

Sensory/Regulation: Clover 6 HD

What is it?

The Clover 6 HD is a portable, high-definition video magnifier for individuals with visual impairments. It features a 6-inch LCD screen with adjustable magnification and multiple viewing modes, such as color and high-contrast, to enhance readability. Compact and lightweight, it's easy to use at home, school, or work, promoting independence and accessibility.

Why use it?

The Clover 6 HD benefits individuals with visual impairments by providing high-definition magnification and customizable viewing modes for clear, strain-free reading. Its portable, user-friendly design allows easy use at home, school, or work, empowering users to access written content independently and confidently, enhancing education, independence, and quality of life.

How to use it?

To use the Clover 6 HD, turn it on and place it over the text. Adjust magnification with the zoom buttons and toggle viewing modes (color, black-and-white, or high-contrast) for optimal readability. The autofocus keeps text sharp as you move the device across the page.

Inclusive classroom example

During reading assignments, Emily, a student with a visual impairment, places the Clover 6 HD over her textbook, adjusting the magnification and high-contrast settings to make the text clear and legible. This allows her to follow along and engage with the material alongside her peers. When working on a group project, Emily uses the Clover 6 HD to examine charts and diagrams, contributing valuable insights to the discussion. Her classmates show interest in the device, and Emily demonstrates its features, fostering understanding and inclusion.
