Our developers set out to create a completely new hinge system. The result is Tiomos. Not only does Tiomos outperform any other hinge in the industry, it offers a timeless design as well as its own individual character.

The product range covers virtually every application, from standard doors to wide angle doors, from frameless applications to face frame applications. The Tiomos offers two closing actions: the standard Self-close and the popular Soft-close. The Soft-close offers a three tier adjustable mechanism, which is fully integrated and concealed in the hinge arm. The Soft-close mechanism remains active through the duration of the close, resulting in an extremely smooth action. With the superb engineering and design, size and weight of the door will not be a factor. The doors pull open with ease and minimal gaps can be achieved due to the design of the hinge.

Tiomos - the ideal solution to the ever increasing requirements of today's manufacturers.

RFI 77 ATTACHMENT

Tiomos - One hinge system to cover all applications.

Meet Tiomos, an evolutionary hinge system that offers the best possible movement for cabinet doors.

Tiomos provides perfect movement for essentially every application, from standard doors to wide angle doors, from diagonal corner hinges to pie-cut corner hinges, and from frameless applications to face frame applications. Tiomos is available in a 45mm or 42mm boring pattern for dowelled hinges and 45mm for screw-on hinges. The Tiomos Impresso, the ever popular tool-free version, is available in a combined 42/45mm pattern.

TIOMOS HINGE SYSTEM

One hinge system featuring a multitude of innovative aspects.

Soft-close technology is concealed within the hinge arm.

Three levels of closing pressure are available with the Tiomos adjustable Soft-close mechanism, which is fully integrated and concealed in the hinge arm. The hinges arrive with the adjustment lever in the horizontal position. A turn to the left or the right will adjust the Soft-close mechanism to your individual requirements.

For stronger damping action, turn the adjustment lever by 90° to the right.

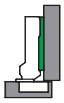
Perfect alignment with a twist of the hand.

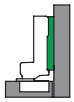
For fine adjustment, the Tiomos hinge system offers 3-dimensional adjustment. Depth adjustment (+3/-2mm) is based on the worm screw principle and is continuous and self-locking. Depending on the type of base plate chosen, height adjustment (± 2mm) can be achieved via a worm screw or through elongated holes (± 2.5mm). Side adjustment (± 2mm) is on the hinge arm.

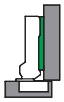
Tiomos hinges leave the factory with the adjustment lever in the horizontal position.

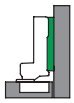
The kinematics inside Tiomos.

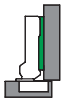
The complex inner workings of this high-tech hinge are hidden from view, but they are most impressive when working as one. With the kinematics in place the doors are extremely easy to open. This mechanism makes alignment with the smallest of gaps and reveals possible, opening up new possibilities to cabinet designers.

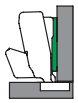


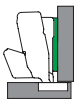


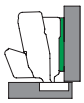


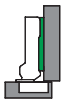


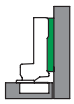


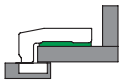












For a gentler closing action, the adjustment lever of the Soft-close damper is turned to the left by 90°.

Features and Benefits

Tiomos

Features

- Adjustable 3-tier Soft-close mechanism integrated and concealed in the hinge arm
- Continuous, smooth closing action from the degree that the Soft-close is activated until the door is completely closed
- Uniform closing action regardless of the door size, weight, or materials
- Soft-close mechanism can be adjusted easily and without tools, even after doors are installed
- Wide selection of hinges and specialty hinges cover all application needs
- Increased applications:
  - Full overlay from 24 - 13.5mm
  - Overlay from 19 - 11.5mm
  - Half Overlay from 12.5 - 5mm
  - Inset

Integrated damper adjustment
with 3 Soft-close settings. Adjustment system is concealed in the hinge arm.

Depth adjustment (+3/-2mm)
is smooth and self-locking via worm screw.

Easy height adjustment (± 2mm)
via hinge arm on baseplate

Side adjustment (±2mm)
with overturn stop

Ergonomic clip
release with audible locking

3 Soft-close settings
adjust to meet your individual Soft-close requirements.

Height adjustment
is based on the worm screw principle that is continuous and self-locking.

Features

- One hinge type for all door thicknesses up to 24mm
- 3-dimensional adjustment with suitable base plate
  - Depth adjustment +3/-2mm via self-locking worm screw
  - Height adjustment +/-2mm on base plate via hinge arm
  - Side adjustment with overturn stop +/-2 via hinge arm
- Soft-close or Self-close hinges are available
- For face frame or frameless applications
- Impresso for tool-free application
- 42mm and 45mm boring patterns

Impresso Hinges
for tool-free application
Insertion instructions on page 14.

Improved Kinematic
reduces opening force and minimizes reveals.

Tiomos Styles
42mm pattern, Dowelled
45mm pattern, Screw-on and Dowelled
42/45mm pattern, Impresso

Cup depth
12.6mm (1/2")

Dowelled and Screw-on
cup attachments. Dowelled available in both 42mm and 45mm patterns. Screw-on available in 45mm pattern.

RFI 77 ATTACHMENT

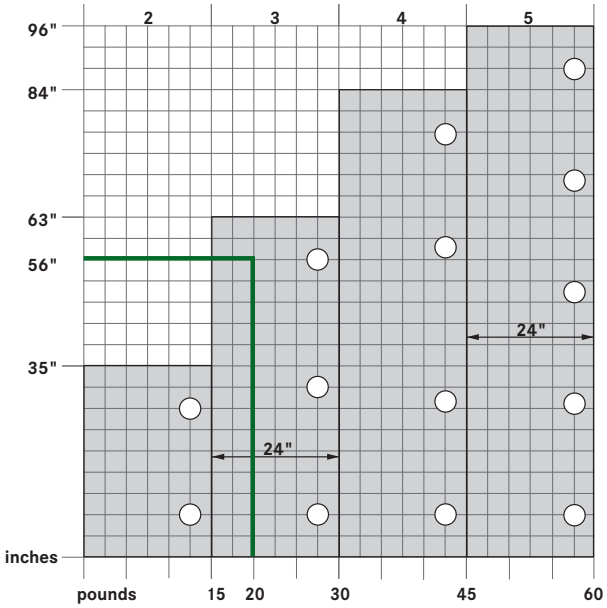
Technical information

For Tiomos

Number of Hinges Per Door

The number of hinges is determined by the door height, door weight, quality of the door material, and the fixing of the cup and base plate.

The load and height data refer to 24" standard door widths.



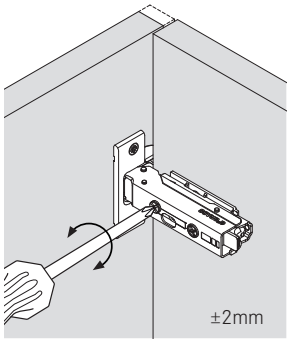
The table refers to hinges with and without integrated dampers.
Grass strongly recommends a trial mount for all hinges and base plates.

Attach base plates using all available screw holes.

Example:
For doors measuring 56" x 24" and weighing 19 lb, Grass recommends the installation of 3 hinges.

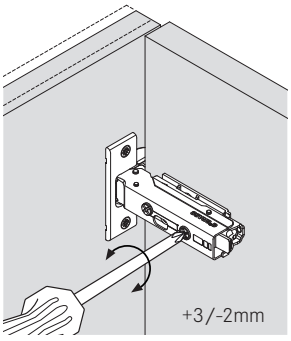
Note: The distance between the top and bottom hinge must be greater than the width of the door.

The **Tiomos** hinge meets and exceeds the minimum requirements of ANSI/BHMA A156.9 Standard.



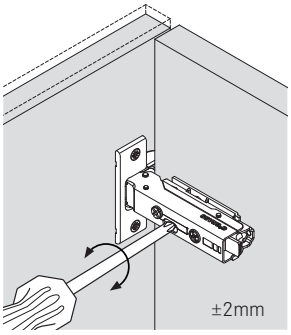
Adjustments

The options for height adjustment depend on the type of base plate. All adjustments can be made independent of one another.



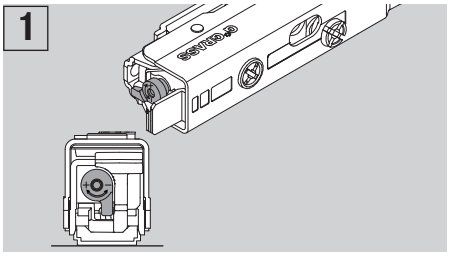
For depth adjustment, select base plates have worm screw adjustment access through the hinge arm.

Use a #2 POZI drive screwdriver for hinge adjustments.



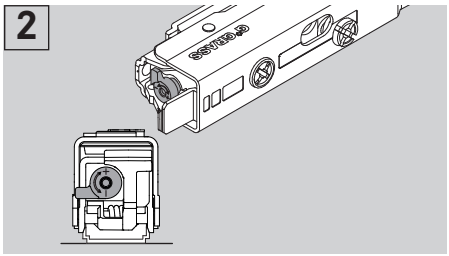
Attach base plates using all available screw holes.

Side adjustment



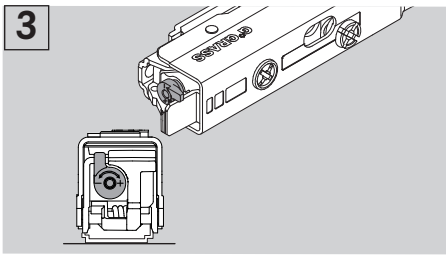
Depth adjustment
via worm screw

Height adjustment
via base plate



Tool-free Soft-close Adjustment

Soft-closing performance can be regulated for any door size and weight with the Tiomos adjustable integrated Soft-close.
Depending upon the requirement, the Soft-close settings can be adjusted easily and without tools. With 2 hinges there are 6 Soft-close settings.

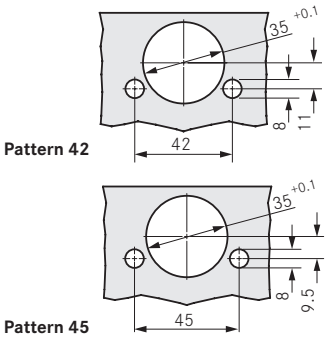


Light setting
Adjustment lever points toward the cabinet wall

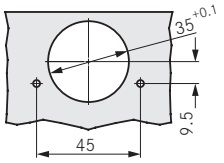
Appropriate for:
- Small, light doors

Medium setting (factory setting)
Adjustment lever is parallel to the cabinet wall.
This setting covers 80% of door applications.

Appropriate for:
- Standard doors



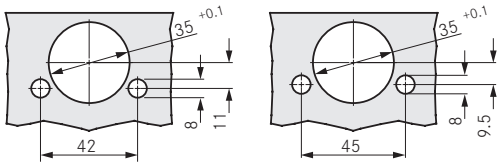
Strong setting
Adjustment lever points toward the cabinet interior



Appropriate for:
- Large, heavy doors

Tiomos Drilling Patterns

Dowelled

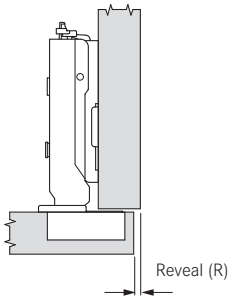


Screw-on

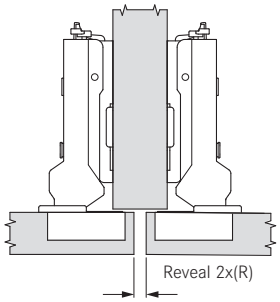
Tiomos Impresso Drilling Patterns

Impresso 42/45 hinges accommodate cup drilling patterns of both 42mm and 45mm.

Pattern 42 and 45

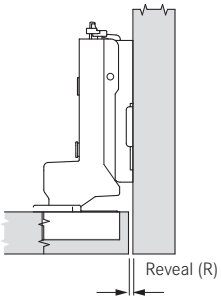


Reveal



The reveal (R) is the distance required between two doors or between the door and side wall of the cabinet to allow sufficient space for opening the door. The required reveal width (R) depends on the thickness of the door.

Most cabinet makers prefer a reveal (R) of between 3mm and 6mm.



Full Overlay Door

Half Overlay Door

Inset Door

Reveal for Full Overlay, Overlay, and Half Overlay Doors

The table shows the reveal necessary between two doors or between door and side wall to allow enough space for opening the door.

Example:
For a door thickness of 19mm and a drilling distance of 6mm, a reveal of 0.9mm is needed.

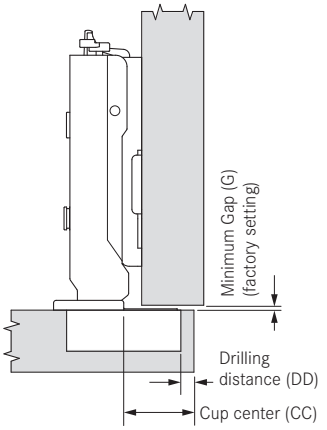
Door thickness (DT) \ Drilling Distance (DD)	3	4	5	6	7
24	2.4	2.1	2.1	2.1	2.0
21	1.6	1.6	1.6	1.5	1.5
21	1.4	1.3	1.3	1.3	1.3
20	1.1	1.1	1.1	1.5	1.1
19	0.9	0.9	0.9	0.9	0.9
18	0.7	0.7	0.7	0.7	0.7
17	0.6	0.6	0.6	0.6	0.6
16	0.6	0.6	0.6	0.6	0.6
	Reveal min. (R)				

Reveal for Inset Door

The table shows the minimum reveal for an inset door, depending on the drilling distance and base plate height.

Example: A drilling distance of 6mm results from using a base plate with height 03 in a reveal of 1mm.

Minimum Reveal (R) \ Drilling Distance (DD)	3	4	5	6	7
0		0		2	3
.5					3.5
1	0		2	3	
1.5				3.5	
2		2	3		
3	2	3			
4	3				
	Base Plate Height (BPH)				



Note:
Reveal dimensions were determined with a door edge radius of 1mm. Hinge dimensions and calculation of gap with factory setting.

IMPORTANT

To determine the correct application Grass strongly recommends a trial mounting for all hinges and base plates.

Minimum Gap

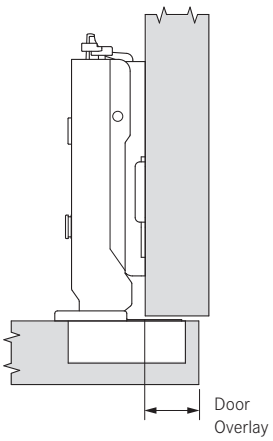
The Minimum Gap (G) is the gap between the closed door and the front of the cabinet.

Drilling Distance

Drilling Distance (DD)		Cup Center (CC)	
1/8"	3	13/16"	20.5
5/32"	4	27/32"	21.5
3/16"	5	7/8"	22.5
1/4"	6	15/16"	23.5
9/32"	7	31/32"	24.5
5/16"	8	1"	25.5

The Drilling Distance (DD) is the distance between the edge of the door and the edge of the cup hole.

The Cup Center (CC) is the distance of the cup drilling distance plus 1/2 of the cup diameter.



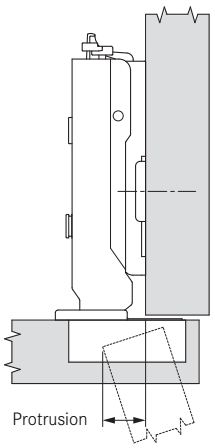
Example:
For a door thickness (DT) of 17mm and a drilling distance (DD) of 6mm a minimum gap of 1mm is needed.

Door Thickness (DT) \ Drilling Distance (DD)	3	4	5	6	7
24	1.0	1.0	1.0	1.2	2.1
22	1.0	1.0	1.0	1.0	1.5
21	1.0	1.0	1.0	1.0	1.2
20	1.0	1.0	1.0	1.0	1.0
19	1.0	1.0	1.0	1.0	1.0
18	1.0	1.0	1.0	1.0	1.0
17	1.0	1.0	1.0	1.0	1.0
16	1.0	1.0	1.0	1.0	1.0

Minimum Gap (G)

Door Overlay

The door overlay is the part of the cabinet side wall or face frame that is covered by the door on the hinge side.



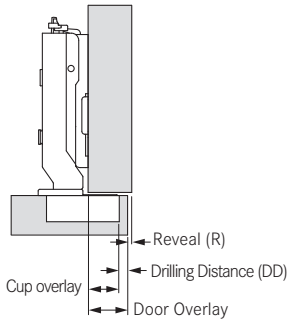
Example:
For a hinge with a cranking of 03, a base plate height (BPH) of 2mm, and a drilling distance (DD) of 4mm, the door overlay is 14mm.

Door Overlay \ Drilling Distance (DD)	3	4	5	6	7
19					0
18				0	
17			0		2
16.5					
16		0		2	3
1.5					3.5
15	0		2	3	
14.5				3.5	
14		2	3		
13.5			3.5		
13	2	3			
12.5		3.5			
12	3				
11.5	3.5				

Base Plate Height (BPH)

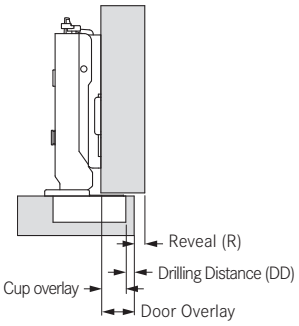
Door Edge Protrusion

The door edge protrusion is the amount by which the edge of the open door protrudes into the opening and varies depending on the type of hinge and method of fixing. It is stated on the respective catalog page and refers to the stated base plate for the factory setting. It can be changed by changing the height of the base plate and adjusting the lateral adjustment.



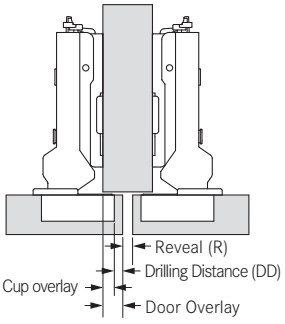
Door Positions

Achieve overlay with hinge cranking



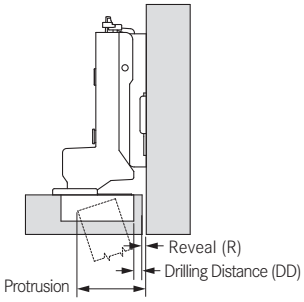
Full Overlay (Cranking 00)

The cup overlay (factory setting) plus drilling distance determines the door overlay. Dimensions can be found in a table on the respective page of the catalog.



Overlay (Cranking 03)

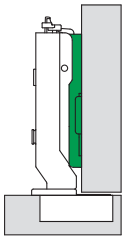
The cup overlay (factory setting) plus drilling distance determines the door overlay. Dimensions can be found in a table on the respective page of the catalog.



Half Overlay (Cranking 9.5)

The cup overlay (factory setting) plus drilling distance determines the door overlay. Dimensions can be found in a table on the respective page of the catalog.

Inset (Cranking 19)



There is no door overlay. The reveal between the side of the cabinet and the door depends on the base plate height (BPH) and the drilling distance (DD). Dimensions can be found in a table on the respective page of the catalog.

Achieve overlay with base plate

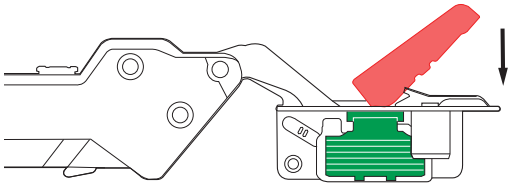
Insertion instructions

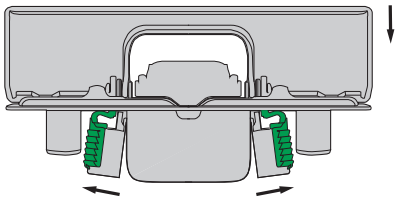
Tiomos Impresso

Tiomos Impresso

The Tiomos Impresso is a high quality, performance hinge with superior strength. For the best results for cup insertion into a door, please follow the guide shown below.

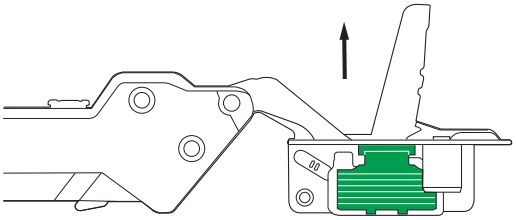


IMPORTANT

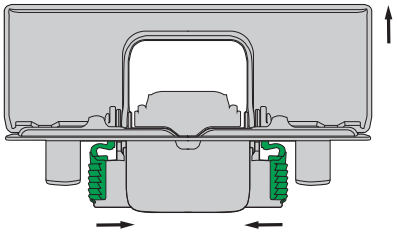


Cup bore hole diameter must be within 35mm - 35.1mm range.

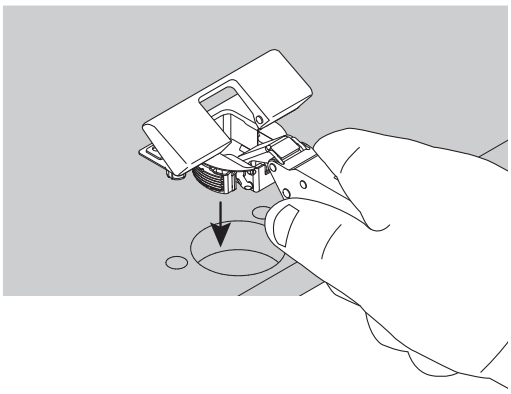
Instructions for Impresso Insertion

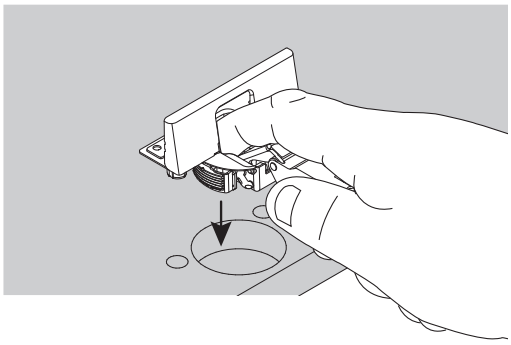


Begin with hinge in the open position and not mounted on door.



If the hinge cup flap is partially closed due to shipping and handling, lift flap to upright position before inserting into door as illustrated.

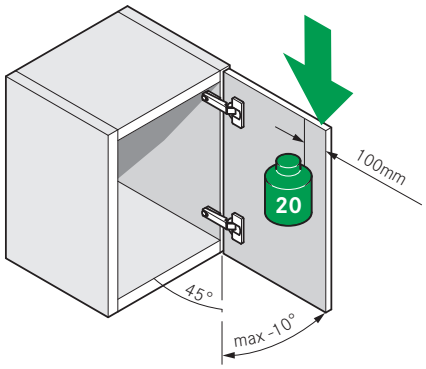




Ensure that expanding green brackets are in loose/neutral position before inserting into door.

For fast and easy insertion, use index finger to push cup into door.

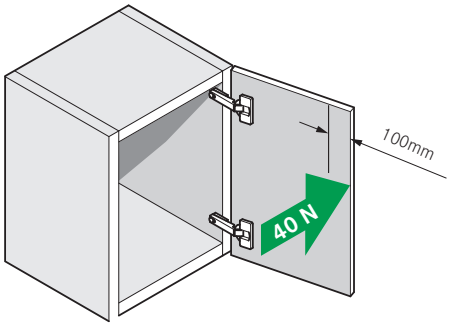
Testing information



Tiomos

Functional Test

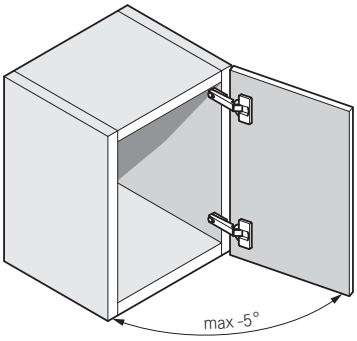
Static Load - vertical



Additional load: 44 lb (20 kg)

Opening angle: max -10°

Static Load - horizontal

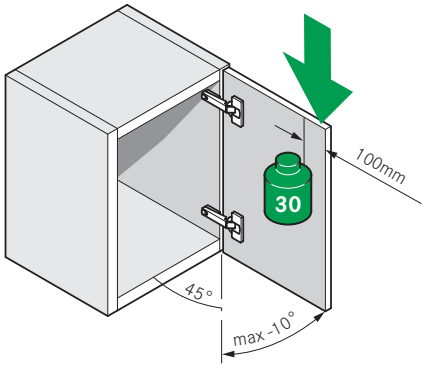


Force: 40 N

Endurance Test

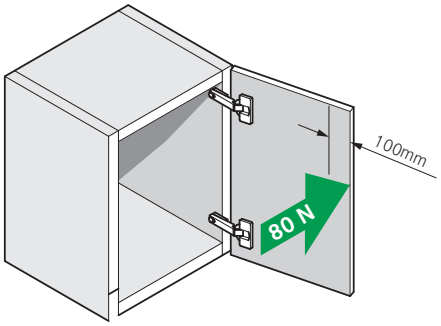
Opening angle: max -5°

Open and close movements: 100,000



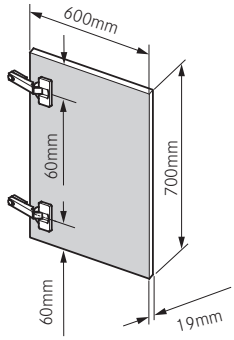
Overload Testing

Vertical



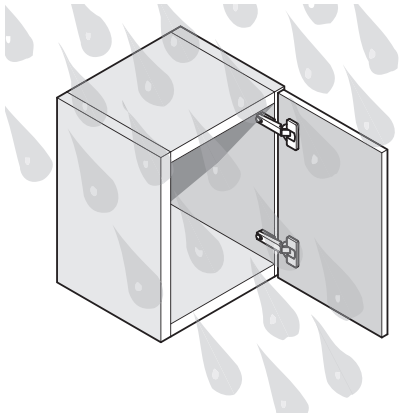
Additional load: 66 lb (30 kg)

Opening angle: max -10°



Horizontal

Force: 80 N



Test Door

Weight approximately 11.5 lb (5.2 kg)

Salt Spray and Humidity Test

Based on DIN ISO 9227 and DIN 6270-2

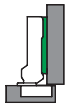
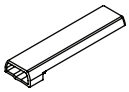
Tiomos 120

120° hinge for standard doors





- 3-dimensional adjustment with suitable base plate
- Accommodates overlays up to 24mm (15/16")
- Optimal reveal up to 24mm door thickness
- Soft-close or Self-close hinges available
- For face frame or frameless cabinets
- Convenient depth adjustment with worm screw

PU - Packaging unit

Dimensions in millimeters, fractional inch equivalents as noted.

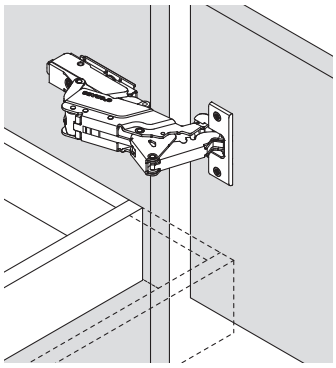
Mitered Corner Application

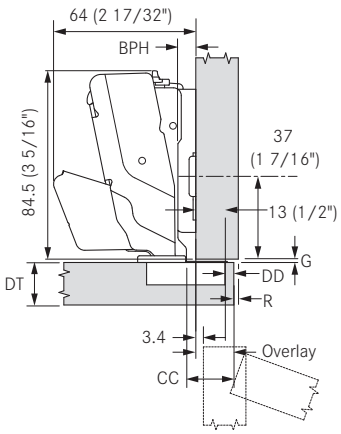
Use Full overlay hinge (00 Cranking) with 19mm base plate.

Mitered door application is now possible without using the 120° opening angle reduction clip.



3/8" Lip Door Application

Use Full overlay hinge (00 Cranking) with 21mm base plate.



Use 120° opening angle reduction clip. Prevents doors from bumping with the cabinet side in inset applications and mitered corner applications.

Zero Protrusion at 90°

At 0 cranking, and with all mounting plate thicknesses, the door protrudes inwards at 90°. With cranking size 3 and mounting plate height 3mm, the door will be flush with the cabinet.

RFI 77 ATTACHMENT

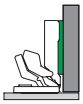
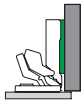
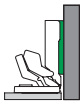
Tiomos M0

125° hinge for thin doors (6-10mm)







- No cup hole necessary
- Door thickness of 6mm (1/4") to 10mm (3/8")
- Accommodates door overlays up to 25.4mm (1")
- Soft-close hinges
- Works with a variety of door material - wood, aluminum, MDF, mineral composite, HPL (laminate), chipboard, solid surface
- Special fasteners for hinge attachment to door
- Compatible with Tiomos base plates

Number of Hinges Per Door

Installation Information

Countersunk screw M5 x 6mm

(except for aluminum)**:**

1. Drill a Ø 4.8mm hole
2. Cut a Ø 5mm thread
3. Position the hinge and secure with the screws

Countersunk screw M4 x 8mm with sleeve M4 x 5.5mm:

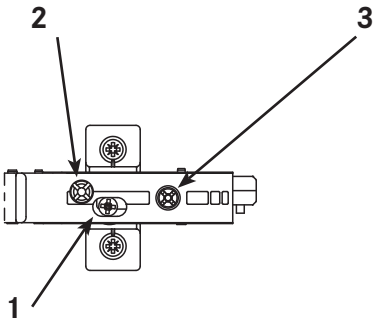
1. Drill a Ø 5mm hole
2. Slightly countersink the edge of the hole
3. Insert the sleeve
4. Knock in the sleeve with a hammer
5. Position the hinge and secure with the screws

Notes

An inset application is achieved with the base plate (X) and a low housing screwing distance (Z).

Depending on the type and thickness of the base material the pull-out resistances can vary with the same fastening method. For information regarding the selection and processing of the base material please contact the base material supplier.

Liability claims: Please note that Grass cannot accept any liability for damage resulting from unsuitable fastening materials or methods.



IMPORTANT

To determine the correct application Grass strongly recommends a trial mounting for all hinges and base plates.

Tiomos Base Plates

For Tiomos hinges

- Steel, nickel plated
- Depth adjustment via worm screw
- Height adjustment via worm screw or elongated hole
- Side adjustment via hinge
- Use a #2 Pozi drive screwdriver for hinge adjustment
- Attach base plates using all available screw holes

Height adjustment via base plate ± 2mm | Side adjustment ±2mm | Depth adjustment +3/-2mm

All adjustment options can be made independently of one another

FFA Base Plate, 2 Point Fixing — 9.5/32 — For Wood Screws

- Height adjustment via elongated screw holes

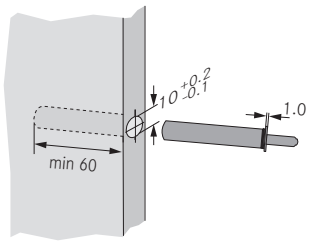
Tipmatic

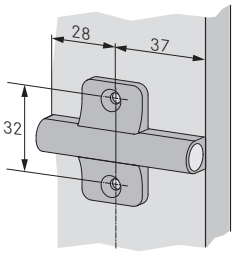
For handle-free wooden doors



- Gently tapping the front causes the doors to open to a convenient angle
- Use with Tiomos 110 Tipmatic Plus or with Nexis and Tiomos free-swinging hinges
- Large magnet catch range – holds door closed securely
- Gap adjustment from 2.5 to 5.5mm with integrated, self-locking and tool-free depth adjustment feature
- Mount on the front side of the cabinet or with an adapter plate

Tipmatic Pin — For Drilling

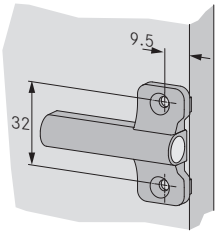
- Incl. Tipmatic mechanism:
  - Stick on strike plate
  - Screw on strike plate
- Hole drilled from the front
- Plastic RAL 7036, platinum grey



Item No.	PU
F069135**396**513	25

Adapter Plate for Line Boring — For Euro Screws

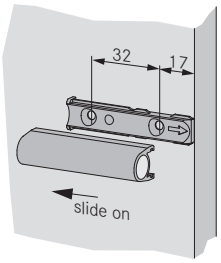
- Suitable for line boring 28 and 37mm
- Attach with Euro screws (6.3 x 13.5)
- Plastic RAL 7035, light grey



Item No.	PU
F069063**310**213	25

Face Frame or Standard Adapter Plate — For Wood Screws

- Quick upgrade installation
- Attach with wood screws (3.5 x 13)
- Plastic RAL 7035, light grey



Item No.	PU
F069073**697**213	25

Linear Adapter Plate — For Wood Screws

- Design solution – also suitable for inset door applications
- Attach with wood screws (3.5 x 13)
- Plastic RAL 7035, light grey

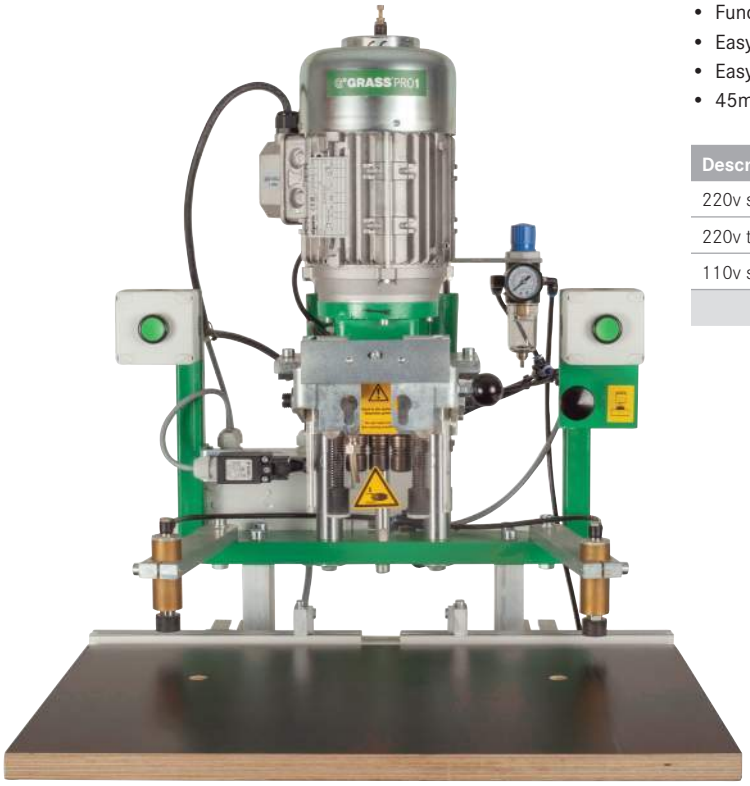
GRASS PRO1 drilling and insertion machine for 45mm boring pattern

One machine can do the job. Whether it's drilling, boring, or inserting for hinges or installing slides for drawer boxes, GRASS PRO1 has it covered. Constructed from the highest quality materials and precision assembled, the GRASS PRO1 is designed for the demands of everyday use. Designed for use with Grass products, every unit is supported by Grass technicians and engineering.



- Bore depth automatically adjusts to material thickness
- Functional design
- Easy, fast and efficient operation
- Easy maintenance

SUBSTITUTION REQUEST
(During the Bidding/Negotiating Phase)

CSI®

PROJECT: Greenwich Central Middle School

SUBSTITUTION REQUEST NUMBER: 1

FROM:

TO: Turner Construction

DATE: 10/10/24

A/E PROJECT NUMBER:

RE:

CONTRACT FOR:

SPECIFICATION TITLE: Metal Lockers

DESCRIPTION: Metal Locker & Bench

SECTION: 10 5113

PAGE: 2,3,4

ARTICLE/PARAGRAPH: 2.1-A, 2.2-A, 2.2-B 2.2-C, 2.4-A

PROPOSED SUBSTITUTION: Metal Lockers & Bench

MANUFACTURER: List Industries **ADDRESS:** Deerfield Beach, FL **PHONE:** 1-800-776-1342

TRADE NAME: Metal Lockers & Benches **MODEL NO.:** Classmate Corridor Bench Tops & Pedistals

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

3. Substitutions: See Section 01 6000 - Product Requirements.

2.2 LOCKER APPLICATIONS

A. Student Lockers: **Types A and B**. Metal lockers, free-standing with matching closed base.
   1. Width: 9 inches 12 inches.
   2. Depth: 15 inches 18 inches.
   3. Height:
      a) Type A: 72 inches.
      b) Type B: 40 inches, nominal.
   4. Configurations: As indicated below.
      a) **Type A**: Four-tier. DOUBLE
      b) **Type B**: Single-tier.
   5. Fittings: Size and configuration as indicated on drawings.
      a) Provide additional shelf for accessibility compliance, as indicated on drawings. Provide at 5% of each locker type, or (1) minimum, whichever is greater.
      b) Hooks: One single prong.
   6. Ventilation: Louvers at top and bottom of door panel.
   7. Locking: Recessed lift handles with built-in padlock hasp.
      a) Accessible Lockers: Provide a built-in digital keypad lock.
   8. Provide sloped top, to the extent indicated on drawings.
   9. Color: To be selected from manufacturer's full range by Architect and allow for (3) additional custom accent colors, as indicated on the "Finish Product List - Finishes for Miscellaneous Items" on the drawings.

B. Custodial Lockers: **Type C**. Metal lockers, free-standing with matching closed base.
   1. Width: 18 inches.
   2. Depth: 18 inches.
   3. Height: 72 inches.
   4. Configuration: Single tier.
   5. Fittings: Size and configuration as indicated on drawings.
      a) Hat shelf.
      b) Hooks: One single prong.

4. Metal Lockers
   a. General Lockers: Basis of Design, Penco, Canvas 054, Interior and any exposed sides of locker to match exterior paint color.
   b. Color Accent Lockers at Right Side Classroom Pod: Custom Color to Match P10, interior of locker any exposed sides to match exterior paint color.
   c. Color Accent Lockers at Center Classroom Pod: Custom Color to Match P11, interior of locker any exposed sides to match exterior paint color.
   d. Color Accent Lockers at Left Side Classroom Pods: Custom Color to Match P12, interior of locker any exposed sides to match exterior paint color.
   e. Athletic Rooms: Basis of Design; Penco 052 Reflex Blue, To be selected from manufacturer's full range, interior of locker to match exterior paint color. Flat top and exposed sides to match exterior paint color.
   f. Custodial Room: Basis of Design; Penco 052 Reflex Blue, To be selected from manufacturer's full range, interior of locker to match exterior paint color. Flat top and exposed sides to match exterior paint color.

Approved Substitution - SLAM

SUPERIOR®
Bench Top and Pedestal Specifications

Maple

Benchtops: To be 9-1/2" wide x 1-1/4" thick and made from laminated ~~hardwood~~. Benchtops are to be finished with one coat deep penetrating sealer and two coats of heavy body high impact hot hydraulically applied lacquer. Benches up to 8'-0" in length have two pedestals. Benchtops longer than 8'-0" up to 12'-0" are supplied with three pedestals.

No. 4805 Heavy-Duty Steel Pedestal: Fabricated from 1-1/2" diameter 14 gauge steel tube welded to top and bottom 11 gauge formed flanges. Each flange to have three anchoring holes. Color: #729 Parchment.

No. 4810 Extra Heavy Duty Cast Iron Pedestal: One piece cast iron pedestal to include 6" diameter top and bottom flanges. Each flange to have three anchoring holes. Multiple piece constructed pedestal are not acceptable. Color #729 Parchment.

No. 4820 Standard Moveable Pedestal: Fabricated of extruded aluminum providing four anchoring holes at bottom. Pedestal is designed to be moveable type if desired. Color #729 Parchment.

No. 4825 Stainless Steel Pedestal: Fabricated from 16 gauge stainless steel. Pedestal is designed to be moveable but includes 4 holes for anchoring to floor if desired. Unpainted

No. 8032 Pedestal: Adjustable height pedestal consisting of a cast aluminum base, threaded pipe nipple and steel pipe flange at the top. Anchoring thru the cast aluminum base is concealed.
Color #729 Parchment.

UNIBODY ALL-WELDED CORRIDOR LOCKERS

WHAT IS UNIBODY ALL-WELDED?

- Superior unibody all-welded corridor lockers include our double vertical frame design adding strength, integrity, durability and visual appeal.
- First we start with prime grade cold rolled sheet steel. 16 gauge for all body components except backs which are 18 gauge. Doors are heavy 14 gauge.
- Sides are formed to be an integral part of the front vertical locker frame which locks into the bottom for precise alignment and added strength.
- We MIG weld an additional channel shaped vertical frame member between doors providing a continuous door strike at both the hinge and latch side of the door.
- The top and bottom are flanged downward at the front to form a 1-1/2" high channel shaped top and bottom horizontal frame member continuous across the multiple column unit up to 60" wide.
- The base is a full 1-1/2" high keeping locker contents away from moisture on the floor and/or wood/concrete base.
- Front-to-back channel stiffeners are welded into the base under each side panel providing a strong anchor bearing surface for installation and increasing overall unit strength.
- Horizontal tier dividers for double and triple tier models project through to the face of the locker forming a horizontal cross member between doors for maximum strength.
- Guaranteed in writing by our lifetime warranty.

THE CLASSMATE™ CORRIDOR LOCKERS

Our unique double frame, unibody all-welded design provides a durable locker with a classic appearance that is backed by our life-time warranty.

Single Tier 3-Wide

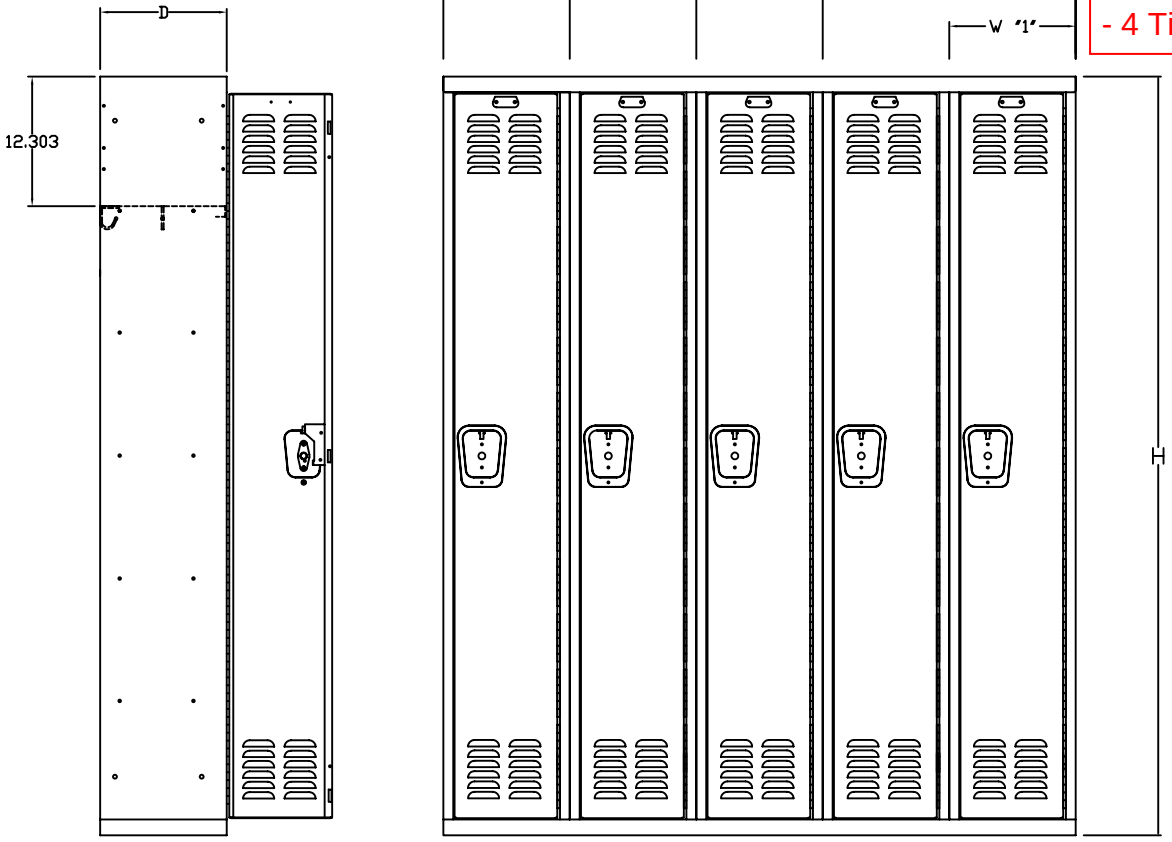
Double Tier 3-Wide

Triple Tier 3-Wide

UPGRADE

INTEGRAL SLOPE TOP *is fabricated of heavy 16 gauge steel, runs continuous across a multiple column unit and is MIG welded at the factory replacing welded locker unit flat top. Sides are sloped at top providing rigid support beneath the slope top between each locker column.*

UPGRADE



PREMIER SERIES CLASSMATE *which includes a 3" wide 18 gauge full height door stiffener spot welded to the inner door face and MIG welded to the hinge side as well as to the top and bottom door flanges providing a rigid torque-free door. A 1-1/2" wide stiffener will be furnished for 9" wide Premier doors. 18" and 24" all-welded lockers are only available in Premier Series.*

SUPERIOR®
Classmate Corridor™
Unibody All-Welded Lockers

General: Lockers shall Be **"Superior Classmate Corridor Unibody All-Welded Lockers**" as manufactured by List Industries Inc. or approved equal. All lockers shall be factory-assembled, of all MIG welded construction, in multiple column units to meet job conditions. **Assembly of locker bodies by means of bolts, screws, or rivets will not be permitted. Welding of knockdown locker construction is not acceptable.** Grind exposed welds and metal edges flush and make safe to touch.

