊠
7i.	Applied pesticides when occupants were not present or in areas where they would not be exposed to the chemicals			
7j.	Ensured that school occupants (students and staff) are notified of upcoming pesticide applications through posted notices and/or letters	. 🕅		ū
7k.	Ensured that parents are notified of upcoming pesticide applications through letters	. 🛛		a
71.	Kept copies of current pesticide labels and information on pesticides easily accessible	X		
7m.	Stored pesticides off site or in areas that are locked and accessible only to designated personnel	. 🛛		
7n.	Ensured that storage areas are adequately ventilated and are located away from areas prone to flooding or where spills or leaks may contaminate			
	the environment			
	Ensured that flammable liquids are stored away from ignition sources	X.		
7p.	Ensured that pesticides are stored in their original containers and all lids are securely fastened	. 🛛		
7q.	Ensured that air in the storage space cannot mix with the air in the central ventilation system	. 🕅		
8.	EVALUATING RESULTS AND RECORD KEEPING			
8a.	Ensured that accurate, up-to-date records of IPM practices and a pest management log for each property are kept	. 🛛		
8b.	Ensured that pesticide records necessary to meet all state, local, and school			
	board requirements are maintained		Ω	
8c.	Ensured that each log book contains the following items:			
	Copy of the pest management plan			
	Service schedules for maintenance of buildings and grounds			
	Current EPA-registered labels	. 🛛		

- Current Material Safety Data Sheets (MSDS) for each pesticide project 🛛 🛛 🖓
- Pest surveillance data sheets 🖾 🖸 🖸

NOTES

BRS is located in a wooded area. Our routine pest control service is for mice. We use little to no pesticide. Generally, the only time our pest control vendor (currently Orkin) uses pesticide is for emergency use to remove bee/wasp/hornet nests reported on the campus. We currently utilize no routine pesticide treatments on campus

We use a work order system for reporting signs of pests. For mice located in inhabited areas we will generally place traps overnight during unoccupied hours and retrieved them in the morning. Often, we'll set traps in those areas every evening until we stop catching mice and the room inhabitant reports no new evidence of their presence.

In coordination with our Tools for School committee we stress the importance of limiting food storage in classroom spaces and making sure all food is stored in tightly sealed containers. We also try to encourage staff to minimize clutter.

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of the checklist for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Food Service Checklist

Name: Jessica Hill		
School: Beecher Road School		
Room or Area: BRS	_ Date Completed: _	10/17/24
Signature: Jest - Ukle		

1. COOKING AREA

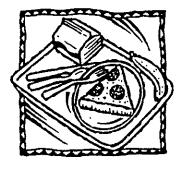

la.	Determined that local exhaust fans operate properly (note if fans are excessively noisy)		No	N/A
1b.	Checked for odors near cooking, preparation, and eating areas			
lc.	Ensured that exhaust fans are used whenever cooking, washing dishes, and cleaning	X		
1 d.	Determined that gas appliances function properly			X
1e.	Verified that gas appliances are vented outdoors	ב	Q	X
1f.	Ensured there are no combustion gas or natural gas odors, leaks, back- drafting, or headaches when gas appliances are used	3		X
1 g.	Ensured that kitchen is clean after use	R		
	Checked for signs of microbiological growth in the kitchen, including the upper walls and ceiling (for example, mold, slime, and algae)	X	۵	D
1i.	Selected biocides registered by EPA (if required), followed the manufacturer's directions for use, and carefully reviewed the method of application	Z	۵	
lj.	Verified the kitchen is free of plumbing and ceiling leaks (signs include stains, discoloration, and damp areas)	2	۵	۵
2.	FOOD HANDLING AND STORAGE			
29	Checked food preparation cooking and storage grass for signs of inserts			

3.	WASTE MANAGEMENT		
2f.	Swept and wet mopped floors		
2e.	Cleaned counters with soap and water or a disinfectant (according to school policy)	a	۵
	Disposed of food scraps properly and removed crumbs \boxtimes		
2c.	Ensured that food preparation, cooking, and storage practices are sanitary $ \Box$		
2b.	Stored leftovers in well-sealed containers with no traces of food on outside surfaces	۵	
2a.	checked food preparation, cooking, and storage areas for signs of insects and vermin (for example, feces or remains)		

3a,	Selected and placed waste in appropriate containers	
	Ensured that containers' lids are securely closed	
3c.	Separated food waste and food-contaminated items from other wastes,	
	if possible	
3d.	Stored waste containers in a well-ventilated area	D
3e.	Ensured that dumpsters are properly located (away from air intake	
	vents, operable windows, and food service doors in relation to	
	prevailing winds)	

4. DELIVERIES

	• · · • • · · · · · · · · · · ·			N/A	
4a.	Instructed vendors to avoid idling their engines during deliveries	🛛	Ц	LI.	
4b.	Posted a sign prohibiting vehicles from idling their engines in				
	receiving areas	🗆	X		
4c.	Ensured that doors or air barriers are closed between receiving area				
	and kitchen	🛛			

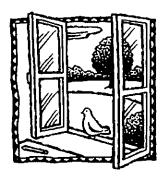

NOTES

Our kitchen and cafeteria are cleaned extensively on a daily basis. The Food Service manager works directly with the Facilities Department to ensure any issues are resolved as soon as possible.

Our school currently utilizes a composting program. Our staff/student separate food waste, recycling, liquids, and garbage and the custodians will dispose of it accordingly. All compost bins are stored outside and picked up once a week for processing.

Jur Mili

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of this checklist for **each** ventilation unit in your school, as well as a copy for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- Return the checklist portion of this document to the IAQ Coordinator.

Ventilation Checklist

Name:	Vito Esparo
School:	Beecher Road School
Unit Venti	lator/AHU No: ERV 1-4
Room or A	
Signature:	
Ũ	

1. OUTDOOR AIR INTAKES

1a.	Marked locations of all outdoor air intakes on a small floor plan (for example, a fire escape floor plan)		No D	N/A
16.	Ensured that the ventilation system was on and operating in "occupied" mode	X	ū	
AC	TIVITY 1: OBSTRUCTIONS			
1c.	Ensured that outdoor air intakes are clear of obstructions, debris, clogs,			
	or covers	🛛		
1 d.	Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake)	🗅		
AC	TIVITY 2: POLLUTANT SOURCES			
	Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas)	🗅	D	X
1f.	Checked rooftop intakes for pollutant sources (plumbing vents; kitchen,			
	toilet, or laboratory exhaust fans; puddles; and mist from	5.4	-	-
	air-conditioning cooling towers)	iX		
Ig.	Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe)	🛛		Ø
AC	TIVITY 3: AIRFLOW			
1h.	Obtained chemical smoke (or a small piece of tissue paper or light plastic))) Xì		
1i.	Confirmed that outdoor air is entering the intake appropriately	🖾	۵	۵
2.	SYSTEM CLEANLINESS			
AC	TIVITY 4: AIR FILTERS			
	Replaced filters per maintenance schedule	Ø		
	Shut off ventilation system fans while replacing filters (prevents dirt from		_	_
	blowing downstream)			
2c.	Vacuumed filter areas before installing new filters			
	Confirmed proper fit of filters to prevent air from bypassing (flowing			
	around) the air filter			
2e.	Confirmed proper installation of filters (correct direction for airflow)	🕅		ü

2. SYSTEM CLEANLINESS (continued)

ACTIVITY 5: DRAIN PANS

range to continue.

