

Wide Area Network – WAN – Group 1
(RFP – No. LodiUSD-2024-143)
Question(s) from Vendor(s)

1. Based on the below, they may be requesting burstable solutions at some locations, is that accurate?

- Four high schools (Bear Creek High School, Lodi High School, Tokay High School, & Ronald McNair High School) with a single 2Gbps handoff, scalable up to 10 Gbps within a 24-hour request, without changing fiber Ethernet interfaces.

Answer: Not looking for burstable solution, but scalable up to 10 Gbps without changing hardware (just making a service adjustment for more allowable bandwidth).

2. Is this just for DIA or do the locations need to talk to each other? Ie MPLS or DIA w/SD-WAN?

Answer: We do need the sites to be able to talk to each other, should we need to host some services at a different location due to an outage at a central location.