Lockers shall be **GREENGUARD Gold Certified**℠.

Finishing: All locker parts to be cleaned and coated after fabrication with a seven stage zinc/iron phosphate solution to inhibit corrosion, followed by a coat of high grade custom blend powder electrostatically sprayed and baked at 350 degrees Fahrenheit for a minimum of 20 minutes to provide a tough durable finish. Color to be selected from manufacturer's standard list of colors. **Two-Tone Color Combination: Shall be at no additional cost with the locker body, frame and trim chosen from one color and the doors may be one of any other color chosen from manufacturers standard selection.**

Classmate Wardrobe Doors: Doors 20" high and over and 15" wide and under shall be fabricated from single sheet prime 14 gauge with single bends at top and bottom and double bends at the sides. The channel formed by the double bend at the latch side is designed to fully conceal the lock bar. Doors to be louvered.

Seamless Drawn Stainless Steel Recessed Locker Handle: All locker doors shall have a seamless drawn not less than 304 stainless steel recessed handle shaped to receive a padlock or built-in combination lock. The recess pan shall be deep enough to have the lock be completely flush with the outer door face. A finger lift/padlock hasp shall protrude through the top of the handle for easy opening of the locker door.

Latching: The latching mechanism shall be finger lift control type constructed of 14 gauge (minimum) steel with a nylon cover that has a generous finger pull. Spring activated nylon slide latches shall be completely enclosed in the lock channel allowing doors to close with the lock in the locked position. Lock bar shall be hot dip galvanized and installed after paint to ensure proper paint coverage and lock bar operation. Locking devise shall be designed for use with either built-in combination locks or padlocks. Latch hooks shall be 12 gauge (minimum) and shall be MIG welded to vertical frame member. Provide three latch hooks for doors 48" and over and two for doors under 48".

Hinges: Hinges shall not be less than 16 gauge continuous piano type hinges riveted to the frame and welded to the door. All doors shall be right hand side hinged.

Twin-Frame / Vertical Side Panels: Shall be of integral frame and side wall construction manufactured from solid 16 gauge sheet steel. The one-piece side/frame shall be formed to provide a continuous door strike on the hinge side. An additional continuous vertical door strike shall be achieved at the latch side by MIG welding a 16 gauge full height channel frame member to the integral locker side producing a rigid torque-free welded locker body. The frame shall include a tab which engages a slot in the base locking the side panel and frame into position.

RFI 89

SUPERIOR® Classmate™ Corridor Unibody All-Welded Lockers (Page 2)

Integral Frame Locker Base: 16 gauge formed sheet steel with double return flanges at the front and rear. A full depth horizontal channel shall be MIG welded under the locker bottom front-to-back at the left and right side of each welded locker unit as well as beneath each vertical side panel for maximum rigidity.

Flat Tops: Shall be formed of one piece of 16 gauge cold rolled sheet steel and shall be an integral part MIG welded to each vertical side panel frame member and be continuous to cover the full width of a multiple locker unit.

Hat Shelves, Intermediate Shelves And Bottoms: Shall be 16 gauge sheet steel, have double bends at front and shall be MIG welded to the sides.

Backs: Shall be 18 gauge cold rolled sheet steel, be continuous to cover a multiple twin-framed unit and be welded to each vertical side panel.

Locks (If Required): Shall be master keyed to one system for the entire project. (See lock use chart for suggested lock application).

Equipment: Furnish each locker with the following items, unless otherwise shown.

Single tier lockers: Openings 60” and 72” shall include one hat shelf, one double prong ceiling hook and a minimum of two single prong hooks.

Double and Triple tier lockers: Openings 20” thru 36” high shall include one double prong ceiling hook and a minimum of two single prong hooks.

Lifetime Warranty: Superior Unibody All-Welded Lockers are covered against all defects in materials and workmanship excluding finish, damage resulting from deliberate destruction and vandalism under this section **for the lifetime of the facility**.

RFI 89

PEDESTAL AND BENCH TOP INSTALLATION INSTRUCTIONS

General Instructions

1. Check material received against the packing list. First, check the number of packages received and then check the contents of each package.

2. Check the material received for damage. If damage has occurred, secure a "damage notation" from the carrier

3. Identify each part as it is unpacked and put like parts together as close as possible to the working area where they are to be assembled.

4. Be careful to use the correct hardware as specified in the assembly instructions.

CAUTION

In the interest of safety, all lockers must be securely anchored to the floor and/or wall. For safety, handle all components carefully and wear work gloves when assembling lockers. Install all units plumb and tighten all hardware securely. Retain instruction for future reference.

SUBSTITUTION REQUEST
(During the Bidding/Negotiating Phase)

CSI®

PROJECT: Greenwich Central Middle School
State Project No. 057-0114N

TO: Turner Construction Company

RE: BP-9 Sitework Retaining Walls

SUBSTITUTION REQUEST NUMBER: 001

FROM:

DATE: 10/14/24

A/E PROJECT NUMBER:

CONTRACT FOR:

SPECIFICATION TITLE: Segmental Retaining Walls

DESCRIPTION:

SECTION: 323223 **PAGE:** 6 of 10

ARTICLE/PARAGRAPH: 2.2 Segmental Retaining Wall

PROPOSED SUBSTITUTION: Versa-Lok Square Foot

MANUFACTURER: Versa-Lok

ADDRESS: 5 Northern Blvd #15
Amherst, NH 03031

PHONE: (603)883-3042

TRADE NAME:

MODEL NO.: Square Foot

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

SUBMITTED BY:

SIGNED BY:

FIRM:

ADDRESS:

TELEPHONE:

Versa-lock is an acceptable substitution. Approval contingent on contractor to ensuring that proposed product can meet design intent with regard to layout and construction, as well as warranty and compatibility. Color to be selected from manufacturer's full range of colors and finishes (including premium). Near vertical batter (1/4"). - SLAM

A/E's REVIEW AND RECOMMENDATION:

- ☐ Approve Substitution—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.
- ☒ Approve Substitution as noted—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.
- ☐ Reject Substitution—Use specified materials.
- ☐ Substitution Request received too late—Use specified materials.

SIGNED BY: Kathryn Packtor - SLAM **DATE:** 10.30.2024

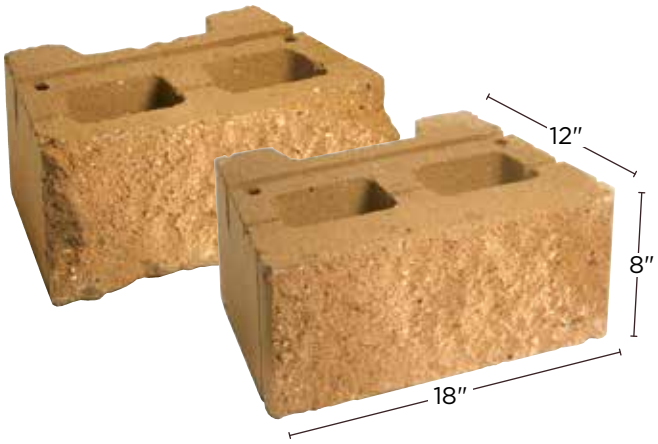
VERSA-LOK SQUARE FOOT

RETAINING WALL SYSTEM

VERSA-LOK®
Retaining Wall Systems
Solid Solutions.™

AFFORDABLE & ATTRACTIVE WALLS BY THE FOOT.

VERSA-LOK® Square Foot™ units are engineered to provide the construction flexibility you need in a large retaining wall project, making it a smart, low-cost alternative for public works, institutional and commercial projects. At 87-pounds each, the Square Foot unit is a unique hybrid design, combining the versatility of VERSA-LOK's top-pinning technology with cost-effective hollow-core unit construction. No mortar or concrete footings are needed, so Square Foot walls remain flexible in climates that experience freeze-thaw cycles. And its thick face affords better durability than other cored systems.



Square Foot's top-pinning system allow for variable bond construction, quick accurate alignment, tighter vertical joints and easy installation. Its trapezoidal design enables inside and outside curves with one of the tightest radiuses in the industry (4' 6"). Square Foot retaining walls can be built with a traditional 1-inch setback or near-vertical, and will accommodate geogrid reinforcement to build walls to any height. The maximum stable unreinforced Square Foot wall is 3 feet, depending on soil, site and loading conditions (including terraces). Square Foot walls can be finished off with VERSA-LOK cap units.

Square Foot™

Design & Installation Guidelines

Building a reputation.
One square foot at a time.

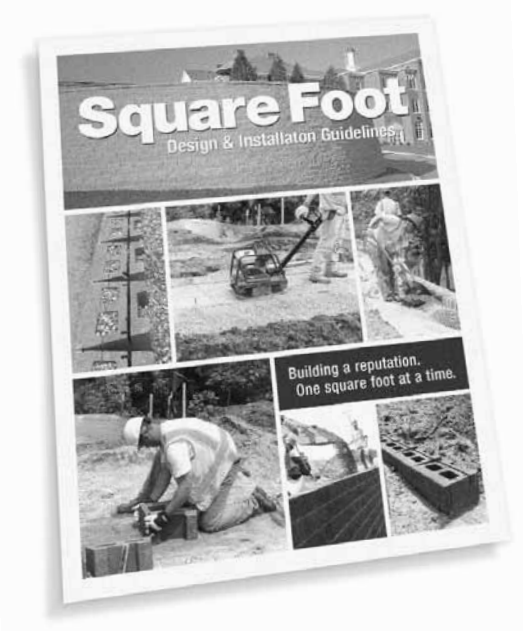
BQ#104 Attachment

WELCOME

This guide is intended to illustrate design and construction capabilities of Square Foot™ retaining walls. There are many variables to consider, however, when planning or constructing any retaining wall. Soil types, drainage, loading, topography, and height each need to be addressed on every project to ensure safe, trouble-free installation.

Walls that support heavy loads or exceed three feet in height require special soil reinforcement and often professionally designed plans. Consult a qualified engineer if unsure about any construction, site, or soil conditions.

A variety of technical support is available including in-house engineering assistance and reference literature. The following Technical Bulletins* are for VERSA-LOK® Standard units, however, the general principles also apply to Square Foot units.



Please call **(800) 770-4525** with questions or to request any of the following:

- **Technical Bulletin #1** *Shoreline, Waterway and Retention Pond Protection*
- **Technical Bulletin #3** *Curves and Corners*
- **Technical Bulletin #4** *VERSA-LOK® Caps*
- **Technical Bulletin #5** *Base Installation*
- **Technical Bulletin #7** *Tiered Walls*
- **Technical Bulletin #8** *Fences, Railings, and Traffic Barriers*
- **Technical Documentation for VERSA-Grid® Soil Reinforcement**

**Technical Bulletins are also available for download online at www.versa-lok.com.*

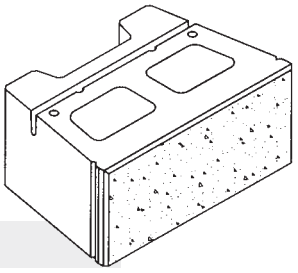
INTRODUCTION & UNIT SPECIFICATIONS

1

Square Foot™ retaining walls are a permanent, attractive, preferred alternative to ordinary retaining wall types. They have a natural split-face texture to complement any environment and because they are made of concrete, are environmentally safe.

Square Foot retaining walls are economically installed without mortar and do not require concrete footings. In addition, each unit covers one square foot of wall face, making Square Foot retaining walls an economical choice for large commercial and agency projects.

Square Foot retaining walls have rapidly earned approval from architects, engineers, and contractors. It may be easily installed by contractors, grounds maintenance personnel, or municipal construction crews. Matching concrete caps are available to attractively finish any Square Foot retaining wall.



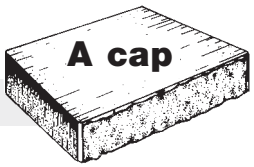
Square Foot units are routinely used by many state transportation departments. Properly designed, walls may be constructed to heights in excess of 40 feet.

Square Foot units are made from high-strength, low-absorption concrete on standard block machines. Holes and slots molded into units accept VERSA-TUFF® non-corrosive, nylon/fiberglass pins. Pins interlock units and help provide consistent alignment. This unique hole-to-slot pinning system permits easy variable-bond construction—keeping vertical joints tight.

1 INTRODUCTION & UNIT SPECIFICATIONS

SQUARE FOOT™ UNIT

(Actual unit size and weight may vary slightly by region.)



Height:	8 inches	(203.2 mm)
Width (face)**:**	18 inches	(457.2 mm)

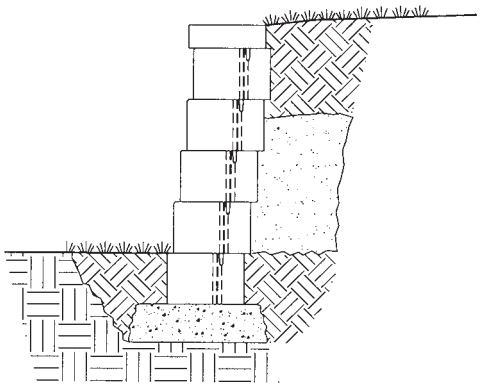
Weight:	**A** cap	40 lbs.	(18.14 kg)
	B cap	50 lbs.	(22.68 kg)

BQ#104 Attachment

Pinning

Square Foot™ units interlock with non-corrosive VERSA-TUFF® pins (two per unit). As wall courses are installed, pins are inserted through holes in uppermost course units and are received in slots of adjacent lower course units. Receiving slots allow pinning for near vertical (1/4" setback) or canted (1" setback) walls.



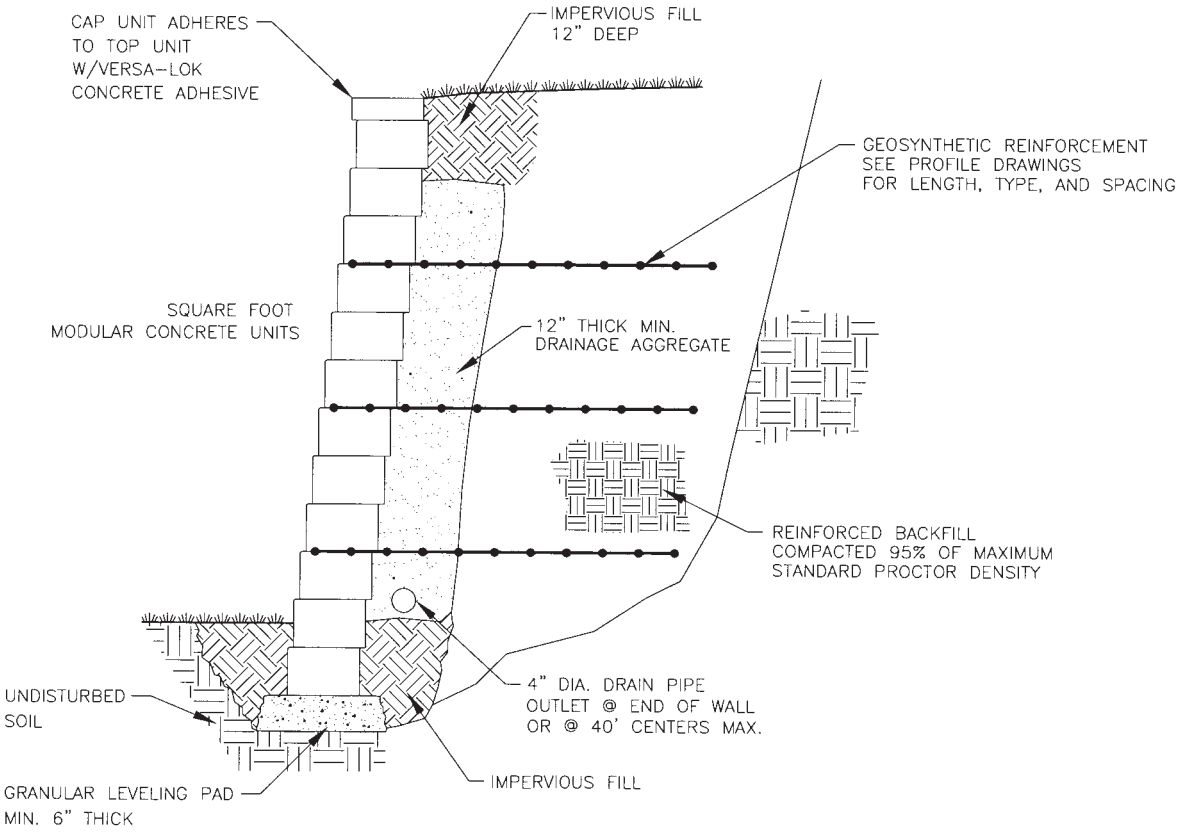
PINNING DETAIL

Unreinforced Walls

For shorter walls, Square Foot retaining walls work purely as gravity systems—unit weight alone provides resistance to earth pressures. Batter setback of wall faces offers additional resistance against overturning.

Maximum allowable wall height for gravity walls varies with soil and loading conditions. Generally, with level backfill, good soils and no excessive loading, Square Foot gravity walls are stable to heights of three feet.

Reinforced Walls



When weight of units alone is not enough to resist soil loads, horizontal layers of geosynthetics are used to reinforce soil behind walls. With proper soil reinforcement and design, Square Foot retaining walls can be constructed to heights in excess of 50 feet. Geosynthetics and soil combine to create reinforced soil structures that are strong and massive enough to resist forces exerted on them.

2 SYSTEM OVERVIEW

Reinforced Wall Typical Section

(The need for design of soil reinforcement and drainage materials is site/soil dependent.)

A Square Foot™ retaining wall has a number of components: the Square Foot modular concrete facing units, geosynthetic reinforcement (if required), leveling pad, backfill, drainage features, and retained soil.

BQ#104 Attachment

Foundation

Foundation soils on which walls will rest must be stiff, firm, and have sufficient capacity to support wall system weight. Any loose, soft, or compressible material must be removed and replaced with properly compacted backfill. The bearing capacity of the foundation soils should be addressed by a soils engineer.

Square Foot™ retaining walls are installed on leveling pads consisting of well-graded angular gravel. The most commonly used material for leveling pads is that which is used locally as road base aggregate. Granular leveling pads provide stiff, yet somewhat flexible, bases to distribute wall weights.

Rigid concrete footings extending below frost are not required or recommended. Because Square Foot units are installed without mortar, they are free to move slightly in relation to each other. Flexibility of the leveling pad and wall units accommodates freeze/thaw cycles without damage to structures. Square Foot walls, installed on granular leveling pads, have been successfully used on projects throughout North America—including shoreline applications and walls exceeding 50 feet in height.

If a contractor chooses to form leveling pads using concrete, unreinforced pads should be made of lean concrete mix (200-300 psi) and no more than two inches thick. To ensure correct Square Foot unit alignment, special care needs to be taken to construct concrete pads that are exactly level. In rare situations where rigid, reinforced-concrete footings are required, they should be placed below seasonal frost depths.

Embedment

Square Foot retaining walls usually have one-tenth of exposed wall heights embedded below grade. For example, a wall with 20 feet of height exposed above grade would have a minimum of 2.0 feet buried below grade—making a total wall height of 22.0 feet. Embedment should be increased for special conditions such as slope at the toe of walls, soft foundation soils, or shoreline applications. Embedment provides enhanced wall stability and long-term protection for leveling pads.

BQ#104 Attachment

3 WALL COMPONENTS

Soils and Compaction

With proper design, segmental walls can be constructed within a wide variety of soil conditions. Granular soils are preferred as fill in the areas reinforced with geosynthetics. However, fine-grained soils such as clays are acceptable, too. Usually, coarse soils require less soil reinforcement and are easier to compact than fine soils. Problem materials like expansive clays, compressible soils, or highly organic soils (top soil) should be avoided or properly addressed in designs.

Proper compaction of foundation and backfill soil is critical to long-term performance of retaining wall systems. Loose backfill will add pressure on walls, collect water, cause settlement, and will not anchor soil reinforcement materials properly.

Foundation and backfill materials should be compacted to at least 95 percent of standard Proctor density. (Proctor density is the maximum density of the soil achieved in a laboratory using a standard amount of compaction effort.) Generally, construction observation and testing for proper soil type and compaction is provided by the project's soils engineer.

Drainage Within Walls

Segmental retaining walls are designed assuming no hydrostatic pressure behind walls. Drainage aggregate (angular gravel, clear of fines) placed behind walls helps eliminate water accumulation. Because no mortar is used in Square Foot™ wall construction, water is free to weep through joints of installed units. For walls taller than three feet high, a perforated drain pipe is recommended at the base of the drainage aggregate to quickly remove large amounts of water.

If high groundwater levels are anticipated or if the wall is along a shoreline, additional drainage materials behind and below reinforced fill may be required. Filter fabric may be required to prevent unwanted migration of fine soil particles into the drainage aggregate.

Surface Drainage

Wall sites should be graded to avoid water flows, concentrations, or pools behind retaining walls. If swales are designed at the top of walls, properly slope them so water is removed before it can flow down behind walls.

BQ#104 Attachment

Give special attention to sources of stormwater from building roofs, gutter downspouts, paved areas draining to one point, or valleys in the topography. Be sure to guide flows from these areas away from retaining walls. Slope the soil slightly down and away from wall base to eliminate water running along base and eroding soil.

If finish grading, landscaping, or paving is not completed immediately after wall installation, temporarily protect the wall from water runoff until adjacent construction and drainage control structures are completed.

Geosynthetic Reinforcement

Geosynthetics are durable, high-strength polymer products designed for use as soil reinforcement. Horizontal layers of geosynthetic provide tensile strength to hold the reinforced soil together, so it behaves as one coherent mass. The geosynthetic reinforced soil mass becomes the retaining wall. Sufficient length and strength of geosynthetics can create a reinforced soil mass large enough and strong enough to resist destabilizing loads. Geosynthetic layers also connect the Square Foot units to the reinforced soil.

Geosynthetics are made from several types of polymers that resist installation damage and long-term degradation. Geosynthetics are designed to interact with the soil for anchorage against pullout and resistance to sliding. Geogrids, the most common soil reinforcement for walls, are formed with an open, grid-like configuration. Geotextiles (solid fabrics) are also used. Product-specific testing determines the durability, soil interaction, and strength of each type of geosynthetic. The interaction of various geosynthetics with Square Foot units (connection strength) has also been thoroughly tested.

Geosynthetic layers must be nominally tensioned and free of wrinkles when placed. Geosynthetics are generally stronger in one direction—the roll direction. It is important that the high-strength direction is placed perpendicular to the wall face, in one continuous sheet (no splices). Along the wall length and parallel to the face, adjacent sections of reinforcement are placed immediately next to each other without overlap to create 100-percent coverage with no gapping, and with special details for curves and corners.

The required type, length, vertical spacing, and strength of geosynthetic vary with each project depending on wall height, loading, slopes, and soil conditions. A professional Civil Engineer (P.E.) should prepare a final, geogrid-reinforced wall design for each project.

BQ#104 Attachment

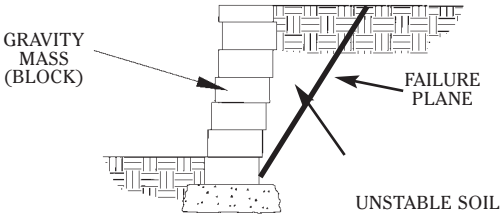
4 ENGINEERING

Square Foot™ retaining walls are designed as traditional gravity walls. For unreinforced walls, the stabilizing weight of the battered wall units is compared to the loading on the walls to ensure stability against overturning and sliding. *(Figure **1A**)* When the loading exceeds the stability of the units alone, a larger gravity mass is created from reinforced soil. *(Figure **1B**)*

To ensure stability of a reinforced retaining wall, the wall engineer must design a reinforced soil mass large enough to resist loads from outside the wall system (external stability) and with enough layers of proper strength geosynthetic to keep the reinforced soil mass together (internal stability). In addition, the design must have sufficient geosynthetic layers to keep units stable and properly connected to the reinforced soil mass (facial stability).

For internal stability, the geosynthetic layers must resist loads that could pull apart the reinforced soil mass. *(Figure **2**)* The wall design engineer must ensure the geosynthetic has enough anchorage length to resist pullout from the stable soils and enough strength to resist overstress (breakage). The geosynthetic also must be long enough to resist sliding along the lowest layer.

For external stability, the reinforced soil mass must have sufficient width to resist sliding and overturning. *(Figure **3**)* The wall design engineer increases geosynthetic lengths until the reinforced soil is massive enough to provide required stability. The project geotechnical engineer should review the wall design and site soil conditions for external stability against bearing failures, settlement, or slope instability. *(Figure **4**)* Often, the wall design engineer can address any such global stability concerns by increasing geosynthetic lengths.



For facial stability, the wall design engineer must ensure wall units can resist loads at the face of the wall and stay connected to the reinforced soil mass, stay interlocked between geosynthetic layers, and not overturn at the top of the wall.

Loading on segmental walls is dependent on soil conditions, surcharges, slopes, water conditions, and wall heights. Accurate knowledge of each of these properties is needed for a proper design. Soil properties required for a segmental retaining wall design include the internal friction angle (ϕ) and soil unit weight (γ). Generally, the cohesion (c) of any fine-grained soils is conservatively ignored to simplify the design.

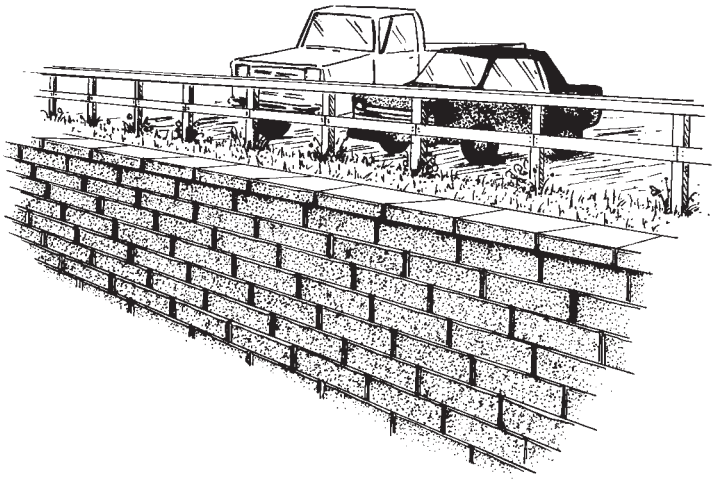
External Stability *(Figure 3)*

Global Stability *(Figure 4)*



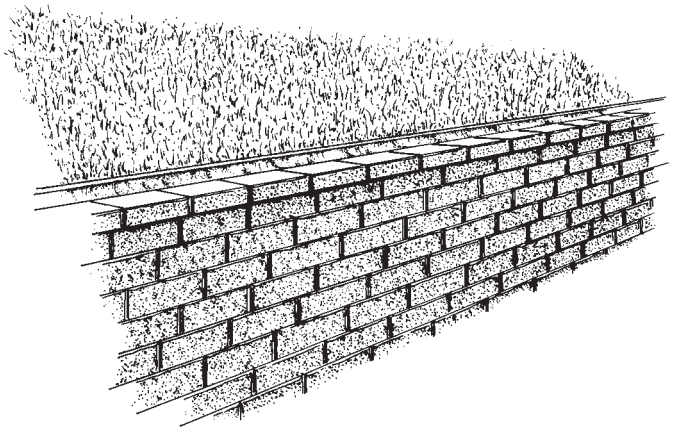
5 SPECIAL DESIGN CONSIDERATIONS

Shorelines

Square Foot™ retaining walls perform well in shoreline applications. However, special design considerations are often necessary to ensure that water pressures do not build up behind walls. Special provisions may include granular reinforced backfill, additional drainage aggregate, drainage behind reinforced soil masses, and filter fabric. Protection of bases from water scour, wave action,and ice may also be necessary.

! *See VERSA-LOK® Technical Bulletin #1 for more information regarding shoreline and retention pond protection.*

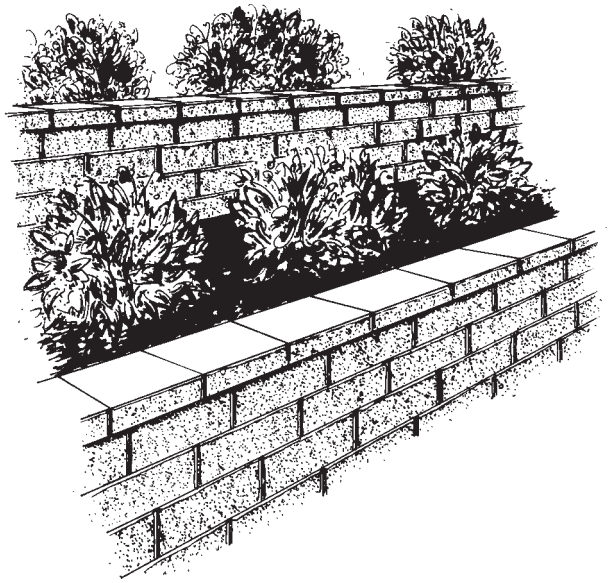
Loads Behind Walls



Surcharge loads behind walls can substantially increase amounts of required soil reinforcement. Common surcharge loads include: parking areas, driveways, roads, and building structures. For design purposes, permanent loads like buildings are considered to contribute to both destabilizing and stabilizing forces acting on walls. Dynamic forces like vehicular traffic are considered to contribute to destabilizing forces only.

BQ#104 Attachment

Often, the highest surcharge loads are caused by grading or paving equipment during construction. Heavy equipment should be kept at least three feet behind the back of retaining wall units. Soil reinforcement designs should accommodate all anticipated surcharge loads—even if they will occur infrequently or just once.



Slopes

Slopes behind walls increase pressures, sometimes doubling soil loads compared to level backfills. Steep slopes below walls can decrease stability of wall foundations. Slopes can increase the amount of soil reinforcement needed, especially the length. Generally, slopes above or below walls should be no steeper than 2:1 (horizontal:vertical).

Tiering

Aesthetically, dividing large grade changes into tiered wall sections may sometimes be desirable. However, upper wall tiers can add surcharge loads to lower walls and necessitate special designs. To avoid loading lower walls, upper walls must be set back horizontally at least twice the height of the lower walls. If walls are placed closer, lower walls must be designed to resist the load of upper walls.

! Several closely spaced tiered walls can create steep, unstable slopes. If tiered walls make a grade change steeper than 2:1 (horizontal:vertical), global slope stability may need to be reviewed by a qualified soils engineer. See VERSA-LOK® Technical Bulletin #7 for more information regarding tiered wall construction.

BQ#104 Attachment

6 PLANNING, ESTIMATING, & FINAL DESIGNS

Planning

Careful planning is critical to successful projects. Prior to design, accurate information needs to be gathered including soil conditions, proposed wall heights, topography, groundwater levels, and surface water conditions. Proper permits, owner approvals, utility clearances, and temporary easements should also be obtained in advance.

Planned wall alignments should be reviewed for feasibility. Make sure that layouts account for minimum curve radii, wall setback, and area needed for geosynthetic soil reinforcement. Be sure that all wall components fit within property constraints. Verify that temporary construction excavations will not undermine foundation supports of any existing structures or utilities. Considerations should also be given to site access for equipment and materials.

Estimating

Accurately estimate and order required materials including Square Foot™ units, VERSA-TUFF® pins, cap units, VERSA-LOK® Concrete Adhesive, imported backfill, leveling pad materials, geosynthetic soil reinforcement, drainage aggregate, and additional drainage materials. See the Material Estimation Worksheet on page 28 to help determine Square Foot quantities.

For reinforced-wall projects, the VERSA-Grid® estimating charts on page 29 provide approximate amounts of geogrid soil reinforcement necessary to construct walls in various soil and loading conditions. For tall walls or complex situations, our staff engineers can prepare project-specific preliminary designs to be used for estimation purposes.

BQ#104 Attachment

Final Designs

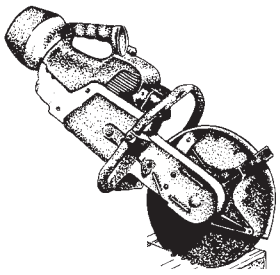
For walls more than four feet tall, most building codes require a final wall design prepared by a licensed Civil Engineer (P.E.) registered in that state. Square Foot™ retaining wall manufacturers have a network of licensed civil engineers who are familiar with segmental retaining wall design. These individuals are available for referrals to architects, engineers, or contractors with final wall design needs.

Final wall designs may be provided prior to putting projects out for bidding. Alternatively, wall portions of projects can be specified design/build. With design/build projects, engineers/architects provide wall layout information (line and grade) but not final engineering for the wall. Contractors submit bids based on this layout including estimated labor, materials, and final engineering costs. Contractors who are awarded projects retain licensed engineers to prepare final wall designs and submit shop drawings for approval from project engineers/architects.

As with all proposed construction, a soils report prepared by a qualified geotechnical engineer is required to provide adequate information for proper design. The soils report should address overall stability of planned grade changes and allowable bearing capacity of foundation soils. The report should also include information about reinforced and retained soil properties.

For assistance in specifying, designing and engineering Square Foot retaining walls, standard design/build specifications and sample construction details are provided on pages 30 to 41. This information is also available in electronic format on a Square Foot Construction Details disk. Technical staff is also available to assist with planning, layout, preliminary engineering, and referrals for final engineering.

BQ#104 Attachment



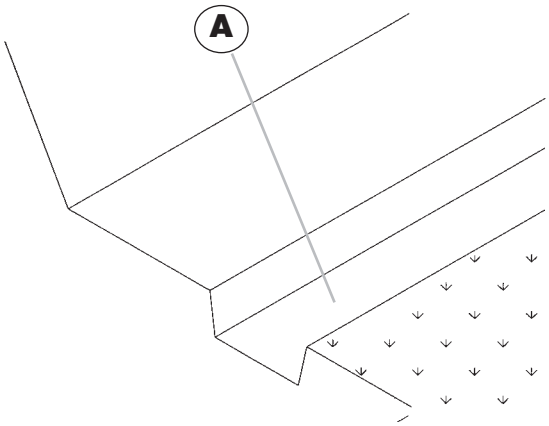
7 WALL CONSTRUCTION

Tools

The following tools may be helpful during construction of Square Foot™ retaining walls.

- **Safety Protection**
- **Shovel**
- **Four-Foot Level**
- **Smaller Level**
- **Four-Pound Sledge Hammer**
- **Masonry Chisel**
- **Brick Hammer**
- **Tape Measure**
- **Hand Tamper**
- **Vibratory-Plate Compactor**
- **Caulking Gun**
- **String Line**
- **Finishing Trowel**
- **Broom**
- **Diamond-Blade Concrete Saw**
- **Transit or Site Level**
- **Backhoe or Skid-Steer Loader**

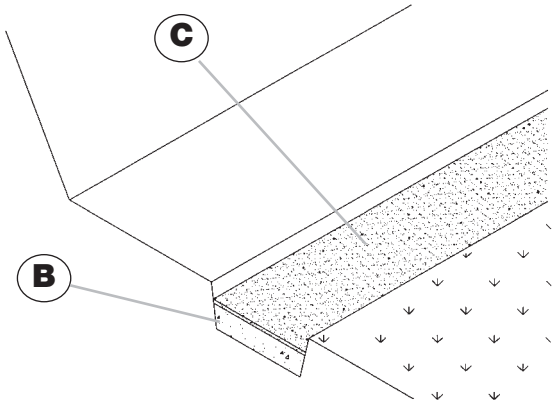
Unit Modification



Saw-cuts are normally made using a gas-powered cut-off saw with a diamond blade. To cut a unit, mark desired path of cut on all unit sides. Stand the unit with its face up and cut two to three inches deep along the front path. Reposition the unit and complete the cut by cutting the remainder of the unit along top and bottom paths. Cutting first into the front face ensures a straight, square edge which will likely have to fit closely next to the straight edge of an adjacent unit. Remember to always wear proper safety protection when performing cutting operations.

BQ#104 Attachment

Excavation

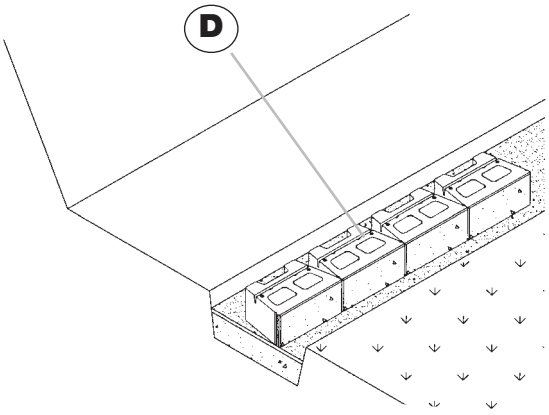


Excavate just deeply enough to accommodate the leveling pad (usually six inches) and required unit embedment below grade. (A) When necessary, also excavate areas where geosynthetic soil reinforcement will be placed. Required unit embedment varies with wall height and site conditions. Generally, if grade in front of the wall is level, one-tenth of the exposed wall height should be buried (embedded) below grade. Additional embedment may be required for special conditions including slopes in front of walls, soft foundation soils, and water applications.

Compact soil at the bottom of excavation. Do not place wall system on loose, soft, wet, or frozen soil—settlement may result. If the wall will sit on a previously backfilled excavation such as a utility line trench, be sure the entire depth of existing backfill is well compacted. If necessary, over-excavate soft soils and replace with properly compacted backfill.

Leveling Pad

Place granular leveling pad material and compact to a smooth, level surface. (B) Leveling pad should be at least six inches thick and 24 inches wide. It should consist of 3/4-inch crushed gravel. Use a thin layer of fine sand on top of the leveling pad for final leveling. (C)



To quickly construct long sections of leveling pad, create forms by leveling and staking rectangular metal tubing along both sides of the planned pad. Place and compact granular material within these leveled forms and screed off excess. See VERSA-LOK® Technical Bulletin #5 and video for more tips about leveling pad construction.

BQ#104 Attachment

7 WALL CONSTRUCTION

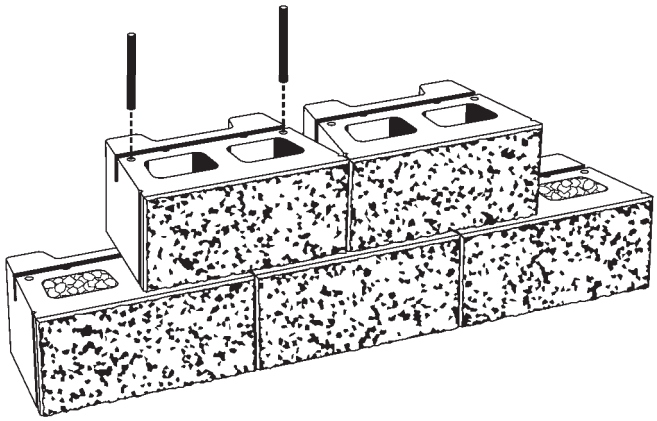
If the planned grade along wall front will change elevation, the leveling pad may be stepped in eight-inch increments to match the grade change. Always start at the lowest level and work upward.

Step the leveling pad often enough to avoid burying extra units while maintaining required unit embedment.

Base Course

Make sure that the leveling pad is level and begin placing base course units. (D) If the leveling pad is stepped, begin at the lowest course before proceeding to next course.

Align units using their backs or slot rather than their irregularly textured front faces. String lines may be helpful when aligning straight walls. Refer to pages 24 and 25 for tips on curve and corner alignment. Place units on the leveling pad, side-by-side. Front faces on adjacent units should fit tightly and unit bottoms should contact the leveling pad completely. Using a four-foot level, level units front-to-back, side-to-side with adjacent units. Tap high points with a mallet or hand tamper until level. Take time to ensure a level base course. Minor unevenness in the base course will be amplified and difficult to correct after several course have been installed.



After positioning the base course, fill the voids (cores) of the units with crushed gravel. To avoid clogging the pinning slots, use gravel that is 1.0 to 1.5 inches in diameter. Crushed gravel is suggested in the base course core fill because free-draining aggregate core fill may allow water to flow down to the base. Place and compact soil backfill behind the units. Also replace and compact over-excavated soil in front of the units. The backfill behind and in front of embedded units should consist of soil—do not use drainage aggregate.

BQ#104 Attachment

Additional Courses

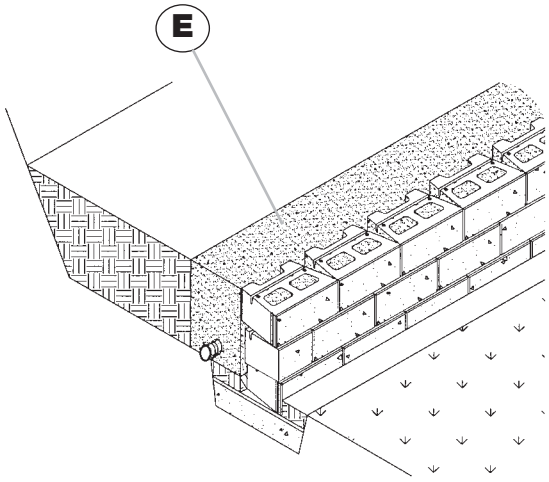
Sweep off tops of installed units to remove any debris that may interfere with additional courses. Place the next course of units by setting them a short distance away from their final position and slide them into place. Sliding helps remove imperfections and debris from the top surface of installed units.