ACTIVITY 5: DRAIN PANS			
		No	N/A
accumulating)			8
2g. Cleaned drain pans			X
2h. Checked drain pans for mold and mildew	. 🗆		K)
ACTIVITY 6: COILS			
2i. Ensured that heating and cooling coils are clean	. 🗆		X
ACTIVITY 7: AIR-HANDLING UNITS, UNIT VENTILATORS			
2j. Ensured that the interior of air-handling unit(s) or unit ventilator			
(air-mixing chamber and fan blades) is clean	X		
2k. Ensured that ducts are clean	X		
ACTIVITY 8: MECHANICAL ROOMS	50	_	-
21. Checked mechanical room for unsanitary conditions, leaks, and spills	. 🛛		
2m. Ensured that mechanical rooms and air-mixing chambers are free of trash, chemical products, and supplies	Γ γ η		D
chemical products, and supplies	. 🖂	ч	ц.
3. CONTROLS FOR OUTDOOR AIR SUPPLY			
29. Ensured that air downors are at least partially onen (minimum residion)	57	m	m
3a. Ensured that air dampers are at least partially open (minimum position)	. 🖾		
3b. Ensured that minimum position provides adequate outdoor air for occupants	M		
ю острано		-	-
ACTIVITY 9: CONTROLS INFORMATION			
3c. Obtained and reviewed all design inside/outside temperature and humidity			
requirements, controls specifications, as-built mechanical drawings,			
and controls operations manuals (often uniquely designed)	X)		
ACTIVITY 10: CLOCKS, TIMERS, SWITCHES			
3d. Turned summer-winter switches to the correct position	150		D
3e. Set time clocks appropriately			
3f. Ensured that settings fit the actual schedule of building use (including	, uai		u
night/weekend use)	. 🖸		
Ç,			
ACTIVITY 11: CONTROL COMPONENTS			
3g. Ensured appropriate system pressure by testing line pressure at both the		_	
occupied (day) setting and the unoccupied (night) setting			XI
3h. Checked that the line dryer prevents moisture buildup	. Ц	Q	X
3i. Replaced control system filters at the compressor inlet based on the			
compressor manufacturer's recommendation (for example, when you blow down the tank)		D	X
3j. Set the line pressure at each thermostat and damper actuator at the proper	. 🖵		تما
level (no leakage or obstructions)			23
() ,, ,	• —		_
ACTIVITY 12: OUTDOOR AIR DAMPERS			
3k. Ensured that the outdoor air damper is visible for inspection	X		
31. Ensured that the recirculating relief and/or exhaust dampers are visible			
for inspection	. 🛛	D	
3m. Ensured that air temperature in the indoor area(s) served by each	-	_	_
outdoor air damper is within the normal operating range	. 🗶		
NOTE: It is necessary to ensure that the damper is operating properly and with	n the	e nor	mal
range to continue.			

	of shutting off appropriate air handler		No	N/A
	Checked that the outdoor air damper opens (at least partially with no delay) when the air handler is turned on	1		D
Зр.	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F	נ		ស
3q.	If in cooling mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 60°F and mixed air thermostat is set to 45°F	נ		×
3r.	If the outdoor air damper does not move, confirmed the following items: • The damper actuator links to the damper shaft, and any linkage set			
	screws or bolts are tight	3		Ø
	• Moving parts are free of impediments (e.g., rust, corrosion)	נ		V
	• Electrical wire or pneumatic tubing connects to the damper actuator	נ		
	• The outside air thermostat(s) is functioning properly (e.g., in the right location, calibrated correctly)	נ		X 1

Proceed to Activities 13–16 if the damper seems to be operating properly.

ACTIVITY 13: FREEZE STATS

3s.	Disconnected power to controls (for automatic reset only) to test continuity across terminals	D	Ø
OR			
3t.	Confirmed (if applicable) that depressing the manual reset button (usually red) trips the freeze stat (clicking sound indicates freeze stat was		
	tripped)		X
3u.	Assessed the feasibility of replacing all manual reset freeze-stats with		
	automatic reset freeze-stats		X

NOTE: HVAC systems with water coils need protection from the cold. The freeze-stat may close the outdoor air damper and disconnect the supply air when tripped. The typical trip range is $35^{\circ}F$ to $42^{\circ}F$.

ACTIVITY 14: MIXED AIR THERMOSTATS

3v. Ensured that the mixed air stat for heating mode is set no higher than 65°F	
3w. Ensured that the mixed air stat for cooling mode is set no lower than the room thermostat setting	
ACTIVITY 15: ECONOMIZERS	
3x. Confirmed proper economizer settings based on design specifications or local practices	
NOTE: The dry-bulb is typically set at $65^{\circ}F$ or lower.	
3y. Checked that sensor on the economizer is shielded from direct sunlight	
3z. Ensured that dampers operate properly (for outside air, return air, exhaust/relief air, and recirculated air), per the design specifications	۵
NOTE: Economizers use varying amounts of cool outdoor air to assist with the co load of the room or rooms. There are two types of economizers, dry-bulb and enthe	

load of the room or rooms. There are two types of economizers, dry-bulb and enthalpy. Dry-bulb economizers vary the amount of outdoor air based on outdoor temperature, and enthalpy economizers vary the amount of outdoor air based on outdoor temperature and humidity level.

ACTIVITY 16: FANS

3aa. Ensured that all fans (supply fans and associated return or relief fans)			
that move outside air indoors continuously operate during occupied	Yes	No	N/A
hours (even when room thermostat is satisfied)			

NOTE: If fan shuts off when the thermostat is satisfied, adjust control cycle as necessary to ensure sufficient outdoor air supply.

4. AIR DISTRIBUTION

ACTIVITY 17: AIR DISTRIBUTION

4a. Ensured that supply and return air pathways in the existing ventilation system perform as required		۵
4b. Ensured that passive gravity relief ventilation systems and transfer grilles between rooms and corridors are functioning	۵	
NOTE: If ventilation system is closed or blocked to meet current fire codes, consult v professional engineer for remedies.	with a	
 4c. Made sure every occupied space has supply of outdoor air (mechanical system or operable windows) 		D
4d. Ensured that supply and return vents are open and unblocked		

NOTE: If outlets have been blocked intentionally to correct drafts or discomfort, investigate and correct the cause of the discomfort and reopen the vents.

4e.	Modified the HVAC system to supply outside air to areas without an outdoor air supply		
4f.	Modified existing HVAC systems to incorporate any room or zone layout and population changes	ū	X
4g.	Moved all barriers (for example, room dividers, large free-standing blackboards or displays, bookshelves) that could block movement of	-	X 1
41.	air in the room, especially those blocking air vents	L	2
<u>4n</u> .	Ensured that unit ventilators are quiet enough to accommodate classroom activities		ß
4i.	Ensured that classrooms are free of uncomfortable drafts produced by air from supply terminals		

ACTIVITY 18: PRESSURIZATION IN BUILDINGS

NOTE: To prevent infiltration of outdoor pollutants, the ventilation system is designed to maintain positive pressurization in the building. Therefore, ensure that the system, including any exhaust fans, is operating on the "occupied" cycle when doing this activity.

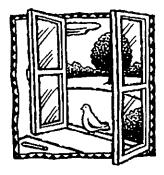

4j.	Ensured that air flows out of the building (using chemical smoke) through		
	windows, doors, or other cracks and holes in exterior wall (for example,		
	floor joints, pipe openings)	X	

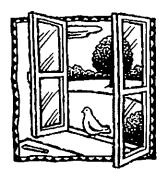

5. EXHAUST SYSTEMS

ACTIVITY 19: EXHAUST FAN OPERATION

5a. Checked (using chemical smoke) that air flows into exhaust fan grille(s) 🛛 🛛 🖓

- If fans are running but air is not flowing toward the exhaust intake, check for the following:
 - Inoperable dampers
 - Obstructed, leaky, or disconnected ductwork
 - Undersized or improperly installed fan
 - Broken fan belt

5. EXHAUST SYSTEMS (continued)

ACTIVITY 20: EXHAUST AIRFLOW

NOTE: Prevent migration of indoor contaminants from areas such as bathrooms, kitchens, and labs by keeping them under negative pressure (as compared to surrounding spaces).

