## What is “IT”?

Information technology (IT) is the use of computer systems or devices to access information. It is the foundation of our communication, technological advancement, innovation, sustainability and recreation. We use information technology on a personal level to connect and communicate with others, share media, shop and be social.

From a career perspective, information technology is largely responsible for much of our business operations and spans nearly every industry. From healthcare to food services, manufacturing to sales, and beyond, we rely on IT to help connect us to others, store and manage information and create more efficient processes.

Careers in IT span many different areas, from computer hardware and software development to networking, computer repair, technical support, cybersecurity, cloud computing, artificial intelligence, data science and so much more. What originally began as a solo department, information technology is now considered a critical business function that impacts nearly every aspect of an organization.

## Courses & Certifications

- IT Networking I (CompTIA A+ 1101 Core 1)