A unique hole-to-slot pinning system allows units to be installed on variable bond. (Square Foot™ units do not need to be placed exactly halfway over the two lower course units.) Vertical joints can wander in relation to other joints throughout walls. Do not try to install walls on half bond by leaving gaps in vertical face joints. Because the bond can vary, vertical face joints can and always should be tight.

Pin Square Foot units with a one-inch setback (7 degree cant) or a 1/4-inch setback (near vertical). Use the one-inch setback unless the near vertical setback is specifically required. (Near-vertical walls require more geogrid than setback walls). For the one-inch setback, use the front pin holes (outside holes). For the near vertical setback, use the pin holes within the slots (inside holes). Insert two VERSA-TUFF® pins through the appropriate holes of the upper units into the receiving slots in the lower units. The two pins should engage two separate units in the course below. Make sure the pins are fully seated in the lower unit slots. If necessary, seat pins using a mallet and another pin. Avoid dropping pins into holes in the slots.

Pull the units forward to remove any looseness in the pin connection. Check unit alignment and levelness—adjust if necessary. If length of a course must fit into a limited space or if vertical joints begin to line up with joints below, adjust by installing partial units. Create partial units by saw-cutting whole units into pieces at least four inches wide.

Fill the voids (cores) of each course of units with angular, free-draining gravel before stacking the next course. Stack no



BQ#104 Attachment

7 WALL CONSTRUCTION

more than two courses before backfilling. If units are stacked too high, they may push out of alignment during placement of backfill.

Drainage Aggregate

Beginning at the level of planned grade in front of the wall, place drainage aggregate (1-1.5-inch clear, free-draining, angular gravel) between and directly behind units to a minimum of 12 inches. Drainage aggregate must be free of fine dirt or soil. Do not place drainage aggregate behind units that will be embedded. (E)

Drainage aggregate is critical to wall performance because it keeps water pressures from building up behind the wall face.

For walls over three feet in height, perforated drain pipes should be used to collect water along the base of the drainage aggregate. Drain pipes help to quickly remove large amounts of water.

For some projects, especially shoreline applications, a geosynthetic filter fabric may be required behind the drainage aggregate. Filter fabric prevents soils or sands (fines) from migrating into the drainage aggregate and wall face joints.

Compacted Soil Backfill

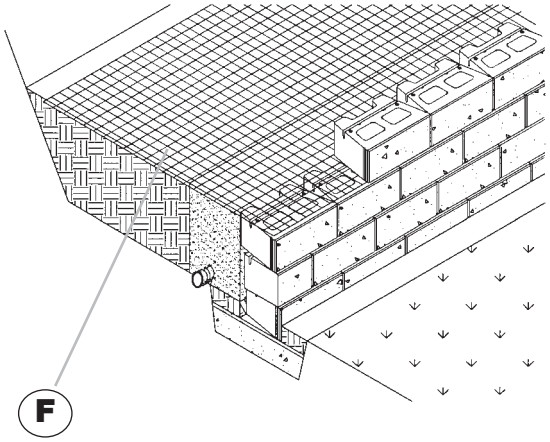
Proper placement and compaction of backfill is critical to the stability of a segmental wall. Poorly compacted backfill puts extra pressures on a wall—especially when it becomes wet.

Place soil backfill beginning directly behind drainage fill in layers (lifts) no thicker than six inches. Compact soil backfill—making sure that backfill is neither too wet nor dry. The amount and type of effort needed for adequate backfill compaction varies with soil type and moisture content. Generally, hand-operated vibratory-plate compactors can be used to achieve adequate compaction of granular soils—even on big projects. Fine soils such as clays should be compacted with kneading-type equipment like sheepsfoot rollers.

BQ#104 Attachment

To avoid pushing wall units out of alignment, do not use heavy self-propelled compaction equipment within three feet of the wall face.

At the end of the day's construction, protect the wall and the reinforced backfill from possible rainstorm water damage. Grade the soil backfill so water will run away from wall face and direct runoff from adjacent areas away from project site.



Geosynthetic Soil Reinforcement

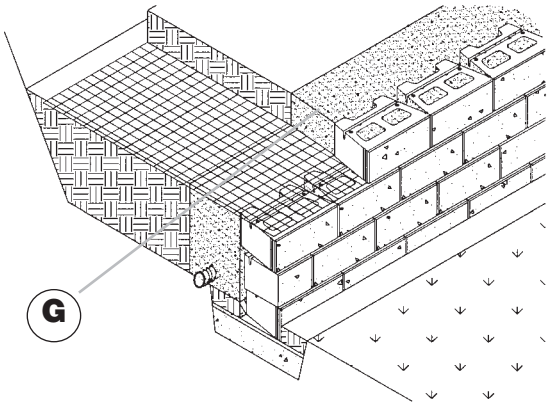
Geosynthetic soil reinforcement, like VERSA-Grid®, is used to reinforce soil backfill when weight of Square Foot™ units alone is not enough to resist soil pressures. Soil reinforcement type, length, and vertical spacing will vary for each project and should be specified in a final wall design prepared by a licensed Civil Engineer (P.E.).

Prepare to install soil reinforcement materials by placing Square Foot units and backfilling up to the height of the first soil reinforcement layer specified on construction drawings. Lay soil reinforcement horizontally on top of compacted backfill and Square Foot units. (F) Geosynthetic layers should be placed about one inch from the front of Square Foot units.

Geosynthetics are usually stronger in one direction. It is very important to place them in the correct direction.

The strongest direction of the geosynthetic must be perpendicular to the wall face. For correct orientation, follow the geosynthetic manufacturer's directions carefully.

To ensure stability during construction, vertical spacing between geosynthetic layers should never exceed two feet. See VERSA-Grid® estimating charts on page 29 for assistance with preliminary material estimating.



After positioning soil reinforcement, place the next course of Square Foot units on top of soil reinforcement. Insert pins through Square Foot units and into lower course units. Place drainage aggregate against back of the units and on top of soil reinforcement. Remove slack by pulling soil reinforcement away from the wall face and anchoring at back ends.

7 WALL CONSTRUCTION

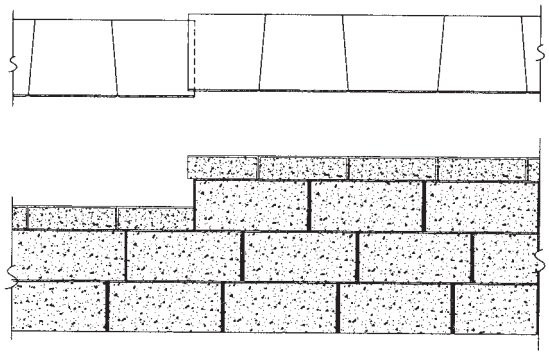
(G) Beginning at the wall face, place and compact soil backfill. Keep soil reinforcement taut and avoid wrinkles.

Place a minimum of six inches of soil backfill before using any tracked equipment on top of soil reinforcement. Follow manufacturer's construction guidelines to avoid damage to soil reinforcement.

Placing soil reinforcement behind curves and corners requires special layout and overlapping procedures. Never overlap soil reinforcement layers directly on top of each other. Slick surfaces of geosynthetics will not hold in place properly when placed directly on top of one another. Always provide at least three inches of soil fill between overlapping soil reinforcement layers.

! *See VERSA-LOK® Technical Bulletin #3 and geosynthetic manufacturer's instructions for more curve/corner soil reinforcement details.*

More, More, More ...



Continue placing additional courses, drainage material, compacted soil backfill, and geosynthetic soil reinforcement as specified until desired wall height is achieved.

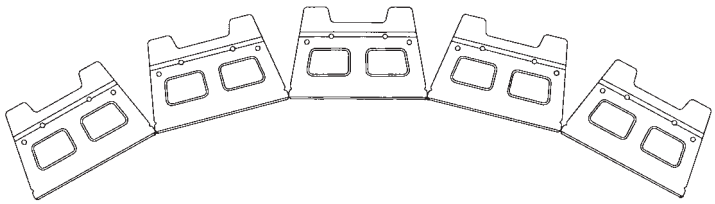
! *For walls more than four feet high, most building codes require a final wall design prepared by a licensed Civil Engineer (P.E.) registered in that state. Square Foot™ and its manufacturers have a network of licensed civil engineers who are familiar with segmental retaining wall design. These individuals are available for referrals to architects, engineers, or contractors with final wall design needs.*

BQ#104 Attachment

Caps

Finish the wall by placing cap units along the top. Two cap unit types are available—A and B. Alternate A and B caps on straight walls. Use A caps for convex (outside) curves. Use B caps for concave (inside) curves.

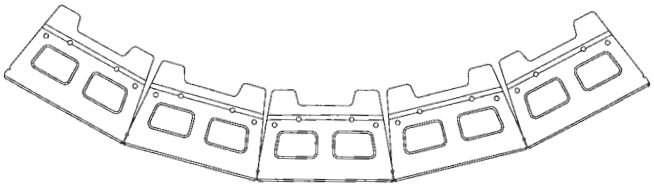
If cap layout does not exactly match the wall radius, adjust spacing at the back of the caps—do not gap caps at the front. To completely eliminate gapping, it may be necessary to saw-cut sides of cap units.



Front faces of caps may be placed flush, set back, or slightly overhanging faces of Square Foot™ units. It is preferred to overhang cap units approximately 3/4-inch to create an "eyebrow" on top of the wall. Overhanging cap units will create a small shadow on wall units and help hide minor imperfections in wall alignment.

! *All cap units should be arranged before securing with VERSA-LOK® Concrete Adhesive. Secure caps by placing two, continuous, 1/4-inch beads of adhesive along the top course of wall units. Set caps on prepared wall units. Do not secure caps using mortar or adhesives that become rigid. A Square Foot wall may move slightly (especially in areas subject to freeze/thaw cycles) causing a rigid cap adhesive to fail. Do not place caps if the units are too wet for the adhesive to stick. In cold weather, keep the adhesive tubes warm until just prior to use. For more information about capping, see VERSA-LOK Technical Bulletin #4.*

BQ#104 Attachment

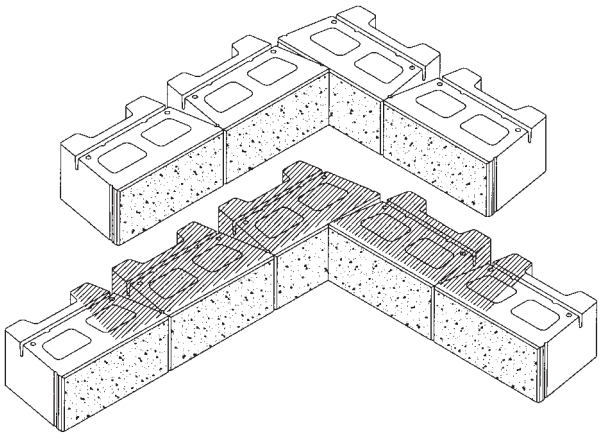


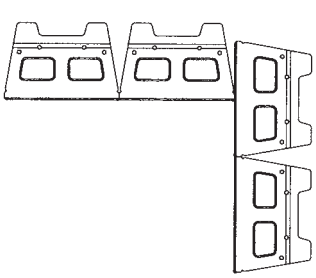
8 WALL DESIGN ELEMENTS

Curves

The trapezoidal shape of Square Foot™ units permits construction of concave and convex curves. Construct curves by increasing or decreasing spaces between the backs of the units—always keeping the front joints tightly aligned. The recommended minimum radius for both convex (outside) and concave (inside) curves is 4’ 6” (4.5 feet), measured from the front face of the units.

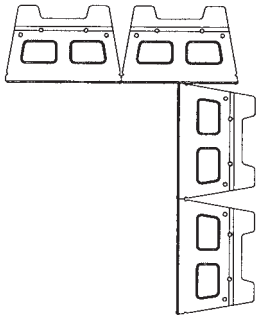
See VERSA-LOK® Technical Bulletin #3 for proper placement of geosynthetic soil reinforcement.





For convex curves, plan ahead to make sure the upper courses do not get tighter than the minimum radius. Because each course sets back, the radius of a convex curve becomes smaller as each course is stacked. To calculate minimum base course radius of a convex curve, add up the setback (either 1/4 or one inch) for each course needed. For example, minimum base course radius for a wall that will have six one inch setbacks (including embedded units) will be (6 x 1") + 4'6" = 5.0".

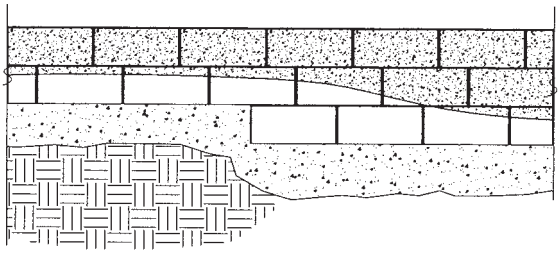
BQ#104 Attachment



Corners

Inside 90-degree corners can be easily installed with no unit modification. For the first course, abut the unit from one side of the corner against a unit on the other side that runs past the corner. On the next course, simply reverse which side abuts and which side runs long.

UPPER COURSE



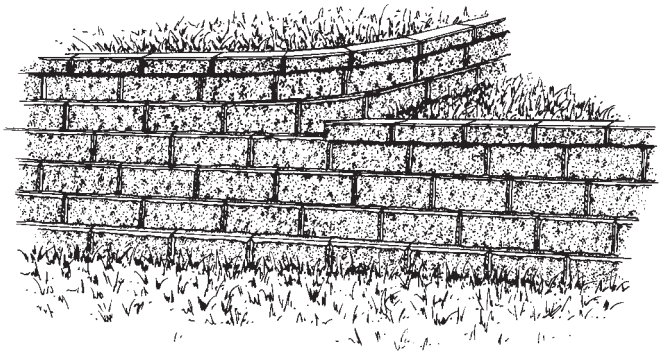
LOWER COURSE

A special corner unit is needed for an outside 90-degree corner and is available only in limited markets. Check with your local Square Foot™ supplier. For ease of installation, it is suggested to replace outside corners with a tight radius convex curve whenever possible.

8 WALL DESIGN ELEMENTS

Stepped Base Elevations

If the final grade along the front of the wall changes elevation, the leveling pad and base course may be stepped in eight-inch increments to match the grade change. Always start at the lowest level and work upward.

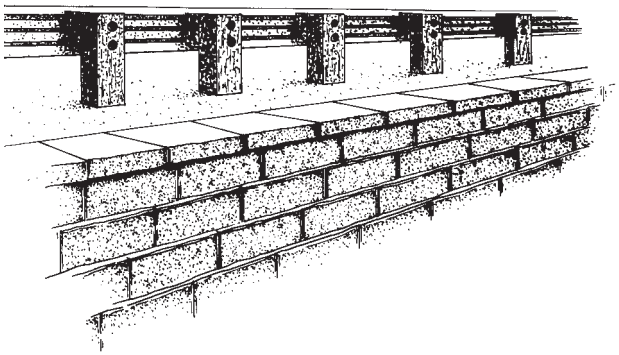


Step the leveling pad often enough to avoid burying extra units while maintaining required unit embedment.

Returns

As an option to stepping wall tops, grade changes at the top of a wall can be accommodated by creating returns that turn into slopes behind a wall.

Returns create a terraced appearance instead of several small steps along the top of a wall.



! *See VERSA-LOK® Technical Bulletin #7 for more information on tiered walls.*

BQ#104 Attachment

Guide Rails, Railings, and Traffic Barriers

For safety purposes, a variety of barriers may be placed behind Square Foot™ walls, including fences, railings, and guide rails. Barriers should be placed several feet behind wall faces to provide post foundations. Posts may penetrate geosynthetic soil reinforcement layers in accordance with the manufacturer's and engineer's recommendations.

When space is limited, properly designed, reinforced concrete barriers can be placed directly on top of walls. Expansion joints and bond breaks should be provided to accommodate differential movement between rigid barriers and flexible wall faces. Cantilevered supports extending behind walls stabilize the barriers against overturning.

! *For more information about guide rails, railings, and traffic barriers see VERSA-LOK® Technical Bulletin #8 or Construction Details Disk—available FREE by calling (800) 770-4525.*

MATERIAL ESTIMATION WORKSHEET

Square Foot™ Units

Area of Wall (SF) x 1.0 Units per SF = Number of Units

_____ SF x 1.0 = _____ Units Needed

VERSA-TUFF® Pins

Units x 2 Pins per Unit = Number of Pins

_____ Units x 2 = _____ Pins Needed

NOTE: *Pins will not be used on the base course.*

Cap Units

Lineal Feet of Wall (LF) x .86 = Number of Caps

_____ LF x .86 = _____ Caps Needed

straight walls - use half **A** caps and half **B** caps
inside curves - use **B** caps
outside curves - use **A** caps

Additional caps may be needed for special splits or cuts.
Gradual curves may require a combination of A & B caps.

VERSA-LOK® Concrete Adhesive

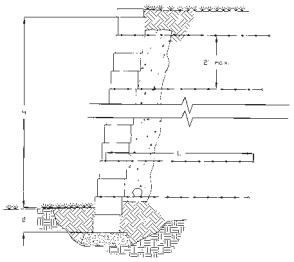
11 oz. Tube: _____ LF ÷ 14 LF per Tube = _____ Tubes

For estimating purposes, the tables on the following page provide approximate amounts of geogrid soil reinforcement needed to construct walls in certain soil and loading conditions. For tall walls or complex situations, in-house staff engineers can prepare project specific preliminary designs to be used for estimation purposes.

VERSA-GRID® ESTIMATING CHARTS

These tables are provided for **estimating purposes only**. *They should not be used or relied upon for any application without verification of accuracy, suitability, and applicability for the use contemplated, which is the sole responsibility of the user. A final, project-specific design should be prepared by a qualified, licensed, professional Civil Engineer (P.E.) based on actual site conditions. Preparation of these tables did not include consideration or analysis of global slope stability or allowable bearing capacity of foundation soils. These must be reviewed for each project by a qualified Geotechnical Engineer.*

There are three tables provided in this guide to help estimate geogrid for different wall loading situations—level backfill, sloping backfill, and surcharges. To estimate geogrid quantities, first look under the **column** *appropriate for project soils, determine the height (H) of the proposed wall and read across the* **row** *(under appropriate soil column) to approximate geogrid type, number of layers, and lengths of each layer.*



These design charts assume the following conditions:

- Uniform soil conditions
- Stable foundation soils
- Level grade in front of the wall
- No groundwater/water loads
- Slopes and loads behind the wall as shown
- No additional loading behind wall *(such as tiered walls, building loads, etc.)*

Design standards and properties used to develop these charts were:

- Design methodology - in general accordance with NCMA Design Manual for SRWs
- Unit weight of soil (γ) 120 pcf
- Internal friction angle of soil (ϕ) as shown on charts
- Long term design strength of the geogrid (LTDS)
  - **VERSA-Grid VG 3.0 - 1250 lb/ft**
  - **VERSA-Grid VG 5.0 - 1875 lb/ft**

SQUARE FOOT™ SPECIFICATIONS

PART 1: *GENERAL*

1.01 DESCRIPTION

A. *Work includes furnishing and installing segmental retaining wall (SRW) units to the lines and grades designated on the project's final construction drawings or as directed by the Architect/Engineer. Also included are furnishing and installing appurtenant materials required for construction of the retaining wall as shown on the construction drawings.*

1.02 REFERENCE STANDARDS

A. *Segmental Retaining Wall Units*
   1. **ASTM C 1372**
      - Standard Specification for Segmental Retaining Wall Units
   2. **ASTM C 140**
      - Standard Test Methods of Sampling and Testing Concrete Masonry Units

B. *Geosynthetic Reinforcement*
   1. **ASTM D 4595**
      - Tensile Properties of Geotextiles by the Wide-Width Strip Method
   2. **ASTM D 5262**
      - Test Method for Evaluating the Unconfined Creep Behavior of Geosynthetics
   3. **GRI:GG1**
      - Single Rib Geogrid Tensile Strength
   4. **GRI:GG5**
      - Geogrid Pullout

C. *Soils*
   1. **ASTM D 698**
      - Moisture Density Relationship for Soils, Standard Method
   2. **ASTM D 422**
      - Gradation of Soils
   3. **ASTM D 424**
      - Atterberg Limits of Soil

D. *Drainage Pipe*
   1. **ASTM D 3034**
      - Specification for Polyvinyl Chloride (PVC) Plastic Pipe
   2. **ASTM D 1248**
      - Specification for Corrugated Plastic Pipe

E. *Engineering Design*
   1. "NCMA Design Manual for Segmental Retaining Walls," Second Edition

F. *Where specifications and reference documents conflict, the Architect/Engineer shall make the final determination of applicable document.*

1.03 SUBMITTALS

A. **Material Submittals**: *The Contractor shall submit manufacturers' certifications two weeks prior to start of work stating that the SRW units and geosynthetic reinforcement meet the requirements of Section 2 of this specification.*

B. **Design Submittal**: *The Contractor shall submit two sets of detailed design calculations and final retaining wall plans for approval at least two weeks prior to the beginning of wall construction. All calculations and drawings shall be prepared and sealed by a professional Civil Engineer (P.E.) – (Wall Design Engineer) experienced in SRW design and licensed in the state where the wall is to be built.*

1.04 DELIVERY, STORAGE AND HANDLING

A. *Contractor shall check materials upon delivery to assure that specified type and grade of materials have been received and proper color and texture of SRW units have been received.*

B. *Contractor shall prevent excessive mud, wet concrete, epoxies, and like materials that may affix themselves, from coming in contact with materials.*

C. *Contractor shall store and handle materials in accordance with manufacturer's recommendations.*

D. *Contractor shall protect materials from damage. Damaged materials shall not be incorporated into the retaining wall.*

BQ#104 Attachment

SQUARE FOOT™ SPECIFICATIONS

PART 2: *MATERIALS*

2.01 SEGMENTAL RETAINING WALL UNITS

A. *SRW units shall be machine-formed, Portland Cement concrete blocks specifically designed for retaining wall applications. SRW units currently approved for this project are:* Square Foot™ units as manufactured by _____.

B. *Color of SRW units shall be* _____.

C. *Finish of SRW units shall be split face.*

D. *SRW unit faces shall be of straight geometry.*

E. *SRW unit height shall be 8 inches.*

F. *SRW units (not including aggregate fill in unit voids) shall provide a minimum weight of 80 psf wall face area.*

G. *SRW units shall be interlocked with connection pins, designed with proper setback to provide 8:1 vertical to horizontal batter (a 7 degree cant from vertical) or near vertical (2 degree cant from vertical).*

H. *SRW units shall be capable of being erected with the horizontal gap between adjacent units not exceeding 1/8 inch.*

I. *SRW units shall be sound and free of cracks or other defects that would interfere with the proper placing of the unit or significantly impair the strength or permanence of the structure. Cracking or excessive chipping may be grounds for rejection. Units showing cracks longer than 1/2" shall not be used within the wall. Units showing chips visible at a distance of 30 feet from the wall shall not be used within the wall.*

J. *Concrete used to manufacture SRW units shall have a minimum 28 days compressive strength of 3,000 psi and a maximum moisture absorption rate, by weight, of 8 percent as determined in accordance with ASTM C140. Compressive strength test specimens shall conform to the saw-cut coupon provisions of ASTM C140.*

K. *SRW units' molded dimensions shall not differ more than ± 1/8 inch from that specified, in accordance with ASTM C1372.*

2.02 SEGMENTAL RETAINING WALL UNIT CONNECTION PINS

A. *SRW units shall be interlocked with VERSA-TUFF® connection pins. The pins shall consist of glass-reinforced nylon made for the expressed use with the SRW units supplied.*

2.03 GEOSYNTHETIC REINFORCEMENT

A. *Geosynthetic reinforcement shall consist of geogrids or geotextiles manufactured as a soil reinforcement element. The manufacturers/suppliers of the geosynthetic reinforcement shall have demonstrated construction of similar size and types of segmental retaining walls on previous projects. The geosynthetic type must be approved one week prior to bid opening. Geosynthetic types currently approved for this project are:* **VERSA-Grid® Geogrids.**

B. *The type, strength, and placement location of the reinforcing geosynthetic shall be as determined by the Wall Design Engineer, as shown on the final, P.E. sealed retaining wall plans.*

2.04 LEVELING PAD

A. *Material for leveling pad shall consist of compacted sand, gravel, or combination thereof (USCS soil types GP, GW, SP, & SW) and shall be a minimum of 6 inches in depth. Lean concrete with a strength of 200 to 300 psi and three inches thick maximum may also be used as a leveling pad material. The leveling pad should extend laterally at least a distance of 6 inches from the toe and heel of the lowermost SRW unit.*

2.05 DRAINAGE AGGREGATE

A. *Drainage aggregate shall be angular, clean stone or granular fill meeting the following gradation as determined in accordance with ASTM D422*

Sieve Size	Percent Passing
1 inch	100
3/4 inch	75-100
No. 4	0-60
No. 40	0-50
No. 200	0-5

SQUARE FOOT™ SPECIFICATIONS

2.06 DRAINAGE PIPE

A. *The drainage collection pipe shall be a perforated or slotted PVC, or corrugated HDPE pipe. The drainage pipe may be wrapped with a geotextile to function as a filter.*

B. *Drainage pipe shall be manufactured in accordance with ASTM D 3034 and/or ASTM D 1248*

2.07 REINFORCED (INFILL) SOIL

A. *The reinforced soil material shall be free of debris. Unless otherwise noted on the final, P.E. sealed retaining wall plans prepared by the Wall Design Engineer, the reinforced material shall consist of the inorganic USCS soil types GP, GW, SW, SP, SM meeting the following gradation, as determined in accordance with ASTM D422:*

Sieve Size	Percent Passing
4 inches	100
No. 4	20-100
No. 40	0-60
No. 200	0-35

B. *The maximum particle size of poorly-graded gravels (GP) (no fines) should not exceed 3/4 inch unless expressly approved by the Wall Design Engineer and the long-term design strength (LTDS) of the geosynthetic is reduced to account for additional installation damage from particles larger than this maximum.*

C. *The plasticity of the fine fraction shall be less than 20.*

PART 3: *DESIGN PARAMETERS*

3.01 SOIL

A. *The following soil parameters, as determined by the Owner's Geotechnical Engineer shall be used for the preparation of the final design:*

	Unit Weight (γ) (pcf)	Internal Friction Angle (ϕ) (degrees)	Cohesion (c)
REINFORCED FILL:	_____	_____	0
RETAINED SOIL:	_____	_____	0
FOUNDATION SOIL:	_____	_____	_____

(If internal friction angles are not available for the above section, the specifier can provide the USCS soil type classification for the reinforced, retained, and foundation soils and/or attach the geotechnical investigation report for this project.)

B. *Should the actual soil conditions observed during construction differ from those assumed for the design, design shall be reviewed by the Wall Design Engineer at the Owner's Geotechnical Engineer's direction.*

3.02 DESIGN

A. *The design analysis for the final, P.E.-sealed retaining wall plans prepared by the Wall Design Engineer shall consider the external stability against sliding and overturning, internal stability, and facial stability of the reinforced soil mass and shall be in accordance with acceptable engineering practice and these specifications. The internal and external stability analysis shall be performed in accordance with the "NCMA Design Manual for Segmental Retaining Walls", using the recommended minimum factors of safety in this manual.*

B. *External stability analysis for bearing capacity, global stability, and total and differential settlement shall be the responsibility of the Owner and the Owner's Geotechnical Engineer. The Geotechnical Engineer shall perform bearing capacity, settlement estimates, and global stability analysis based on the final wall design provided by the Wall Design Engineer and coordinate any required changes with Wall Design Engineer.*

C. *While vertical spacing between geogrid layers may vary, it shall not exceed 2.0 feet maximum in the wall design.*

BQ#104 Attachment

D. *The geosynthetic placement in the wall design shall have 100-percent continuous coverage parallel to the wall face. Gapping between horizontally adjacent layers of geosynthetic (partial coverage) will not be allowed.*

PART 4: CONSTRUCTION

4.01 INSPECTION

A. *The Owner or Owner's Representative is responsible for verifying that the Contractor meets all the requirements of the specification. This includes all submittals for materials and design, qualifications, and proper installation of wall system.*

B. *Contractor's field construction supervisor shall have demonstrated experience and be qualified to direct all work at the site.*

4.02 EXCAVATION

A. *Contractor shall excavate to the lines and grades shown on the project grading plans. Contractor shall take precautions to minimize over-excavation. Over-excavation shall be filled with compacted infill material, or as directed by the Engineer/Architect, at the Contractor's expense.*

B. *Contractor shall verify location of existing structures and utilities prior to excavation. Contractor shall ensure all surrounding structures are protected from the effects of wall excavation. Excavation support, if required, is the responsibility of the Contractor.*

4.03 FOUNDATION PREPARATION

A. *Following the excavation, the foundation soil shall be examined by the Owner's Engineer to assure actual foundation soil strength meets or exceeds the assumed design bearing strength. Soils not meeting the required strength shall be removed and replaced with infill soils, as directed by the Owner's Engineer.*

B. *Foundation soil shall be proofrolled and compacted to 95 percent standard Proctor density and inspected by the Owner's Engineer prior to placement of leveling pad materials.*

4.04 LEVELING PAD CONSTRUCTION

A. *Leveling pad shall be placed as shown on the final, P.E.-sealed retaining wall plans with a minimum thickness of 6 inches. The leveling pad should extend laterally at least a distance of 6 inches from the toe and heel of the lower most SRW unit.*

B. *Granular leveling pad material shall be compacted to provide a firm, level bearing surface on which to place the first course of units. Well-graded sand can be used to smooth the top 1/4- to 1/2-inch of the leveling pad. Compaction will be with mechanical plate compactors to achieve 95-percent of maximum standard Proctor density (ASTM D 698).*

4.05 SRW UNIT INSTALLATION

A. *All SRW units shall be installed at the proper elevation and orientation as shown on the final, P.E.-sealed retaining wall plans and details as directed by the Wall Design Engineer. The SRW units shall be installed in general accordance with the manufacturer's recommendations. The specifications and drawings shall govern in any conflict between the two requirements.*

B. *First course of SRW units shall be placed on the leveling pad. The units shall be leveled side-to-side, front-to-rear and with adjacent units, and aligned to ensure intimate contact with the leveling pad. The first course is the most important to ensure accurate and acceptable results. No gaps shall be left between the front of adjacent units. Alignment may be done by means of a string line or offset from base line to the back of the units.*

C. *The voids (cores) of the base course units shall be filled with crushed gravel. The cores of additional courses shall be filled with free-draining aggregate.*

D. *All excess debris shall be cleaned from top of units and the next course of units installed on top of the units below.*

E. *Two VERSA-TUFF® connection pins shall be inserted through the pin holes of each upper course unit into receiving slots in lower course units. Pins shall be fully seated in the pin slot below. Units shall be pushed forward to remove any looseness in the unit-to-unit connection.*

F. *Prior to placement of next course, the level and alignment of the units shall be checked and corrected, where needed.*

BQ#104 Attachment

SQUARE FOOT™ SPECIFICATIONS

G. *Layout of curves and corners shall be installed in accordance with the wall plan details or in general accordance with SRW manufacturer's installation guidelines. Walls meeting at corners shall be interlocked by overlapping successive courses.*

H. *Procedures "C" through "F" shall be repeated until reaching top of wall, just below the height of the cap units. Geosynthetic reinforcement, drainage materials, and reinforced backfill shall be placed in sequence with unit installation as described in Section 4.06, 4.07, and 4.08.*

4.06 GEOSYNTHETIC REINFORCEMENT PLACEMENT

A. *All geosynthetic reinforcement shall be installed at the proper elevation and orientation as shown on the final, P.E.-sealed retaining wall plan profiles and details, or as directed by the Wall Design Engineer.*

B. *At the elevations shown on the final plans, (after the units, drainage material, and backfill have been placed to this elevation) the geosynthetic reinforcement shall be laid horizontally on compacted infill and on top of the concrete SRW units. It shall be placed to within one inch of the front face of the unit below. Embedment of the geosynthetic in the SRW units shall be consistent with SRW manufacturer's recommendations. Correct orientation of the geosynthetic reinforcement shall be verified by the Contractor to be in accordance with the geosynthetic manufacturer's recommendations. The highest strength direction of the geosynthetic must be perpendicular to the wall face.*

C. *Geosynthetic reinforcement layers shall be one continuous piece for their entire embedment length. Splicing of the geosynthetic in the design strength direction (perpendicular to the wall face) shall not be permitted. Along the length of the wall (parallel to the face), horizontally adjacent sections of geosynthetic reinforcement shall be butted in a manner to assure 100-percent coverage parallel to the wall face.*

D. *Tracked construction equipment shall not be operated directly on the geosynthetic reinforcement. A minimum of 6 inches of backfill is required prior to operation of tracked vehicles over the geosynthetic. Turning should be kept to a minimum. Rubber-tired equipment may pass over the geosynthetic reinforcement at slow speeds (less than 5 mph).*

E. *The geosynthetic reinforcement shall be free of wrinkles prior to placement of soil fill. The nominal tension shall be applied to the reinforcement and secured in place with staples, stakes, or by hand tensioning until reinforcement is covered by 6 inches of fill.*

4.07 DRAINAGE MATERIALS

A. *Drainage aggregate shall be installed to the line, grades, and sections shown on the final P.E. sealed retaining wall plans. Drainage aggregate shall be placed to the minimum thickness shown on the construction plans between and behind units (a minimum of 1 cubic foot for each exposed square foot of wall face unless otherwise noted on the final wall plans).*

B. *Drainage collection pipes shall be installed to maintain gravity flow of water to outside the reinforced soil zone. The drainage collection pipe shall daylight into a storm sewer manhole or along a slope at an elevation lower than the lowest point of the pipe within the aggregate drain.*

4.08 BACKFILL PLACEMENT

A. *The reinforced backfill shall be placed as shown in the final wall plans in the maximum compacted lift thickness of 10 inches and shall be compacted to a minimum of 95-percent of standard Proctor density (ASTM D 698) at a moisture content within 2-percent of optimum. The backfill shall be placed and spread in such a manner as to eliminate wrinkles or movement of the geosynthetic reinforcement and the SRW units.*

B. *Only hand-operated compaction equipment shall be allowed within 3 feet of the back of the wall unit. Compaction within the 3 feet behind the wall unit shall be achieved by at least three (3) passes of a lightweight mechanical tamper, plate, or roller.*

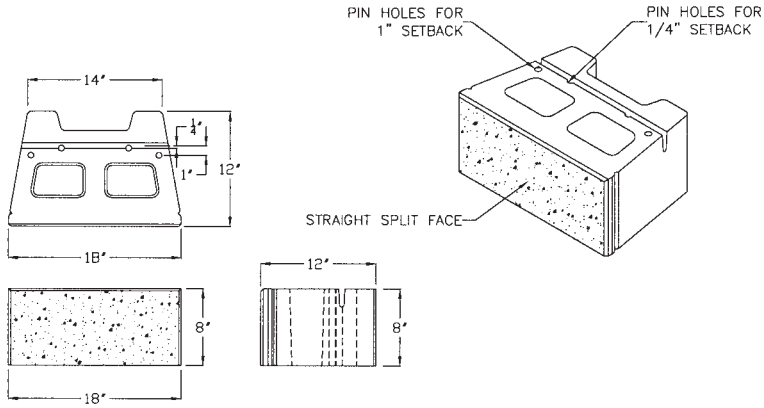
C. *At the end of each day's operation, the Contractor shall slope the last level of backfill away from the wall facing and reinforced backfill to direct water runoff away from the wall face.*

D. *At completion of wall construction, backfill shall be placed level with final top-of-wall elevation. If final grading, paving, landscaping, and/or storm drainage installation adjacent to the wall is not placed*

BQ#104 Attachment

immediately after wall completion, temporary grading and drainage shall be provided to ensure water runoff is not directed at the wall nor allowed to collect or pond behind the wall until final construction adjacent to the wall is completed.

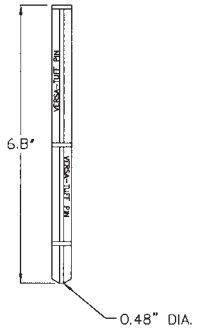
4.09 SRW CAPS



A. *SRW caps shall be properly aligned and glued to underlying units with VERSA-LOK® Concrete Adhesive, a flexible, high-strength concrete adhesive. Rigid adhesive or mortar are not acceptable.*

B. *Caps shall overhang the top course of units by 3/4- to 1-inch. Slight variation in overhang is allowed to correct alignment at the top of the wall.*

4.11 CONSTRUCTION ADJACENT TO COMPLETED WALL



A. *The Owner or Owner's Representative is responsible for ensuring that construction by others adjacent to the wall does not disturb the wall or place temporary construction loads on the wall that exceed design loads, including loads such as water pressure, temporary grades, or equipment loading. Heavy paving or grading equipment shall be kept a minimum of 3 feet behind the back of the wall face. Equipment with wheel loads in excess of 150 psf live load shall not be operated within 10 feet of the face of the retaining wall during construction adjacent to the wall. Care should be taken by the General Contractor to ensure water runoff is directed away from the wall structure until final grading and surface drainage collection systems are completed.*

GENERAL NOTES FOR GEOSYNTHETIC REINFORCEMENT

1. AT THE ELEVATIONS SHOWN ON THE CONSTRUCTION PLANS, THE GEOSYNTHETIC SHALL BE LAID HORIZONTALLY ON COMPACTED SOIL FILL AND PLACED ON TO THE VERSA–LOK UNITS.
2. CORRECT ORIENTATION (ROLL DIRECTION) OF THE GEOSYNTHETIC SHALL BE VERIFIED BY THE CONTRACTOR TO BE IN ACCORDANCE WITH THE GEOSYNTHETIC MANUFACTURER'S RECOMMENDATIONS.
3. THE GEOSYNTHETIC SHALL BE IN TENSION AND FREE OF WRINKLES PRIOR TO PLACEMENT OF SOIL FILL.
4. NOMINAL TENSION SHALL BE APPLIED TO THE GEOSYNTHETIC AND SECURED IN PLACE WITH STAPLES, STAKES OR BY HAND TENSIONING UNTIL THE GEOSYNTHETIC IS COVERED BY SIX INCHES OF SOIL FILL.

SUBSTITUTION REQUEST
(During the Bidding/Negotiating Phase)

PROJECT: Greenwich Middle School

SUBSTITUTION REQUEST NUMBER: 1

FROM:

TO: Joseph Matta

Turner Construction Company

DATE: 10/14/2024

A/E PROJECT NUMBER:

RE: Aacer Power Play Panel equal to basis of design

CONTRACT FOR: Aacer Sports Flooring

SPECIFICATION TITLE: Wood Athletic Flooring

DESCRIPTION: Wood Athletic Flooring

SECTION: 096466 **PAGE:** 3

ARTICLE/PARAGRAPH: 2.1,A,1

PROPOSED SUBSTITUTION: Aacer Power Play Panel

MANUFACTURER: Aacer Sports Flooring **ADDRESS:** 701 E. Elm St, Crandon, WI 54520 **PHONE:** (877)-582-1181

TRADE NAME: Aacer Sports Flooring LLC **MODEL NO.:**

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

SUBMITTED BY:

SIGNED BY:

FIRM:

ADDRESS:

TELEPHONE:

A/E's REVIEW AND RECOMMENDATION:

- [X] Approve Substitution—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.
- [ ] Approve Substitution as noted—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.
- [ ] Reject Substitution—Use specified materials.
- [ ] Substitution Request received too late—Use specified materials.

SIGNED BY: Stephen Martocchio - SLAM **DATE:** 10/30/24

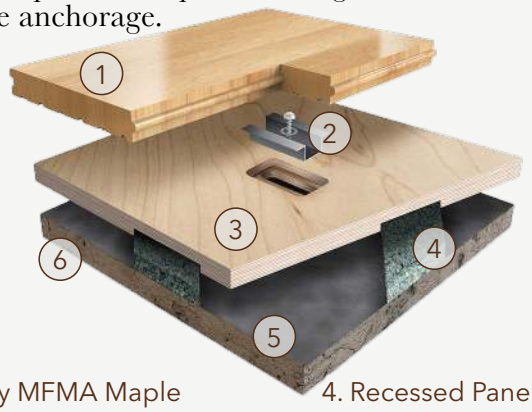
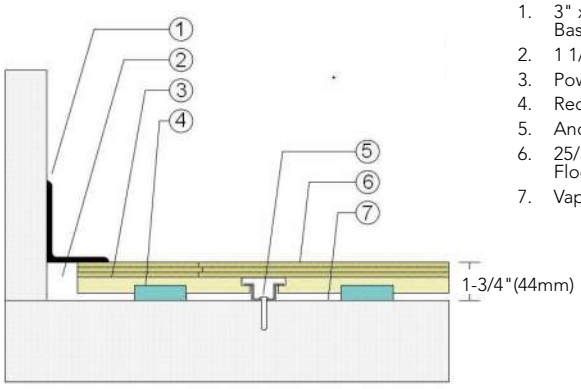
PowerPlay™ Panel

FIXED RESILIENT SYSTEM



AACER SPORTS FLOORING
an Infinity Wood Floors Company

Prefabricated PowerPlay Panels provide lineal cushions contributing to uniform high shock absorption and ball rebound value and offer athletic response equivalent to full blanket floors with the added advantage of subfloor ventilation and resilient pad protection. Sectional steel channel anchorage contributes to added stability and uniformity while allowing for lateral movement.



PowerPlay™ Panel RFI 119

PowerPlay Panel provides desired shock absorption, basketball rebound, protective pad housing, airflow, and stabilizing steel concrete anchorage.

SECTION: 09 51 00

PAGE: 2

ARTICLE/PARAGRAPH: 2.1 - A & B

PROPOSED SUBSTITUTION: Utilize Certainteed ceiling tile and grid

MANUFACTURER: Certainteed

ADDRESS: 5015 Oakbrook Pkwy
Norcross, Georgia 30093

PHONE:

TRADE NAME: Acoustical Ceilings

MODEL NO.: Various

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

FEATURES AND BENEFITS

- Balanced Acoustics. Wide range of options. Sound absorption NRC up to 0.90 and sound attenuation CAC up to 40 with 0.95 NRC coming soon.
- High light-reflective finish (LR-0.90 White products).
- Washable and scrubbable finish.[6]
- Impact and scratch resistant.[6]
- Coordinates visually with USG Halcyon™ Acoustical Panels for open- or closed-plan applications.
- Nondirectional, monolithic visual reduces installation time and waste.
- ClimaPlus™ 30-year limited system warranty against visible sag, mold and mildew.
- GREENGUARD Gold certified for low emitting performance.
- USG Mars™ High-NRC/High-CAC Acoustical Panels are part of the Ecoblueprint™ portfolio — meeting today's sustainability standards. For sustainability documentation go to USG.com or CGCInc.com.

APPLICATIONS

- Offices
- Healthcare

Low Emissions (VOC)
Third party (GREENGUARD Gold) certified for low-emitting performance, meets California Department of Public Health's (CDPH) Standard Method v1.2 - 2017 (CA Section 01350). 'Certificates of Compliance' for Low VOC Emissions are available on usg.com and at spot.ul.com.

ClimaPlus™ Warranty Performance[3]
Contains a broad-spectrum antimicrobial additive on the face and back of the panel that provides resistance against the growth of mold and mildew. Includes sag-resistance performance.

High Recycled Content
USG classifies High Recycled Content as greater than 50%. Total recycled content is based on product composition of postconsumer and preconsumer (postindustrial) recycled content per FTC guidelines.