5b. Checked (using chemical smoke) that air is drawn into the room from adjacent spaces		No ⊠	N/A
Stand outside the room with the door slightly open while checking airflow high the door opening (see "How to Measure Airflow").	and a	low ii	n
5c. Ensured that air is flowing toward the exhaust intake	🖬		
 ACTIVITY 21: EXHAUST DUCTWORK 5d. Checked that the exhaust ductwork downstream of the exhaust fan (which under positive pressure) is sealed and in good condition 			
6. QUANTITY OF OUTDOOR AIR			

ACTIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULATIONS

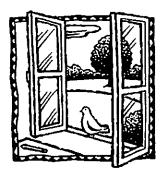

NOTE: Refer to "How to Measure Airflow" for techniques.

6a. Measured the quantity of outdoor air supplied (22a) to each ventilation unit		X
6b. Calculated the number of occupants served (22b) by the ventilation unit under consideration□		\mathbf{X}
6c. Divided outdoor air supply (22a) by the number of occupants (22b) to determine the existing quantity of outdoor air supply per person (22c)□		
ACTIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUANTITIES		
 ACTIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUANTITIES 6d. Compared the existing outdoor air per person (22c) to the recommended levels in Table 1 6e. Corrected problems with ventilation units that supplied inadequate 	Q	Ø

NOTES

Beecher Road School has 4 energy recovery ventilation units located on various parts of the roof. These unit feed fresh air to all 44 FCU units. These units are not connected to our dual temperature HVAC loop and do not have heating or cooling coils.

We did not re-calculate information in #6, in early 2024 we completed our IAQ Evaluation and HVAC assessment. Every space passed assessment; however, we are planning for a rebalancing and recommissioning as recommended in the evaluation.

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of this checklist for each ventilation unit in your school, as well as a copy for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Ventilation Checklist

Name:	Vito Esparo
School:	Beecher Road School
Unit Venti Room or A Signature:	

1. OUTDOOR AIR INTAKES

		П	D
	example, a fire escape floor plan) Ensured that the ventilation system was on and operating in "occupied" mode	example, a fire escape floor plan) Image: Structure Ensured that the ventilation system was on and operating in "occupied" Image: Structure mode Image: Structure TIVITY 1: OBSTRUCTIONS Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake) Image: Structure TIVITY 2: POLLUTANT SOURCES Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas) Image: Structure Checked rooftop intakes for pollutant sources (plumbing vents; kitchen, toilet, or laboratory exhaust fans; puddles; and mist from air-conditioning cooling towers) Image: Structure Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe) Image: Structure TIVITY 3: AIRFLOW Obtained chemical smoke (or a small piece of tissue paper or light plastic) Image: Structure SYSTEM CLEANLINESS Structure Image: Structure Image: Structure Shut off ventilation system fans while replacing filters (prevents dirt from blowing downstream) Image: Structure Image: Structure Vacuumed filter areas before installing new filters Image: Structure Image: Structure Image: Structure	example, a fire escape floor plan) Ensured that the ventilation system was on and operating in "occupied" mode mode TIVITY 1: OBSTRUCTIONS Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers or covers Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake) Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake) INTIVITY 2: POLLUTANT SOURCES Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas) Checked rooftop intakes for pollutant sources (plumbing vents; kitchen, toilet, or laboratory exhaust fans; puddles; and mist from air-conditioning cooling towers) Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe) Cherine chemical smoke (or a small piece of tissue paper or light plastic) SYSTEM CLEANLINESS TIVITY 4: AIR FILTERS Replaced filters per maintenance schedule Shut off ventilation system fans while replacing filters (prevents dirt from blowing downstream) Wacuumed filter areas before installing new filters Confirmed proper fit of filters to prevent air from bypassing (flowing around) the air filter.

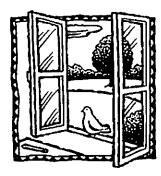

2. SYSTEM CLEANLINESS (continued)

ACTIVITY 5: DRAIN PANS

range to continue.

ACTIVITY 5: DRAIN PANS			
2f. Ensured that drain pans slant toward the drain (to prevent water from accumulating)		No D	N/A
2g. Cleaned drain pans	. 🗖		X)
2h. Checked drain pans for mold and mildew	. 🔽		D
ACTIVITY 6: COILS	53	~	5
2i. Ensured that heating and cooling coils are clean	, 121		
ACTIVITY 7: AIR-HANDLING UNITS, UNIT VENTILATORS 2j. Ensured that the interior of air-handling unit(s) or unit ventilator			
(air-mixing chamber and fan blades) is clean	X		
2k. Ensured that ducts are clean			
ACTIVITY 8: MECHANICAL ROOMS			
21. Checked mechanical room for unsanitary conditions, leaks, and spills	X		
2m. Ensured that mechanical rooms and air-mixing chambers are free of trash, chemical products, and supplies	. 🛛		
3. CONTROLS FOR OUTDOOR AIR SUPPLY			
3a. Ensured that air dampers are at least partially open (minimum position)	M		
3b. Ensured that minimum position provides adequate outdoor air	, 02		L
for occupants	. 🖾		
ACTIVITY 9: CONTROLS INFORMATION			
3c. Obtained and reviewed all design inside/outside temperature and humidity			
requirements, controls specifications, as-built mechanical drawings, and controls operations manuals (often uniquely designed)	. 🛛		D
ACTIVITY 10: CLOCKS, TIMERS, SWITCHES			
3d. Turned summer-winter switches to the correct position			
3e. Set time clocks appropriately	X		
3f. Ensured that settings fit the actual schedule of building use (including night/weekend use)	. 🔽		
ACTIVITY 11: CONTROL COMPONENTS			
3g. Ensured appropriate system pressure by testing line pressure at both the			
occupied (day) setting and the unoccupied (night) setting			X
3h. Checked that the line dryer prevents moisture buildup	, 🗆		X
3i. Replaced control system filters at the compressor inlet based on the			
compressor manufacturer's recommendation (for example, when you blow down the tank)		D	X
3j. Set the line pressure at each thermostat and damper actuator at the proper	. 🛶	<u>ц</u>	
level (no leakage or obstructions)	.0		2
ACTIVITY 12: OUTDOOR AIR DAMPERS			
3k. Ensured that the outdoor air damper is visible for inspection	X		
31. Ensured that the recirculating relief and/or exhaust dampers are visible for inspection	. 🛛	۵	
3m. Ensured that air temperature in the indoor area(s) served by each outdoor air damper is within the normal operating range	. 🔽		
NOTE: It is necessary to ensure that the damper is operating properly and with		e nor	mal
range to continue.			

3n.		/es ⊠	No D	N/A
	inter and an Autore to turned on Autority and an Autority and Autori	X	D	
3p.	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F	Ø	۵	
•	If in cooling mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 60°F and mixed air thermostat is set to 45°F		D	۵
3 r.	If the outdoor air damper does not move, confirmed the following items:The damper actuator links to the damper shaft, and any linkage set			
	screws or bolts are tight			\mathbf{X}
	• Moving parts are free of impediments (e.g., rust, corrosion)			$\mathbf{\nabla}$
	• Electrical wire or pneumatic tubing connects to the damper actuator			۶ Ω
	• The outside air thermostat(s) is functioning properly (e.g., in the right location, calibrated correctly)		۵	X

Proceed to Activities 13–16 if the damper seems to be operating properly.

ACTIVITY 13: FREEZE STATS

3s.	Disconnected power to controls (for automatic reset only) to test continuity across terminals	X	
OR			
3t.	Confirmed (if applicable) that depressing the manual reset button (usually red) trips the freeze stat (clicking sound indicates freeze stat was		
	tripped)		
3u.	Assessed the feasibility of replacing all manual reset freeze-stats with automatic reset freeze-stats		

NOTE: HVAC systems with water coils need protection from the cold. The freeze-stat may close the outdoor air damper and disconnect the supply air when tripped. The typical trip range is $35^{\circ}F$ to $42^{\circ}F$.

