

**Interscholastic Athletic Activities**

It is the intention of this policy to bring together all stakeholders, working through equitable and legal means, to enhance student engagement and opportunity in interscholastic athletic activities. In order to meet students' athletic needs and interests, the Superintendent shall create a procedure by which students, parents, and staff members can request the modification of existing District athletic activities, or the addition of new athletic activities, either funded or not funded by the School District. A "non-funded" athletic program is defined as an athletic program, consisting solely of District students that is sponsored by, but not funded by the School District. The Superintendent shall also develop criteria for evaluating such requests and presenting the recommendations to the Board of Education.

In order to determine students' interests in interscholastic athletic activities, a survey will be administered every two years. The results of the survey and other related participation data will be provided to the Board of Education in a timely manner.

Requests for modification of existing District athletic activities or the addition of new athletic activities must be submitted to the administrator responsible for athletics of the school in question by February 1.