White 050

Fine-Textured Panel

FEATURES AND BENEFITS

- Water-repellent membrane designed to be durable and safe with common disinfectants.**
- Washable and soil-resistant fi nish. Impact and scratch resistant.
- Acoustics and cleanability exceed FGI guidelines for healthcare.
- Meets USDA/FSIS guidelines for use in food-processing areas.
- Achieves FDA standards for smoothness, durability and cleanability.
- Clean Room tested to ISO 5 (Class 100) (Items 86169CR, 88189CR, 86684CR, 88683CR).
- ClimaPlus™ 30-year limited system warranty against visible sag, mold and mildew.
- AirCare™ coating applied to face and back reduces 75% of formaldehyde over a 10-year period.[4]
- GREENGUARD Gold certified for low emitting performance.
- Balanced Acoustics. High-NRC and High-CAC provide excellent sound control that assist in addressing HIPAA standards.
- USG Mars™ Healthcare Acoustical Panels is part of the Ecoblueprint™ portfolio — meeting today's sustainability standards. For sustainability documentation go to USG.com or CGCInc.com.

APPLICATIONS

- Kitchen and food-prep areas
- Lavatories and restrooms

APC-2

Low Emissions (VOC)
Third party (GREENGUARD Gold) certified for low-emitting performance, meets California Department of Public Health's (CDPH) Standard Method v1.2 - 2017 (CA Section 01350). 'Certificates of Compliance' for Low VOC Emissions are available on usg.com and at spot.ul.com.

ClimaPlus™ Warranty Performance[3]
Contains a broad-spectrum antimicrobial additive on the face and back of the panel that provides resistance against the growth of mold and mildew. Includes sag-resistance performance.

High Recycled Content
USG classifies High Recycled Content as greater than 50%. Total recycled content is based on product composition of postconsumer and preconsumer (postindustrial) recycled content per FTC guidelines.

****Maintenance**
To clean panel, use a clean, white cloth with water or a mild detergent and wipe surface. To disinfect panel, lightly spray surface and wipe clean with a clean, white cloth. Acceptable colorless disinfectants include:
- Hydrogen peroxide
- Isopropyl alcohol
- Quaternary ammonium
- Sodium hypochlorite

Do not mix cleaners. Follow cleaner manufacturer's recommendations.

USG Mars™ Healthcare Clean Room
- Field-cut edges of USG Mars™ Healthcare Clean Room panels may be sealed with white latex paint. Use square edge panels for all lay-in field-cut perimeter panels.
- Clean Room-rated applications require a suspension system with gasketed tee flanges such as USG Donn® Brand CE™.
- Tested to ISO Class 5 particle emissions, per ISO 14644, by UL Environment. Rating may decrease to ISO Class 7 or greater with airflow above 1 ACH, pressure fluctuations, or vibrations in the ceiling system.
- For more information, please reference test report from UL Environment.

Metric sizes available
Contact sales for minimum quantities and lead times.

Footnotes
1. For details, see USG Sustainability tool at usgdesignstudio.com or cgcdesignstudio.com.
2. LR values are shown as averages.
3. Panel face and back surfaces treated with a proprietary broad-spectrum antimicrobial standard formulation that inhibits and retards the growth of mold and mildew. For details, see *USG 30-Year Limited System Warranty Commercial Applications* (SC2102).
4. AirCare™ coating removes formaldehyde by an average of 75% over 10 years at an average indoor concentration of 13 ppb.
5. Maximum 2'x2' with SQ edge panels.
6. All USG Mars™ High NRC Acoustical Panels with a "plant-based binder" label contain up to 65% plant-based material in the binder. For more information please refer to the USG Mars™ Acoustical Panels Health Product Declaration, available at www.usg.com
7. Mars™ Healthcare should not be mixed with non-Healthcare products in the same ceiling plane.
8. Product with Aircare™ coating should not be mixed with non-Aircare™ coated products.

Proposed Substitution

MINERAL FIBER
SMOOTH

The Symphony line provides a full range of ultra-durable acoustic solutions with a consistent, smooth visual, coupled with excellent durability.

FEATURES AND BENEFITS

- Excellent sound absorption (NRC 0.75-0.85) and sound blocking (CAC 33-42)
- Certified clean room component to ISO Class 4 (highest among comparable products)
- Tested to 1,000 wash cycles and compatible with most sanitizing solutions
- Exceeds FGI Guidelines for cleanability and acoustic performance (≥ 1.0 lbs/s.f.)
- **SmartFit panels available** – fully fabricated off-the-shelf solution to accommodate linear lighting, ventilation and utility areas with standard components
- **CertaSize® program** – non-standard sizes made to order on select products. Lead time varies. Contact your local sales rep or Customer Support

PHYSICAL DATA

MATERIAL
Mineral Fiber

FIRE CLASS (ASTM E1264)
All are Class A per ASTM E84 & CAN/ULC S102
Flame Spread: 25 or less
Smoke Developed: 50 or less

ASTM E1264 CLASSIFICATION
Type IV, Form 2, Pattern E

VOC EMISSIONS
Independently certified compliant with California Department of Public Health CDPH/EHLB/Standard Method Version 1.2, 2017.

MOLD/MILDEW RESISTANCE
BioShield treatment included for added mold and mildew resistance.

APPLICATION CONSIDERATIONS
Clean panel using a sponge/cloth dampened with water and mild liquid detergent solution. Do not soak panel. Cleanable with sanitizing chemicals.

WARRANTY
10-year 104/90 Limited Warranty increases to 15 years when installed with CertainTeed suspension systems. Full warranty information can be found at certainteed.com/warranty.

FEATURES AND BENEFITS

- 9/16" exposed grid provides a clean aesthetic.
- Compatible with USG Logix™ Integrated Ceiling Systems.
- Cross-tee override-ends resist twisting and ensure a finished look.
- Proprietary Quick-Release™ cross tees.
- High recycled content (HRC) available.
- Seismic installation designs validated in ICC-ES Evaluation Report ESR-1222.
- Premium and custom colors available.
- Some items available in metric sizes.
- USG Donn® Brand Centricitee™ DXT™/DXLT™ Acoustical Suspension System is part of the Ecoblueprint™ portfolio — meeting today's sustainability standards. For sustainability documentation go to USG.com or CGCInc.com.

APPLICATIONS

- Interior general-use areas
- Fire-rated interior general-use areas
- USG Logix™ Integrated Ceiling Systems

PHYSICAL DATA/ FOOTNOTES

Product literature and samples
Data sheet: AC3040, USG Logix™ system guide: IS268 USG Logix™ architectural design guide: IS287, USG Logix™ critical system dimensions: IS609, Sample: 206564

Material
Min. G30 hot-dipped galvanized steel body and cap. Baked on polyester paint or powder-coated finish.

Installation
Install according to ASTM C636, ASTM E580, CISCA and USG requirements. Alternate installation methods may be used when approved by the authority having jurisdiction.

Online tools
usgdesignstudio.com or cgcdesignstudio.com

Air diffusers
Refer to: AC272

Limitations
Refer to specific ceiling panel for limitations with square edge panels.

ICC Evaluation Service, LLC Report Compliance
For areas under ICC jurisdiction, see ICC-ES Evaluation Report ESR-1222 for allowable values and conditions of use. Reports are subject to reexamination, revision and possible cancellation. Refer to usg.com for most current version.

ASTM Load Compliance
Classified as Light, Intermediate or Heavy Duty when tested in accordance with ASTM C635.

Notes
1. All USG main tees, cross tees and main tee-hanger wire connections meet AC 368 and ASTM E580 requirements for tension and compression strength, as tested per ASTM E3090.
2. Rated Load expressed in lb./LF based on simple span tests in accordance with ASTM E3090 with deflection limit of L/360. Duty rating is assigned based on rated load per ASTM C635.
3. Panels must be specified to be field-cut to size and field-revealed to provide as wide a lay-on edge as possible.
4. Metric sizes shown available with standard lead times. Other metric sizes available by RTQ.
5. SC = Standard Color, AC=Advantage Color, PC=Premium Color
6. Seismically tested in accordance with ASTM E3118.

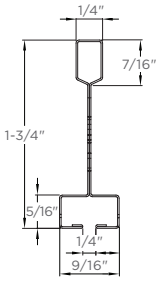
CROSS TEE

9/16" WALL ANGLE

7/8" WALL ANGLE

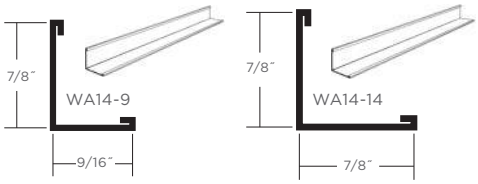
Suspension Systems

Proposed Substitution



9/16" EZ Stab Elite Narrow System

The slim face width complements modern design and offers flexibility and added strength.



Features & Benefits

- Increased frequency (3" O.C.) of patented Latitude Holes™ provides installation flexibility
- Narrow style 9/16" (15 mm) face integrates with narrow reveal edge panels
- EZ Stab clip technology allows for a fast and strong connection on cross tees with enhanced removability
- Centering tabs prevent gaps around the edge, enabling integration with trim edge panels
- Enhanced stitching increases stiffness, reducing bending or twisting
- Suitable for all seismic applications
- ICC certified (ESR-3336) and City of Los Angeles Building Code compliant via ESR-3336 LABC Supplement
- Grid features G30 hot-dipped galvanized steel web construction for corrosion resistance
- Intermediate- and heavy-duty load-bearing capabilities/classification
- Available in Standard White and Black. Additional color options are offered through our Post-Paint process.

TRADE NAME: Window shades

MODEL NO.: - Z - Wave Motorized - Roller shade manual

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

A/E's REVIEW AND RECOMMENDATION:

- ☐ Approve Substitution—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.
- ☐ Approve Substitution as noted—Make submittals in accordance with Specification Section 01 33 00 Submittal Procedures.
- ☒ Reject Substitution—Use specified materials.
- ☐ Substitution Request received too late—Use specified materials.

Roller shades – the proposed product appears to be residential and not of the same quality. The submittal is lacking in detail on materials used for the housing etc. Project Specification lists four acceptable manufacturers - SLAM

SIGNED BY: Stephen Martocchio - SLAM

Features

Summary

Graber® Roller and Solar Shades offer a great selection of light and temperature controlling shades.

Roller Shades
- Wide variety of colors
- Wide variety of textures and designs
- Improved temperature control

Solar Shades
- 1% to 12% openness
- Excellent outward visibility
- Glare control

Features	Benefits
UltraLite Cordless Lift	• Precision placement — lower and raise the shade by moving the hem bar exactly where you want it. Ideal system for aligning shade height for multiple shades on the same wall • Light and smooth lift for all shade sizes • Aesthetically beautiful mounting hardware that hides mechanics • Shade is spring-loaded on each end and will self-center between brackets when installed • Streamlined appearance with no chains; ideal for homes with children or pets • Optional contour valance, cassette valance with fabric insert, fascia, flat valance, or wood cornice
UltraLite Dual Lift (U.S. ONLY)	• Precision placement with two ways to operate the shade — lower and raise the shade by moving the hem bar exactly where you want it, or lower and raise by pulling on the chain or cord • Light and smooth lift for all shade sizes • Choice of bead chain or fabric cord • One pull of the chain will raise the entire shade • Aesthetically beautiful mounting hardware that hides mechanics • Shade is spring-loaded on each end and will self-center between brackets when installed • Beaded chain (or optional cord) remains at same length, regardless of chain position • Choose from five colors for the plastic chain, or stainless steel chain • Hold down device keeps chain taut for enhanced safety • Choose left or right chain or cord location • Optional contour valance, cassette valance with fabric insert, fascia, flat valance, or wood cornice
Enclosed Loop Dual Lift (Canada ONLY)	• Precision placement with two ways to operate the shade: 1) lower and raise shade by moving the hem bar exactly where you want it, or 2) raise the shade by moving the plastic grip toward the top of the window, then hold down the up-arrow button, while simultaneously pulling the grip down. Once you are at the bottom, release the button, reset the grip at the top, and repeat until your shade is at the desired height. To lower the shade, hold the down-arrow button and follow the same instructions. • Light and smooth lift for all shade sizes • Aesthetically beautiful mounting hardware that hides mechanics • Shade is spring-loaded on each end and will self-center between brackets when installed • Beaded chain remains at same length, regardless of chain position • Choose left or right chain location • Optional contour valance, cassette valance with fabric insert, fascia, flat valance, or wood cornice
Enclosed Loop Lift (Canada ONLY)	• Spring-loaded idle for easy install • Enclosed Loop Lift features a cord cover and sliding handle to operate the chain loop easily and safely • Four clutch sizes depending on shade size • Beaded chain remains at same length, regardless of shade position • Choose left or right chain location • Optional contour valance, cassette valance with fabric insert, fascia, flat valance, or wood cornice
Continuous-Loop Lift (U.S. ONLY)	• Spring-loaded idle for easy install • Beaded chain and clutch system make raising and lowering shade easy • Four clutch sizes depending on shade size • Beaded chain remains at same length, regardless of shade position • Choose from five colors for the plastic chain or stainless steel chain • Hold down device keeps chain taut for enhanced safety • Choose left or right chain location • Optional contour valance, cassette valance with fabric insert, fascia, flat valance, or wood cornice

Features

Summary

Graber® Roller and Solar Shades offer a great selection of light and temperature controlling shades.

Roller Shades
- Wide variety of colors
- Wide variety of textures
- Improved temperature control

Solar Shades
- 1% to 12% openness
- Excellent outward visibility
- Glare control

Features	Benefits
Cordless Lift	• Streamlined appearance with no chains; ideal for homes with children or pets • Shade raises and lowers smoothly and easily due to a unique dual braking system • Tension can be manually adjusted so shade always raises at desired speed • Color coordinated tassels facilitate easy operation and keep fabrics clean (wood tassels in Natural, Walnut, and Golden Oak are optional) • Optional clear hem grip available (not available with scallop option) • Optional contour valance, cassette valance with fabric insert, flat valance, or wood cornice
Smart Pull Lift	• Convenient easy glide lift system with a wand • Shade is lowered automatically with a single pull of the wand • Shade is raised to the desired placement with simple pull of the wand • Optional contour valance, cassette valance, flat valance or wood cornice
Motorized Lift	• Window treatments can be operated from virtually anywhere in the home • Provides easy operation of hard-to-reach or larger windows • Operate multiple window treatments simultaneously or individually
Dual Shade (U.S. ONLY) or Enclosed Loop Dual Shade (Canada ONLY)	• Two shades are combined onto one bracket for complete privacy and light control • Each shade may be configured with roller and/or solar fabrics • Maximizes view to the outside with solar or sheer fabrics • Maximizes privacy with roller fabrics • Improves energy efficiency • Optional large cassette
Options	• Each operating system offers multiple valance and cornice options (surcharge applies) • Turning fabric width for height and seaming accommodates larger windows; available on select fabrics • Reverse roll: fabric rolls over the front of tube; standard: material rolls over the back • Hem bar: fabric-wrapped (standard) or sealed (optional with Continuous-Loop Lift, Enclosed Loop Lift and Motorized Lift) • Projection brackets for Smart Pull Lift and Cordless Lift (no charge) • Hold down brackets (no charge) • Bay or corner shade • Motorized Lift • Fascia available in 3" and 4" heights
Commercial Solutions	• Side and sill channels (optional with Enclosed Loop Lift, Continuous-Loop Lift and Motorized Lift) • Low voltage motorized coupled shades • Pockets and closure plates
Total Room Coordination	• Total room fabric coordination of many fabrics for roller, solar, sliding panels, verticals, and pleated shades • Coordinate a room by using a single fabric for a mixture of window types and sliding doors • Cut yardage available
Scallop, Gimp, and Trims	• Create a customized look for roller shades
Warranty	• Limited lifetime warranty; five-year warranty on motorization components

Features

Roller Shade Fabrics

- Offer a solution for light control (sheer to blackout fabrics)
- Any room or decorating style
- Block damaging UV rays
- Coordinate with other product lines (vertical blinds, pleated shades, and sliding panels)
- "Fabric Width" is only a representation of the unfinished roll's usable width. See max/min tables for product size offerings.

Features

Light Control and Privacy: Roller Shade Fabrics

Sheer*: Allows the most amount of light into the room for a minimum amount of privacy and a view to the outside. Objects in the room can be seen quite clearly through shades.
Privacy Level: Minimal

Light Filtering*: Allows light to gently filter through and provides privacy. Images and shapes may be seen through these shades, but details are not visible. Deep fabric colors provide moderate light control, while light colors provide lower light control.
Privacy Level: Moderate

Room Darkening*: Allows some light to filter into the room and provides privacy. Objects in a lit room seen through these shades appear as vague shapes. Deep fabric colors darken a room; light colors filter and diffuse bright sunlight.
Privacy Level: Complete

Blackout: Prohibits light from shining through and provides maximum privacy. Prevents shadows and silhouettes from showing through the fabric. All fabric colors provide maximum light control.
Privacy Level: Complete

Light Gaps: For optimal light and glare control, outside mount is recommended, or you may add a secondary soft window treatment (drapery or curtain) to hide the light gap on an inside mount. (Refer to light gap chart in this section.)
Privacy Level: Moderate

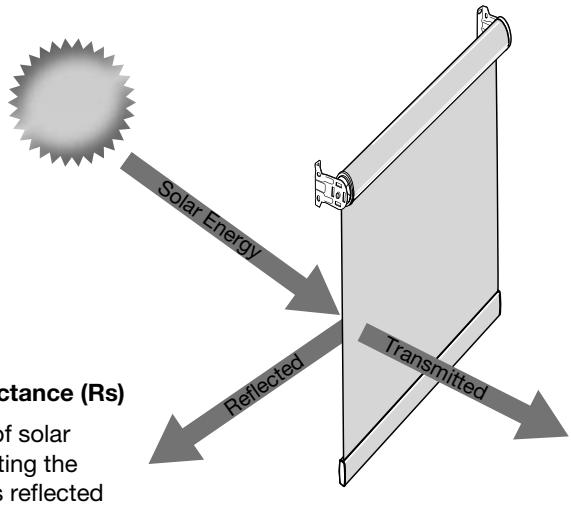
*These fabrics are translucent and their colors may be influenced by changing light conditions. Colors may appear to vary depending upon the time of day and type of lighting, as well as whether the shade is partially or fully lowered.
NOTE: Select roller weaves may have “pinpricks” of light showing through.

Features

Solar Shade Fabrics

Maintain an Outward View
- Filter and diffuse light while maintaining an outward view
- In general, the higher the openness factor and darker the fabric, the clearer the view

Manage Glare
- Minimize glare on televisions and home office computers
- The darker the fabric color, the better the glare control and the better the view to the outside



Block Damaging UV Rays
- The amount of UV ray blockage is the inverse of a fabric's openness factor (e.g., a fabric with 10% openness blocks 90% of UV rays)
- Protect your furniture, carpets, artwork, etc., from fading due to harmful UV rays

Reduce the Temperature
- Fabrics reduce heat transmittance, keeping rooms cooler and increasing the comfort level in the home
- The lighter the fabric color, the better the temperature control

NOTE: Solar shades do not offer nighttime privacy; lighted interiors allow inward visibility. If complete privacy is desired, a Dual Shade or secondary treatment is necessary.

Solar Optical Properties

When solar radiation reaches the shading fabric it is either reflected, absorbed, or transmitted. The sum of these values equals 100% of the solar energy hitting the fabric.

Solar Reflectance (Rs)

Proportion of solar radiation hitting the fabric that is reflected by the fabric.

Solar Absorption (As)

Percentage of the solar radiation hitting the fabric that is absorbed by the fabric.

Solar Transmittance (Ts)

Percentage of solar radiation hitting the fabric that is transmitted through the fabric, illuminating the interior space.

Features

Fabric Recommendations

Order all shades for the same room at the same time to ensure color consistency and minimize dye lot variation.

When displaying multiple shades in the same room, we recommend all shades be ordered with the same fabric orientation for a consistent look.

Fabric Disclaimers

Due to the nature of the weaving process, some imperfections in the weave are normal.

NOTE: Select roller weaves may have "pinpricks" of light showing through.

Roll direction cannot be reversed after a shade is ordered. Fabric appearance can vary based on changing light conditions in the room.

Fabric Width

The fabric width is narrower than the finished shade width of the tube and its components.

Light Gap

Control Type	Light Gap per Side (inches)

Smart Pull with Flat Valance	9/16 to 15/16
Smart Pull Lift with Cassette	⅝ to 1

Cleaning and Care Information

Roller shade fabrics are virtually maintenance free. If the shade is dusty, simply vacuum over it using an upholstery attachment. A dusting cloth can also be used to gently remove dust. Shades may also be gently wiped with a clean damp cloth. Allow the shade to dry completely before raising. Do **NOT** completely immerse.

Solar shade fabrics are virtually maintenance free. Only periodic vacuuming and an occasional cleaning using a mild detergent, soft brushing, and thorough rinsing is required. Allow the shade to dry completely before raising. Do **NOT** completely immerse.

Large Window Sizing

Fabrics can be turned 90° clockwise (width for height) to accommodate wider windows. In these cases some solar fabrics can be seamed for longer heights. Fabrics turned width for height (referred to as railroaded) may curl along the edge. Springs Window Fashions performs extensive testing to ensure our customers receive high quality shades. On extremely wide shades, a slight V shape may appear in the center of the shade. This occurs due to the weight of the fabric and should be considered a normal characteristic.

Seams may be added to solar fabrics to accommodate long shade requirements. Seams are placed as close to the tube as possible; seam location is determined by the manufacturer. Seams may be visible when the shade is fully extended. Seaming is not available for Cordless Lift or Smart Pull Lift shades.

Pattern Alignment

Exact alignment of the fabric pattern across side-by-side shades is not possible. Vertical alignment of the shade fabric with cassettes is not possible. Fabrics with large repeat patterns are not centered on the shade.

Fabric Certifications

GREENGUARD Indoor Air Quality Certified® Fabrics: Many Graber® fabrics have been certified by GREENGUARD Environmental Institute (GEI) to be low chemical- and particle-emitting fabrics, which provides a healthier indoor air quality. The process used for certification complies with established indoor air quality standards and is performed by a third party lab. Please see baliblinds.com for more information.

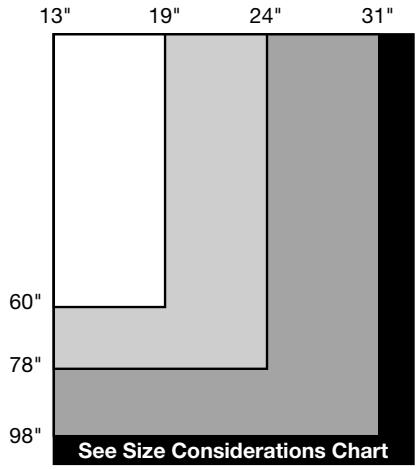
Cradle to Cradle Certified Design: Cradle to Cradle certification aims to transform all industries through ecologically intelligent design. That means the certified textiles are globally recognized to be safer and more sustainable.

Oeko-Tex® Standard 100 certifies that our fabrics are free of halogen, lead, formaldehyde, allergenic dyes, pesticides, phenols, and heavy metals, and meets all VOC content limits.

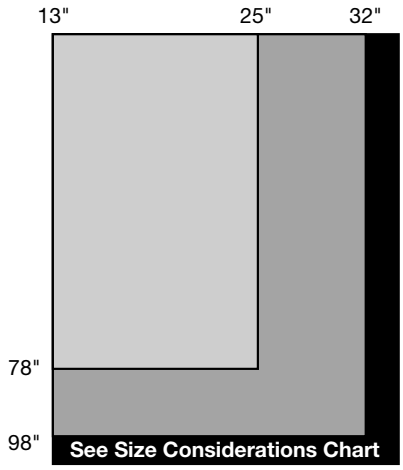
GREENGUARD Indoor Air Quality Certified is a registered trademark of the GREENGUARD Environmental Institute.

Oeko-Tex is a registered trademark of the Oeko-Tex Association.

Size Considerations



Maximum Shade Size



Cordless Lift Shade Maximum Size

If Shade Width Is at Least (inches)	Maximum Height of Shade (inches)
13 but less than or equal to 19	60
19⅛ but less than or equal to 24	78
24⅛ but less than or equal to 31	98
For shades greater than 31", see size considerations charts	

Smart Pull Lift Shade Maximum Size

If Shade Width Is at Least (inches)	Maximum Height of Shade (inches)
13 but less than or equal to 25	78
25⅛ but less than or equal to 32	98
For shades greater than 32", see size considerations charts	

Follow these easy steps to determine maximum shade size and valance size from the maximum shade size tables:

1. Determine your fabric style, shade size, control type, and cassette valance (or no cassette valance) requirement.
2. Find the fabric in the first column.
3. Follow the fabric row to the appropriate control type section (UltraLite Cordless Lift, UltraLite Dual Lift, Enclosed Loop UltraLite Dual Lift, Enclosed Loop Lift, Continuous-Loop Lift, Dual Shade, Motorized Lift, Cordless Lift, or Smart Pull Lift).
4. Determine if your shade size is within the normal fabric orientation size range.
5. Identify the appropriate size valance for your shade size.
6. If your shade size is larger than either the maximum width or height range, your fabric may be able to be turned width for height for larger shades. Use the fabric turned width for height tables to determine this maximum size.

EXAMPLE 1: Determine the maximum allowable shade size and cassette valance for normal orientation shades. The example shade is 72" x 100", Arboretum BO fabric, Cordless Lift, with cassette valance.

1. Go to the Cordless Lift section.
2. Find Arboretum BO in the first column.
3. The maximum width and maximum height available for this configuration is 78" x 120".
   NOTE: Both width and height must be less than the maximum width and height segment to fit the normal shade orientation.
4. Follow this segment to the top of the table. This segment is within the medium cassette valance size, indicating that the smallest segment cassette valance size available for this shade is a medium size cassette valance.

EXAMPLE 2: Determine the maximum allowable shade size and cassette valance for a continuous-loop shade. The example shade is 79" x 80", Exposition fabric, Enclosed Loop Lift with a large cassette valance. First, determine if the shade size is available with the requested fabric and control type.

1. Go to the continuous-loop section.
2. Find Exposition in the first column.
3. The maximum width and maximum height available for this configuration is 96" x 144". The 79" x 80" size does not exceed the Enclosed Loop Lift segment.
4. The 79" x 80" size does not exceed either the medium or large cassette segments. The smallest cassette valance size available for this shade is the medium cassette valance.

Dual Shades

The maximum size for Dual Shades is found using the Dual Shade column. Because two shades must fit into a single cassette valance, the Dual Shade requires the large cassette valance. Small and medium cassette valances are not available for Dual Shades.

Recommendation: For a consistent look in a single room, we recommend the same size cassette valance be used for every shade. Use the largest shade to determine the smallest available cassette valance size for that room. For example, if the largest shade in the room requires a medium cassette valance, then it is recommended all shades in the room use a medium cassette valance. The cassette valance size can be specified during ordering.

Motorization Features

Motorized Shades

Refer to individual product information guide for specific option for the product being ordered. See price charts for pricing.

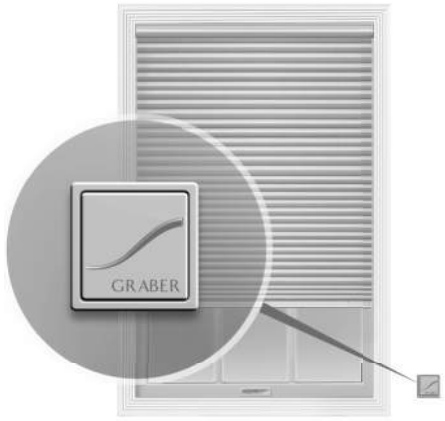
Radio Frequency (RF)

Graber motorized shades feature advanced Bluetooth and Z-Wave radio technology that provides reliable, effortless operation of window coverings. Graber motorized shades are quiet, simple to install and adjust, and simple to operate. These automated shades also feature:

Bluetooth Radio Frequency Features

Bluetooth technology allows you to control your shades directly from your phone without a hub or gateway. Any iOS or Android device is compatible.

- Control your shades directly from your phone or tablet without a gateway
- Operate your shades within Bluetooth range
- Create and schedule routines to automate your window coverings
- A safer alternative to accessible cords; ideal for homes with children and pets
- Provides easy operation for hard to reach or large windows



Z-Wave Radio Frequency Features

- Operates your shades virtually anywhere within 65 feet
- Supported by an alliance of countless smart home products and home automation providers making integration simple and inexpensive.
- Easily integrate with voice control devices
- A safer alternative to accessible cords; Ideal for homes with children and pets.
- Provides easy operation for hard to reach or large windows.

Motorization Size Considerations

CrystalPleat® Cellular Shades Motorized Lift

Order Entry: 12V Z-Wave and Bluetooth Motor

Refer to individual product information guide for specific option for the product being ordered.
See page 2 for benefits of using Bluetooth & Z-wave motorization.

Product Specifications

- Motor located on right side within headrail
- Available as corner and bay window application
- Available with Wood Cornice and Valance
- Available with reversible fabric at time of order
- Available with lightblocking strip
- Available with Fabric Wrapped headrail.
- Rail colors can be specifided at time of order
- Available with room-darkening channels
- Not available with top down continuous-loop, sun up/sun down, combination shades, SkyTrack™ Skylight, specialty shapes or multiple shades on one headrail
- Not available with hold down brackets or side mount brackets

Control and Power Options

- Multiple control and power options available; see Z-Wave options for availability

NOTE: Motorization components and accessories have a five-year limited warranty, excluding batteries.

Features and Size Considerations

This table provides the maximum shade size available by fabric, control type, and valance style.
Fabric turned width for height (railroaded) may curl along its edge. This is not a defect in the product.

Only the large cassette valance is available for the dual shade.
Small and medium cassette valances are not available.

Lightweaves Roller and Solar Shades: Dual Shades Maximum Shade Size

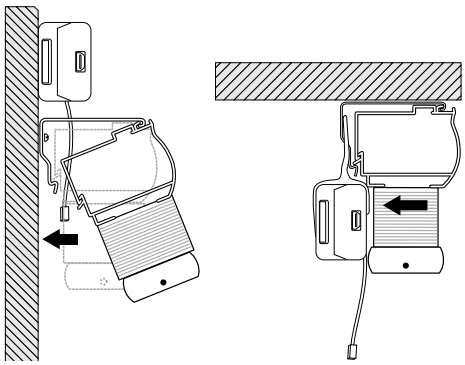
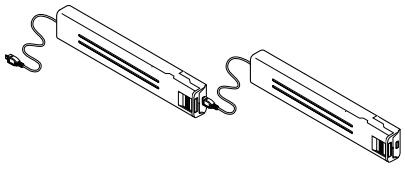
Power Considerations



Cellular and Pleated
Battery Consideration

Battery Case (non-rechargeable solution)
Dimensions: 9 1/4" x 1 1/4" x 7/8"



Ceiling/Inside Mount

Outside Mount

Inside Mount

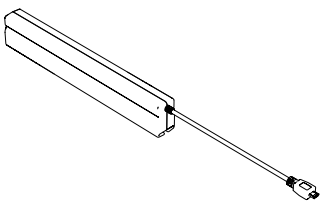
Dual Battery Cases

Motors can be powered by non-rechargeable AA lithium batteries, rechargeable battery pack, plug-in transformer, or multi-motor power supply. Each shade requires a motor and appropriate power source.

Power Considerations
Larger shades consume more power while operating. When choosing the appropriate power source based upon the shade size we recommend the following power sources for the best performance.

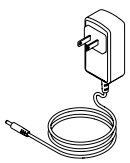
Shade Size square inches	**Non-Rechargeable Recommended Power Source**	**Rechargeable Battery Pack Estimated Battery Life Before Recharge* Single Pack Only**
0 to 3,600	Batteries (single or dual), plug-in, or multi-motor power supply	~12 Months
3,600 to 7,200	Dual battery cases, plug-in, or multi-motor power supply	~6-12 Months
>7,200	Plug-in or multi-motor power supply only	~6 Months or Less

Battery Case Considerations
Battery power recommended for maximum of 10 shades for best battery performance.
Battery cases are installed in space outside of the product and can be a challenge to hide in some windows.



For Inside Mounts
- The cleanest and simplest method available for cellular and pleated shades is the integrated battery case hanger; this hanger attaches directly to a shade bracket to support the battery case while allowing the case to be removed for battery changes; additional recessed space will be needed

For Outside Mounts
- For outside mounts, battery cases can be installed above or to the side of the shade



NOTE: For best performance with non-rechargeable solutions, use only AA lithium batteries.

Dual battery cases installed end-to-end: require 21" of space (including connectors)

Battery case minimum recessed space (installed with bracket): product minimum recessed space + ¾"

Rechargeable Battery Pack
Dimensions: 8 9/16" x 1 7/16" x 15/16"

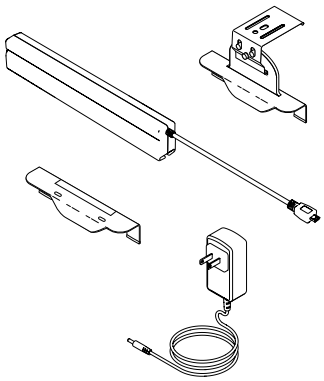
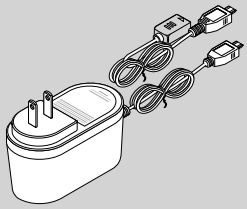
Motorization Power Options



Power Components

NOTE: These power supplies are not compatible with Radio Technology Somfy motors.



Reloadable Battery Case

- Reloadable: available with or without batteries
- Multiple mounting options provided
- Simple case design allows for easy battery replacement
- Recommend shades greater than 3,600 square inches utilize two single battery cases (dual cases) to extend battery life
- For best performance, use only AA lithium batteries (each case requires 8 AA lithium batteries)
- 48" and 96" extensions available, maximum of 2 per motor
- Battery power recommended for maximum of 10 shades for best battery performance

Rechargeable Battery Pack

- The rechargeable battery pack comes as a sealed pack with the batteries already included. Batteries are charged by plugging the charger into the pack.
- Multiple mounting options provided.
- 48" and 96" motor-to-battery extensions available, maximum of 2 per motor
- Rechargeable battery packs ship at 30% charge and must be fully charged prior to installation
- Dual pack configuration is not available or necessary for the rechargeable battery packs
- One Lithium-Ion Charger is required per order; sold separately
- Lithium-Ion charger cable is 6 feet
- Lithium-Ion charger has an LED that turns red to indicate charging and green to indicate fully charged
- Fully charging the rechargeable battery pack takes an average of 5 hours

Plug-In Transformer

- Eliminates the need for batteries
- Small plug profile
- Cord can be concealed behind curtains or along trim
- 72" power cord and 96" extension cable (power cord and extension cable cannot be cut to length)
- 48" and 96" extensions available, maximum of 2 per motor
- We recommend shades greater than 7,200 square inches utilize a transformer to eliminate changing batteries frequently
- Available in white only

Transformer Dimensions

- 3¼" wide x 2" deep (not including plug) x 1½" tall (as you look at the plug in the outlet)
- Wire management components are not included with your motorized shade system
  - Refer to 12 volt power considerations for further details

Multi-Motor Power Supply

- Used when direct wiring the motorized window coverings
- Each motor is “home run” wired back to the multi-motor power supply using 16 gauge 2 conductor wire (must be purchased locally; Graber® does not supply)
- Power supply includes connectors
- Must be mounted indoors, NEMA rated
- Dimensions: 12" wide x 6" deep x 12" high
- Input: 100-120v AC / 200-240V AC at 3.3 amps
- Output: 10 amps; each shade port - 2 amp fused

NOTE: Due to the many variations of installations, wire management components are not included with your motorized shade system. There are numerous wire management products available at your local hardware store or home improvement center to help disguise the power cord when using a plug-in transformer. An example of a popular wire management accessory is wire channel. Wire channel is a vinyl sheathing that can be placed along the window casing or wall that will house and conceal exposed wiring for a clean and professional appearance.

Z-Wave Control Options

Z-Wave Motorization Controls

NOTE: These controls are not compatible with Radio Technology Somfy motors.

Standard Remote

The standard remote is meant to control an individual shade (one to one). This helps assure simple, reliable control as well as simplifying the process of readjusting pre-set positions should it become necessary—without removing power from adjacent shades. However, the standard remote can be paired to multiple shades to provide group control (onsite programming step).

- Not available for sheer or layered shades
- Includes convenient mounting hardware
- Battery included—CR2430
- Available in white
- Not available with Bottom Up/Top Down

Plus Remote

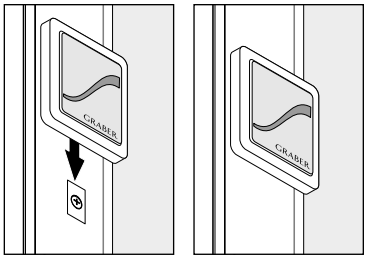
- Used to control single shades or a group of shades simultaneously
- Set and use an intermediate position for your shades
- Includes convenient mounting hardware
- Battery included—CR2430
- Available in white
- Not available with Bottom Up/Top Down

Plus Remote Decorator Wall Plate Kit (single-channel remote sold separately)

- Provides attractive mounting option to match look of existing light switches
- Locates the remote where most convenient for the user
- Helps prevent misplacing of remote when not in use
- Mounts flush to wall with included anchors, no cutting of drywall needed
- Available in white

Premium Remote (12-channel)

- 12-channel remote, controls up to 24 shades
- Control single shades on each channel or group shade performing the same function
- Control Bottom Up/Top Down cellular shades
- Shades are added to the remote fro the manufacture. Channel assignment will need to be done at time of install.
- Convenient display provides easy programming
- Set and use an intermediate position for your shades
- Includes mounting wall plate and hardware; mounts to wall with anchors (see multi-channel remote mounting options)
- Batteries included—2 AAA
- Available in white



Graber Motorization Gateway

The Graber Motorization Gateway takes your motorized shades to the next level. The gateway allows you to control your shades away from your home, integrate with third party services, and schedule routines based on sunrise and sunset.

- Controls up to 10 devices (shade motors and remotes)
- Average Home Coverage: appox. 2,500 square feet depending on a variety of factors including number of walls and material of walls
- Mulitple gateways can be added to an account on the Graber Motorization App to extend coverage and number of devices
- Control single shades individually with the abiltiy to group shades in rooms for additional functionality
- Integrate directly with Amazon Alexa and Google Assistant for voice control
- Create routines routines to control multiple shades with the ability to schedule based on sunrise and sunset
- Set and use favorite positions
- Compatible with Apple and Android devices
- Gateway (shown in the image to the left) plugs directly into your wall outlet.
- Requires a 2.4Ghz, password protected, Wi-Fi network
- Multiple users can be added to an account with the option to assign different permission levels

Designer US Price List — Effective January 2024

Motorization

See product information guide for illustrations of power and control items listed below. Select motor package and add to price of shade.

Motor Pricing

See options section for descriptions and illustrations of items listed below.
For motorized lift dual shades, one (1) motor, and one (1) power source are required for each motorized shade (total of two motors and two power sources if both shades of the dual shade are motorized lift).

A. Motor Pricing

Add price of motor to blind or shade price.
Order Entry: 12V BLE and ZW Motor without Remote (option 14)

Motor Options	
Cellular, Pleated, and Classic Roman Shades	451
Roller, Solar, Layered, Artisan Roman and Sheer Shades	451
Natural Shades*	451
Cellular Bottom Up, Top Down	646

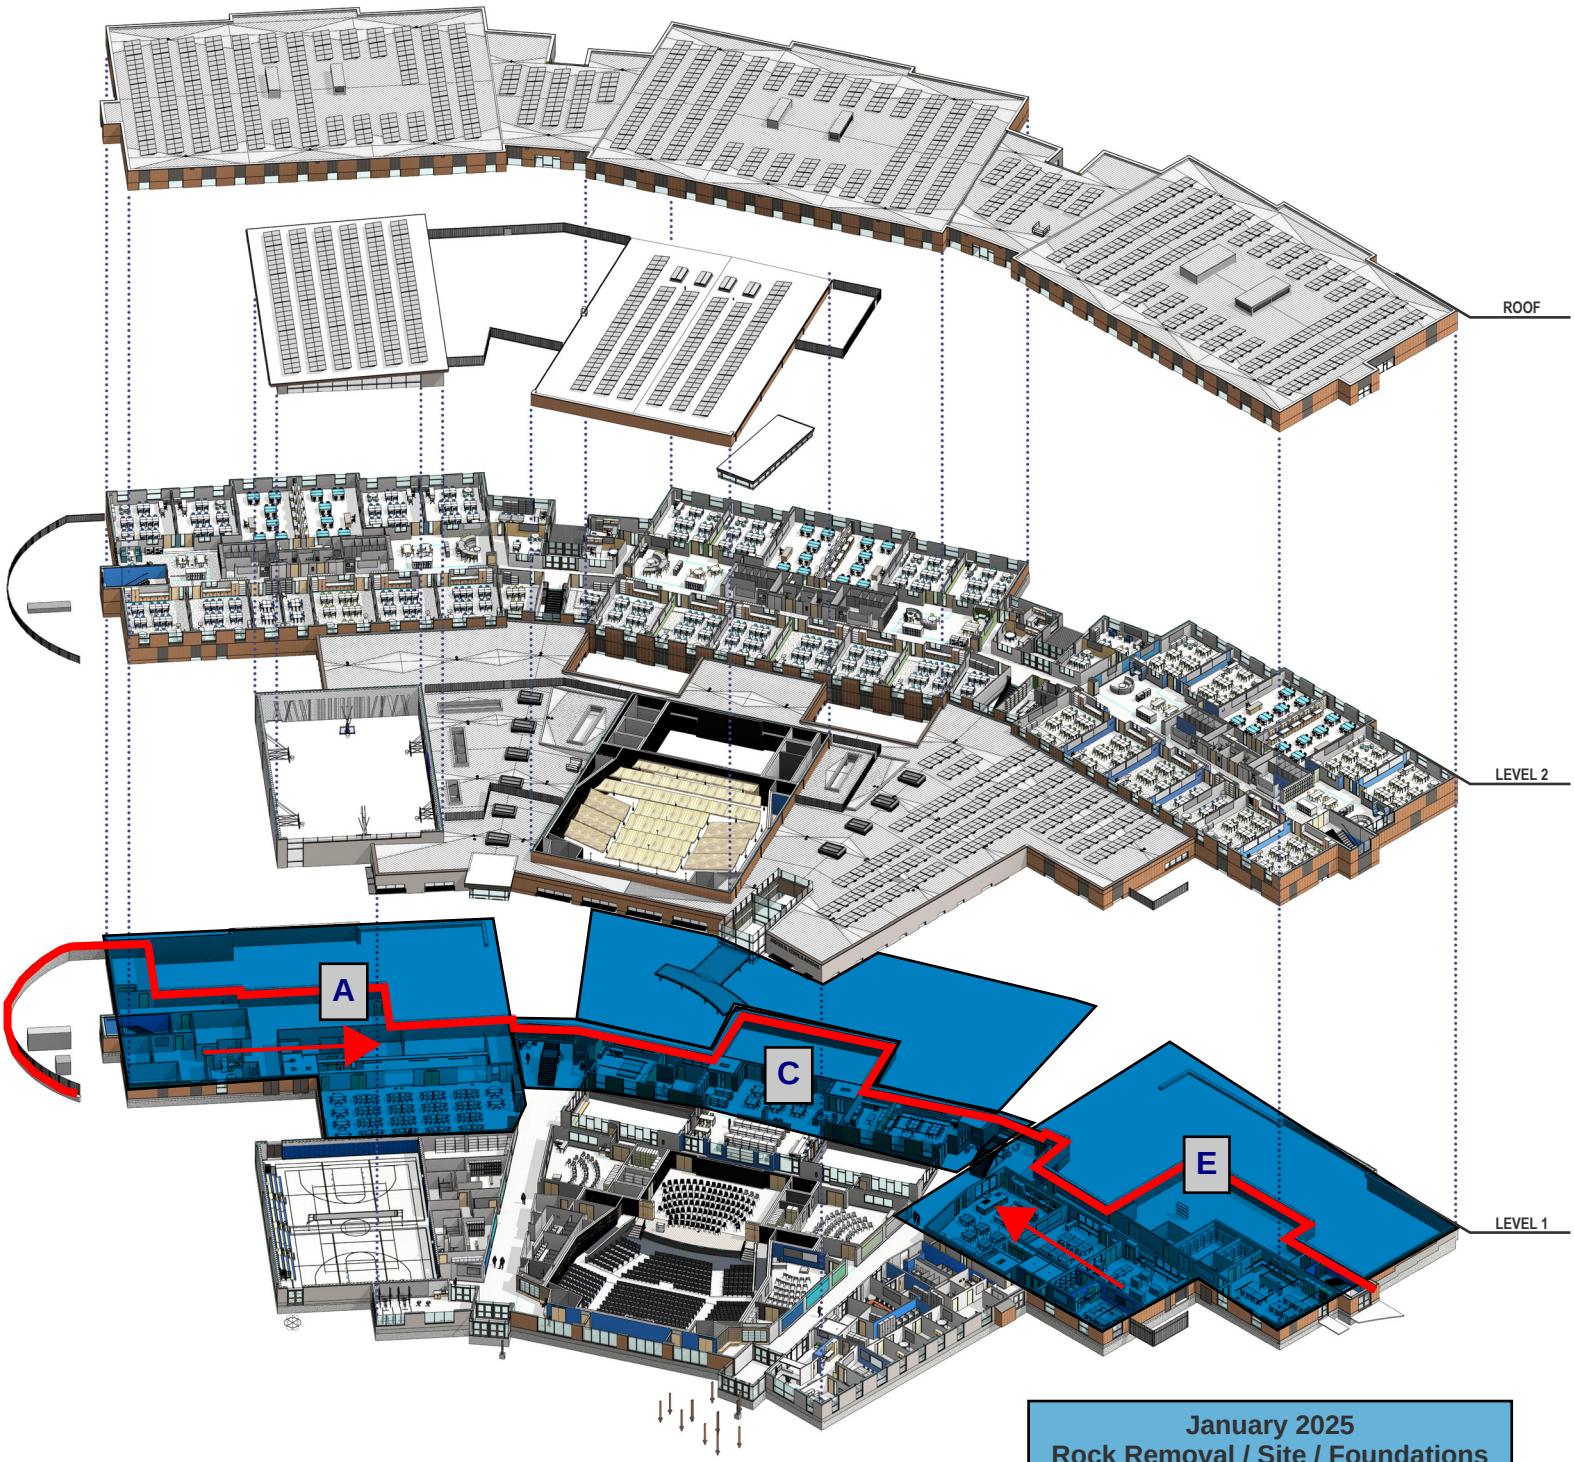
*Motor on a natural shade is priced per panel and can be ordered with multiple shades on one headrail.
NOTE: For all other non-motorization options, see individual price list for specific blind or shade.