ACTIVITY 14: MIXED AIR THERMOSTATS

3v.	Ensured that the mixed air stat for heating mode is set no higher than 65°F		Q
3w.	Ensured that the mixed air stat for cooling mode is set no lower than the room thermostat setting		
AC	FIVITY 15: ECONOMIZERS		
3x.	Confirmed proper economizer settings based on design specifications or local practices		
NOT	TE: The dry-bulb is typically set at 65°F or lower.		
Зу.	Checked that sensor on the economizer is shielded from direct sunlight \square		
3z.	Ensured that dampers operate properly (for outside air, return air, exhaust/relief air, and recirculated air), per the design specifications		
NOTE: Economizers use varying amounts of cool outdoor air to assist with the cooling load of the room or rooms. There are two types of economizers, dry-bulb and enthalpy. Dry-bulb economizers vary the amount of outdoor air based on outdoor temperature,			

and enthalpy economizers vary the amount of outdoor air based on outdoor temperature and humidity level.

ACTIVITY 16: FANS

3aa. Ensured that all fans (supply fans and associated return or relief fans)			
that move outside air indoors continuously operate during occupied	Yes	No	N/A
hours (even when room thermostat is satisfied)	🛛		

NOTE: If fan shuts off when the thermostat is satisfied, adjust control cycle as necessary to ensure sufficient outdoor air supply.

4. AIR DISTRIBUTION

ACTIVITY 17: AIR DISTRIBUTION

4a. Ensured that supply and return air pathways in the existing ventilation system perform as required			
4b. Ensured that passive gravity relief ventilation systems and transfer grilles between rooms and corridors are functioning	0		
NOTE: If ventilation system is closed or blocked to meet current fire codes, consu professional engineer for remedies.	lt w	ith a	
4c. Made sure every occupied space has supply of outdoor air (mechanical system or operable windows)	ð	D	
4d. Ensured that supply and return vents are open and unblocked			
NOTE: If outlets have been blocked intentionally to correct drafts or discomfort,	nvez	stiga	te

NOTE: If outlets have been blocked intentionally to correct drafts or discomfort, investigate and correct the cause of the discomfort and reopen the vents.

4e.	Modified the HVAC system to supply outside air to areas without an outdoor air supply	D	
4f.	Modified existing HVAC systems to incorporate any room or zone layout and population changes		Ø
4g.	Moved all barriers (for example, room dividers, large free-standing		
	blackboards or displays, bookshelves) that could block movement of		
	air in the room, especially those blocking air vents		X
4h.	Ensured that unit ventilators are quiet enough to accommodate classroom		
	activities		X
4i.	Ensured that classrooms are free of uncomfortable drafts produced by air		
	from supply terminals		

ACTIVITY 18: PRESSURIZATION IN BUILDINGS

NOTE: To prevent infiltration of outdoor pollutants, the ventilation system is designed to maintain positive pressurization in the building. Therefore, ensure that the system, including any exhaust fans, is operating on the "occupied" cycle when doing this activity.

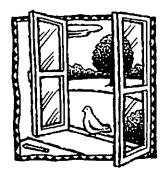

4j.	Ensured that air flows out of the building (using chemical smoke) through		
	windows, doors, or other cracks and holes in exterior wall (for example,		
	floor joints, pipe openings)	\boxtimes	

5. EXHAUST SYSTEMS

ACTIVITY 19: EXHAUST FAN OPERATION

5a. Checked (using chemical smoke) that air flows into exhaust fan grille(s) 🗅 🛛 🗠

- If fans are running but air is not flowing toward the exhaust intake, check for the following:
 - Inoperable dampers
 - Obstructed, leaky, or disconnected ductwork
 - Undersized or improperly installed fan
 - Broken fan belt

5. EXHAUST SYSTEMS (continued)

ACTIVITY 20: EXHAUST AIRFLOW

NOTE: Prevent migration of indoor contaminants from areas such as bathrooms, kitchens, and labs by keeping them under negative pressure (as compared to surrounding spaces).

5b. Checked (using chemical smoke) that air is drawn into the room from adjacent spaces		No ⊠	N/A
Stand outside the room with the door slightly open while checking airflow high the door opening (see "How to Measure Airflow").	and	low ii	r
5c. Ensured that air is flowing toward the exhaust intake	🕅		
 ACTIVITY 21: EXHAUST DUCTWORK 5d. Checked that the exhaust ductwork downstream of the exhaust fan (which under positive pressure) is sealed and in good condition 			D
6. QUANTITY OF OUTDOOR AIR			

ACTIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULATIONS

NOTE: Refer to "How to Measure Airflow" for techniques.

6a. Measured the quantity of outdoor unit	air supplied (22a) to each ventilation		X
6b. Calculated the number of occupan under consideration	ts served (22b) by the ventilation unit \Box	D	X
6c. Divided outdoor air supply (22a) the determine the existing quantity of	by the number of occupants (22b) to outdoor air supply per person (22c)		Ø
ACTIVITY 23: ACCEPTABLE LEV	ELS OF OUTDOOR AIR QUANTITIES		
6d. Compared the existing outdoor air		D	Ø
 6d. Compared the existing outdoor air levels in Table 1 6e. Corrected problems with ventilation quantities of outdoor air to ensure 	per person (22c) to the recommended	Q	X

NOTES

Beecher Road School has 5 roof top units servicing the main offices, cafeteria, library, technology center, and business offices. These units are monitored daily and are equipped with temperature, humidity, and Co2 sensors. Any abnormal reading will trigger an in person inspection of the unit. This includes; high/low room temperatures, high/low discharge temperatures, high/low Co2 readings, and more. BRS also utilizes a "Fix It" work order system to allow for timely responses to any heating, cooling, or IAQ concerns.

Drain pans for these units are sealed. During cooling season these units are checked periodically to assure condensate is draining. We have looked into outfitting all units with automatic reset freeze stats, however we have opted against it as a manual reset freeze stat assures the unit is inspected to determine the cause of the alarm.

We did not re-calculate information in #6, in early 2024 we completed our IAQ Evaluation and HVAC assessment. Every space passed assessment; however, we are planning for a rebalancing and recommissioning as recommended in the evaluation.

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of this checklist for **each** ventilation unit in your school, as well as a copy for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Ventilation Checklist

Name:	Vito Esparo	
School:	Beecher Road School	
	ilator/AHU No: AHU 1-6 N/S Gyms, Rotunda, Area Sputh Assembly, and Band Room Date Completed:	October 2024
	<u> </u>	

1. OUTDOOR AIR INTAKES

1a.	Marked locations of all outdoor air intakes on a small floor plan (for example, a fire escape floor plan)		No	N/A
1b.	Ensured that the ventilation system was on and operating in "occupied" mode	🖾		ū
AC	TIVITY 1: OBSTRUCTIONS			
1c.	Ensured that outdoor air intakes are clear of obstructions, debris, clogs,			
	or covers			
1d.	Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake)	ם		X
AC	TIVITY 2: POLLUTANT SOURCES			
	Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas)	🖾		
1f.	Checked rooftop intakes for pollutant sources (plumbing vents; kitchen,			
	toilet, or laboratory exhaust fans; puddles; and mist from	53		
1	air-conditioning cooling towers)	(61	u	ч
Ig.	Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe)	🗅		Ø
AC	TIVITY 3: AIRFLOW			
1h.	Obtained chemical smoke (or a small piece of tissue paper or light plastic)	🕅		
1i.	Confirmed that outdoor air is entering the intake appropriately	🖾		
2.	SYSTEM CLEANLINESS			
AC	TIVITY 4: AIR FILTERS			
2a.	Replaced filters per maintenance schedule	🛛	D	
	Shut off ventilation system fans while replacing filters (prevents dirt from			
	blowing downstream)	🛛		
2c.	Vacuumed filter areas before installing new filters	🖸		
	Confirmed proper fit of filters to prevent air from bypassing (flowing		_	_
	around) the air filter			
2e.	Confirmed proper installation of filters (correct direction for airflow)	🖬		

2. SYSTEM CLEANLINESS (continued)

3i. Replaced control system filters at the compressor inlet based on the	. —	-	-
compressor manufacturer's recommendation (for example, when you			
blow down the tank)	🗖		X
3j. Set the line pressure at each thermostat and damper actuator at the proper			
level (no leakage or obstructions)	🗖		X
ACTIVITY 12: OUTDOOR AIR DAMPERS	150	~	_
3k. Ensured that the outdoor air damper is visible for inspection3l. Ensured that the recirculating relief and/or exhaust dampers are visible			
51. Ensured that the recirculating relief and/or exhaust dampers are visible for inspection	Ņ		
3m. Ensured that air temperature in the indoor area(s) served by each			9
outdoor air damper is within the normal operating range	. 🖸		D
NOTE: It is necessary to ensure that the damper is operating properly and with range to continue.	in the	e nor	mal
range to continue.			

