

Using the Safe Social Networking Features in CyberSmarts or Teen CyberSmarts eBook Programs

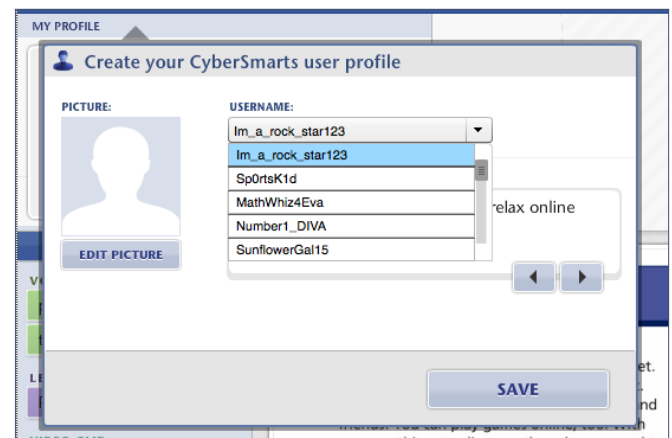

Created by: Madison-Oneida BOCES

Rosen Publishing has created these learning modules which teach students to use social media within a guided/controlled environment. They will help students make smart choices online.

To get started, click "Create New Profile"

Then choose one of the pre-made usernames from the drop down arrow.

Also if you would like to add a picture, click the "Edit Picture" button and choose from one of the pictures below.

Under "Status" choose one of the selections by clicking the arrows left or right.

Then click "Save"

Lastly, copy down your password so that you can log in later!

PASSWORD:

purple3badA

Please note your password.
You can use it to log in later.

OK

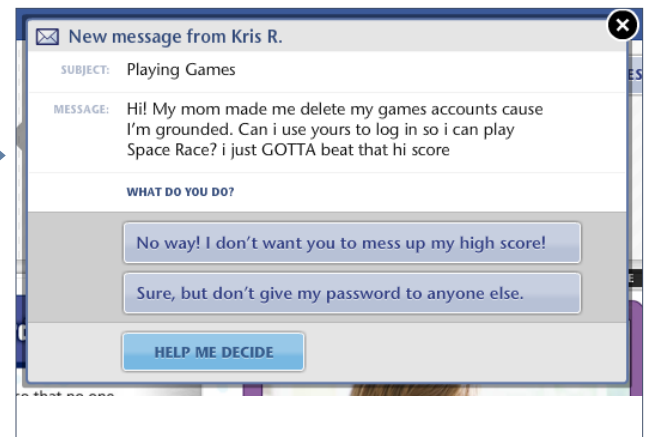

Using the Safe Social Networking Features (page 2)

After you have created a profile, you will then start to see notifications indicating a new message, friend request or chat message. (Note, these are all pre-made messages that will help students make smart choices online.)

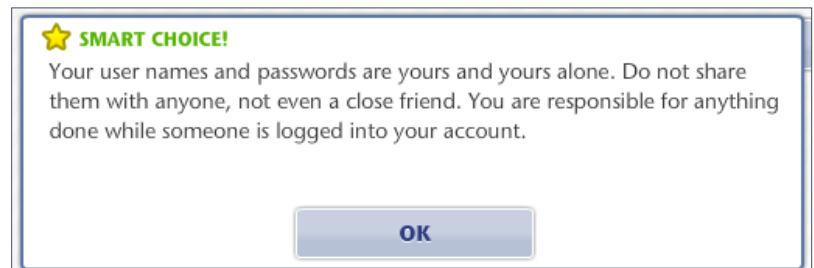

1) When you get a new message, you will see a green exclamation point near one of the three messages; friend request, new message or chat message.

2) After clicking the new message, you will get this dialogue box. There will be a subject header and a message. After reading the message you have a choice of 2 replies; one being the "smart" online safe choice.

3) After choosing one of the two choices, you will get another dialogue box that will give you tips on how to be safe while being online!

As you work through these interactive eBooks, new messages, requests, and chats will show up with different messages and response choices to further educate students on how to be safe while being online. (Note that they may not appear on every page.)