B. Motorization Power Sources

Choose one (1) battery option or one (1) transformer per motor.

12-Volt Power Options	
Battery Cases	
Single Non-Rechargeable, Reloadable Battery Case (empty)	48
Single Non-Rechargeable, Reloadable Battery Case (filled) (Includes 8 AA lithium batteries)	115
Dual cases recommended for shades over 3,600 square inches (2.3 square meters) to extend battery life.	
Dual Non-Rechargeable, Reloadable Battery Case (empty)	95
Dual Non-Rechargeable, Reloadable Battery Case (filled) (Includes 16 AA lithium batteries)	230
Other Power Options	
48" (121.9 cm) Extension Cable	21
96" (243.8 cm) Extension Cable	26
12 Volt DC Plug-In Transformer (includes 96" (243.8 cm) extension)	115
Multi-Motor Power Supply Kit (Up to 10 motors per power supply)	1179
12-Volt Rechargeable Power Options	
12-Volt Rechargeable Battery Pack	187
12-Volt 6 foot (1.9 m) Li-ion Charger	21

NOTE: For woven wood shades, surcharge is per panel.



C. Z-Wave Motorization Controls

Choose one or more remotes per order. Controllers are wire-free, battery and mounting hardware is included. App & Gateway are wire-free and do not require batteries.

Radio Frequency Remote Controls	
Standard Remote	152
Plus Remote Single Channel	175
Plus Remote Decorator Wall Plate	18
Premium Remote Multi-Channel (includes wall mount and hardware)	310
Graber Motorization App and Gateway	315

RE: Approved Elevator Manufacturer

CONTRACT FOR: Greenwich Central Middle School

SPECIFICATION TITLE: Electric Traction Elevators

DESCRIPTION: Manufacturers

SECTION: 142100

PAGE: 5

ARTICLE/PARAGRAPH: 2.1/A./1&2

MODEL NO.: 3300 MRL

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:
- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

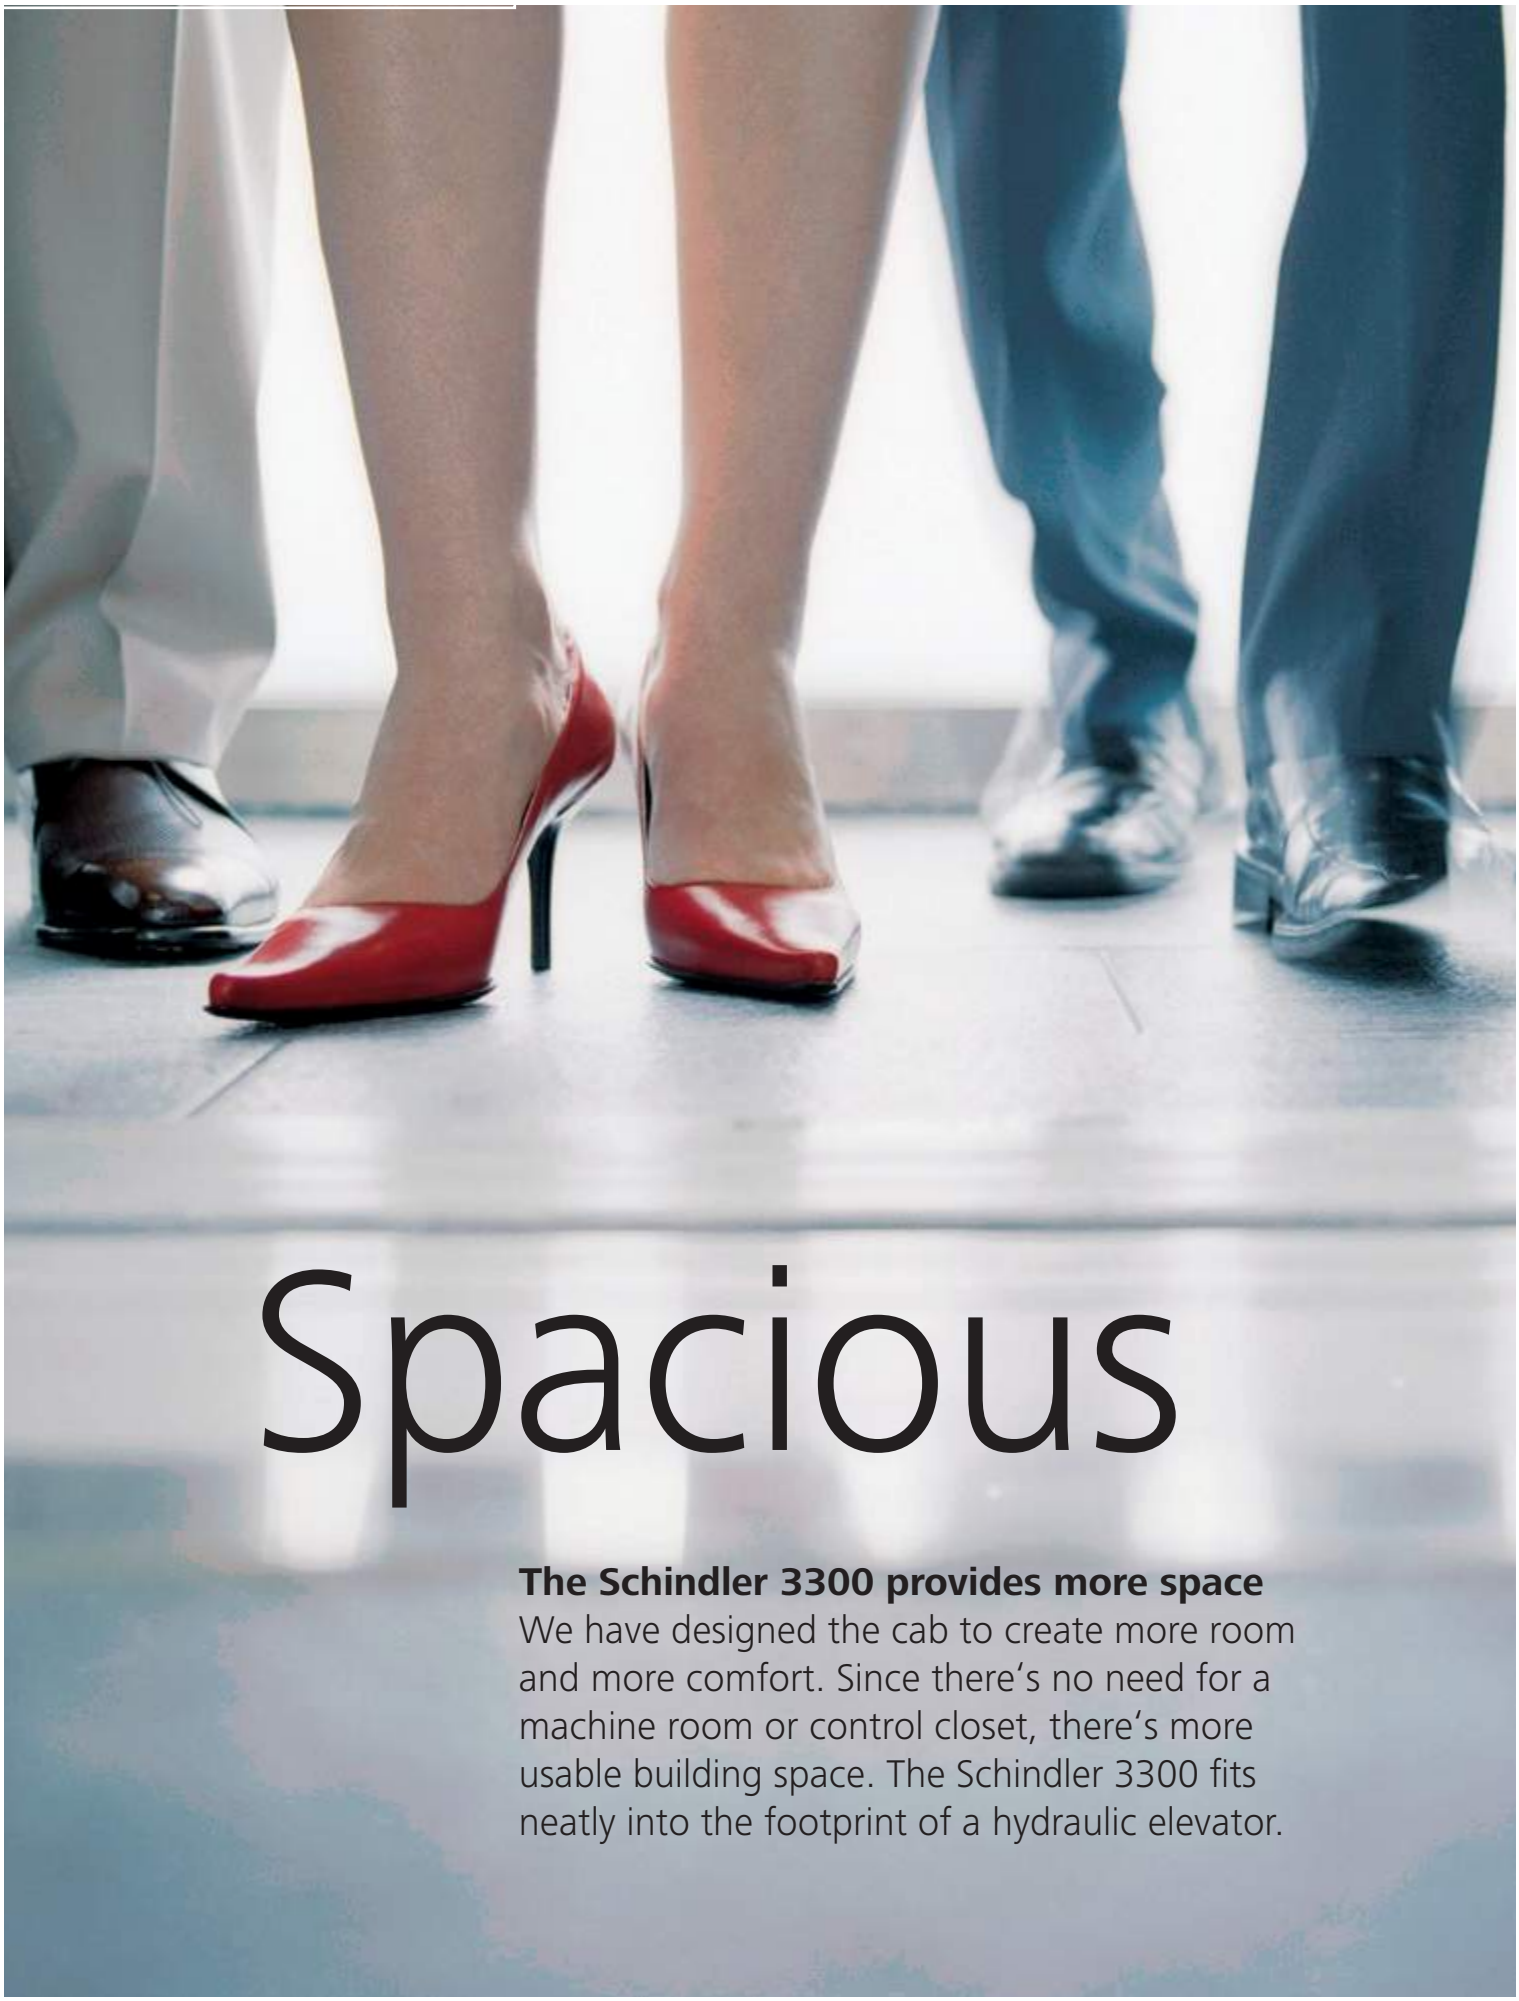
Schindler 3300

Distinctive design. Cost-effective solution. Green technology made easy.



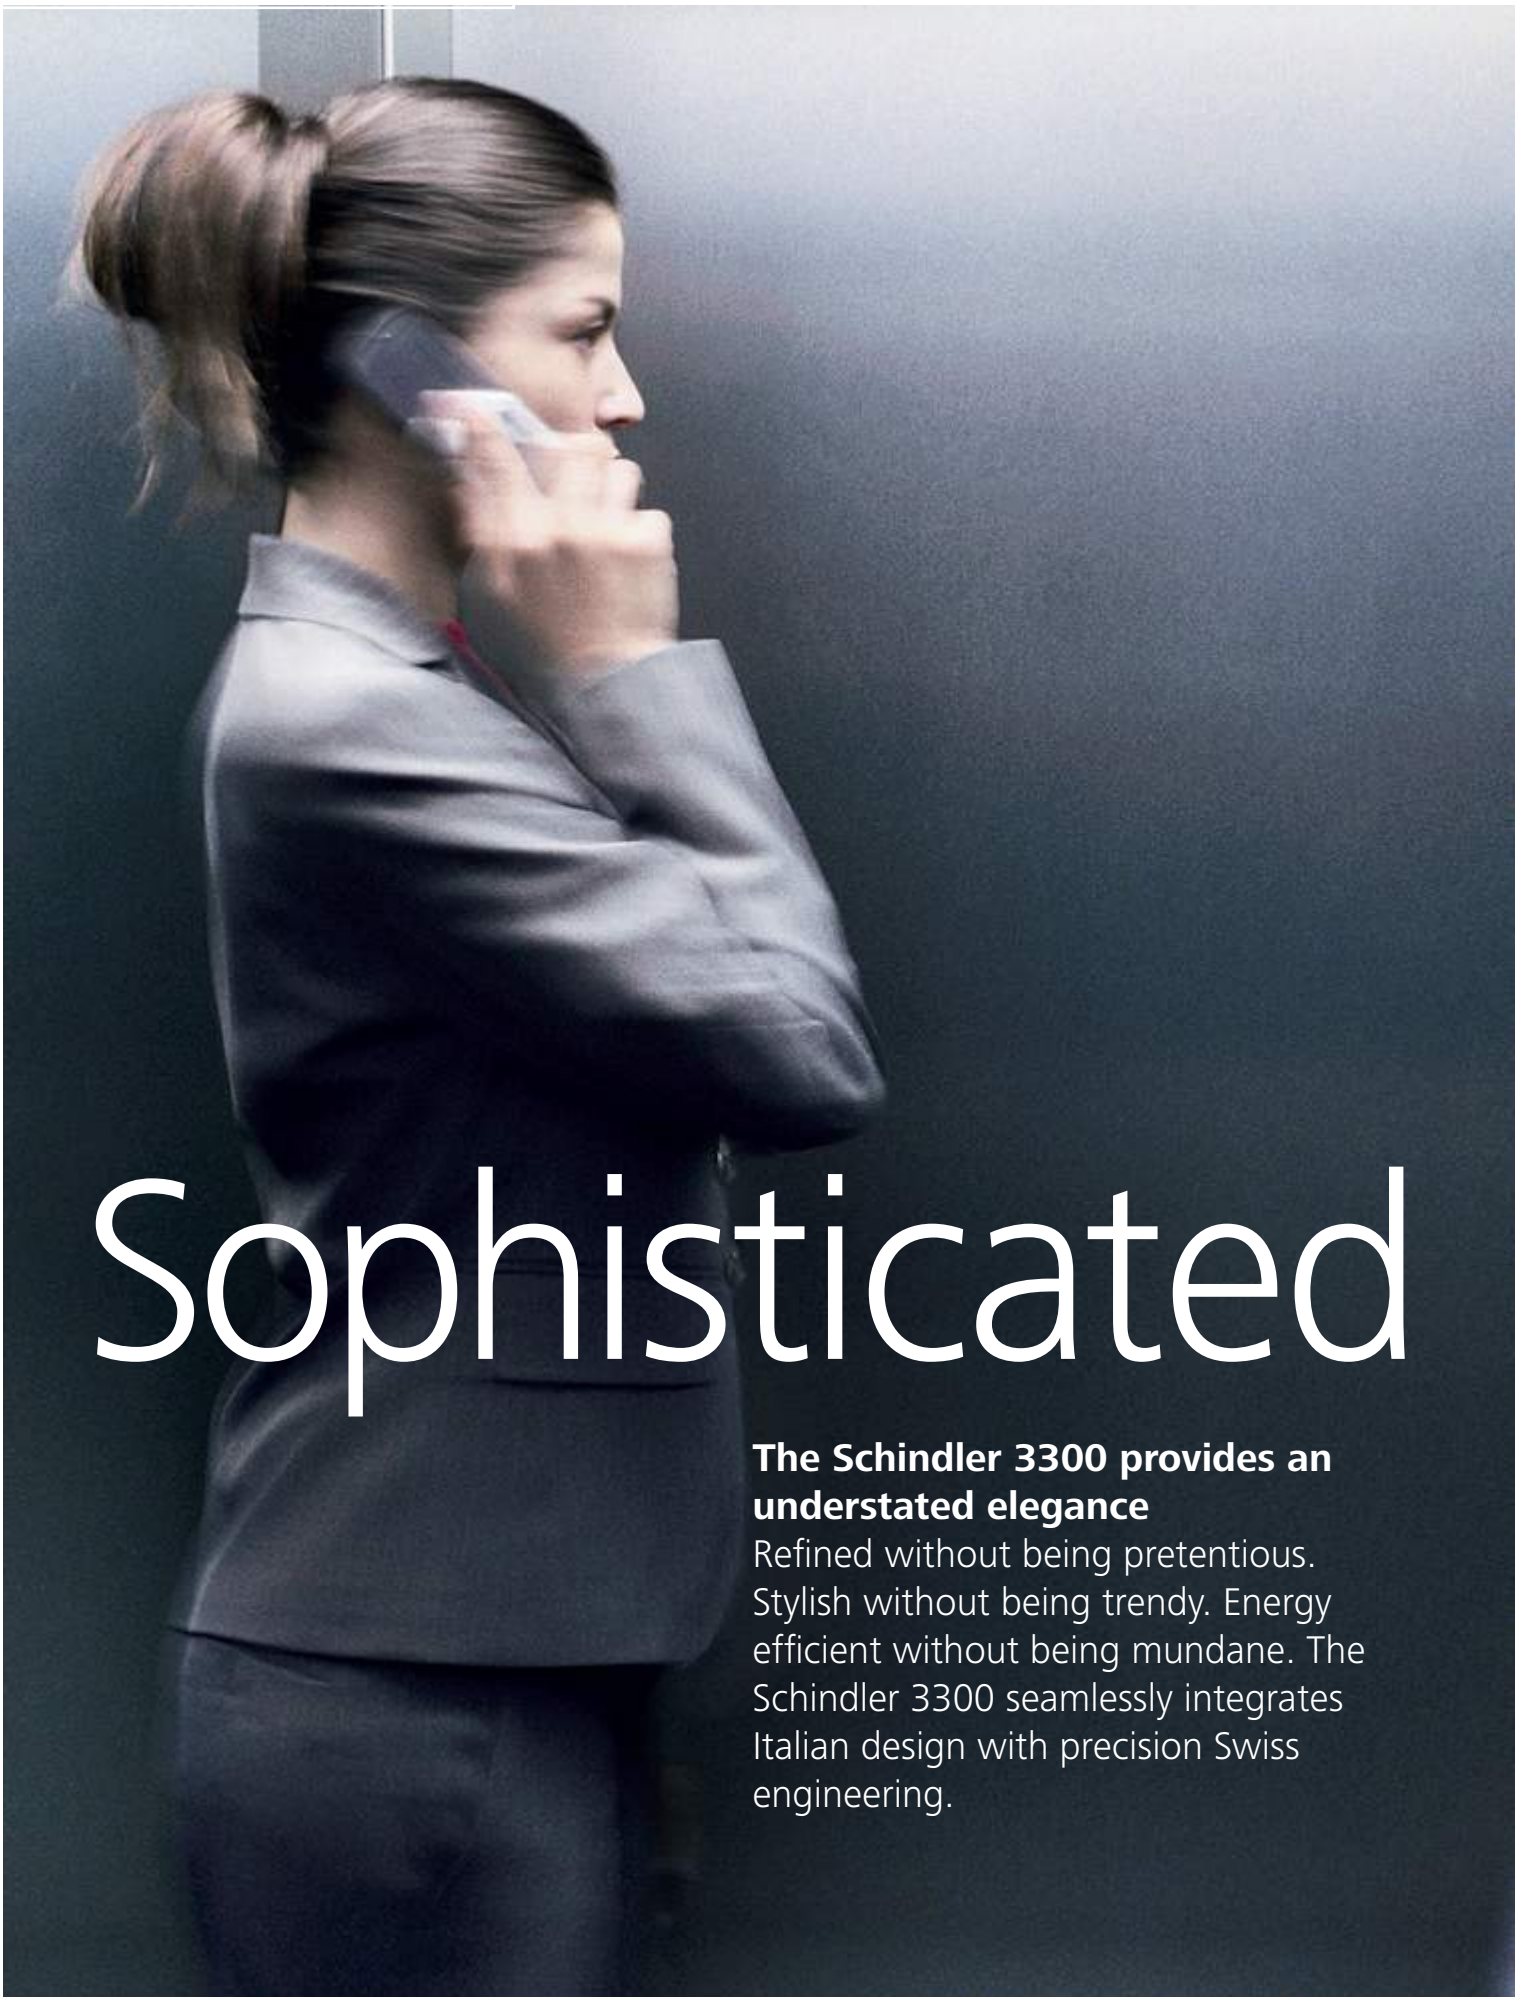
Schindler

Smart

The Schindler 3300 provides enlightened engineering

Easy to order. Accelerated lead times. Simple to install. And a pleasure to design. That's the Schindler 3300. From its distinctive aesthetic options to its machine room-less configuration, this elevator's features are thoughtful of the needs of architects, general contractors and passengers alike.

Spacious



The Schindler 3300 provides more space
We have designed the cab to create more room and more comfort. Since there's no need for a machine room or control closet, there's more usable building space. The Schindler 3300 fits neatly into the footprint of a hydraulic elevator.

Smooth

The Schindler 3300 provides a more comfortable ride

Noticeably quiet. Beautifully fluid. Reliably safe. Schindler's exclusive engineering provides smooth, quiet operation for the most comfortable ride experience – floor by floor, stop by stop.

Sophisticated

The Schindler 3300 provides an understated elegance

Refined without being pretentious. Stylish without being trendy. Energy efficient without being mundane. The Schindler 3300 seamlessly integrates Italian design with precision Swiss engineering.

Value has a new, intelligent design

The world's most enlightened elevator
The Schindler 3300 has proven itself globally as the smartest choice for low- to mid-rise commercial and residential buildings.

That's because it is engineered like no other everyday elevator. It offers a distinctive range of design and aesthetic options along with an amazingly smooth performance that uses less energy and makes less noise. All in a smaller, easy to fit footprint.

It's setting the new global standard.

More room. More usable space.
As architects and engineers around the world can attest, the Schindler 3300 is designed to minimize the space required for technical equipment, while maximizing the square footage of the cab interior.

Thanks to our new easy-to-install suspension traction media, hoistways designed for a hydraulic elevator can now accommodate a more spacious traction elevator.

Also, because the control is distributed throughout the system, and inspection and test panels are located in the top landing hoistway door jamb, the Schindler 3300 needs no machine room. What's more, it requires minimum overhead, eliminating unsightly structures on your roof. All told, the Schindler 3300 gives you more space and reduces construction costs.

Smooth to the eyes and ears
Schindler cabs are constructed using only high-quality materials. And with standard palettes that are anything but "standard," we can provide exceptional looks, while keeping lead times and costs down. From stainless steel to a distinctive collection of attractive color laminates, your design choices are easier than ever before.

To add to the aura, we are also working to reduce noise. Our suspension traction media enables the Schindler 3300 to glide peacefully through your building. Elevator movements go virtually unnoticed – which will certainly be appreciated by guests in your building.

Sophisticated design for our passengers and our planet
With automatic evacuation, we've elevated our focus on safety. In the event of a power failure, you will be taken safely to the next floor.

We're also setting a new standard in conservation. The Schindler 3300 is economical in its use of energy, which contributes to lower operating costs and a smaller carbon footprint. The effects are highly visible.

Fast facts

Capacity	2100–3500 lbs., 14-23 passengers
Travel height	Max. 98'-5", max. 8 stops
Door width	36-42 inches
Door height	84 inches
Drive	Gearless/frequency controlled
Speed	100/150 FPM
Control	Selective collective
Interior	Baked enamel, plastic laminate or brushed stainless steel

Efficient mobility
Sustainable technology

In architecture, in engineering, in everyday life, there is a global movement toward sustainability. There is a growing demand for solutions that benefit the planet as much as they do people. At Schindler, we are proud to be at the forefront of this initiative. In every facet of our business, we are looking for ways to become better stewards of the planet.

The Schindler 3300 is the hallmark of our environmental efforts. When designing this elevator, sustainability was not an afterthought, but the driving force behind every decision we made. As a result, the Schindler 3300 offers more eco-friendly features than one might have thought possible.

Drive
- Gearless machine designed to save energy and avoid power loss
- Stable start uses energy more efficiently and reduces electric costs
- Frequency converter with standby power mode allows elevator to return safely to nearest floor in the event of a building power outage
- Compact, lightweight and durable design.

Control
- Controls automatically switch car lights to standby mode to save energy
- Car panel and floor indicators all operate with low power, LED lights
- Multi-bus control architecture reduces cabling, material and waste
- Smart controls provide more efficient passenger transportation.

Cab and hoistway
- Car lighting equipped with energy-efficient lamps
- Central guiding system reduces friction and overall energy consumption
- Door drive with standby mode uses less electricity
- Overall design provides more usable space for enhanced passenger comfort.

Environmentally-responsible company
We are working to make our entire operation more eco-friendly. We have instituted more ecologically responsible production systems and material usage. We are able to manage installations faster and more efficiently. And our products and services are designed to provide energy-efficient and eco-friendly options to architects, contractors, building owners and managers.

What's more, Schindler is a member of the U.S. Green Building Council and supports the LEED® Green Building Rating System.

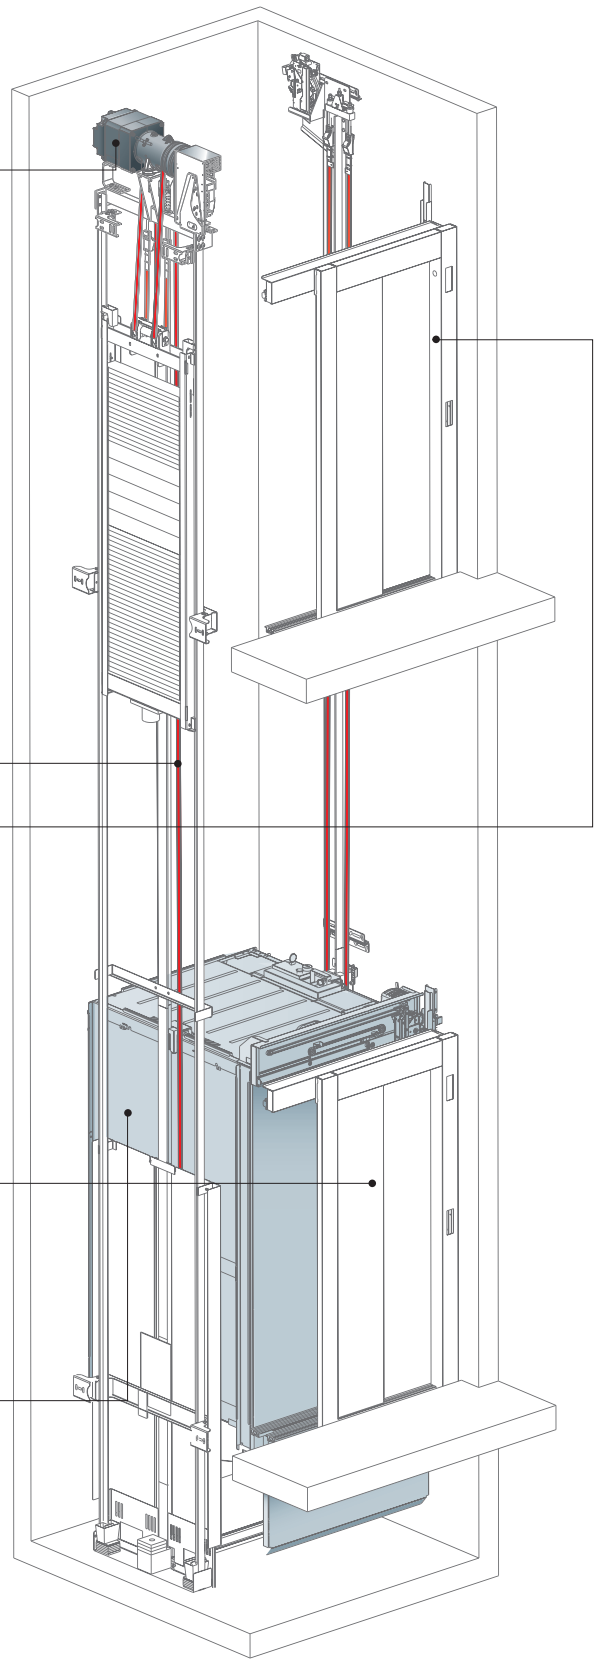
The following categories of the LEED rating system are areas where Schindler can assist you in obtaining the necessary credits for accreditation.

ISO9001 • ISO14001

LEED RATING SYSTEM VERSIONS 3 AND 2.2

Energy and Atmosphere	Materials and Resources	Indoor Environmental Quality
Prerequisite 1 Fundamental Commissioning of the Building Energy Systems	Credit 2.1 and 2.2 Construction Waste Management	Credit 4.1 Low – Emitting Materials: Adhesives and Sealants
Credit 1 Optimize Energy Performance		Credit 4.2 Low – Emitting Materials: Paints and Coats
		Credit 4.4 Low – Emitting Materials: Composite Wood and Agrifiber Projects

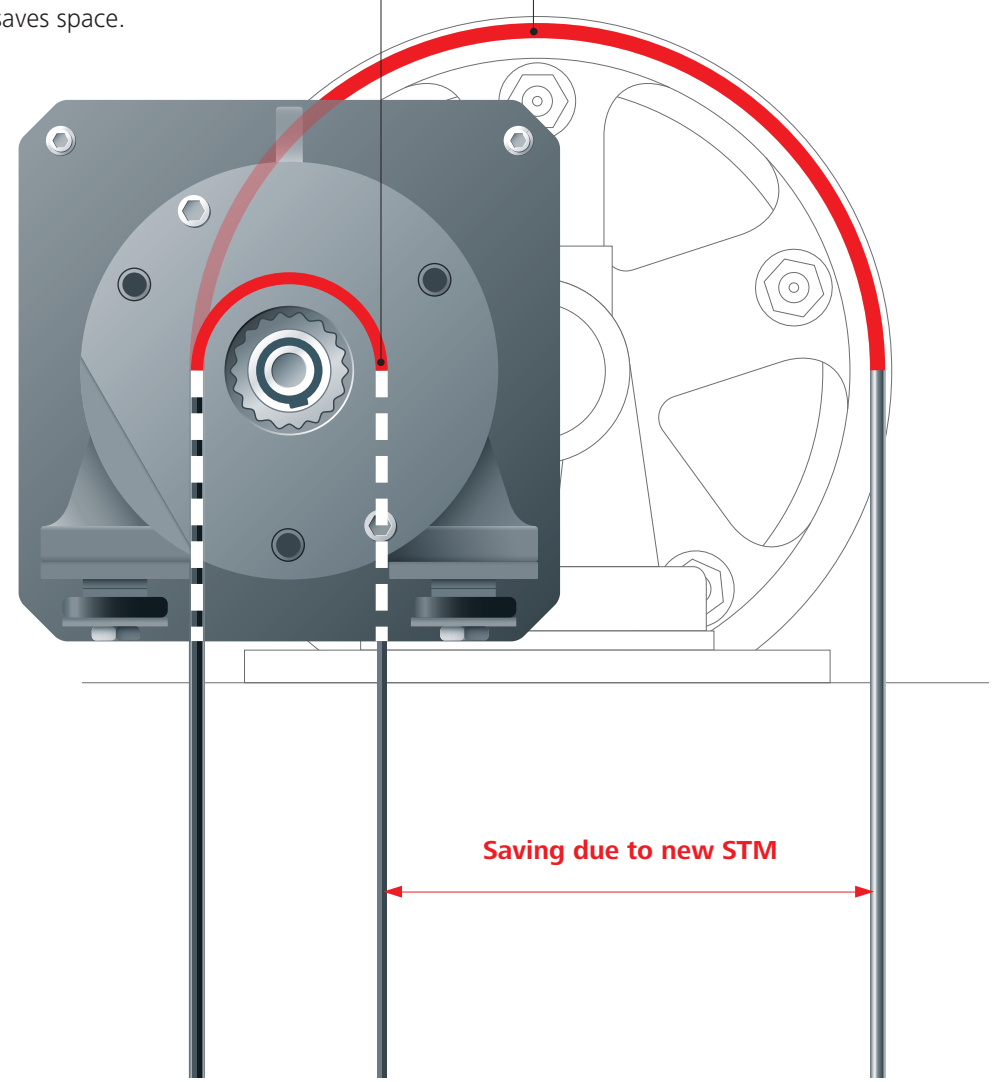
Technology advanced
Perfection attainable



Drive system
The Schindler 3300 requires a small hoist machine and inverter. This saves more space compared to previous drive systems; it is installed directly in the overhead and does not require a separate machine room. The system stops the car with precision. Cab and landing floor line up very accurately to ensure that passengers get in and out safely. The system is economical in energy consumption and causes minimal noise due to the material of the suspension traction media (STM) in the elevator and in the entire building. Real comfort.

Suspension Traction Media (STM)
The STM consists of thin metal cables sheathed in a non-circular EPDM (Ethylene Propylene Diene Monomer) jacket. They replace conventional steel cables, weigh less, require less space and run quieter. Thanks to the STM, there is room for the machine and drive directly in the elevator hoistway, allowing hydraulic-sized shafts to be utilized.

Inspection and test panel
In the Schindler 3300, the inspection and test panel is built directly into a standard door frame at the top landing. This highly functional solution is a vital achievement. It simplifies elevator installation, provides practical handling and saves space.



Doors
Doors are equipped with a frequency-controlled drive for fast and reliable operations. Two-speed side-opening doors opening to the left or right, as well as single-speed center-opening doors are available.

Cab
Technology does not take much space in the Schindler 3300. This is an obvious benefit that allows hydraulic elevator-sized shafts to be utilized while providing a larger cab interior. This is a striking advantage.

Previously: steel cables
Steel cables are relatively inelastic. They need a traction sheave diameter of at least 12 inches with the cable diameters required for elevators. The complete conventional motor, including drive gears, must be large enough to match. A system that requires space.

New: Suspension Traction Media (STM)
Suspension traction media are flexible. They use a much smaller traction pulley diameter than steel cables. 4.25 inches is enough, requiring a much smaller motor. A design that saves space.

We put a premium on design, without charging a premium

All around the world, architects and designers are discovering a new creative outlet. Conceptualized by an Italian designer, the Schindler 3300's sleek cab design is impressive yet understated. Simple, yet refined, with design palettes to suit any style or building décor.

– Cab walls are available in stainless steel, baked enamel or a choice of plastic laminates.

– The unique ceiling design is available in a choice of brushed stainless steel or silver-metallic baked enamel.

– Ceiling lighting is refined, yet illuminating, with compact fluorescent light fixtures.

– The elegant curved handrail is available in painted, brushed or polished aluminum finishes.

– Landing doors are available in brushed stainless steel, various colors of durable baked enamel or primer. Doors are available in center-opening or side-opening configurations, with left-hand or right-hand openings.

– Hall fixtures are composed of tempered safety glass panels, back-printed in white, to give the Schindler 3300 a contemporary, modern look.

Note: For more information on the high fashion details we designed into the Schindler 3300, be sure to ask for a copy of our Deco brochure, which includes all décor and accessory options. The car specifications, options and colors in this brochure are representative only and are subject to change. Sample shown may vary from the original in color and material.

River Walk

Clean, cool and cutting edge

Miami Bottle Glass

Matte or gloss finish laminates with glassy sheen; swatches are a representation of the gloss finish.

Great Lakes

Steely, sophisticated and elegant

Toronto Grey

Choose from gloss finish laminates with subtle, monochromatic patterns or a distinctive brushed stainless steel cab.

Willamette

Rich, natural and classic

Baltimore Cherry

Matte and gloss finish laminates with rich, wood-grain colors; swatches are a representation of the gloss finish.

The perfect fusion of people-centered design and technology

The features and components of the Schindler 3300 are smartly designed to enhance the rider experience, improve safety and minimize downtime. From the low-energy multiprocessor controls to the stylish, tempered safety glass operating panels, you'll find the latest technological advances.

Control
The control system is based on low-energy multiprocessor technology. The compact main inspection and test panel of the decentralized system is integrated in the door frame.

Control functions
– Miconic® NX microprocessor
– On-board diagnostics, self testing
– Light curtain
– Overload detection
– Two-way, hands-free emergency communication
– Firefighter's Service operation
– Independent service
– Automatic car light
– Automatic evacuation to nearest floor.

Schindler Remote Monitoring™
Supports Schindler predictive maintenance, anticipating difficulties before they occur and allowing rapid response to service calls.

Fixtures
The stylish, tempered safety glass panels are back-printed in white to give the elevator a contemporary, modern look while meeting all applicable codes. Please refer to our deco brochure for more information on all decor and accessory options.

State-of-the-art planning, installation and support

Planning
The Schindler 3300 requires no machine room. For you, this means less planning. Only one space, the elevator shaft, has to be designed. Standardized plans simplify the process, making it fast and efficient.

Order
The design of the Schindler 3300 is sophisticated, yet simple. The key factors are quickly established. Since there are no complicated specifications, it is easy to place an order. You will quickly and effortlessly find the product that fits your needs.

Delivery
We deliver the Schindler 3300 complete and all at once, just in time for when the building is ready for the elevator installation.

Installation
The elevator is quickly installed. No cranes or scaffoldings are required. The system is ready in about two weeks. A well-thought-out process.

Keeping it all running smoothly

The Schindler 3300 combines proven engineering and smooth performance with the best service in the industry, from our integrated maintenance delivery technology to our highly trained technicians. So you can be confident of fewer callbacks, fewer inconveniences and less downtime.

– On-board sensors monitor your equipment 24 hours a day with Schindler Remote Monitoring™ (SRM). It's a powerful diagnostic tool that can identify a problem, map out a solution and dispatch a technician to your site – often before you're even aware of the issue.

– One toll-free call to the Schindler Customer Service Network (SCSN) provides fast dispatching at any time, day or night.

– Schindler FieldLink™ gives your technician unlimited access to virtually any information needed to complete your maintenance quickly and accurately.

– Genuine manufacturer's replacement parts from extensive local and national inventories are available within 24 hours if need be.

– Exclusive Schindler Customer Score Card™ allows you to track trends, view performance reports and service records in real time at www.us.schindler.com.

FIREFIGHTERS'
OPERATION

Ever greener

Keeping the environment in mind

Schindler is committed to helping you reduce the environmental footprint of your buildings and qualify for LEED® certification by incorporating sustainable green features into our elevator and escalator systems. Improving the environmental impact of our products and processes, particularly our consumption of energy and materials, is fundamental to our corporate responsibility as an industry leader. Schindler 3300 is a prime example of our continuing commitment to improve mobility while preserving resources.

Bid RFI #389

SHERIDAN SEATING INC.

TELESCOPIC BLEACHER SPECIFICATIONS

PART 1 GENERAL

1.1 Description

A. Scope

1. Telescopic seating systems comprised of multi-tiered rows of seats, deck components and risers on interconnected, retractable, supporting structure. Telescopic seating operation shall be by means of manual or electric operation. Telescopic seating system shall be wall attached (typically), recessed, telescoping or portable. System shall be floor attached where reverse folding.