3n.	Checked that the outdoor air damper fully closes within a few minutes of shutting off appropriate air handler	Yes ⊠	No D	N/A
30.	Checked that the outdoor air damper opens (at least partially with no delay) when the air handler is turned on	X	D	
3p.	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F	X		D
3q.	If in cooling mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 60°F and mixed air thermostat is set to 45°F		D	
3r.	If the outdoor air damper does not move, confirmed the following items: • The damper actuator links to the damper shaft, and any linkage set			
	screws or bolts are tight			X
	• Moving parts are free of impediments (e.g., rust, corrosion)			$\mathbf{\Sigma}$
	• Electrical wire or pneumatic tubing connects to the damper actuator			Ø
	• The outside air thermostat(s) is functioning properly (e.g., in the right location, calibrated correctly)		Ċ	X

Proceed to Activities 13–16 if the damper seems to be operating properly.

ACTIVITY 13: FREEZE STATS

3s.	Disconnected power to controls (for automatic reset only) to test continuity across terminals	X	D
OR			
3t.	Confirmed (if applicable) that depressing the manual reset button (usually red) trips the freeze stat (clicking sound indicates freeze stat was		
	tripped) 🗹		
3u.	Assessed the feasibility of replacing all manual reset freeze-stats with		
	automatic reset freeze-stats		D

NOTE: HVAC systems with water coils need protection from the cold. The freeze-stat may close the outdoor air damper and disconnect the supply air when tripped. The typical trip range is $35^{\circ}F$ to $42^{\circ}F$.

ACTIVITY 14: MIXED AIR THERMOSTATS

3v. Ensured that the mixed air stat for heating mode is set no higher than 65°F		
3w. Ensured that the mixed air stat for cooling mode is set no lower than the room thermostat setting	۵	
ACTIVITY 15: ECONOMIZERS		
 Confirmed proper economizer settings based on design specifications or local practices		

NOTE: The dry-bulb is typically set at 65°F or lower.

- 3y. Checked that sensor on the economizer is shielded from direct sunlight \square \square \square
- 3z. Ensured that dampers operate properly (for outside air, return air,

NOTE: Economizers use varying amounts of cool outdoor air to assist with the cooling load of the room or rooms. There are two types of economizers, dry-bulb and enthalpy. Dry-bulb economizers vary the amount of outdoor air based on outdoor temperature, and enthalpy economizers vary the amount of outdoor air based on outdoor temperature and humidity level.

ACTIVITY 16: FANS

NOTE: If fan shuts off when the thermostat is satisfied, adjust control cycle as necessary to ensure sufficient outdoor air supply.

4. AIR DISTRIBUTION

ACTIVITY 17: AIR DISTRIBUTION

 4a. Ensured that supply and return air pathways in the existing ventilation system perform as required		۵
between rooms and corridors are functioning		
NOTE: If ventilation system is closed or blocked to meet current fire codes, consult w professional engineer for remedies.	ith a	
 4c. Made sure every occupied space has supply of outdoor air (mechanical system or operable windows) 		
4d. Ensured that supply and return vents are open and unblocked		D
NOTE: If outlets have been blocked intentionally to correct drafts or discomfort, inve- and correct the cause of the discomfort and reopen the vents.	stiga	te
4e. Modified the HVAC system to supply outside air to areas without an outdoor air supply		
4f. Modified existing HVAC systems to incorporate any room or zone layout and population changes		প্র
4g. Moved all barriers (for example, room dividers, large free-standing blackboards or displays, bookshelves) that could block movement of		
air in the room, especially those blocking air vents		X
4h. Ensured that unit ventilators are quiet enough to accommodate classroom activities		8
4i. Ensured that classrooms are free of uncomfortable drafts produced by air from supply terminals		

ACTIVITY 18: PRESSURIZATION IN BUILDINGS

NOTE: To prevent infiltration of outdoor pollutants, the ventilation system is designed to maintain positive pressurization in the building. Therefore, ensure that the system, including any exhaust fans, is operating on the "occupied" cycle when doing this activity.

4j.	Ensured that air flows out of the building (using chemical smoke) through		
	windows, doors, or other cracks and holes in exterior wall (for example,		
	floor joints, pipe openings)	X	Ē

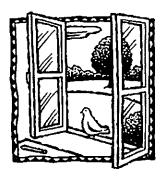

5. EXHAUST SYSTEMS

ACTIVITY 19: EXHAUST FAN OPERATION

5a. Checked (using chemical smoke) that air flows into exhaust fan grille(s) 🛛 🛛 🖓

- If fans are running but air is not flowing toward the exhaust intake, check for the following:
 - Inoperable dampers
 - Obstructed, leaky, or disconnected ductwork
 - Undersized or improperly installed fan
 - Broken fan belt

5. EXHAUST SYSTEMS (continued)

ACTIVITY 20: EXHAUST AIRFLOW

NOTE: Prevent migration of indoor contaminants from areas such as bathrooms, kitchens, and labs by keeping them under negative pressure (as compared to surrounding spaces).

5b. Checked (using chemical smoke) that air is drawn into the room from adjacent spaces		No ⊠	N/A
Stand outside the room with the door slightly open while checking airflow high the door opening (see "How to Measure Airflow").	i and l	'ow ir	1
5c. Ensured that air is flowing toward the exhaust intake	🕅		
 ACTIVITY 21: EXHAUST DUCTWORK 5d. Checked that the exhaust ductwork downstream of the exhaust fan (which under positive pressure) is sealed and in good condition 			D

6. QUANTITY OF OUTDOOR AIR

ACTIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULATIONS

NOTE: Refer to "How to Measure Airflow" for techniques.

6a. Measured the quantity of outdoor air supplied (22a) to each ventilation unit	םנ	X
6b. Calculated the number of occupants served (22b) by the ventilation unit under consideration		X
6c. Divided outdoor air supply (22a) by the number of occupants (22b) to determine the existing quantity of outdoor air supply per person (22c)	ם נ	Ø
ACTIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUANTITIE	5	
OU. COMDARCE THE EXISTING OBTION AIT DEPENDED UZZES TO THE RECOMMENDED		
 6d. Compared the existing outdoor air per person (22c) to the recommended levels in Table 1 6e. Corrected problems with ventilation units that supplied inadequate 	ם ב	Ø

NOTES

Beecher Road School has 6 air handling units servicing the North/South gymnasiums, South Assembly room, Rotunda, and Band room. These units are monitored daily and are equipped with temperature, humidity, and Co2 sensors. Any abnormal reading will trigger an in person inspection of the unit. This includes; high/low room temperatures, high/low discharge temperatures, high/low Co2 readings, and more. BRS also utilizes a "Fix It" work order system to allow for timely responses to any heating, cooling, or IAQ concerns.

Drain pans for these units are sealed. During cooling season these units are checked periodically to assure condensate is draining. We have looked into outfitting all units with automatic reset freeze stats, however we have opted against it as a manual reset freeze stat assures the unit is inspected to determine the cause of the alarm.

We did not re-calculate information in #6, in early 2024 we completed our IAQ Evaluation and HVAC assessment. Every space passed assessment; however, we are planning for a rebalancing and recommissioning as recommended in the evaluation.

