

MOUNT OLIVE TOWNSHIP *New Jersey*

Childhood lead exposure remains a significant public health issue, but together, we can protect our children. Did you know that, according to the CDC, approximately 500,000 children in the United States under age 6 are estimated to have elevated blood lead levels, which can lead to long-term health issues?

The Mount Olive Township Health Department has compiled comprehensive resources to raise awareness about lead exposure prevention and safety. These materials are designed to empower families and community members with the knowledge to safeguard their homes and protect children from the dangers of lead.

By sharing these resources with your friends, family, and networks, you can help us extend our reach and make an even greater impact. Here's how you can contribute:

- Share our resources on social media or through email.
- Encourage parents and caregivers in your community to learn how to identify and reduce lead hazards.

Thank you for your partnership in creating healthier communities for our children.