B. Manufacturer's Design Criteria

1. Gymnasium seat assembly is designed to support, in addition to its own weight, a live load in excess of 120 lbs. per linear foot or 100 lbs. per square foot (whichever affect is greater), front to rear sway in excess of 10 lbs. per linear foot and a parallel sway load in excess of 24 lbs. per linear foot of row.
2. Guard railings are engineered to withstand a load of 200 lbs. per foot at top rail and an intermediate load of 150 lbs. per foot.
3. Steel structure must be free standing when installed and include 4 steel columns per row, per section. Those manufacturers which only include 2 columns per row, per section are not acceptable.
4. Steel columns must be fabricated from structural high tensile steel tubing; minimum size of tubing will be 1 ½'' x 3'' x 10 ga. Those manufacturers providing formed steel or angle iron columns in place of structural tubing are not acceptable. Maximum spacing between columns shall be 11'-6".
5. Two row locks per row, per bleacher section manufactured from ¼'' hot rolled steel to prevent racking of bleachers as they are retracting are required.
6. Footboards shall be produced from ¾'' plywood with top facing. Voids or boat patching on top facing is not acceptable. Top facing shall receive 3 coats of colored, opaque, catalyzed epoxy coating. Aluminum trim shall be installed on all exposed edges. Extruded aluminum joiners shall be placed between adjacent footboards.
7. Optional Upgrade – Panelam decking on ¾" plywood.
8. Optional Upgrade – Bronzed aluminum decking.

9. Wood seat boards shall be full 4/4" finished size, kiln dried, select pine with rounded edges. Seat boards shall be sealed on all surfaces and three coats of polyurethane on top and sides.
10. Molded seats shall be 18" wide of high density polyethylene structural foam with full perimeter interlock and concealed mounting hardware. End caps shall be provided at all ends, aisle ways and ADA locations. Colors are bright without excessive streaking. "Waterfall" coloring will not be acceptable. Indents for numbers and letters shall be standard.
11. No less than 4" diameter x 1 ¼" soft faced, non marking rubber wheels to support understructure system shall be provided with sintered metal bearings and clips for easy replacement.
12. Nose beam shall be formed from 14 ga. minimum galvanized steel. Steel shall have G90 galvanized coating or better. These will encapsulate ¾" plywood decks.
13. Rear riser shall be formed from 14 ga. minimum galvanized steel. Steel shall have G90 galvanized coating or better.
14. Handicap seating provisions: Provide recoverable first tier cutouts as required by ADA. Include manufacturer's standard front guardrail and closure panel below. Shop drawings will reflect locations.

1.2 Quality Assurance

A. Acceptable Manufacturer

1. The manufacturer shall be a firm experienced in the manufacturing of telescoping bleacher seating systems.
2. The telescopic seating system specified herein shall comply with the International Code 2000 Edition, Standard for Assembly Seating, Tents and Membrane Structures; and specifically with Chapter 5, Folding and Telescopic Seating, except where additional requirements are indicated or imposed by authorities having such jurisdiction.
3. The telescopic seating system manufacturer shall employ a registered, professional engineer to certify that equipment to be supplied meets and/or exceeds the design criteria of these specifications.
4. The telescopic seating system manufacturer shall have all welding done in a CWB/AWB certified shop.
5. It will be the responsibility of the bidder to furnish with his bid a list clarifying any deviation from these specifications, written or implied.

B. Acceptable Installer

1. Installers to be recognized, trained and certified by the telescoping bleacher seating manufacturer.

1.3 Submittals

A. Submit six copies of each of the following:
   1. Manufacturer's shop drawings
   2. Manufacturer's standard 1-year warranty and limited 20 year warranty
   3. Manufacturer's Operation and Maintenance instructions

B. Submit seating and deck samples, as required.

1.4 Warranty

A. Submit manufacturers standard warranty form for Telescopic seating systems.
   1. The manufacturer shall guarantee all work performed under these specifications to be free from defects for a period of one (1) full year.
   2. Replacement structural steel components, nuts, bolts, axles, and wheels as necessary to maintain the integrity of the original installation, will be provided at no charge for a period of twenty (20) years.
   3. The guarantee shall be limited to the fair use of the Telescopic Seating System and shall not include acts of vandalism, fire, flood or other situations that do not fall into the general use requirements of the bleachers.
   4. A yearly inspection and required maintenance must be performed to maintain the extended 20-year warranty.

PART 2 PRODUCT

2.1 Manufacturers

A. The basis of design for the gymnasium seating shown on the plans and detailed in these specifications is by Sheridan Seating Inc. Other manufacturers desiring to bid shall submit detailed product literature and specifications a minimum of ten (10) days prior to bid.
   1. Model: W100 Wood Seats or M200 Molded Seats
   2. Aisle Type: Foot level Aisles with center aisle railings with curved top rail terminations.
   3. End rails: Typically self-storing ready rails.
   4. Operation: Integrally powered friction electric operation or manual operation.
   5. Product Requirements:
      a. System to be wall attached. System shall be floor attached where reverse folding.

b. Bank length as required by specifications.
c. Total number of rows as required by specifications.
d. Row rise: 10'', 11 5/8'', or as required by specifications
e. Row spacing: 22'', 24'', 26'' or as required by specifications.

6. Accessories:
   a. Handicap seating provisions: Provide first tier handicap cutouts to comply with American Disabilities Act (ADA). All handicap cutouts shall have required railings. Double center cutouts will be recoverable.
   b. Scorers table 15'' X 96''. Table shall be self-supporting and portable to be used anywhere within the bleacher system or on the gymnasium floor.
   c. Self–storing End Rails: All railings to receive powder-coating finish (black).
   d. P Rails: Every other deck shall have an intermediate pedestal mounted railing. These railings shall have a round handrail and shall be self-storing without the need of dismantling. Railings to receive powder-coated finish (black).
   e. Obstructions: Note any obstructions (columns, drainage pipes, overhead ducts, etc.) on final shop drawings.

2.2 Fabrication

A. Understructure System

1. Structural high-tensile steel columns fabricated from minimum size 1 ½'' x 3'' x 10-gauge structural tubing.
2. Bracing: 1 ½'' square, structural tubing
3. Row Locks: Provide two per each row, per bleacher section made of ¼'' plate, hot rolled steel.
4. Wheels shall be 4'' diameter x 1 ¼'' width.
5. Maximum spacing between columns shall be 11'–6".
6. Finish: Provide manufacturers black, semi-gloss, machinery enamel

B. Deck System

1. Footboards shall be ¾'' plywood with top facing. All surfaces shall be thoroughly sealed. Top facing shall receive three coats of colored, opaque, catalyzed epoxy coating. Aluminum trim shall be installed on exposed edges. Adjacent foot boards shall be joined by means of extruded aluminum joiner beam sized for ¾'' footboards.
2. Optional Upgrade – Panelam decking on ¾" plywood.
3. Optional Upgrade – Aluminum decking.
4. Provide thru-bolt fastening through galvanized steel riser beams at locations of splices in rear riser. Front deck connection shall be provided using front steel nose beams.

C. Decking and Riser Supports
   1. Decking and riser supports shall form rigid closed deck structure. Tapered deck stiffeners shall be bolted through the front and back.

D. Seat System
   1. Molded Structural Foam: Provide one-piece, high density structural polyethylene foam. Scuff resistant, textured solid color with anatomically correct tops. Color(s) for the seat modules shall be determined by the Architect by providing color charts. Contrasting color effects can be created with custom colors.
   2. Wood: Provide full 4/4" kiln dried, select southern yellow pine with rounded edges. Provide sanding sealer and three coats of clear polyurethane finish on top and sides.

E. Electrical System
   Tractor Drive System: A series of electric drives are located under the first row in sufficient quantities necessary to move the system in and out effortlessly. Each tractor drive consists of two 12" wide x 6" diameter cylinder wheels covered with a specially formulate white 60 durometer soft-faced rubber grooved for positive grip and low wear while reducing stress on floor.

   The tractor is operated by a minimum ¼" HP gear reduction motor built into a height adjustable steel framework and containing additional weight plates for added traction where necessary. These drives operate from one central control box and a single plug-in, hand-held, low-voltage remote pendant controller which has, in addition to an in-and-out button, a left and a right jog button used to always allow for straight and true steering (steering provided where required). The standard system operates with 3 phase, 208 volt, 60 Hz power. Optional power source can be supplied as required.

PART 3 EXECUTION

3.1 General

A. Manufacturer's representative or bleacher system installer shall demonstrate the proper method of operation of the bleacher system to the Owner and Architect upon completion of the work.
B. Telescopic Seating Subcontractor shall verify that all areas are free of impediments interfering with the installation and that substrates are acceptable to receive seating in accordance with the manufacturer's recommendations.

C. Electrical wiring within the building as required for power operation of the bleachers shall be provided by others.

3.2 Installation

A. Seating shall be installed in accordance with the manufacturer's instructions and final shop drawings. Telescopic Seating Subcontractor will install all accessories, anchors, inserts and other items for installation of seating and for permanent attachment to adjoining construction.

B. Adjustment and Cleaning: Upon completion of installation, Telescopic Seating Subcontractor shall adjust each seating assembly to operate in compliance with manufacturer's recommendations. Telescopic Seating Subcontractor shall clean installed seating on exposed or semi-exposed surfaces and touch-up all exposed finishes.

C. The manufacturer reserves the right to incorporate design changes and material substitutions as it sees fit to improve the overall product.

All rights reserved, Sheridan Seating Inc.

Sheridan Seating Warranty

Sheridan Seating Inc., “Sheridan”, warrants, the “Owner” that its new Telescopic Bleachers, “the Product”, will be free from defects in material and workmanship as per the specification for 10 years from Substantial Completion under conditions of normal use and that have been maintained as per Sheridan’s requirements, except as noted below. If such a defect causes failure of the Product or a portion of the product, Sheridan, at its option and sole discretion, will either repair or replace the defective Product or portion of the Product at no charge to the customer. Replacement structural steel components, hardware, axles, and wheels as necessary to maintain integrity of the original installation, will be provided, at no charge, for a period of 20-years.

This guarantee is limited to fair use of the system and does not include vandalism, fire, flood, other acts of dog or situations that do not fall into the general requirements of our bleacher. This guarantee is contingent up the client arranging an annual maintenance program carried out by a Sheridan certified maintenance company.

This warrant is the customer’s exclusive remedy for product defects and does not apply to products altered or modified by the user, or their agents, or to user attached accessories.

There are no warranties except as expressly stated above whether expressed or implied including, but not limited to any warranty of merchantability or fitness for any particular purpose. Sheridan shall not be liable for consequential or incidental damage arising from any product defect.

Sheridan Product Certification

Sheridan Seating Inc. products meet or exceed the customer specific requirements detailed in the “Bleacher Specifications” distributed to initiate product quotations and the build thereafter.

The product meets or exceeds the applicable codes listed here:

ADA & ABA 2004 USA, IBC 2021 USA, NFPA-102 2021 USA, ANSI-300 2017 USA & CANADA, BOCA USA & CANADA, NFC Canada 2020, NBC Canada 2020, 2017 ICC 300, Accessible Canda Act.

Where requested the product will meet or exceed load requirements and can be verified by 3rd party engineering firms for any State, Province, or Territory in North America.

Sheridan's Understructure Advantage:

- Sheridan seating uses a 4 column freestanding understructure which makes our understructure easier to assemble than many of the competitors in the industry.
- The four vertical columns and connecting braces create a "box-frame" and provide great rigidity to the understructure.
- Sheridan understructure is made with 100% North American steel for unparallelled strength and durability.

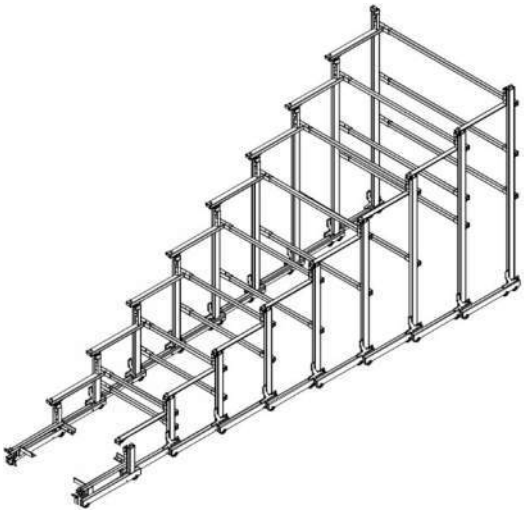

Figure 1:Sheridan 4 Column System

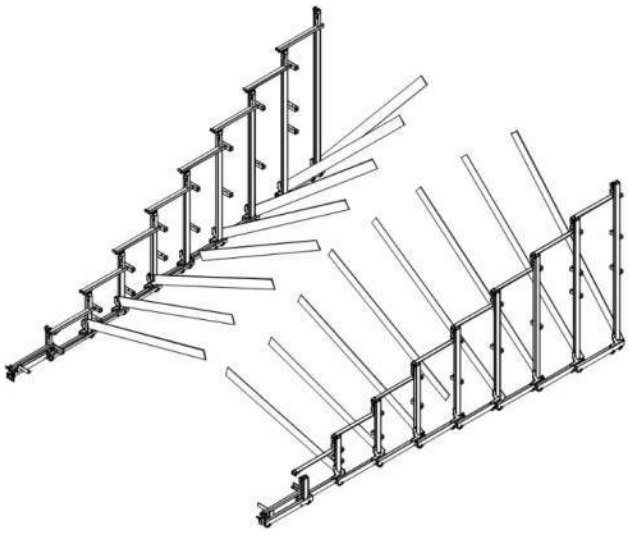

Figure 2: Competitor System

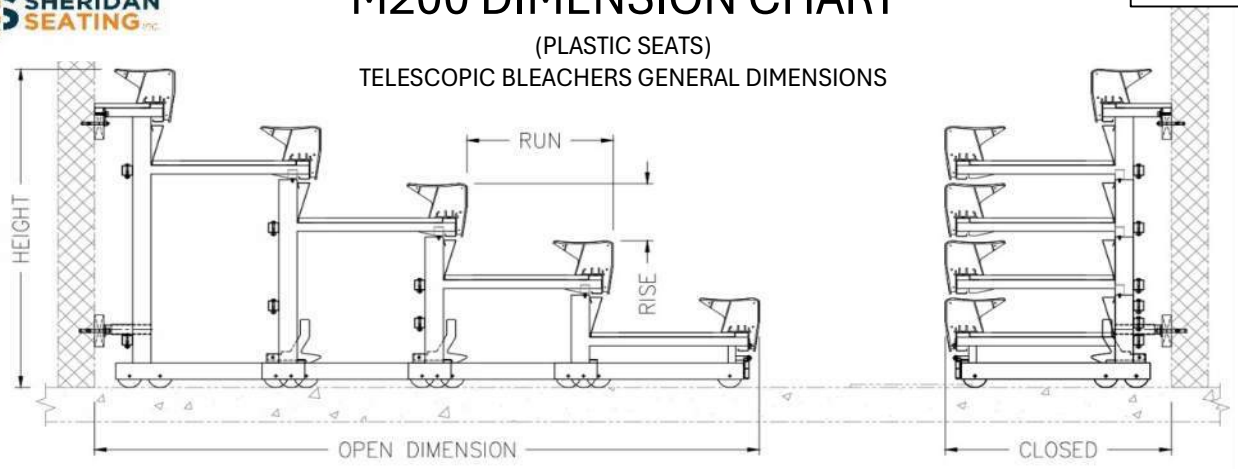
Sheridan's Design Advantage:



- Every project is unique, and we understand the importance of creating customized solutions for our customers. Our design and fabrication teams work closely with our clients to bring their visions to life.
- Sheridan build and design our products around your facility, we do not drive our customers to design their facility around our designs.
- From selecting the finest materials to incorporating personalized features and finishes, we strive to exceed expectations on every project. Whether it's an intimate auditorium or large arena, we have the expertise and equipment needed to fabricate the perfect solution, every time.
- We would be pleased to help design and set up your new facility. We will provide you with the necessary resources and experience needed to optimize the end results of your project.

OPERATION AND MAINTENANCE

INSTRUCTIONS

BOTH OPERATION AND MAINTENANCE SHALL BE TRANSMITTED TO THE OWNER

BY SHERIDAN SEATING INC. OR THEIR REPRESENTATIVE.

SERVICE

OPERATION AND MAINTENANCE OF THE BLEACHER SHALL BE THE

RESPONSIBILITY OF THE OWNER OR THEIR DULY AUTHORIZED

REPRESENTATIVE, AND SHALL INCLUDE THE FOLLOWING:

1. IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS.

2. ONLY ATTACHMENTS SPECIFICALLY APPROVED BY THE MANUFACTURER FOR

THE SPECIFIC INSTALLATION SHALL BE ATTACHED TO THE BLEACHER.

3. AN ANNUAL INSPECTION AND REQUIRED MAINTENANCE OF EACH BLEACHER SYSTEM SHALL BE PERFORMED TO ENSURE SAFE CONDITIONS. THE INSPECTION SHALL BE PERFORMED BY A TRAINED FACTORY INSTALLER, QUALIFIED SERVICE PERSONNEL OR A REGISTERED BLEACHER INSPECTION COMPANY.OPERATING INSTRUCTIONS FOR ELECTRIC OPERATION

USING PENDANT HAND CONTROL

THE MOST IMPORTANT ASPECT OF OPERATING BLEACHER PLATFORMS IS THERE NOT BE

ANY OBSTRUCTIONS ON THE FLOOR WHILE THE UNITS ARE TRAVELLING IN AND OUT.

TO OPEN BEACHERS

(1) CHECK IN FRONT OF THE BLEACHER PLATFORMS TO ENSURE THAT NO OBSTRUCTIONS ARE

IN THE WAY.

(2) PLUG IN THE PENDANT HAND CONTROL. THE FEMALE PLUG IS LOCATED IN THE CENTRE OF THE BLEACHER IN THE FIRST ROW SKIRTBOARD. CARE SHOULD BE TAKEN WHEN INSERTING THE PENDANT CONTROL PLUG TO ENSURE THAT THE PINS LINE UP CORRECTLY. THERE IS AN ALIGNMENT PIN IN THE PLUG.

(3) STEP BACK AND, HOLDING THE PENDANT CONTROL, TURN THE BUTTON TO THE OUT

POSITION TO PLACE THE BLEACHER IN MOTION. WALK FORWARD WITH THE BLEACHER AS IT MOVES.

(4) AS THE BLEACHER MOVES FORWARD, KEEP YOUR EYES IN LINE WITH THE FIRST ROW TO ENSURE THAT THE BLEACHER IS MOVING OUT IN A STRAIGHT LINE. IT HELPS TO USE THE GAME LINES ON THE FLOOR AS A GUIDE. IN A CASE WHERE THERE ARE NO GAME LINES, IT WILL BE NECESSARY TO USE ALTERNATE MARKINGS. THE FIRST ROW MUST REMAIN PARALLEL TO THE BACK WALL AT ALL TIMES TO PREVENT PLATFORM FROM TRACKING.

(5) THE ROW LOCKS SHOULD RELEASE ONE AT A TIME AND LOCK INTO PLACE WHEN FULLY EXTENDED. THIS ALSO PREVENTS THE BLEACHER FROM TRACKING.

(6) DURING THE OPERATION IT IS POSSIBLE FOR A SECTION TO MOVE MORE QUICKLY ON ONE SIDE THAN THE OTHER DUE TO FLOOR CONDITIONS OR THE MECHANICAL DRAG FACTORS IN THE TELESCOPIC BLEACHER SYSTEM. THIS IS A NATURAL CONDITION TO ALL TELESCOPIC SEATING AND IS OVERCOME BY THE OPERATOR CONTINUOUSLY MONITORING THE MOVEMENT OF THE FIRST ROW TO ENSURE THAT IT IS ALWAYS STRAIGHT. IF THE UNIT BEGINS TO GET OUT OF ALIGNMENT IT WILL BE NECESSARY FOR THE OPERATOR TO USE THE JOG BUTTON TO BRING THE PLATFORM BACK INTO ALIGNMENT. (THE JOG OPTION DOES NOT APPLY TO SYSTEMS UNDER 8 ROWS)

(7) TO JOG THE BLEACHER BACK INTO POSITION, TURN THE PENDANT CONTROL BUTTON TO THE OFF POSITION. THE CONTROLLER IS SPRING LOADED. OUR SYSTEM HAS JOG LEFT AND JOG RIGHT. JOG LEFT WILL MAKE THE MOTORS ON THE LEFT SIDE OF THE PLATFORM RUN FORWARD AND THE MOTORS ON THE RIGHT GO IN REVERSE. THE JOG RIGHT BUTTON WILL DO THE EXACT OPPOSITE. USING THE IN-OUT CONTROL, YOU CAN REVERSE THE MOTOR SEQUENCE. USING THE JOG BUTTONS, IT IS NOW POSSIBLE TO REALIGN THE PLATFORMS. WHEN PLATFORMS ARE MOVED BACK INTO ALGINMENT, YOU CAN SHUT DOWN THE JOG FEATURE AND AGAIN RUN THE PLATFORMS OUT USING THE IN-OUT BUTTON ONLY.

(8) CONTINUE MOVING FORWARD WITH THE BLEACHER UNTIL IT IS FULLY EXTENDED.

(9) REMOVE PENDANT HAND CONTROL AND STORE AWAY.(10) INSTALL REMOVABLE END RAILS. THE END RAILS ARE ALL INTERCHANGEABLE EXCEPT FOR
THE TOP ROW. THEY SLIDE INTO THE RAILING SOCKETS WITH SOME SIDE-TO-SIDE MOTION. WHEN RAILS ARE COMPLETELY INSERTED IN SOCKETS, THERE ARE SET SCREWS AT THE

SIDE OF THE SOCKET THAT REQUIRES TIGHTENING WITH A 3/16” ALLEN KEY.

(11) IF BLEACHER PLATFORMS ARE EQUIPPED WITH SELF-STORING READY RAILS, THEY ARE NOT REMOVED.

(12) IF BLEACHER PLATFORMS ARE EQUIPPED WITH “P” RAILS IN THE AISLES THEY NEED TO BE TURNED 180 DEGREES TO THE USER POSITION. DEPRESS THE LOCK PIN (LOCATED FRONT AND TOP OF POST) AND TURN RAIL. PIN WILL AUTOMATICALLY LOCK INTO CORRECT POSITION.

(13) BEFORE BLEACHER PLATFORMS ARE USED, VISUALLY CHECK THAT ALL ROW LOCKS ARE ENGAGED.

(14) WHEN INTERMEDIATE AISLE STEPS ARE INCLUDED, THE FIRST STEP WILL BE HINGED TO THE NOSING BEAM. FLIP THE STEP DOWN INTO USER POSITION.

(15) FINALLY, SHUT DOWN POWER SOURCE AT DISCONNECT.TO CLOSE BLEACHERS

(1) TO CLOSE THE BLEACHER PLATFORM REVERSE THE PROCESS, STARTING WITH THE REMOVABLE END RAILS. THESE RAILS WILL NEED TO BE STORED.

(2) IF BLEACHER PLATFORMS ARE EQUIPPED WITH SELF-STORING READY RAILS, THEY ARE NOT REMOVED.

(3) IF AISLES HAVE “P” RAILS, THESE NEED TO BE TURNED TO THE NON-USER POSITION. THIS IS AGAIN DONE BY DEPRESSING THE LOCK PIN AND TURNING RAIL 180 DEGREES.

(4) IF AISLES HAVE INTERMEDIATE STEPS, THE FIRST STEP WILL BE HINGED TO THE NOSING BEAM AND WILL NEED TO BE FLIPPED UP INTO POSITION.

(5) MAKE A VISUAL INSPECTION UNDER THE BLEACHERS TO ENSURE THAT THERE ARE NO OBSTACLES IN THE OPERATING AREA.

(6) VISUALLY CHECK THE ROW LOCKS. IT IS IMPERATIVE THAT EACH AND EVERY ROW LOCK IS ENGAGED! IF ONE OR MORE ROW LOCKS ARE NOT IN PLACE, THE BLEACHER WILL NOT

TRACK INTO THE WALL OR POCKET PROPERLY.

(7) TO MAKE SURE ROW LOCKS ARE LOCKED IN PLACE, RUN THE BLEACHER OUT AS FAR AS IT WILL GO.

(8) TURN POWER SOURCE ON AT DISCONNECT.

(9) PLUG IN THE PENDANT HAND CONTROL. FEMALE PLUG IS LOCATED IN CENTRE OF BLEACHER IN FIRST ROW SKIRT BOARD.

(10) STEP BACK AND, HOLDING THE PENDANT HAND CONTROL, TURN THE BUTTON TO THE IN POSITION. THIS WILL PLACE THE BLEACHER INTO MOTION GOING BACK TOWARDS THE WALL.

(11) AS THE BLEACHER MOVES BACK, THE OPERATOR MUST KEEP HIS EYES ON THE FIRST ROW TO ENSURE THE BLEACHER IS MOVING BACK IN A STRAIGHT LINE. AGAIN HE SHOULD USE THE GAME LINES ON THE FLOOR AS A GUIDE (IF THERE ARE NO LINES, IT WILL BE NECESSARY TO USE ALTERNATE MARKINGS). THE FIRST ROW MUST ALWAYS REMAIN PARALLEL TO THE BACK WALL AT ALL TIMES TO PREVENT TRACKING.

(12) THE ROWS MUST RELEASE ONE AT A TIME, STARTING WITH THE FIRST ROW AND GOING BACK. IF, FOR ANY REASON, A ROW FURTHER BACK STARTS TO CLOSE, STOP IMMEDIATELY AND CHECK FOR A ROW LOCK THAT HAS RELEASED PREMATURELY ON THIS ROW. AFTER INSPECTION, THE BLEACHER WILL HAVE TO BE MOVED “FORWARD” COMPLETELY AND THE REVERSING PROCESS STARTED OVER. AGAIN, PLEASE MAKE SURE ALL ROW LOCKS ARE ENGAGING. IF THE ABOVE CONDITION OCCURS, THE OPERATOR SHOULD MAKE A THOROUGH INSPECTION UNDER THE BLEACHER, LOOKING FOR THE OBSTRUCTION OR THE CAUSE WHICH WOULD HAVE MADE THIS CONDITION HAPPEN.

(13) AGAIN, IN THIS CASE, IT IS POSSIBLE FOR ONE SIDE OF THE BLEACHER TO MOVE MORE QUICKLY THAN THE OTHER. THE JOG BUTTON MUST BE USED TO KEEP THE FIRST ROW STRAIGHT AND PREVENT THE PLATFORM FROM RACKING.

(14) CONTINUE MOVING REARWARD WITH THE BLEACHER UNTIL IT IS FULLY CLOSED.

(15) REMOVE THE PENDANT HAND CONTROL AND STORE AWAY.

(16) SHUT DOWN POWER SOURCE AT DISCONNECT.OPERATING INSTRUCTIONS FOR MANUAL OPERATION

(1) TO OPEN BLEACHER PLATFORMS, LIFT THE FRONT RISER BOARD SO THAT THE FRONT ROW LOCKS ARE DEACTIVATED. THE SKIRTBOARD WILL HAVE A CHEST HANDLE TO ASSIST IN LIFTING THE SKIRTBOARD. THE FRONT SKIRTBOARD AND THE FIRST ROW LOCKS ARE MECHANICALLY ATTACHED.

(2) WITH A PERSON AT EACH END AND AN OPERATOR HANDLE INSERTED UNDER THE FRONT SKIRTBOARD, MAKING SURE PULLING CHANNEL IS PULLING ON NOSING BEAM AND NOT SKIRTBOARD, PULL OUT EVENLY. ROWS WILL RELEASE ONE AT A TIME AND ROW LOCKS WILL ACTIVATE. CONTINUE UNTIL BLEACHER PLATFORMS ARE COMPLETELY OUT. PUSH SKIRTBOARD BACK DOWN TO LOCK FRONT ROW LOCK AND SKIRTBOARD IN PLACE.

(3) IT IS NECESSARY TO PULL THE BLEACHER OUT EVENLY TO HELP PREVENT BLEACHER SECTIONS FROM TRACKING.

(4) INSTALL REMOVABLE END RAILS. THE END RAILS ARE ALL INTERCHANGEABLE EXCEPT FOR THE TOP ROW. THEY SLIDE INTO THE RAILING SOCKETS WITH SOME SIDE-TO-SIDE MOTION. WHEN RAILS ARE COMPLETELY INSERTED IN SOCKETS, TIGHTEN THE SET SCREWS AT THE SIDE OF THE SOCKETS WITH A 3/16” ALLEN KEY.

(5) IF BLEACHER PLATFORMS ARE EQUIPPED WITH SELF-STORING READY RAILS, THEY ARE NOT REMOVED.

(6) IF BLEACHER PLATFORMS ARE EQUIPPED WITH “P” RAILS IN THE AISLES, THEY NEED TO BE TURNED 180 DEGREES TO THE USER POSITION. DEPRESS THE LOCK PIN (LOCATED FRONT AND TOP OF POST) AND TURN “P” RAIL. PIN WILL AUTOMATICALLY LOCK INTO CORRECT POSITION.

(7) WHEN INTERMEDIATE AISLE STEPS ARE INCLUDED, THE FIRST STEP WILL BE HINGED TO THE NOSING BEAM. FLIP THE STEP DOWN INTO POSITION.

(8) TO CLOSE BLEACHER PLATFORMS REVERSE PROCEDURE AND PUSH STEADILY SO THAT ROWS ARE STRAIGHT AND NOT JAMMING OR RACKING. CONTINUE UNTIL FULLY CLOSED AND

PUSH DOWN ON RISER TO LOCK IN PLACE.

CAUTION

THE FIRST ROW ACTIVATES THE LOCKING MECHANISM. DO NOT TRY TO PUSH UPPER ROWS AHEAD OF FIRST ROW.

THE USE OF THE OPERATOR HANDLES WILL PROLONG THE LIFE OF THE BLEACHER PLATFORMS AND HELP PREVENT BACK INJURIES TO OPERATORS.MAINTENANCE INSTRUCTIONS FOR TELESCOPIC BLEACHER

IT IS MOST IMPORTANT WITH TELESCOPIC BLEACHERS TO NEVER ALLOW PEOPLE TO CLIMB OR SIT ON THE BLEACHER WHEN IT IS IN A CLOSED POSITION. EACH TIME THE TELESCOPIC BLEACHER IS USED THE FOLLOWING SHOULD BE DONE TO KEEP IT IN A SMOOTH RUNNING CONDITION.

(1) ENSURE THAT NO OBSTRUCTIONS ARE ON THE FLOOR WHILE THE UNIT IS TRAVELLING IN OR OUT.

(2) BEFORE CLOSING THE BLEACHERS, THERE SHOULD BE A VISUAL INSPECTION UNDER THE BLEACHERS TO ENSURE NO OBSTACLES ARE IN THE OPERATING PATH.

(3) THE TOP OF THE PLATFORMS SHOULD ALSO BE VISUALLY INSPECTED BEFORE MOVING.

(4) THE ROWS RELEASE ONE AT A TIME AND LOCK INTO PLACE WHEN FULLY EXTENDED. ROW LOCKS MUST BE VISUALLY CHECKED AND IT IS IMPERATIVE THAT EACH AND EVERY ROW LOCK IS ENGAGED. IF ONE OR MORE ROW LOCK IS NOT IN PLACE, THE BLEACHER WILL NOT TRACK PROPERLY “IN” OR “OUT” FROM THE WALL.

(5) WHEN VISUALLY CHECKING ROW LOCKS, CHECK TO ENSURE ROW LOCK DOES NOT MAKE SIDE-TO-SIDE MOVEMENT.

(6) WHEN CLOSING, IF FOR ANY REASON A ROW FURTHER BACK STARTS TO CLOSE “STOP” IMMEDIATELY AND CHECK FOR A ROW LOCK THAT HAS RELEASED PREMATURELY ON THIS ROW. AFTER INSPECTION, THE BLEACHER WILL HAVE TO BE MOVED “FORWARD”

COMPLETELY AND THE REVERSING PROCESS STARTED OVER. AGAIN, PLEASE MAKE SURE ALL ROW LOCKS ARE ENGAGING. IF THE ABOVE CONDITION DOES OCCUR, THE OPERATOR SHOULD MAKE A THOROUGH INSPECTION UNDER THE BLEACHER, LOOKING FOR THE OBSTRUCTION OR CAUSE WHICH WOULD HAVE MADE THIS CONDITION HAPPEN.

IT IS CONSIDERED GOOD PRACTICE TO INSPECT THE FOLLOWING ON A YEARLY BASIS. THIS WILL ADD TO THE EXPECTED LIFE OF THE BLEACHER AND MUST BE DONE TO INSURE EXTENDED WARRANTIES.

(A) ENSURE THAT ALL CARRIAGE BOLTS USED TO SECURE THE PLYWOOD FLOOR AND LUMBER AREAS ARE CHECKED FOR TIGHTNESS.

(B) ALL BOLTS USED TO FASTEN STEEL-TO-STEEL PIECES ARE CHECKED FOR TIGHTNESS.

.

(C) ALL AREAS WHERE GREASE HAS BEEN PLACED FOR LUBRICATION SHOULD BE WIPED CLEAN AND RE-LUBRICATED. (RUB BARS AND RAMPS)

(D) ALL LUMBER, PLASTIC AND PLYWOOD CAN BE WASHED USING A MILD DETERGENT AND LUKE WARM WATER.

(E) IF ELECTRIC, ALL WIRING CHECKED AND ALL CONNECTIONS CHECKED AND SECURED.

(F) WALL BUCKS ARE SECURE AND NO ANCHORING HAS COME LOOSE.MAINTENANCE INSTRUCTIONS FOR FIXED BLEACHER

ON A YEARLY BASIS:

(A) ENSURE ALL CARRIAGE BOLTS USED TO SECURE PLYWOOD RISERS AND LUMBER AREAS ARE CHECKED FOR TIGHTNESS.

(B) ALL BOLTS USED TO FASTEN STEEL-TO-STEEL PIECES ARE CHECKED FOR TIGHTNESS.

(C) ALL SEATS SHOULD BE INSPECTED FOR MOVEMENT OR VANDALISM AND

TIGHTENED OR REPLACED.

(D) ALL LUMBER AND SEATS CAN BE WASHED USING A MILD DETERGENT AND

LUKE WARM WATER.

(E) WALL BUCKS ARE SECURE AND NO ANCHORING HAS COME LOOSE.

(F) ENSURE RAILINGS ARE INTACT AND FUNCTIONING PROPERLY. IF THERE IS A FUNCTIONAL FAILURE, CALL FACTORY REPRESENTATIVE IMMEDIATELY AND DISCONTINUE USE UNTIL AFTER INSPECTION AND/OR REPAIR.

SHERIDAN SEATING inc.

SEAT COLOURS & FINISHES

15 Standard Colours. Endless Possibilities.

Available in 15 standard colours and endless custom hues, your venue's formed-poly seats will be the star of the show. Incorporate patterns, symbols or your home team's initials into your seating system design by using contrasting colours of seats.

Standard Colours & Finishes

ORANGE S-07
RED S-08
BURGUNDY S-09
LIGHT BLUE S-10
MED. BLUE S-11
DARK BLUE S-12
PURPLE S-13
GREEN S-14
DARK GREEN S-15

Classic Wood Finishes

Our classic Southern Yellow Pine & Clear Pine bench finishes are triple-sanded and finished with two coats of semi-gloss polyurethane. Sheridan's wooden seats offer a classic look and are tough on wear and tear.

Custom Colours

Choose any custom hue to match your venue's palette, brand or team colours. Available for an additional fee.

TELESCOPIC SEATING SOLUTIONS

Bid RFI #389

Delivering the Best Seat in the House

Since 1978, Sheridan Seating has been designing, manufacturing and innovating new seating solutions for venues across North America from our home plant in Ontario, Canada. We're proud to bring that home-town conscientiousness to everything we do. From delivering the best seats in the house for every venue to cheering on the home team in every town, Sheridan Seating is your partner in telescopic seating solutions.

SHERIDAN SEATING inc.

Delivering the Best Seat in the House.

At Sheridan Seating, we know that a seat is more than just a chair. It's a place where people sit to learn, worship, support and cheer. A place where they can show up for the home team, hear an idol sing and share in collective experiences.

That's why we're committed to delivering the best seat in the house for every guest, customized to meet your venue's unique needs.

Serving multi-use facilities ranging in size from intimate corporate spaces and local arenas to large theatres, Sheridan Seating's line of high-quality, flexible and fully customizable seating and retractable stage solutions will inspire your audience with style and comfort.

Interested in delivering the best seat in the house for every guest? Let's work together to bring your venue's vision to life.

TELESCOPIC SEATING SOLUTIONS

Bid RFI #389

Always Custom.
Never Cookie Cutter.

At Sheridan Seating, we know your space needs a solution that fits. That's why we're committed to delivering a seating system that maximizes flexibility, style and safety.

From schools and auditoriums, to sports arenas and more, our reliable and easy-to-use telescopic seating systems are uniquely designed to play a supporting role in your facility so your performances can shine.

Our seating systems are fully customizable, so you'll never have to design your venue around our products.

The best part? We're proud to back our products with a 20-year warranty. Visit us online for full warranty details.

Rugged Engineering.
North American Made.

We design products that look great and are built to last. We source our materials and components from North American suppliers so that you can feel 100% confident in our products.

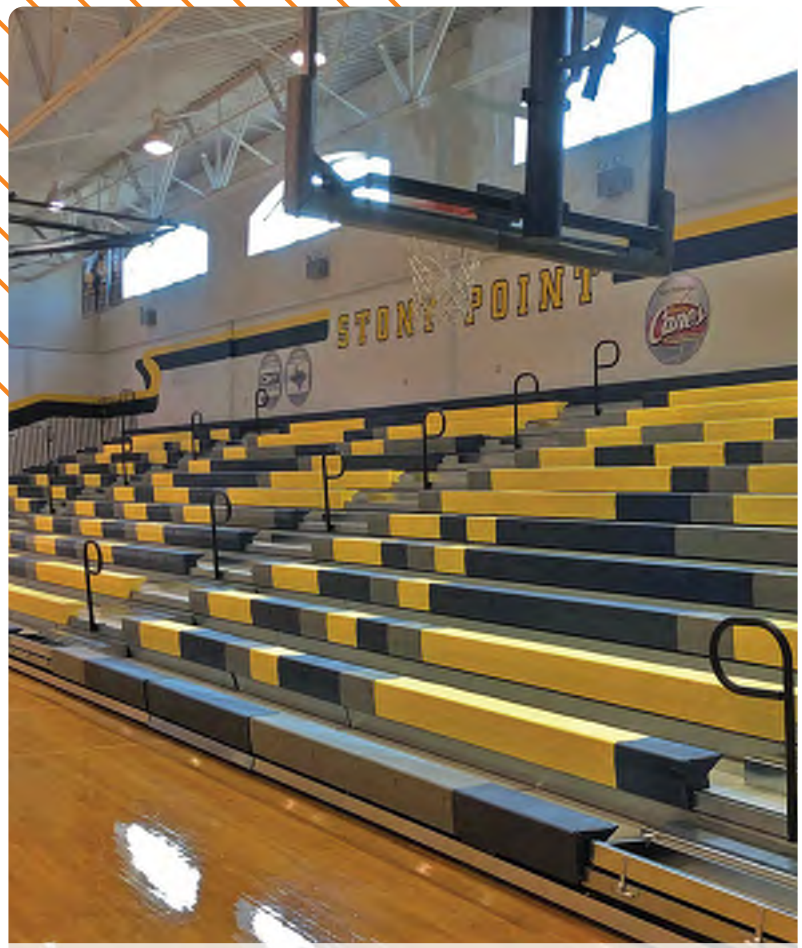
Our rugged bleacher understructure is made with 100% North American steel for unparalleled strength and durability. Engineered with 3/4" decking and 10 gauge tubing, and supported by four support columns instead of only two, you'll never question the toughness of your Sheridan Seating system.

All of our telescopic seating systems are powered by an industry-leading 4 horsepower motor so your recoverable space will always be available at the touch of a button.

We proudly design and manufacture our seating systems in our home plant in Ontario, Canada, where we stringently test and inspect each component before it leaves our facility to ensure a safe, top-quality product is delivered and installed every time.

Bid RFI #389

RALLY™ BLEACHER SYSTEM



(TL6000, TL6100)

Perfect for:
Gymnasiums, E-sports, Auditoriums, Local Arenas, and more.

At the Front of the Action

Blur the line between fans and action with our fully customizable RALLY™ bleacher seating system.

Budget-friendly and big on style, RALLY™'s sleek bench-style seating handles a crowd with ease and, when performances are over, tucks neatly away to make space for whatever your venue has planned next.

GYMNASIUM, STONY POINT HIGH SCHOOL, ROUND ROCK ISD, TEXAS, US

Durable polyethylene, wood or upholstered bench seats

Optimized rise/run for maximum seating capacity

Narrow profile to recover maximum floor space

Comfortable ergonomic benches & custom backrests

Your most cost-effective seating solution

EASY TO OPERATE CUSTOM BLEACHERS

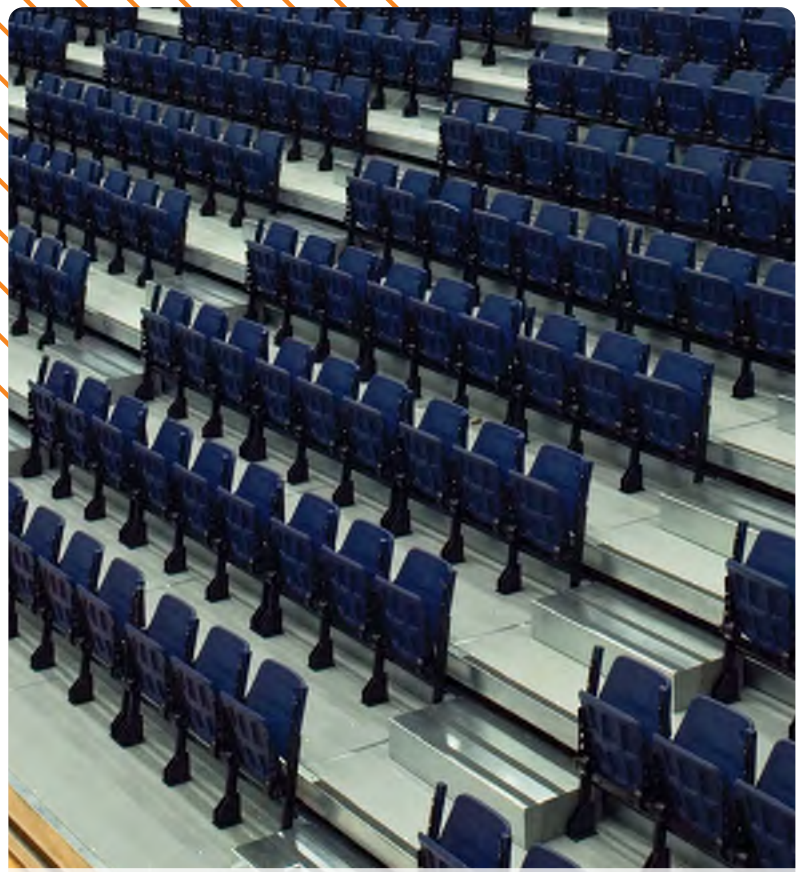
With great looks and easy operating solutions, and supported by our industry-leading engineering, RALLY™ is available in custom and variable rise and run to maximize seating while still delivering big on experience and durability.

COMFORTABLE ERGONOMIC SEATS

Available in ergonomic formed-polyethylene plastic, stylish wood or plush upholstered bench seats, RALLY™ can be fabricated in custom lengths to suit your needs. If you're looking to amp up comfort for your guests, add a custom backrest to any style bench.