- 1. Read the IAQ Backgrounder and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of this checklist for **each** ventilation unit in your school, as well as a copy for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Ventilation Checklist

Name:	Vito Esparo
School:	Beecher Road School
Unit Ven	tilator AHU No: FCUs 1-44
	Are K/D/S/E Wings Date Completed: October 2024
Signature	
L	-/

1. OUTDOOR AIR INTAKES

1a.	Marked locations of all outdoor air intakes on a small floor plan (for example, a fire escape floor plan)		No	N/A
1b.	Ensured that the ventilation system was on and operating in "occupied" mode			D
AC	TIVITY 1: OBSTRUCTIONS			
1c.	Ensured that outdoor air intakes are clear of obstructions, debris, clogs,			
	or covers	XI.		
1d.	Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake)	. 🗅		ß
AC	TIVITY 2: POLLUTANT SOURCES			
	Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas)			
1f.	Checked rooftop intakes for pollutant sources (plumbing vents; kitchen,			
	toilet, or laboratory exhaust fans; puddles; and mist from	5	-	
	air-conditioning cooling towers)			
lg.	Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe)	🗖		X
AC	TIVITY 3: AIRFLOW			
1h.	Obtained chemical smoke (or a small piece of tissue paper or light plastic)		24	D
	Confirmed that outdoor air is entering the intake appropriately			
2.	SYSTEM CLEANLINESS			
AC	TIVITY 4: AIR FILTERS			
2a.	Replaced filters per maintenance schedule	🖾		
	Shut off ventilation system fans while replacing filters (prevents dirt from			
	blowing downstream)			
	Vacuumed filter areas before installing new filters	🛛		
2d.	Confirmed proper fit of filters to prevent air from bypassing (flowing around) the air filter			
2e.	Confirmed proper installation of filters (correct direction for airflow)			

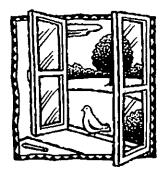

2. SYSTEM CLEANLINESS (continued)

ACTIVITY 5: DRAIN PANS

ACTIVITY 5: DRAIN PANS			
2f. Ensured that drain pans slant toward the drain (to prevent water from accumulating)		No	N/A
2g. Cleaned drain pans			Ľ i
2h. Checked drain pans for mold and mildew			
ACTIVITY 6: COILS		_	_
2i. Ensured that heating and cooling coils are clean	81		
ACTIVITY 7: AIR-HANDLING UNITS, UNIT VENTILATORS			
2j. Ensured that the interior of air-handling unit(s) or unit ventilator			
(air-mixing chamber and fan blades) is clean			
2k. Ensured that ducts are clean	X		
ACTIVITY 8: MECHANICAL ROOMS			
21. Checked mechanical room for unsanitary conditions, leaks, and spills	. 🕅		
2m. Ensured that mechanical rooms and air-mixing chambers are free of trash,			
chemical products, and supplies	🛛		
3. CONTROLS FOR OUTDOOR AIR SUPPLY			
3a. Ensured that air dampers are at least partially open (minimum position)	🖄		
3b. Ensured that minimum position provides adequate outdoor air			
for occupants	🕅		
ACTIVITY 9: CONTROLS INFORMATION			
3c. Obtained and reviewed all design inside/outside temperature and humidity			
requirements, controls specifications, as-built mechanical drawings,			
and controls operations manuals (often uniquely designed)	🖄		
ACTIVITY 10: CLOCKS, TIMERS, SWITCHES			
3d. Turned summer-winter switches to the correct position	🛛	D	
3e. Set time clocks appropriately			
3f. Ensured that settings fit the actual schedule of building use (including			
night/weekend use)	🛛		
ACTIVITY 11: CONTROL COMPONENTS			
3g. Ensured appropriate system pressure by testing line pressure at both the			
occupied (day) setting and the unoccupied (night) setting	🗆		\boxtimes
3h. Checked that the line dryer prevents moisture buildup			Ø
3i. Replaced control system filters at the compressor inlet based on the			
compressor manufacturer's recommendation (for example, when you blow down the tank)	П	D	ß
3j. Set the line pressure at each thermostat and damper actuator at the proper	🛥	-	-
level (no leakage or obstructions)	🖸		Ø
ACTIVITY 12: OUTDOOR AIR DAMPERS			
3k. Ensured that the outdoor air damper is visible for inspection	. 🛛		
31. Ensured that the recirculating relief and/or exhaust dampers are visible			
for inspection	🕅		
3m. Ensured that air temperature in the indoor area(s) served by each	_	_	_
outdoor air damper is within the normal operating range			
NOTE: It is necessary to ensure that the damper is operating properly and with	in the	e nor	mal

NOTE: It is necessary to ensure that the damper is operating properly and within the normal range to continue.

3n.	Checked that the outdoor air damper fully closes within a few minutes of shutting off appropriate air handler		No □	N/A
30.	Checked that the outdoor air damper opens (at least partially with no delay) when the air handler is turned on	a	D	
Зр.	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F	0		
3q.	If in cooling mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 60°F and mixed air thermostat is set to 45°F	0		ū
3r.	If the outdoor air damper does not move, confirmed the following items: • The damper actuator links to the damper shaft, and any linkage set			
	screws or bolts are tight	נ		X
	• Moving parts are free of impediments (e.g., rust, corrosion)	3		ß
	• Electrical wire or pneumatic tubing connects to the damper actuator	נ		Ø
	 The outside air thermostat(s) is functioning properly (e.g., in the right location, calibrated correctly)	ב		X)

Proceed to Activities 13-16 if the damper seems to be operating properly.

ACTIVITY 13: FREEZE STATS

3s.	Disconnected power to controls (for automatic reset only) to test continuity across terminals	۵	
OR			
3t.	Confirmed (if applicable) that depressing the manual reset button (usually red) trips the freeze stat (clicking sound indicates freeze stat was		
	tripped)		X
3u.	Assessed the feasibility of replacing all manual reset freeze-stats with		
	automatic reset freeze-stats		24

NOTE: HVAC systems with water coils need protection from the cold. The freeze-stat may close the outdoor air damper and disconnect the supply air when tripped. The typical trip range is $35^{\circ}F$ to $42^{\circ}F$.

ACTIVITY 14: MIXED AIR THERMOSTATS

3v.	Ensured that the mixed air stat for heating mode is set no higher	n :	-	
	than 65°F	4		Ч
3w.	Ensured that the mixed air stat for cooling mode is set no lower than the room thermostat setting	a		D
AC	TIVITY 15: ECONOMIZERS			
3x.	Confirmed proper economizer settings based on design specifications or local practices	D		

NOTE: The dry-bulb is typically set at 65°F or lower.

- 3y. Checked that sensor on the economizer is shielded from direct sunlight \square \square \square
- 3z. Ensured that dampers operate properly (for outside air, return air,
- exhaust/relief air, and recirculated air), per the design specifications \boxtimes \Box \Box

NOTE: Economizers use varying amounts of cool outdoor air to assist with the cooling load of the room or rooms. There are two types of economizers, dry-bulb and enthalpy. Dry-bulb economizers vary the amount of outdoor air based on outdoor temperature, and enthalpy economizers vary the amount of outdoor air based on outdoor temperature and humidity level.

ACTIVITY 16: FANS

3aa. Ensured that all fans (supply fans and associated return or relief fans)			
that move outside air indoors continuously operate during occupied	Yes	No	N/A
hours (even when room thermostat is satisfied)	🕅		

NOTE: If fan shuts off when the thermostat is satisfied, adjust control cycle as necessary to ensure sufficient outdoor air supply.

4. AIR DISTRIBUTION

ACTIVITY 17: AIR DISTRIBUTION

4a. Ensured that supply and return air pathways in the existing ventilation system perform as required	D	
4b. Ensured that passive gravity relief ventilation systems and transfer grilles between rooms and corridors are functioning	۵	
NOTE: If ventilation system is closed or blocked to meet current fire codes, consult v professional engineer for remedies.	vith a	
4c. Made sure every occupied space has supply of outdoor air (mechanical system or operable windows)		
4d. Ensured that supply and return vents are open and unblocked		
NOTE: If outlets have been blocked intentionally to correct drafts or discomfort, inve and correct the cause of the discomfort and reopen the vents.	estiga	te
4e. Modified the HVAC system to supply outside air to areas without an outdoor air supply		X
4f. Modified existing HVAC systems to incorporate any room or zone layout and population changes		X
4g. Moved all barriers (for example, room dividers, large free-standing blackboards or displays, bookshelves) that could block movement of		
air in the room, especially those blocking air vents		Ø
4h. Ensured that unit ventilators are quiet enough to accommodate classroom activities		
4i. Ensured that classrooms are free of uncomfortable drafts produced by air from supply terminals		

ACTIVITY 18: PRESSURIZATION IN BUILDINGS

NOTE: To prevent infiltration of outdoor pollutants, the ventilation system is designed to maintain positive pressurization in the building. Therefore, ensure that the system, including any exhaust fans, is operating on the "occupied" cycle when doing this activity.

4j.	Ensured that air flows out of the building (using chemical smoke) through		
	windows, doors, or other cracks and holes in exterior wall (for example,		
	floor joints, pipe openings)	X	

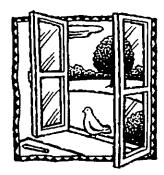

5. EXHAUST SYSTEMS

ACTIVITY 19: EXHAUST FAN OPERATION

5a. Checked (using chemical smoke) that air flows into exhaust fan grille(s) 🗅 🛛 🖄 👘

- If fans are running but air is not flowing toward the exhaust intake, check for the following:
 - Inoperable dampers
 - Obstructed, leaky, or disconnected ductwork
 - Undersized or improperly installed fan
 - Broken fan belt

5. EXHAUST SYSTEMS (continued)

ACTIVITY 20: EXHAUST AIRFLOW

NOTE: Prevent migration of indoor contaminants from areas such as bathrooms, kitchens, and labs by keeping them under negative pressure (as compared to surrounding spaces).

5b.	Checked (using chemical smoke) that air is drawn into the room from adjacent spaces	Yes . 🗆	No ⊠	N/A	
Stand outside the room with the door slightly open while checking airflow high and low in the door opening (see "How to Measure Airflow").					
5c.	Ensured that air is flowing toward the exhaust intake	. 🛛			
AC	TIVITY 21: EXHAUST DUCTWORK				
5d.	Checked that the exhaust ductwork downstream of the exhaust fan (which is under positive pressure) is sealed and in good condition		D	Q	
6.	QUANTITY OF OUTDOOR AIR				
AC	TIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULATIO	NS			

NOTE: Refer to "How to Measure Airflow" for techniques.

	Measured the quantity of outdoor air supplied (22a) to each ventilation unit		
6b.	Calculated the number of occupants served (22b) by the ventilation unit under consideration.		Ø
6c.	Divided outdoor air supply (22a) by the number of occupants (22b) to		
	determine the existing quantity of outdoor air supply per person (22c) \Box		K
ACTIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUANTITIES			
	Compared the existing outdoor air per person (22c) to the recommended		
6d.	Compared the existing outdoor air per person (22c) to the recommended		D

NOTES

Beecher Road School has 44 classroom fan coil units located in the K/D/S wings. These units are monitored daily and are equipped with temperature, humidity, and Co2 sensors. Any abnormal reading will trigger an in person inspection of the unit. This includes; high/low room temperatures, high/low discharge temperatures, high/low Co2 readings, and more. These unit are fed fresh air via ERV units located on the roof of the building. BRS also utilizes a "Fix It" work order system to allow for timely responses to any heating, cooling, or IAQ concerns.

Drain pans for these units are inspected multiple times a year and are also equipped with "overflow" alarms if a condensate drainage issue arises.

We did not re-calculate information in #6, we recently completed a 5-year IAQ assessment and are utilizing the data from that project.

- 1. Read the *IAQ Backgrounder* and the Background Information for this checklist.
- 2. Keep the Background Information and make a copy of this checklist for **each** ventilation unit in your school, as well as a copy for future reference.
- 3. Complete the Checklist.
 - Check the "yes," "no," or "not applicable" box beside each item. (A "no" response requires further attention.)
 - Make comments in the "Notes" section as necessary.
- 4. Return the checklist portion of this document to the IAQ Coordinator.

Ventilation Checklist

Name:	Vito Esparo
School:	Beecher Road School
Unit Ven	tilator/AHU No: UVs 1-24
Room or	Area! A/B/C Wings Date Completed: September 2024
Signature	

1. OUTDOOR AIR INTAKES

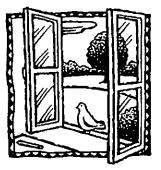

1a.	Marked locations of all outdoor air intakes on a small floor plan (for example, a fire escape floor plan)	Yes …⊠Q	No	N/A
1b.	Ensured that the ventilation system was on and operating in "occupied" mode	X	۵	
AC	TIVITY 1: OBSTRUCTIONS			
1c.	Ensured that outdoor air intakes are clear of obstructions, debris, clogs, or covers		Q	
1d.	Installed corrective devices as necessary (e.g., if snowdrifts or leaves frequently block an intake)			ß
AC	TIVITY 2: POLLUTANT SOURCES			
1e.	Checked ground-level intakes for pollutant sources (dumpsters, loading docks, and bus-idling areas)	🕅		
1f.	Checked rooftop intakes for pollutant sources (plumbing vents; kitchen, toilet, or laboratory exhaust fans; puddles; and mist from			
	air-conditioning cooling towers)	🗅		X)
lg.	Resolved any problems with pollutant sources located near outdoor air intakes (e.g., relocated dumpster or extended exhaust pipe)	D	۵	Ø
AC	TIVITY 3: AIRFLOW			
1h.	Obtained chemical smoke (or a small piece of tissue paper or light plastic)		X	
1i.	Confirmed that outdoor air is entering the intake appropriately	🖾	۵	
2.	SYSTEM CLEANLINESS			
AC	TIVITY 4: AIR FILTERS			
2a.	Replaced filters per maintenance schedule	🛛		
2b.	Shut off ventilation system fans while replacing filters (prevents dirt from blowing downstream)		D	
2c.	Vacuumed filter areas before installing new filters			
	Confirmed proper fit of filters to prevent air from bypassing (flowing around) the air filter			

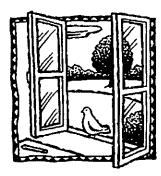

2. SYSTEM CLEANLINESS (continued)

ACTIVITY 5: DRAIN PANS

range to continue.

ACTIVITY 5: DRAIN PANS			
		No	N/A
accumulating)	X)		
2g. Cleaned drain pans	KI 🛛		
2h. Checked drain pans for mold and mildew	X		
ACTIVITY 6: COILS			
2i. Ensured that heating and cooling coils are clean	<u>8</u>		Q
ACTIVITY 7: AIR-HANDLING UNITS, UNIT VENTILATORS			
2j. Ensured that the interior of air-handling unit(s) or unit ventilator			
(air-mixing chamber and fan blades) is clean	8	Q	
2k. Ensured that ducts are clean	K		
ACTIVITY 8: MECHANICAL ROOMS			
21. Checked mechanical room for unsanitary conditions, leaks, and spills	X		
2m. Ensured that mechanical rooms and air-mixing chambers are free of trash,			
chemical products, and supplies	X		
3. CONTROLS FOR OUTDOOR AIR SUPPLY			
3a. Ensured that air dampers are at least partially open (minimum position)	X		D
3b. Ensured that minimum position provides adequate outdoor air		-	
for occupants	Ø		
ACTIVITY 9: CONTROLS INFORMATION			
3c. Obtained and reviewed all design inside/outside temperature and humidity			
requirements, controls specifications, as-built mechanical drawings,			
and controls operations manuals (often uniquely designed)	X		
ACTIVITY 10: CLOCKS, TIMERS, SWITCHES			
3d. Turned summer-winter switches to the correct position	XI.		
3e. Set time clocks appropriately	Ø		D
3f. Ensured that settings fit the actual schedule of building use (including night/weekend use)	X)		
ACTIVITY 11: CONTROL COMPONENTS			
3g. Ensured appropriate system pressure by testing line pressure at both the occupied (day) setting and the unoccupied (night) setting	m		8
3h. Checked that the line dryer prevents moisture buildup			80
3i. Replaced control system filters at the compressor inlet based on the		لاستا	X21
compressor manufacturer's recommendation (for example, when you			
blow down the tank)			X)
3j. Set the line pressure at each thermostat and damper actuator at the proper			
level (no leakage or obstructions)	0		X)
ACTIVITY 12: OUTDOOR AIR DAMPERS			
3k. Ensured that the outdoor air damper is visible for inspection	X		
31. Ensured that the recirculating relief and/or exhaust dampers are visible			
for inspection	X		
3m. Ensured that air temperature in the indoor area(s) served by each		_	_
outdoor air damper is within the normal operating range	X		
NOTE: It is necessary to ensure that the damper is operating properly and within range to continue	n the	nori	nal