Bid RFI #389

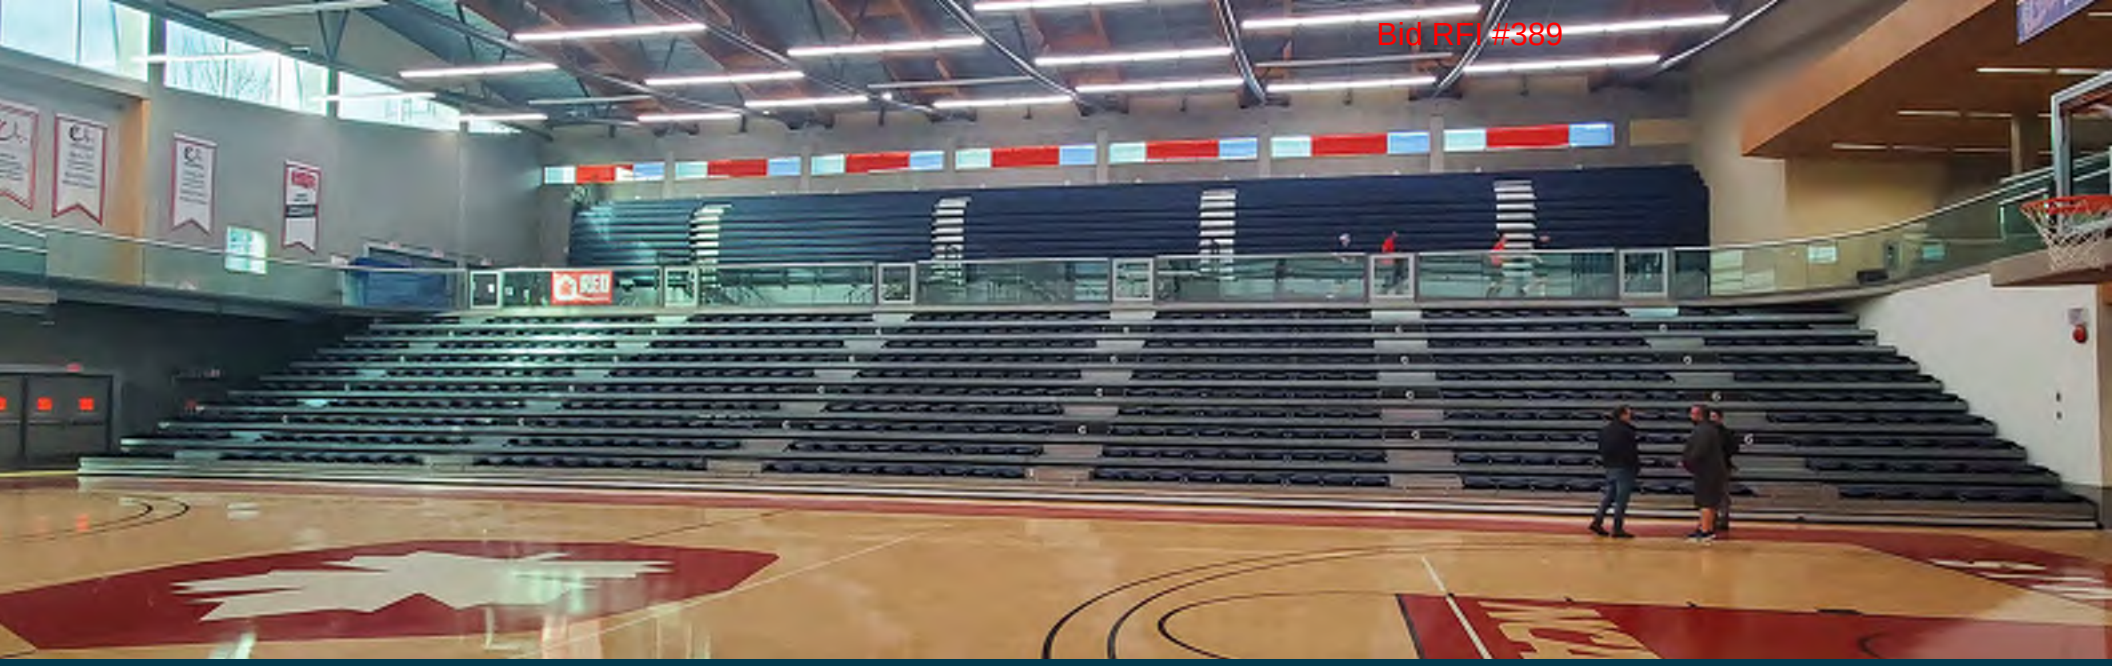
CHEER™ BLEACHER SYSTEM



(TL7000)

Perfect for:
Casinos, Arenas, Gathering Spaces, Lecture Halls, and more.

Where Flexibility Meets Style



Never sacrifice comfort or functionality with Sheridan Seating's CHEER™ platform seating system. This fully customizable solution is available in a variety of decking, seat and accessory options to suit any sized facility or budget.

Our sales representative would be happy to design a hassle-free operating solution that makes changing the configuration of your venue a breeze.

SIMON FRASER UNIVERSITY,
BRITISH COLUMBIA, CANADA

Bid RFI #389

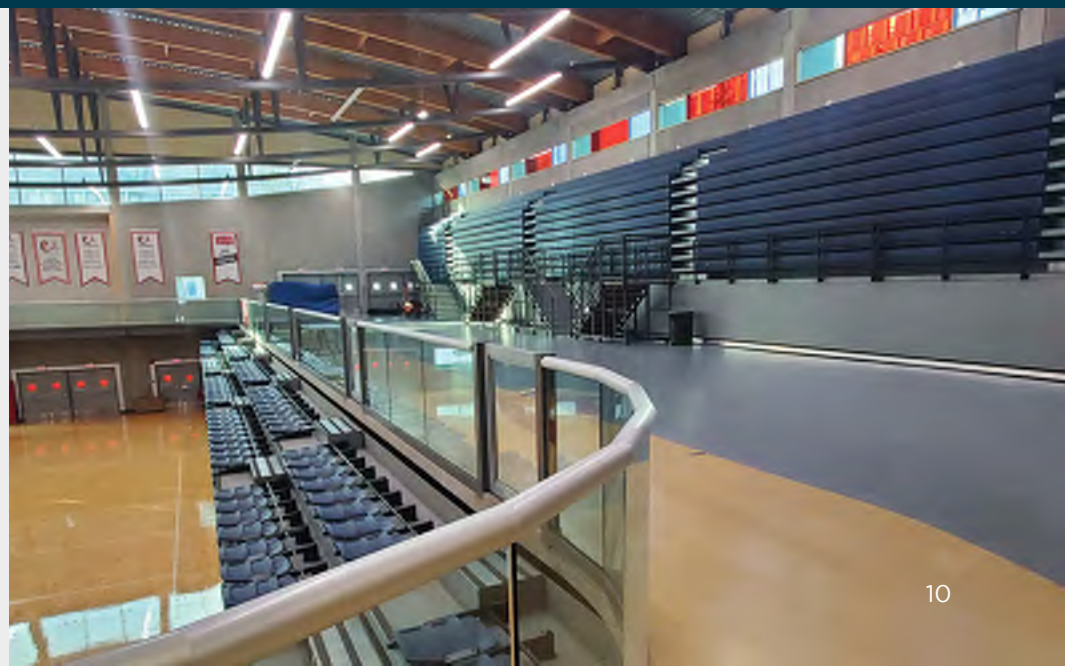
Durable polyethylene, wood* or upholstered bench or chair

Robust seating capacity with generous leg room

Recover maximum floor space (10% less than the RALLY™ line)

Comfortable ergonomic chairs with armrest or benches

Your most customizable seating solution



SUPERIOR COMFORT AND SPACIOUS SEATING

Available with our full line of ergonomic modular bench or folding seats, CHEER™ is great for venues looking to offer a more spacious seating experience. Our CHEER™ platform can fit seats that are 10” or 12” wide and are available with or without armrests, meaning superior comfort for your guests and premium flexibility for your multi-use space.

HASSLE-FREE ELECTRIC OPERATING

Take your facility from full capacity to intimate crowd with the touch of a button when you choose an electric operating device for your custom seating solution.

**Wood finish available for bench only.*

Bid RFI #389

APPLAUD™ BLEACHER SYSTEM

(TL8000)

Perfect for:
Performing Arts Centres, Civic Centres, Corporate Spaces, Theatres, and more.

Maximum Comfort and Class

Our largest and most luxurious platform seating solution, APPLAUD™ offers premium comfort and sophisticated style for your guests.

Suitable for even the most refined audience, this system is designed to support the deepest row spacing and most generous legroom while delivering an exceptional seating experience on world-class upholstered seats. Plus, Sheridan Seating's rugged understructure engineering ensures this seating solution is built to last.

Bid RFI #389

Plush & sophisticated with generous seat size

Seating capacity for maximum comfort and leg room

Designed with seating as a priority

Luxurious upholstered chairs with armrests

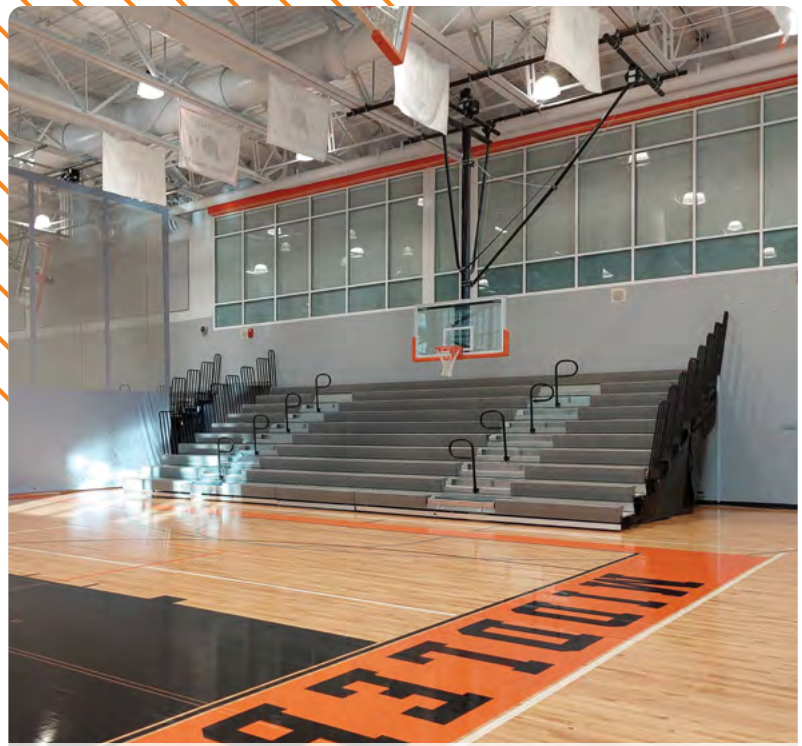
Delivers the best seating experience

HUNDREDS OF PREMIUM SEAT OPTIONS

With access to world-leading luxury seat suppliers, your Sheridan Seating sales expert or dealer will guide you through the chair selection process so you can find the perfect fit for your venue.

DESIGNED FOR THE BEST SEATING EXPERIENCE

The designer elegance of APPLAUD™ means your seats will impress your audience as much as your venue's atmosphere and talent.



Bid RFI #389

CUSTOM SOLUTIONS FOR YOUR SPACE

DESIGNING A SYSTEM THAT FITS

At Sheridan Seating, we know every venue has unique needs, and we love finding the right solution for the job. From understanding your venue's seating capacity to coordinating with your facility's maintenance team, we excel at putting your needs centre stage and delivering a customized seating system that's designed to last.

We also know that creating a functional space takes creativity and ingenuity. Sheridan Seating's selection of installation options and configurations means that your telescopic seats can function how you need them to – on and off game day.

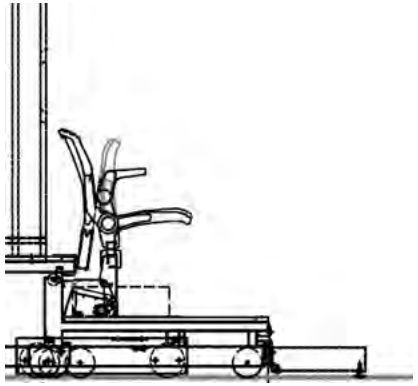
MIDDLEBOROUGH HIGH SCHOOL, MASSACHUSETTS, US

INSTALLATION OPTIONS

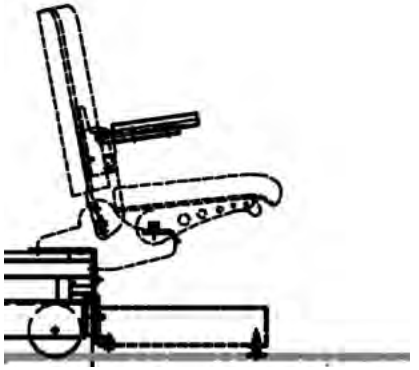
Don't miss out on recoverable space when your seating system is retracted. Choose from one of Sheridan Seating's three installations options designed to maximize your venue's space efficiency. With each option, Sheridan Seating's custom understructure can seamlessly accommodate up to 50 telescoping rows.

Wall Attached: Adaptable and efficient, a wall-attached configuration ensures your space is easily recoverable and quick to turn over so you can get the most out of your facility. Easy to install in an existing venue, this option is great for retrofits and renovations.

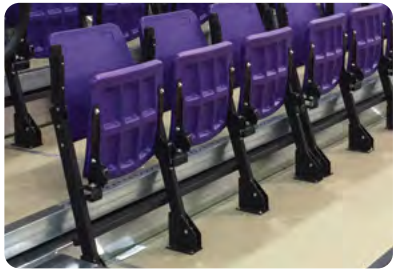
Recessed: Hide your closed seats within a discrete wall pocket, such as under a balcony overhang or mezzanine, to maximize floor space and aesthetics when your bleachers or seats are stacked.



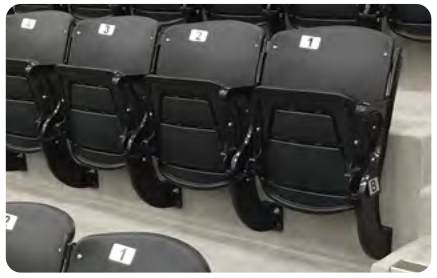
Reverse Fold: Choose a reverse fold configuration when you need to create additional space behind your seating set-up or divide your venue. Think practice space, dressing area or additional storage. Need a cleaner look? Add back panels and end curtains to hide the understructure and mechanics.



CHAIR MOUNT OPTIONS



Choose from one of two standard chair mount options designed to meet your venue's space and configuration needs.



Deck Mount: Mounted on the surface of your platform, this chair style allows for easy folding to stow away seats between rows. Available with an optional semi-automatic fold down device, chairs can be folded as the system is closed. Once opened, chairs are locked into place for safe and secure seating.

Nose Mount: Mounted to the nose of each platform level, these seats offer a chair with ergonomic construction that fits into a narrow envelope for low-rise retractable platforms. Sheridan's upholstered nost mount style allows for additional seat padding for maximum comfort.

Bid RFI #389

FLEXIBLE OPTIONS. EASY OPERATION.

DECKING OPTIONS

Don't let the decking for your telescopic seating system be an afterthought. We provide three decking offerings that give you durability level and price point choices.

Plywood decking is an economical option and is included with standard bleacher systems. Available in Tan, Grey, Clear or Custom Hues.

Looking for more colour options? For a small premium, Panelam decking provides various colour choices, durability and style.

To maximize durability, Sheridan offers a premium aluminum decking option. While the most expensive solution, you know it's built to last.

OPERATING DEVICES

Whether a fully manual or electric drive system is within your vision and budget, Sheridan Seating can recommend and install the best operating device for the job.

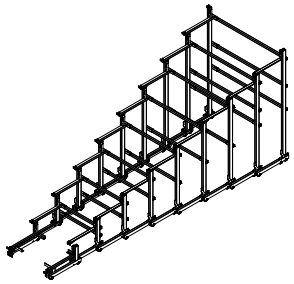
Manual:

Manual operation is available for seating systems up to 7 rows deep, and are installed with a standard operator handle. Easy to use, the operator handle hooks under the first row of bleachers and is used to guide the system sections in or out.

Manual systems can be upgraded with an optional Portable Power Tractor Mule. This bleacher mule is a safe and economical way for one person to make the job of opening and closing the bleachers easier and more efficient. Sheridan Seating's Portable Power Tractor Mule operates on standard 115 volt 20 amp service.

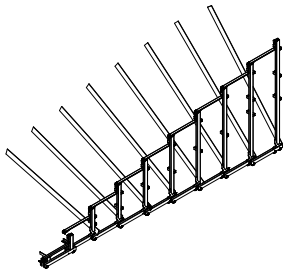
Electric Friction Power:

Our most requested operating system, Sheridan Seating's friction drive system is the strongest on the market, able to push or pull up to 8,000 lbs. With higher horsepower and larger than average drive wheels (12" vs. industry-standard 4"), Sheridan's friction drive system will ensure your venue turnover is quick and seamless - every time. Operable from a hand-held pendant control box with 208 volt, 3 phase or 110 volt, single phase, 60 Hz power and a left and right jog button, this option offers straight and true steering when opening or closing the system. Recommended for seating systems over 7 rows.

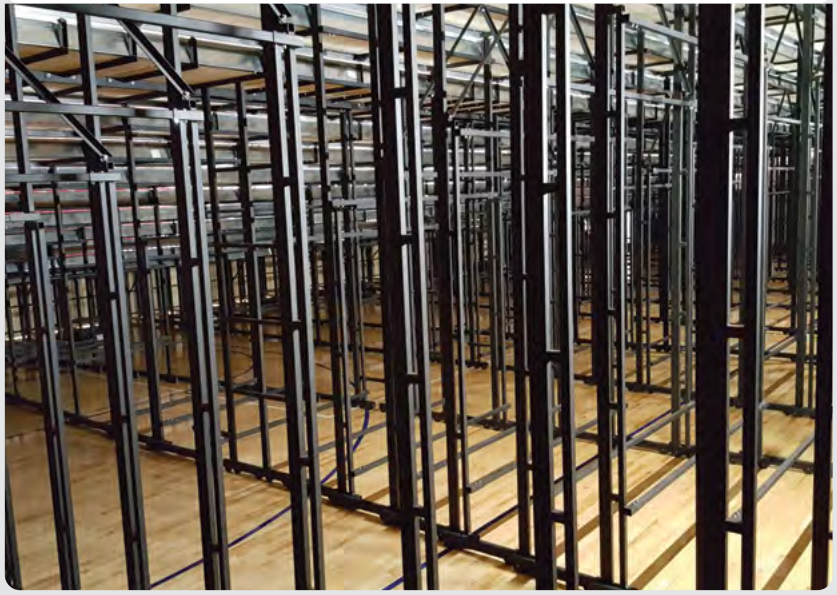


Electric Non-Friction Power:

This fully automated power system operates wall-attached, recessed or reverse-fold telescopic bleachers with the touch of a button. Typically recommended for larger telescopic seating systems, Sheridan's non-friction drive system can move more rows faster and with less hassle than other options on the market - all without the need for traction force on your venue's floor.



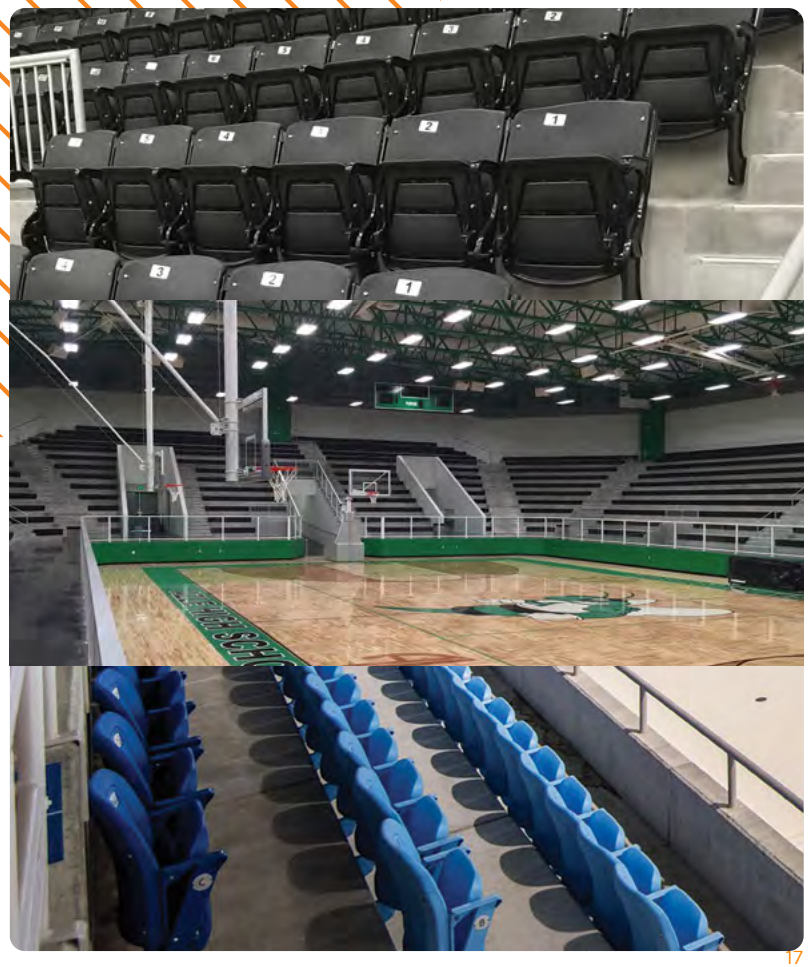
UNDERSTRUCTURE



Our rugged understructure is made with 100% North American steel for unparalleled strength and durability. Engineered with 3/4" decking and 10 gauge tubing, and supported by four support columns instead of only two, you'll never question the toughness of your Sheridan Seating system - designed to meet or exceed industry standards.

Sheridan Frame Assembly

Competitor Frame Assembly



SEATING SYSTEMS

FIXED SEATING FOR A DEPENDABLE AUDIENCE

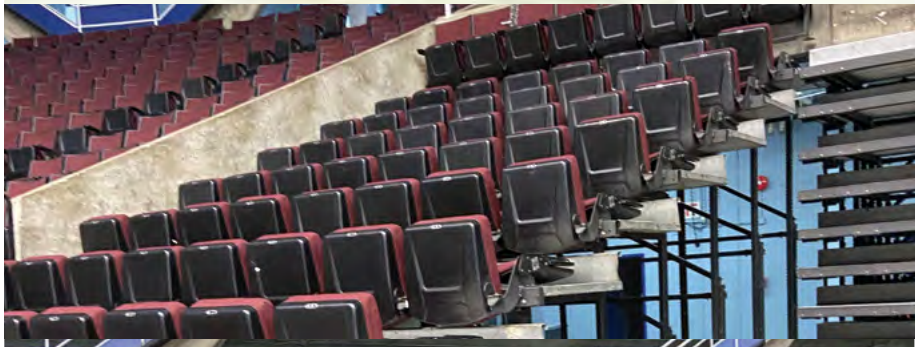
Whether you're looking to install a new fixed seating system in your venue or replace existing seats on your current steel, wood or concrete platform, Sheridan Seating can help.

From performing arts centres and theaters to casinos and arenas, our fully customizable seating options will fit your venue's needs perfectly - every time.

Available in our full range of seat style and finish options, inspire your guests with a cohesive look and feel from the moment they walk into your venue.

PORTABLE SEATS FOR ENDLESS LAYOUTS

Does your venue need extra seats when hosting bigger events?



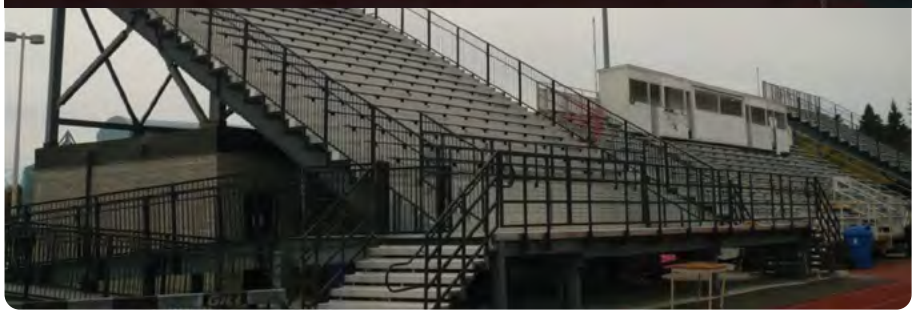
Add portable bleachers or chairs to your facility's seating solution to easily accommodate more guests when and where you want them, creating a custom seating layout for any event.

With Sheridan Seating's portable equipment, you can quickly and easily move and store your additional seats with zero hassle and maximum flexibility.

Available operating devices include:

- Hydraulic Lift Cart
- Portable Power Tractor Mule

SEATING A CROWD OUTDOORS

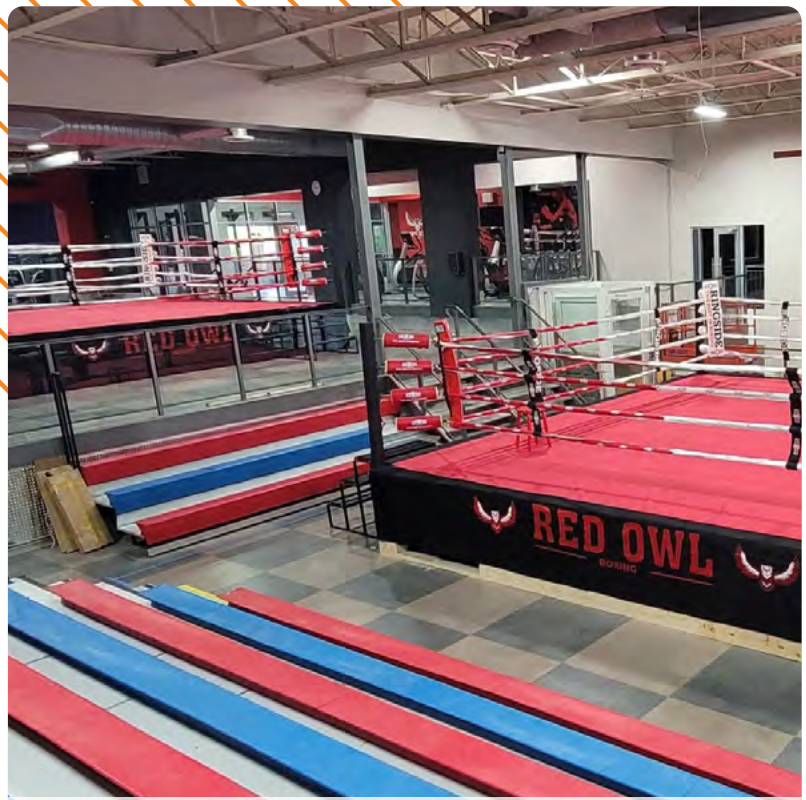


Invite your fans to cheer from the sidelines with Sheridan Seating's fixed outdoor seating system.

Manufactured with our signature galvanized steel understructure with aluminum decking and seats, this rugged system can withstand the wear and tear of the elements and your fans' excitement.

Choose from a nearly endless selection of custom sizes, colours and finishes to really turn up the spirit - on and off the field.

Bid RFI #389



DESIGN CENTRE

Let's bring your venue's vision to life!

DESIGN YOUR SYSTEM IN 4 STEPS

Available in a wide range of styles, colours and finishes, Sheridan Seating's seat and accessory options deliver the finishing touches your venue needs to take it from little league to world class.

With nearly endless customizations available, you'll never have to sacrifice functionality or comfort. Whether your seating system is fixed or telescopic, and no matter which style of seat you choose, your venue's vision will extend from reception hall to centre stage.

RED OWL BOXING BRAMPTON, ONTARIO, CANADA.

Bid RFI #389

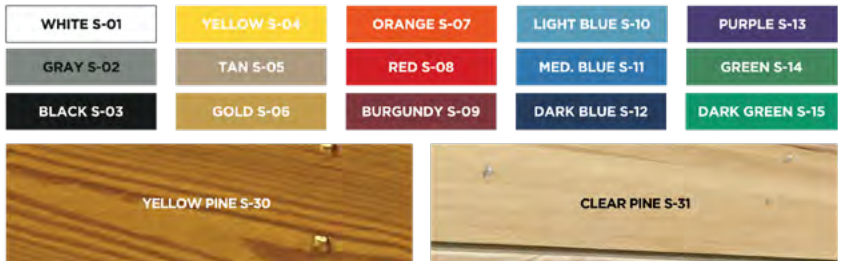
DESIGN CENTRE

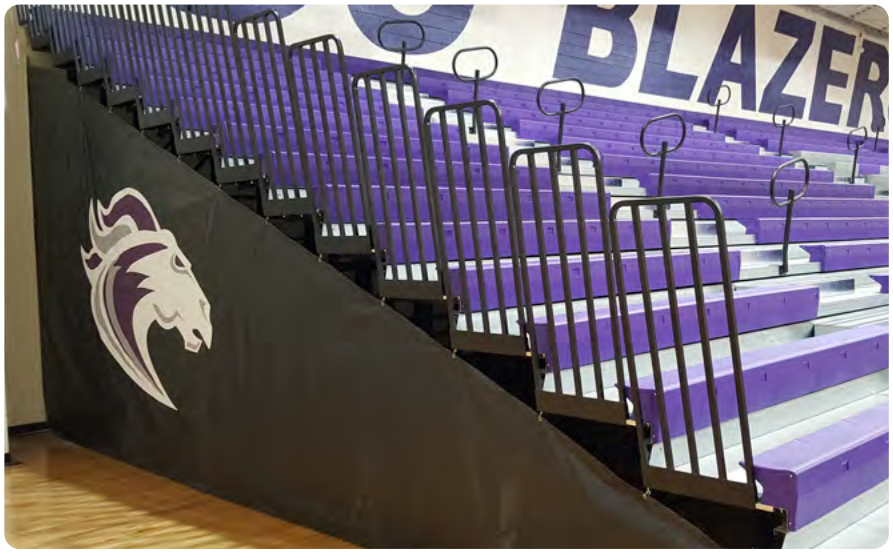


Let's bring your venue's vision to life!

COLOURS & FINISHES

15 Standard colours. Endless possibilities.

Available in 15 standard colours and endless custom hues, your venue's formed-poly seats will be the star of the show. Incorporate patterns, symbols or your home team's initials into your seating system design by using contrasting colours of seats.*



If you're looking for a more traditional look, we offer classic Southern Yellow Pine and Clear Pine bench finishes. Triple-sanded and finished with two coats of semi-gloss polyurethane, Sheridan's wooden seats look great and are tough on wear and tear.

*Available at a premium.

CURTAINS & DIVIDERS

End Curtains

Neatly cap off the end of your telescopic or fixed seating system with an end curtain. Available in 18 oz or 50 oz vinyl fabric and an endless selection of custom colours.

Divider curtains

Easily divide one space into two with a Sheridan Seating divider curtain. Choose from three different styles and endless combinations of vinyl and mesh to enhance the look and feel of your facility. Available in 18 oz or 50 oz vinyl fabric.

Electric Fold-Up Curtain
Sheridan's electric fold-up curtain can be installed onto any existing platform truss - telescopic or fixed. Operated with a key-activated electric switch, the curtain raises or lowers with the touch of a button. Available in single-wall or double-wall models.

Walk-Draw Curtain
The most economical divider curtain to purchase and maintain, Sheridan's walk-draw curtains can be operated and stacked in a small building recess or flat again the wall. Available in vinyl, nylon mesh or any combination of the two.

360° GRAPHICS

Custom Vinyl Wraps

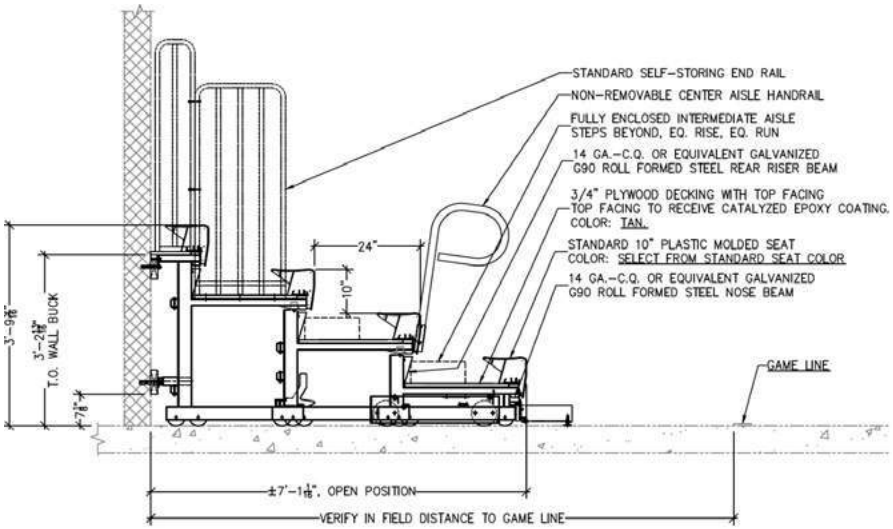
Wrap your venue in 360° of style with Sheridan Seating's custom vinyl wraps. Available in vibrant, full-colour customizations, these eye-catching finishes are sure to inspire every guest.

Bid RFI #389

SAFE SEATING FOR EVERY GUEST

No one should have to miss out on the thrill of a moving performance, game-winning goal or inspiring presentation. That's why Sheridan Seating proudly meets or exceeds industry standards in safety and accessibility on every install.

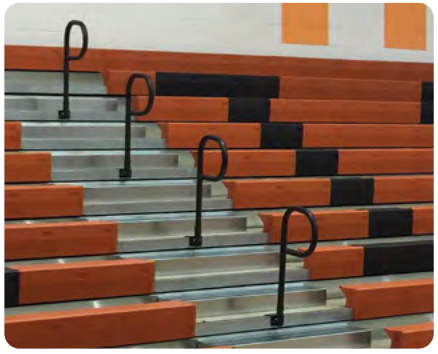
Not only that, but our fully ADA or RADA-compliant sections are safe and stylish. Available in the painted finish of your choice, your seating system can be accented by a punch of colour in every row, or supporting by safety rails in muted tones that fade into the background.



MORTON RANCH HIGH SCHOOL, KATY ISD, TEXAS, US

Bid RFI #389

SAFETY RAILS



End Rails

Sheridan Seating telescopic seating systems are installed with standard non-removable, self-storing rails for the ends of the bleacher platform systems.

Center Aisle Hand Rails

Available in P or D style, Sheridan Seating's centre aisle hand rails are sturdy and user friendly. No removal required, they're operable with the push of a button or in a simple pick-up and turn model. Removable options available when space limitations are a concern.

Back/Front Rails

Required for use on portable or reverse fold bleachers, back rails fill the space anywhere that the bleacher is not directly against the wall.

Removable ADA Rails

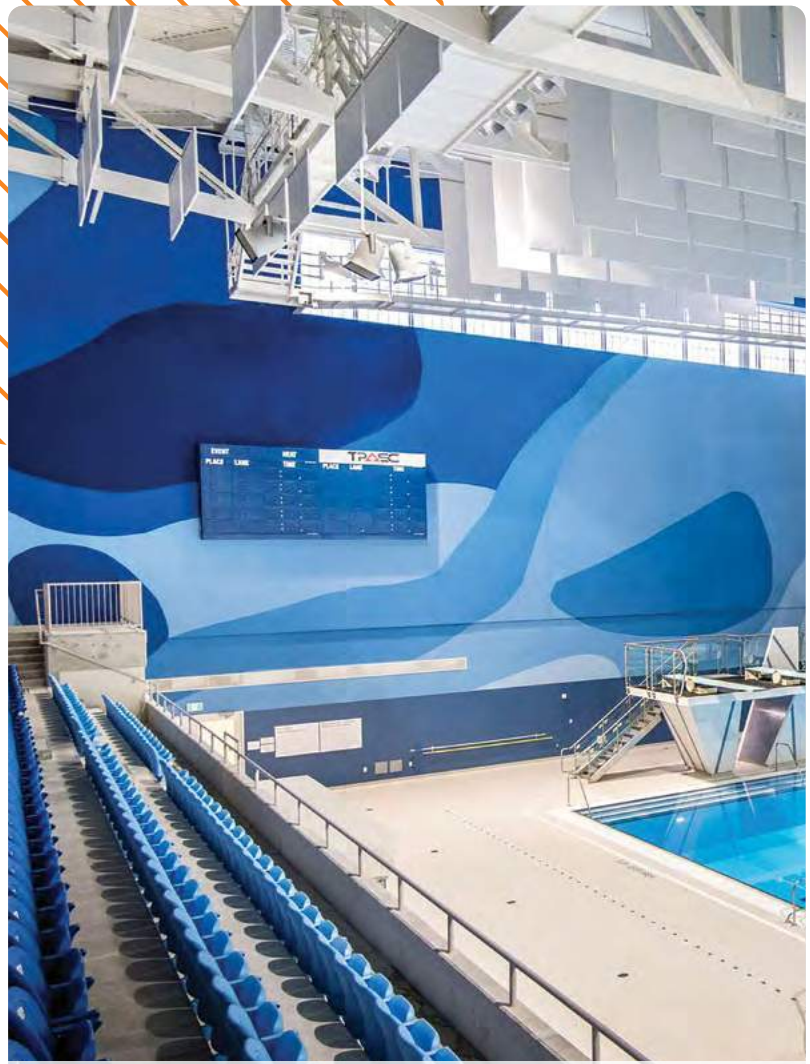
This rail is used for ADA spaces that are recoverable when needed for standard seating. Simply remove the rail and the space can be converted to standard seating.

Non-Removable ADA Rails

The NRADA rail is permanently attached to prevent falls from the deck behind permanent ADA seating. All of Sheridan's ADA rails meet required American Disabilities Act codes.

SAFETY ACCESSORIES

Delay Action Frame



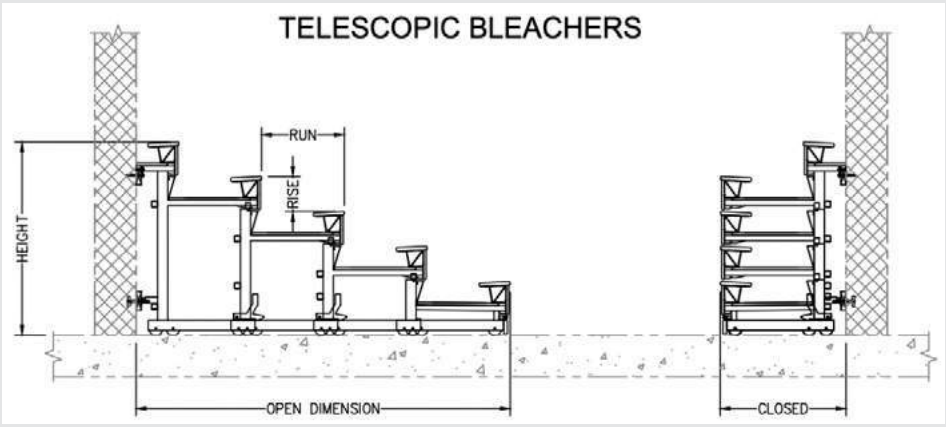
The Delay Action Frame is a great option for venues that want an extra level of protection on their seating system. This frame operates on a time lag before the bleachers begin to move into the open or closed position.

Row Lock

Sheridan's Row Lock is operated by gravity, with no springs needed. The row locking mechanism allows for the securement of any row in the open position so you can choose how many seats you'd like to make available. To prevent unwanted movement, the system is only operable upon unlocking and moving the first row of seats.

PRODUCT DIMENSIONAL DATA

At Sheridan Seating, delivering custom telescopic seating solutions is our specialty. But, to help get you started with your project, our products are available in the following standard sizes, with custom rise and run dimensions available to meet your unique needs.



AQUATIC CENTRE, TORONTO PAN AM CENTRE, ONTARIO, CANADA.

The Ovation Seat

The seat modules are attached to the extruded aluminum rail profile using a simple clamp system, meaning seats can be spaced out evenly during installation before being tightly secured.

The Ovation range is applicable to both stadiums and arena environments. The unit comprises of a seat and backrest molded from premium grade polypropylene co-polymer. Gas injection molding technology is used to create a ridged perimeter to the seat and backrest components which provides unparalleled strength and durability. Spring housings and backrest supports are injection molded from glass reinforced polyamide, and the assembly is designed so that there is no visible fixing hardware.

About The Ovation Seat

— *CT300 / CT301 / CT302*

Ovation is an ergonomic beam mounted stadium chair that is taking the sporting world by storm! More comfortable and cost effective than traditional stadium seats the Ovation provides ease of install and maintenance along with a flexible finished installation. Available for projects large and small the Ovation is a favorite for stadium and arena projects across North America.

Plastic Back and Bottom

Padded Back and Bottom

— *Warranty*

5 year warranty on structural components and mechanical features

— *Available Sizes*

480 mm

— *Accessories*

Fixed Arm
Tip Up Arm
Rear Mount Cup
Flippy Cup
Armrest With Cup Holder
Seat Lock
Seat Numbers & Row Letters

— *Plastic & Vinyl Colors*

About The High Back Ovation Seat

— *CT322*

The high-back ovation is the more VIP cousin of our budget friendly Ovation chair, utilizing the same beam design and ergonomics but incorporating a thick padded bottom and a higher 39" padded back. This is the perfect seat for a club area or suite where you have tight spaces but are looking for a VIP level seat that will keep your fans coming back. More comfortable and cost effective than traditional stadium seats the Ovation provides ease of install and maintenance along with a flexible finished installation.

— *Warranty*

5 year warranty on structural components and mechanical features

— *Available Sizes*

450 mm
460 mm
480 mm

— *Accessories*

Fixed Arm
Tip Up Arm
Rear Mount Cup
Flippy Cup
Armrest With Cup Holder
XZipit Logo System
Seat Numbers & Row Letters

— *Plastic & Vinyl Colors*

About The Zephyr Seat

— *CT350 / CT350FXHB*

Our newest innovation, the Zephyr, is designed for areas in stadium that get the most sun. Designed to provide air flow and a cooler seated experience, the Zephyr is a welcome addition to the DreamSeat line of offerings.

— *Warranty*

5 year warranty on structural components and mechanical features

— *Available Sizes*

450 mm
510 mm (Zephyr Max Only)

— *Accessories*

Fixed Arm
Tip Up Arm
Rear Mount Cup
Armrest With Cup Holder
Seat Numbers & Row Letters

— *Mesh Colors*

Accessories

Armrests

Ovation has a choice of two armrest options, basic and deluxe. Both options are attached independently to the rail as opposed to the seat module.

Deluxe is a more substantial armrest, its fold back function allows it to be used on telescopic platforms, folding automatically on contact with the deck.

Cup Holders

The only cupholder that's pretty much indestructible, and wont leave your patrons with a bruised leg as an overriding memory of what was an otherwise great event experience.

Our cupholders are moulded from a semi ridged polymer and designed to be – yes, as close as it gets to indestructible!

Fixed Armrest

Available for All Ovation Models

Deluxe Tip Up Armrest

C17 Signal Yellow

Note: Full range of standard plastic colors and custom colors available on large projects.

Mesh Color Options

Note: Only available for the Zephyr model.