3n.	Checked that the outdoor air damper fully closes within a few minutes of shutting off appropriate air handler		No D	N/A
30.	Checked that the outdoor air damper opens (at least partially with no delay) when the air handler is turned on			_ _
3p.	If in heating mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set to 85°F	۲X)	п	П
3q.	If in cooling mode, checked that the outdoor air damper goes to its minimum position (without completely closing) when the room thermostat is set	n	_	
3r.	to 60°F and mixed air thermostat is set to 45°F If the outdoor air damper does not move, confirmed the following items:	121		
	• The damper actuator links to the damper shaft, and any linkage set screws or bolts are tight		D	×1
	 Moving parts are free of impediments (e.g., rust, corrosion) Electrical wire or pneumatic tubing connects to the damper actuator 			X) X)
	• The outside air thermostat(s) is functioning properly (e.g., in the right location, calibrated correctly)			X
Pro	ceed to Activities 13–16 if the damper seems to be operating properly.			
AC	TIVITY 13: FREEZE STATS			
3s.	Disconnected power to controls (for automatic reset only) to test continuity across terminals	. 🗆		<u>ل</u> ک
OR				
3t.	Confirmed (if applicable) that depressing the manual reset button (usually red) trips the freeze stat (clicking sound indicates freeze stat was	_	_	-
~	tripped)	, 🖬		X

3u. Assessed the feasibility of replacing all manual reset freeze-stats with automatic reset freeze-stats.....

NOTE: HVAC systems with water coils need protection from the cold. The freeze-stat may close the outdoor air damper and disconnect the supply air when tripped. The typical trip range is $35^{\circ}F$ to $42^{\circ}F$.

ACTIVITY 14: MIXED AIR THERMOSTATS

÷ •	D	X I
		X
TY 15: ECONOMIZERS		
he dry-bulb is typically set at 65°F or lower.		
ked that sensor on the economizer is shielded from direct sunlight 🛍		D

NOTE: Economizers use varying amounts of cool outdoor air to assist with the cooling load of the room or rooms. There are two types of economizers, dry-bulb and enthalpy. Dry-bulb economizers vary the amount of outdoor air based on outdoor temperature, and enthalpy economizers vary the amount of outdoor air based on outdoor temperature and humidity level.

ACTIVITY 16: FANS

3aa. Ensured that all fans (supply fans and associated return or relief fans)			
that move outside air indoors continuously operate during occupied	Yes	No	N/A
hours (even when room thermostat is satisfied)			

NOTE: If fan shuts off when the thermostat is satisfied, adjust control cycle as necessary to ensure sufficient outdoor air supply.

4. AIR DISTRIBUTION

ACTIVITY 17: AIR DISTRIBUTION

4a. Ensured that supply and return air pathways in the existing ventilation system perform as required					
4b. Ensured that passive gravity relief ventilation systems and transfer grilles between rooms and corridors are functioning□		X			
NOTE: If ventilation system is closed or blocked to meet current fire codes, consult with a professional engineer for remedies.					
 4c. Made sure every occupied space has supply of outdoor air (mechanical system or operable windows)					
NOTE: If outlets have been blocked intentionally to correct drafts or discomfort, investigate and correct the cause of the discomfort and reopen the vents.					
4e. Modified the HVAC system to supply outside air to areas without an outdoor air supply		ß			
4f. Modified existing HVAC systems to incorporate any room or zone layout	_				

4f.	Modified existing HVAC systems to incorporate any room or zone layout		
	and population changes	ב	X
4g.	Moved all barriers (for example, room dividers, large free-standing		
	blackboards or displays, bookshelves) that could block movement of		
	air in the room, especially those blocking air vents	ב	ß
4h.	Ensured that unit ventilators are quiet enough to accommodate classroom		
	activities	X)	
4i.	Ensured that classrooms are free of uncomfortable drafts produced by air		
	from supply terminals	8	

ACTIVITY 18: PRESSURIZATION IN BUILDINGS

NOTE: To prevent infiltration of outdoor pollutants, the ventilation system is designed to maintain positive pressurization in the building. Therefore, ensure that the system, including any exhaust fans, is operating on the "occupied" cycle when doing this activity.

4j.	Ensured that air flows out of the building (using chemical smoke) through		
	windows, doors, or other cracks and holes in exterior wall (for example,		
	floor joints, pipe openings)	X	

5. EXHAUST SYSTEMS

ACTIVITY 19: EXHAUST FAN OPERATION

5a. Checked (using chemical smoke) that air flows into exhaust fan grille(s) 🗅 🛛 🖓 👘

If fans are running but air is not flowing toward the exhaust intake, check for the following:

- Inoperable dampers
- Obstructed, leaky, or disconnected ductwork
- Undersized or improperly installed fan
- Broken fan belt

5. EXHAUST SYSTEMS (continued)

ACTIVITY 20: EXHAUST AIRFLOW

NOTE: Prevent migration of indoor contaminants from areas such as bathrooms, kitchens, and labs by keeping them under negative pressure (as compared to surrounding spaces).

5b. Checked (using chemical smoke) that air is drawn into the room from adjacent spaces		No ⊠	N/A
Stand outside the room with the door slightly open while checking airflow the the door opening (see "How to Measure Airflow").	high and l	low i	n
5c. Ensured that air is flowing toward the exhaust intake	🖾		۵
ACTIVITY 21: EXHAUST DUCTWORK			
5d. Checked that the exhaust ductwork downstream of the exhaust fan (wh under positive pressure) is sealed and in good condition		Q	
6. QUANTITY OF OUTDOOR AIR			
ACTIVITY 22: OUTDOOR AIR MEASUREMENTS AND CALCULA	TIONS		
NOTE: Refer to "How to Measure Airflow" for techniques.			
6a. Measured the quantity of outdoor air supplied (22a) to each ventilation unit			ß
6b. Calculated the number of occupants served (22b) by the ventilation un under consideration	it		
6c. Divided outdoor air supply (22a) by the number of occupants (22b) to determine the existing quantity of outdoor air supply per person (22c)		۵	X
ACTIVITY 23: ACCEPTABLE LEVELS OF OUTDOOR AIR QUAN	TITIES		
6d. Compared the existing outdoor air per person (22c) to the recommend- levels in Table 1	ed		
6e. Corrected problems with ventilation units that supplied inadequate quantities of outdoor air to ensure that outdoor air quantities (22c) me	et		
the recommended levels in Table 1			X

NOTES

Beecher Road School has 24 classroom unit ventilators located in the A/B/C wings. These units are monitored daily and are equipped with temperature, humidity, and Co2 sensors. Any abnormal reading will trigger an in person inspection of the unit. This includes; high/low room temperatures, high/low discharge temperatures, high/low Co2 readings, and more. BRS also utilizes a "Fix It" work order system to allow for timely responses to any heating, cooling, or IAQ concerns.

We did not re-calculate information in #6, we recently completed a 5-year IAQ assessment and are utilizing the data from that project.