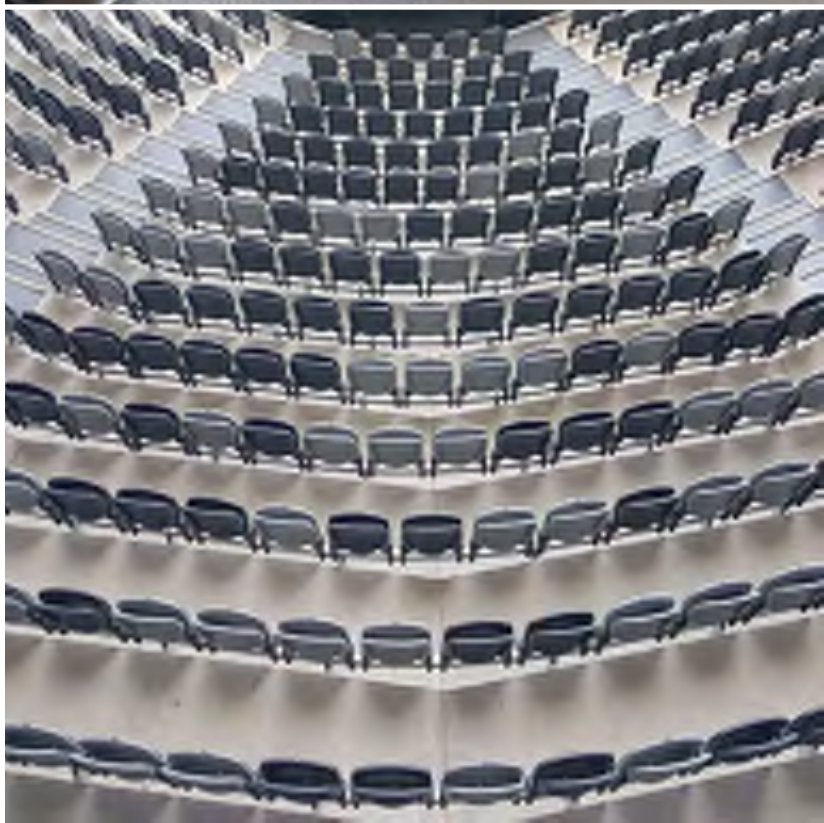
Batyline Iso is the industry standard for outdoor sling furniture. Its long life is due to extremely simple implementation, excellent resistance to weather conditions and dimensional stability. This range, stocked in 31 colors (3 in the fire retardant range), is the broadest on the market.

Bid RFI #390

The Rail System

Are all rail mounted seats the same?

Our competitors would like you to believe so!

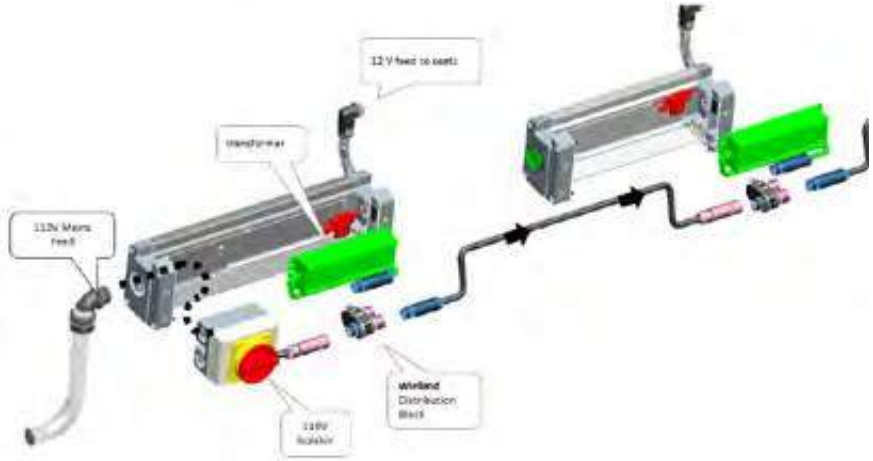


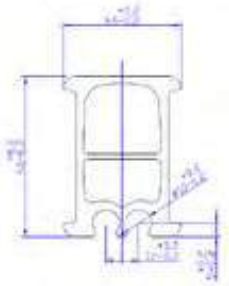
DreamSeat models are fitted to the same rail system, meaning that any Ovation can be interchanged anywhere in the facility, making upgrades and future proofing as simple as switching out the seats.

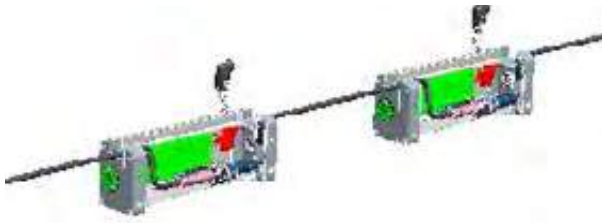
20+ years of experience and continuous improvement has resulted in, quite simply; the best. Our extruded aluminum rail profile is constrained into support fabrications on all four faces by a galvanised steel clamp.

The only system on the market that can be formed into a curve on the job site...

This has the advantage that the rail does not have to be installed in shorter straight sections, which in turn allows seat modules to be installed with beautifully even spaces between them, the result can be seen in the picture to the right.







DREAMSEAT

Power Rail

Power Rail Available With USB, USBc, and Traditional Power Outlets

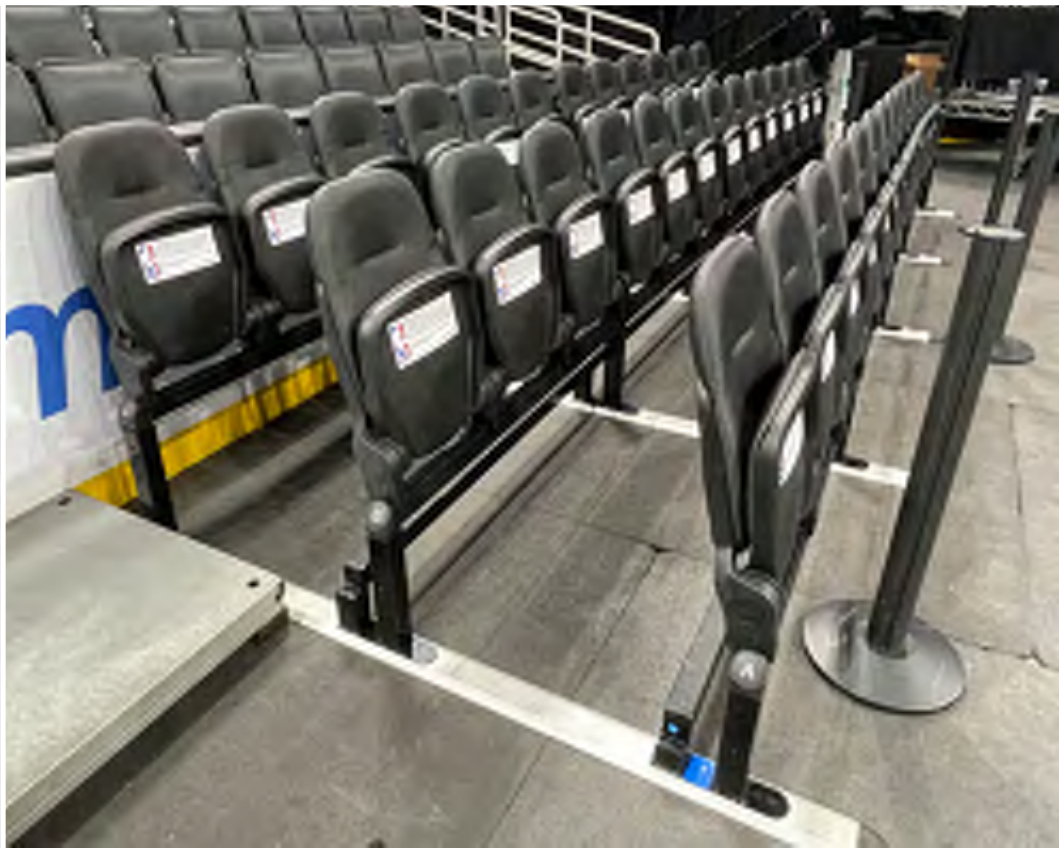
Perfect Pairings For Your Ovation

Grid System

The new design creates an even easier and quicker install experience with a quick glide in install system. The chairs line up straight every time and do not move or serpentine as folding chairs tend to do.

- Chair Locked into Sled Base
- Faster Install than Folding Chairs
- 31.5” of Row Spacing (Customizable)
- Sled Lays Flat On Ground
- 15-20% More Seating In Same Footprint
- Compact Storage Racks

Featured: Fantasy Springs Casino



Grid Rise

The Grid Rise is simply the evolution of floor seating and provides the most benefits to both the venue and spectators. It utilizes a patented system that allows venues to implement tip up seats on the floor of the arena while allowing for changes in seat elevation to produce better sightlines.

All features of the Grid System with the addition of:

- Varying Seat Heights without a Platform
- Added Footrest

BEND #8 BARS TO ALIGN WITH COL BARS ABOVE. SEE DWG 830-S10

COLUMN SCHEDULE

NOTES: ALL COLUMN DIMENSIONS ARE FROM BOTTOM OF BASE PL TO TOP OF CAP PL (OR TOP OF COL IN NO CAP PL). UNLESS OTHERWISE NOTED, PROVIDE 2-¾" ø x 2'-0" HOOKED ANCHOR BOLTS AT EACH COLUMN BASE.
ALL COLS 8"x6"x⅜", 6"x4"x⅜", OR 5"x3½"x⅜" ARE HOLLOW TUBULAR COLUMNS.
FOR COLUMNS BEARING ON BEAMS USE 4 BOLTS IN BASE PL
SEE SHEET S-7 FOR STEEL & CONC. COL. TYP. A-1, A-2, A-3, A-4, A-5, A-6
* PROVIDE 3" HOLE IN MIDDLE OF BASE PL

STRUCTURAL GENERAL NOTES

GENERAL:

A. SEE ARCHITECTURAL, MECHANICAL AND ELECTRICAL DRAWINGS AND SPECIFICATIONS FOR DIMENSIONS AND DETAILS REQUIRED AS STRUCTURAL WORK. BUT WHICH ARE NOT SHOWN ON STRUCTURAL DRAWINGS.
B. EXCEPTIONS TO ITEMS AS OUTLINED IN THESE NOTES ARE SPECIFICALLY NOTED ON PLANS AND SPECIFICATIONS.

SPECIFICATIONS:

A. SEE SPECIFICATIONS GOVERNING DETAILING, FABRICATION, ERECTION, AND INSTALLATION OF ALL STRUCTURAL STEEL, CONCRETE AND WOOD CONSTRUCTION.

DESIGN:

A. LIVE LOADS
Roof ..... 40 psf Kitchen ..... 150 psf
Office ..... 50 "
Classrooms & Toilets ..... 60 "
Cafeteria & Wood Shop ..... 80 "
Corr., Exitways, Stairs, Gym & Projection Rm., Assembly .. 100 "
Book Stacking Area ..... 120 "
Metal Shop, Storage, Fanroom ..... 150 "
B. FOUNDATION BEARING
2 TSF = 4 KSF
C. CONCRETE STRENGTH: ALSO, SEE SPECS. CONCRETE QUALITY AND STRENGTH:
4000 P.S.I. [illegible]

BEARING ON MASONRY WALLS:

A. CONCRETE OR STEEL BEAMS AND COLUMNS SHALL BEAR ON SOLID BLOCK 3'-0" IN LENGTH
B. CONCRETE OR STEEL JOISTS SHALL BEAR ON SOLID BLOCK
C. FILLED CONCRETE BLOCK WILL NOT BE ACCEPTABLE FOR BEARING.

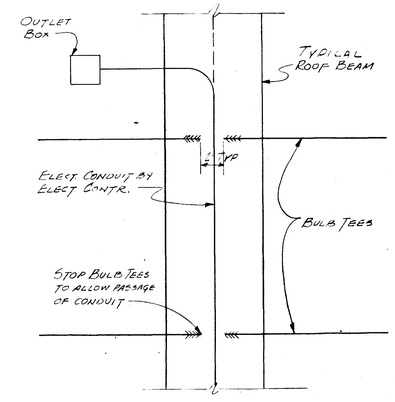
CONCRETE:

A. FOOTINGS ARE 12" DEEP WITH 4" PROJECTION.
B. EXTERIOR FOUNDATION FOOTINGS SHALL BE CARRIED A MINIMUM OF 4'-0" BELOW FINAL GRADE AND ALL FOOTINGS A MINIMUM OF 21-0" BELOW PRESENT GRADE, BUT TO SOUND GROUND IN ANY CASE.
C. CONCRETE BEAMS ARE CAST MONOLITHICALLY WITH SLABS AND ARE LISTED IN BEAM SCHEDULE. DEPTHS ARE MEASURED FROM TOP OF SLABS TO BOTTOM OF BEAMS.
D. INSTALL #6 BARS, 2 FOR EACH SIDE, FRAMING AROUND FOUR SIDES OF ALL OPENINGS IN CONCRETE WALLS. BARS SHALL EXTEND 2' BEYOND OPENING.
E. INSTALL #4 TOP BARS @ 10" O.C. EXTENDING INTO SLAB TWO FEET EACH SIDE OF BEAM OR WALL WHERE SOLID SLABS ARE PARALLEL TO BEAM OR WALL. WHERE SLAB OCCURS ON ONE SIDE ONLY, PROVIDE STANDARD HOOK.
F. CONCRETE SLABS AND BEAMS SHALL HAVE 8" MINIMUM BEARING ON MASONRY WALLS.
G. SLABS AND BEAMS BEARING LESS THAN 8" REQUIRE BOTTOM BARS HOOKED AT SUPPORTS.
H. TOPS OF CONCRETE WALLS SUPPORTING SLABS SHALL BE KEYED TO RECEIVE SLABS AND TO INSURE LATERAL SUPPORT TO WALLS. ALL FOOTINGS SHALL BE KEYED TO RECEIVE WALLS.
I. PROVIDE 2 #4 TIE BARS IN TOPS OF ALL CONCRETE BEAMS IN ORDER TO FASTEN STIRRUPS WHEN NO TOP STEEL IS DESIGNATED ON PLANS OR BEYOND WHERE DESIGNATED TOP STEEL MIGHT NORMALLY BE DISCONTINUED.
J. WHERE COLUMNS BEAR ON INTERSECTION OF TWO DISCONTINUOUS WALLS, PROVIDE #4 BARS X 8'-0" LONG 1' 12" O.C. CORNER REINFORCEMENT FOR TOP FIVE FEET OF WALLS, 2" CLEAR FROM OUTSIDE FACE.
K. WHEREVER STEEL BEAMS ARE ENCASED IN CONCRETE, THE MINIMUM COVER SHALL BE 2 INCHES.
L. PLACE ALL BASEMENT FLOOR SLABS PRIOR TO BACKFILLING AGAINST ADJACENT WALLS.
M. REINFORCE ALL FOOTINGS WITH 2 #8 BOTTOM BARS EXCEPT FOR FOOTINGS WHICH SUPPORT FOUNDATION WALLS GREATER THAN 2'-0" IN HEIGHT.
N. ALL EXTERIOR AND INTERIOR CONCRETE WALLS OF ALL THICKNESSES SHALL BE REINFORCED AS FOLLOWS:

HEIGHT OF WALL	FOOTING SUPPORTING WALL	EARTH PRESSURE ON WALL	REINFORCEMENT
0' TO 2'-0"	YES	FULL OR PARTIAL EITHER SIDE	1-#6 TOP
0' TO 2'-0"	NO	FULL OR PARTIAL EITHER SIDE	1-#6 TOP AND BOTTOM
2'-0" TO 8'-0"	YES OR NO	FULL OR PARTIAL EITHER SIDE	1-#6 TOP AND BOTTOM
2'-0" TO 12'-0"	YES OR NO	LESS THAN 4'-0" DIFFERENCE BETWEEN SIDES	1-#6 TOP AND BOTTOM
8'-0" TO 12'-0"	YES OR NO	MORE THAN 4'-0" DIFFERENCE BETWEEN SIDES	#6@18" O.C. VERT #4@12" O.C. HORIZ

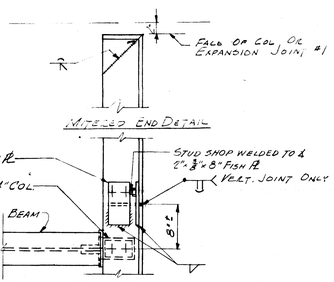
O. ALL REINFORCING FOR WALLS AND FOOTINGS SHALL BE CONTINUOUS AND LAPPED 30 DIAMETERS AT ALL SPLICES, CORNERS AND INTERSECTIONS. PROVIDE #6 FOOTING DOWELS FOR ALL VERTICAL BARS IN WALLS.
P. METAL REINFORCEMENT SHALL BE PROTECTED BY THE FOLLOWING THICKNESSES OF CONCRETE:
1. WHERE CONCRETE IS DEPOSITED AGAINST GROUND, 3" INCHES
2. WHERE CONCRETE IS EXPOSED TO THE WEATHER, OR EXPOSED TO THE GROUND AFTER REMOVAL OF THE FORMS, 2" INCHES EXCEPT THAT SLABS WITH #5 BARS OR SMALLER SHALL HAVE ONLY 1-1/2" CLEAR COVER.
3. IN SLABS INCLUDING CONCRETE ROOF CONSTRUCTION, AND WALLS NOT EXPOSED TO THE GROUND OR WEATHER, 3/4" INCHES
4. IN BEAMS, GIRDERS, AND COLUMNS NOT EXPOSED TO THE WEATHER OR TO THE GROUND, 1-1/2" INCHES
5. IN ALL CASES THE THICKNESS OF CONCRETE OVER THE REINFORCEMENT SHALL BE AT LEAST EQUAL TO THE DIAMETER OF THE BARS.

STEEL:

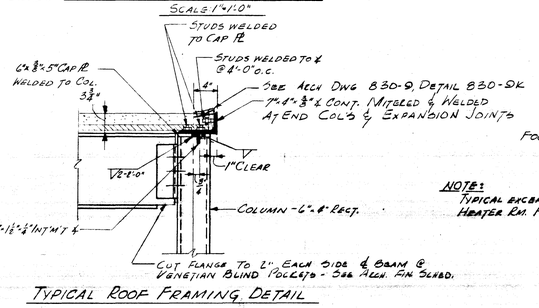


A. FURNISH LOOSE ANGLE LINTELS OVER ALL OPENINGS IN MASONRY WALLS AND PARTITIONS INCLUDING OPENINGS AT DOORS, WINDOWS, RECESSES, DUCTS, VENTS, ETC.
B. PROVIDE ONE ANGLE FOR EACH 4" OF MASONRY THICKNESS AS FOLLOWS:

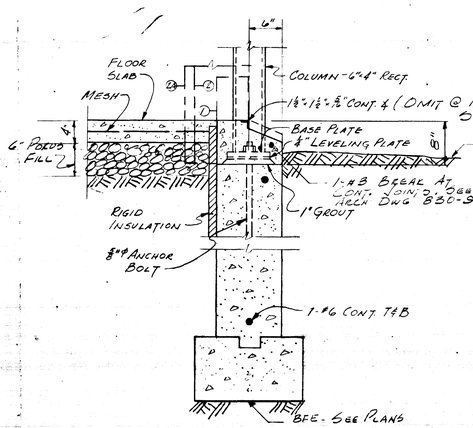
SPANS	LINTEL
UP TO 4'-6"	L - 3-1/2" X 3-1/2" X 5/16"
4'-6" TO 5'-6"	L - 4" X 3-1/2" X 5/16"
5'-6" TO 6'-6"	L - 5" X 3-1/2" X 5/16"
6'-6" TO 7'-6"	L - 6" X 3-1/2" X 3/8"



PROVIDE 3" HORIZONTAL LEG ON ANGLES IF REQUIRED AT CERTAIN METAL DOOR BUCKS. WHERE TOTAL THICKNESS OF WALL TO BE SUPPORTED BY LINTEL IS 4" AND ARCHITECTURAL FINISHES REQUIRE EXPOSED MASONRY ON EACH SIDE, LINTEL SHALL BE AN STJ3½25 WITH 2" OF MASONRY EACH SIDE OF WEB. FURNISH SIMILAR TREATMENT FOR 6" WALLS USING 2 L5 3-1/2" X 5/16" WITH 2" OF MASONRY ON EACH SIDE OF VERTICAL LEGS. ALL STEEL LINTELS SHALL HAVE 8" BEARING ON MASONRY AT EACH END.
C. ALL ROLLED STEEL MEMBERS BEARING ON MASONRY OR CONCRETE WALLS SHALL BE PROVIDED WITH BEARING PLATES AND SHALL BE ANCHORED BY MEANS OF HOOKED ANCHOR BOLTS FOR ALL ROOF ANCHORAGE. WHERE BEAMS FRAME INTO A WALL AND ROOF ANCHORAGE IS NOT NEEDED, GOVERNMENT ANCHORS MAY BE USED. ANCHOR BOLTS SHALL BE 5/8" X 2'-0" WITH 3" HOOK. BEAMS SHALL BE OF SUFFICIENT LENGTH TO BEAR THE FULL WIDTH OF PLATE AT EACH END.
SIZE OF BEARING PLATES FOR BEAMS SHALL BE AS FOLLOWS:



S-SERIES, CHANNELS, TB, AND 4 WF'S	6" X 3/8" X 6"
6 WF	8" X 3/4" X 10"
10 WF, 12 WF	8" X 7/8" X 1'-0"
14 WF, 16 WF, 18 WF	8" X 1" X 1'-2"
21 WF, 24 WF	10" X 1" X 1'-2"



D. PUNCH OR DRILL STEEL FOR 5/8" BOLTS FOR ALL BLOCKING AND ACCESSORIES AS INDICATED ON THE DRAWINGS AND SPECIFICATIONS. SEE ARCHITECTURAL, WHERE NOT SPECIFICALLY INDICATED, STEEL SHALL BE PUNCHED 2'-6" O.C. STAGGERED, FOR BLOCKING.

SECTION A-A
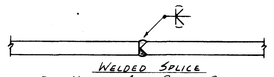
SCALE 1½" = 1'-0"

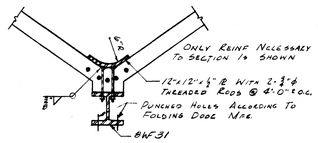
TYPICAL PLATE REINFORCEMENT
SCALE ¾" = 1'-0"

NOTES:



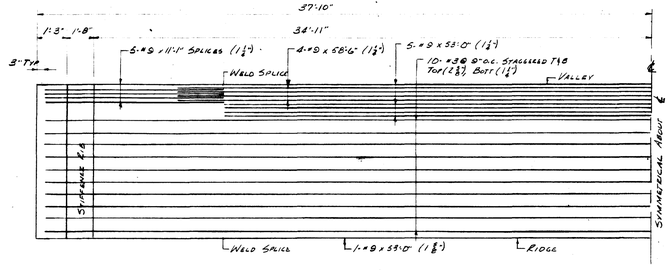
Dimensions In Parenthesis, i.e. (1⅛"), Indicate Support Distance For Bottom Of Bar Above Bottom Of Slab.

Entire Folded Roof Plate Shall Be Placed In Either 2 Or 3 Sections. If 2 Sections Are Prefixed, Locate Construction Joint At Center Valley. If 3 Sections, Locate Construction Joints At Valleys Each Side Of Center.

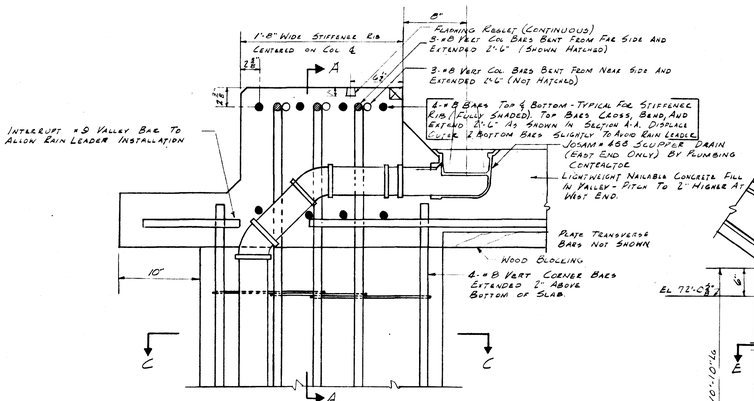


All Forms Must Be Left In Place A Minimum Of 7 Days. Provide 1½" Camber At Midspan. Forms Shall Be Removed In Sections To Insure That Shores In Longitudinal Direction At No Time Exceed 12' O.C., Throughout, For A Duration Not Less Than 28 Days After Final Concrete Placement. Temp Bents Or Longitudinal Shores Shall Compress One At Ridge, One At Midslope, And One At Valley Of Each Plate, Maintaining Proportionate Camber.

Forming, Shoring, And Concrete Sequence Shall Be Subject To Engineer's Approval.



Shores At North And South End Valleys Must Not Be Removed Until Masonry Walls Are Mortared Up Tight.



WELDED SPLICE

PLUMBING FIXTURE SCHEDULE

FIXTURE	SYMBOL	SOIL OR WASTE	VENT	COLD WATER	HOT WATER	MOUNTING HEIGHT	SPECIFICATION
Water Closet	A	4	2	1		Floor	"Santon" #3-300 bowl with #110 FIV "Crown" valve; Olsonite #10 Seat, black with check hinge.
Urinal	B	2	1½	3/4		22"	"Correcto" #7-07 urinal with #186 "Crown" valve.
Lavatory	C	1½	1½	½	½	31"	"Norwich" #1-160V 20"x18"; #8-562 supply and drain fitting, #8-410 1 1/4"x1 1/2" trap; #8-304 3/8" supplies with stops. #8-763 porcelain brackets.
Drinking Fountain	D	1½	1½	½	½	36"	"Coolbrook" #6-570, #6-572 supply fitting; #6-813 waste and 1 1/4" trap with G.P. Wall C.O. No substitutes.
Sink	E	2	1½	½	½	Counter	#5-136 24"x21" acid resisting enamaled C.I. sink; #8-101 A supply fitting, #8-365 open strainer, #8-410 1½" rough brass 'P' trap with C.O.; Judee Frame.
Sediment Trap	F	1½	1½				Josam series "H-20 type H-21½ sediment interceptor with gasketed watertight screwed cover and removable perforated screen. Install on each sink outlet in Arts & Crafts Rms.
Service Sink	G	3	1½	½	½		#7-563 22"x18" acid resisting enamaled C.I. sink; #8-101 rough plated supply fitting with hose end and pail hook, #7-620 trap standard, #8-980 rim guard.
Service Sink	G-1	3	1½	½	½		Same as sink G except without rim guard.
Shower	H					Girls-69" Boys-71"	Speakman #S-2260 shower head with key operated volume control and back inlet.
Shower Cabinet	I	2	1½	½	½		Fiat "Cadet" Model 27 76"x36" galv. steel cabinet with baked enamel fin. Terrazzo receptor with integral drain; Speakman #S-2250 Mixometer shower control with renewable seats #S-2250 Model 3 shower head with ball joint, Bent arm and wall flange, furnish plastic curtain, hooks and soap dish.
Wash Fountain	J	2	1½	1	1	Floor	Bradley type CFA 36" semi-circular, foot operated, precast granito wash fountain
Trap	K	1½	1½				Crane # 8-410 rough brass "P" trap with cleanout. Double sinks to be provided with "LK-5" (Elkay) waste fitting #L350.
Area Drain	L	3					Josam series 110 C.I. area drain with loose set grate
Floor Drain	FD-1	3					Josam series 300 C.I. floor drain with brass strainer. Furnish deep seal 'P' trap
Floor Drain	FD-2	3					Josam series 300-R C.I. floor drain with C.P 17"x5" rectangular strainer. Furnish deep seal 'P' trap
Floor Drain	FD-3	3					Josam series 300-350 C.I. floor drain with non clog C.P. strainer and removable sediment bucket. Furnish deep seal 'P' trap.
Floor Drain	FD-4	3					Josam series 200 C.I. floor drain with integral drum type 'P' trap and polished brass strainer.
Roof Drain							Josam series 410 C.I. roof drain with removable high dome and sediment cup.
Roof Drain		3					Josam series 450 C.I. drain with flashing clamp, removable high dome and C.I. flashing clamp device.
Sillcock					3/4		Josam series Y-210 cast brass non-freeze wall hydrant with loose key.
Gas Valve	Gas V. →						Crane #L-2880 hose end needle valve with renewable seat and plastic index button.
Air Valve	Air V. →						Same as gas, valve, except for use with compressed air and with indentifying index button.

WATER SUPPLY SIZING SCHEDULE

FIXTURE	RATING IN UNITS	PIPE SIZE	CAPACITY IN UNITS
WATER CLOSET	6	1/2"	3
URINAL	3	3/4"	5
LAVATORY	1	1"	12
SINK	2	1 1/4"	30
D. FOUNTAIN	1	1 1/2"	30
SHOWER HEAD	3	2"	65
SILLCOCK	3	2 1/2"	112

THE ABOVE SCHEDULE TO BE USED FOR SIZING BRANCH WATER PIPING FOR FIXTURES IN BATTERIES. SEE FIXTURE SCHEDULE FOR INDIVIDUAL SUPPLY SIZES.

GENERAL NOTES

1. ALL LINES OF PIPING SHOWN ARE DIAGRAMMATIC ONLY. EXACT LOCATIONS SHALL BE DETERMINED ON THE JOB AND IN CONJUNCTION WITH THE OTHER TRADES.
2. CONTRACTOR SHALL CHECK ARCHITECTURAL DRAWINGS FOR LOCATIONS OF ALL ROOF LEADERS, FIXTURES AND SPECIAL EQUIPMENT REQUIRING PLUMBING CONNECTIONS. CONTRACTOR SHALL MAKE CONNECTIONS TO ALL SUCH EQUIPMENT.
3. SANITARY LINES SHALL BE LAID OUT TO MAINTAIN A MINIMUM PITCH OF 1/8" PER FT.
4. PROVIDE STOPS ON BOTH HOT AND COLD WATER LINES AT EACH FIXTURE AND OUTLET. PROVIDE GAS SHUTOFF COCK AT EACH GAS OUTLET.
5. RACK ALL PIPING ON TUNNEL WALLS ON PROPER SUPPORTS TO MAINTAIN MAXIMUM PASSAGE.
6. ALL TRAPS INSTALLED UNDER FLOOR SLABS TO BE LOCATED AS CLOSE AS POSSIBLE TO FINISHED FLOOR.
7. ALL PLUMBING SHOWN ON THESE DWGS SHALL CONFORM TO NATIONAL PLUMBING CODE.

MATERIALS

PARTITION TYPE DESCRIPTION

CORE CHARACTERISTICS

1. METAL STUD
2. METAL STUD WITH SOUND ATTENUATION BLANKET
3. 7/8" FURRING
4. METAL Z CHANNEL WITH RIGID INSULATION
5. C-H METAL STUD

FACE CHARACTERISTICS

- NO CHARACTERISTIC
A. SINGLE LAYER- 5/8" GYPSUM BOARD
B. DOUBLE LAYER- 5/8" AND 5/8" GYPSUM BOARD
C. DOUBLE LAYER- 1/2" AND 5/8" GYPSUM BOARD BELOW (ACOUSTIC)
D. DOUBLE LAYER- 3/8" AND 3/8" GYPSUM BOARD (CURVED)
E. DOUBLE LAYER- 5/8" GYPSUM BOARD WITH 3/4" PLYWOOD BELOW
F. ABUSE RESISTANT GYPSUM BOARD
6. MOISTURE RESISTANT GYPSUM BOARD
H. CEMENT BOARD
J. PLASTER AND LATH
K. RESILIENT CHANNELS WITH 5/8" GYPSUM BOARD
L. 1" GYPSUM LINER PANEL
M. EXISTING SURFACE
N. 6" CONCRETE MASONRY UNIT. (SEE NOTE #18)
O. 8" CONCRETE MASONRY UNIT. (SEE NOTE #18)
P. 8" X 8" X 3" SOLID GLASS BLOCK 1 1/2 HR RATED UL DESIGN #R2556.

PARTITION HEIGHT

1. FULL HEIGHT
2. 4" MINIMUM ABOVE FINISHED CEILING
3. UNDERSIDE OF FINISHED CEILING
4. LOW HEIGHT

GYPSUM BOARD PARTITION RATING

1. 1-HR SHAFT-WALL UL DESIGN #468.
2. 1-HR PARTITION UL DESIGN #465.
3. 2-HR PARTITION UL DESIGN #412.
4. 2-HR SHAFT-WALL UL DESIGN #438.

BRICK VENEER W/ SHEATHING METAL STUDS & GYPSUM BOARD

1. 1-HR EXTERIOR WALL CONSTRUCTION UL DESIGN #425. SEE DWG A601 FOR EXTENT.

NOTE:
ADD ADDITIONAL LAYER OF 1/2" RATED GYPSUM BOARD TO SHAFT-WALL WHEN USED HORIZONTALLY TO MEET WARNOCK-HERSEY TESTED AND APPROVED ASSEMBLY # WH-0415-PSH0154-0187.

PARTITION NOTES

1. UNLESS OTHERWISE NOTED ALL MASONRY PARTITIONS SHALL BE FULL HEIGHT UP TO STRUCTURE ABOVE. ALL PENETRATIONS SHALL BE SEALED WITH FIRE-STOPPING MATERIALS. SEE STRUCTURAL DRAWINGS FOR REINFORCING AND BRACING REQUIREMENTS.
2. UNLESS OTHERWISE NOTED ALL GYPSUM BOARD PARTITIONS SHALL BE 3- 5/8" METAL STUDS AT 16" O.C. WITH 1- LAYER 5/8" GYPSUM BOARD ON EACH SIDE. EXTEND FULL HEIGHT UP TO STRUCTURE ABOVE AND SEAL WITH FIRE-STOPPING MATERIAL AT RATED PARTITIONS AND ACOUSTIC SEALANT AT NON-RATED PARTITIONS. PROVIDE SOUND ATTENUATION INSULATION FULL HEIGHT.
3. PROVIDE SOLID BLOCKING AT ALL GYPSUM BOARD PARTITIONS FOR ALL WALL MOUNTED EQUIPMENT INCLUDING THOSE LISTED AS N.I.C.

GENERAL NOTES

BQ #70 & 125 Attachment

1. THE EXISTING CONDITIONS REPRESENTED HEREIN ARE BASED ON THE CONSTRUCTION DRAWINGS PREPARED BY SHERWOOD, MILLS AND SMITH ARCHITECTS DATED 4-30-97, MAITLAND/STRAUSS/BEIRK ARCHITECTS PC DATED 5-4-81 AND SITE SURVEY PREPARED BY CCA DATED 8-27-97. SITE SURVEY IS INCLUDED FOR CONTRACTORS REFERENCE ONLY. FLETCHER THOMPSON CANNOT GAURANTEE THE CORRECTNESS OF THE EXISTING SHOWN AND ASSUMES NO RESPONSIBILITY HEREITOF. INCLUSION OF THESE EXISTING CONDITIONS HEREIN SHALL IN NO WAY ALLEVIATE THE CONTRACTOR OF ITS RESPONSIBILITY TO VISIT THE SITE AND VERIFY ALL EXISTING CONDITIONS.
2. THE CONTRACTOR SHALL VERIFY EXISTING CONDITIONS, DIMENSIONS, FLOOR ELEVATIONS AND MATERIALS IN THE FIELD AND SHALL NOTIFY THE ARCHITECT OF ANY DISCREPANCIES TWO WEEKS PRIOR TO BID OPENING.
3. EACH TRADE CONTRACTOR IS RESPONSIBLE FOR REVIEWING "THE CONSTRUCTION DRAWINGS" IN COORDINATING HIS WORK WITH THE OTHER TRADE CONTRACTORS AS IS INDICATED ON THE DRAWINGS AND SPECIFICATIONS.
4. THE CONTRACTOR SHALL PATCH, REPAIR AND FINISH ALL EXISTING CONSTRUCTION DAMAGED DURING PERFORMANCE OF HIS OR HIS SUB-CONTRACTORS WORK. HE SHALL ALSO PROVIDE ALL OPENINGS IN EXISTING AND NEW CONSTRUCTION REQUIRED BY HIM OR HIS SUB-CONTRACTORS AND SHALL PATCH, REPAIR AND FINISH THE OPENINGS TO MATCH EXISTING OR NEW FINISHES AFTER WORK HAS BEEN COMPLETED.
5. THE CONTRACTOR SHALL SCHEDULE ALL WORK SO AS TO KEEP ALL CORRIDORS, STAIRWAYS AND OTHER EXIT COMPONENTS FREE OF CONSTRUCTION DEBRIS, STAGING, STORED MATERIALS, ETC. DURING NORMAL SCHOOL HOURS.
6. THE CONTRACTOR SHALL COORDINATE ALL WORK IN THE EXISTING BUILDING WITH THE SCHOOL PRINCIPAL AND SHALL PROVIDE A MIN. OF ONE WEEKS NOTICE PRIOR TO PROCEEDING WITH ANY WORK.
7. THE LOCATION OF ALL TRAILERS, STORAGE STRUCTURES AND OTHER TEMPORARY SITE FACILITIES SHALL BE APPROVED BY THE OWNER AND FIRE MARSHAL.
8. WHERE OWNERS FURNITURE IS REQUIRED TO BE MOVED AND/OR STORAGE CLEANED OUT IN ORDER FOR THE CONTRACTOR TO PERFORM HIS WORK, THE CONTRACTOR SHALL COORDINATE THAT PHASE OF WORK WITH THE OWNER A MIN. OF ONE WEEK TO WORK START-UP. ALL OWNERS FURNITURE RELOCATION AND/OR CLEAN-UP SHALL BE PERFORMED BY THE OWNERS WORK FORCE.
9. THE CONTRACTOR SHALL COORDINATE WITH THE OWNER ANY SALVAGE REQUIREMENTS PRIOR TO START-UP OF WORK AND SHALL REMOVE AND TURN OVER TO THE OWNER ANY HARDWARE AND/OR OTHER EQUIPMENT OR MATERIALS THE OWNER WANTS TO RETAIN.
10. THE PLUMBING, HVAC, SPRINKLER AND ELECTRICAL CONTRACTORS SHALL SEAL NEW OPENINGS AROUND PIPE, CONDUITS, DUCTS, ETC. WITH FIRE-STOPPING / SMOKE RESISTANT NON-COMBUSTIBLE MATERIALS AS INDICATED ON CONSTRUCTION DRAWINGS AND IN PROJECT SPECIFICATIONS.
11. ACCESS PANELS WHICH ARE REQUIRED BY THE PLUMBING, HVAC, SPRINKLER OR ELECTRICAL CONTRACTORS WHICH ARE NOT SHOWN ON THE CONSTRUCTION DRAWINGS, BUT ARE REQUIRED FOR ACCESS TO THEIR EQUIPMENT, SHALL BE FURNISHED BY THE RESPECTIVE CONTRACTOR TO THE MASONRY CONTRACTOR FOR INSTALLATION INTO MASONRY WALLS AND TO THE DRYWALL AND CEILING CONTRACTOR FOR INSTALLATION INTO DRYWALL PARTITIONS AND CEILINGS.
12. PROVIDE TRENCHING IN EXISTING BUILDING FOR UNDERFLOOR PIPING AS INDICATED ON PLUMBING, MECHANICAL AND ELECTRICAL DRAWINGS.
13. ALL WOOD BLOCKING USED ON THE INTERIOR SHALL BE FIRE RETARDANT TREATED. ALL EXTERIOR WOOD BLOCKING SHALL BE PRESSURE TREATED.
14. ALL CONCRETE MASONRY UNIT WALLS SHALL EXTEND TO THE UNDERSIDE OF CONSTRUCTION ABOVE AND BE SEALED-OFF BETWEEN THE CONSTRUCTION AND TOP OF WALL W/ A NON-COMBUSTIBLE FIRE-STOPPING MATERIAL. SEE SPECIFICATIONS 07210. SEE STRUCTURAL DRAWINGS FOR TYPICAL BRACING AT TOP OF INTERIOR C.M.U. WALLS.
15. REFER TO STRUCTURAL DRAWINGS FOR REINFORCING AND GROUTING REQUIREMENTS OF ALL CONCRETE MASONRY WALLS.
16. BLOCK FOR USE IN (1) & (2) HR FIRE RATED WALLS AND PARTITIONS SHALL HAVE SUCH EQUIVALENT SOLID THICKNESS THAT WHEN INSTALLED THEY WILL PROVIDE FIRE RESISTANCE RATING CONFORMING TO STATE CODE REQUIREMENTS.

    THE PRODUCER OF CONCRETE MASONRY UNITS FOR FIRE RATED WALLS SHALL FURNISH CERTIFICATION FROM AN INDEPENDENT TESTING LABORATORY CONFIRMING ALL 8" WIDE OR LARGER MASONRY UNITS MEET THE REQUIREMENTS OF UL-618, REFERENCING FULL SCALE FIRE TEST REPORTS (ASTM E-119). ALL 4" AND 6" WIDE UNITS SHALL CONFORM TO NATIONAL BUREAU OF STANDARDS AND NATIONAL COUNCIL FULL SCALE FIRE TESTS.
17. FINISH GROUND FLOOR ELEVATION 44'-1".
    FINISH FIRST FLOOR ELEVATION 55'-1".
18. IN ALL NEW CONSTRUCTION WHERE CEILING PLENUMS ARE INDICATED FOR USE AS UNDUCTED RETURN AIR TRANSFER, ALL MATERIALS PROVIDED WITHIN THESE SPACES SHALL BE NON-COMBUSTIBLE. ALL WIRING SHALL BE IN CONDUIT & ALL CABLING FOR FIRE ALARM, P.A., COMPUTERS, T.V., TELEPHONE SYSTEMS SHALL BE RATED FOR PLENUM INSTALLATION.

    IN ALL EXISTING RENOVATED AREAS WHERE CEILING PLENUMS ARE INDICATED FOR USE AS UNDUCTED RETURN AIR TRANSFER, ALL COMBUSTIBLE MATERIALS SHALL BE REMOVED & REPLACED WITH NON-COMBUSTIBLE MATERIALS. ALL WIRING SHALL BE IN CONDUIT & ALL CABLING FOR FIRE ALARM, P.A., COMPUTERS, T.V. TELEPHONE SYSTEMS SHALL BE RATED FOR PLENUM INSTALLATION.

DRAWING NOTES

- REFER TO STRUCTURAL DRAWINGS AND SPECIFICATIONS FOR REINFORCING, GROUTING AND BRACING REQUIREMENTS AT CONCRETE MASONRY UNIT PARTITIONS.
- REFER TO CODE COMPLIANCE AND LIFE SAFETY DRAWINGS FOR SMOKE AND FIRE RESISTANCE REQUIREMENTS FOR PARTITIONS.
- REFER TO GENERAL INFORMATION DRAWING FOR ABBREVIATIONS, SYMBOLS, GENERAL NOTES, AND ACCESSORY MOUNTING HEIGHTS.

TRADE CONTRACTOR'S NOTE

ALL EQUIPMENT SHOWN ON THESE DRAWINGS AND IN PROJECT SPECIFICATION IS BASED ON SPECIFIED MANUFACTURERS. ANY MODIFICATION AND/OR SUBSTITUTION OF SAID EQUIPMENT IS SUBJECT TO COMPLETE COORDINATION OF ALL CONNECTIONS, SERVICES, OPENING SIZES, AND ANY OTHER CONSTRUCTION RELATED REQUIREMENTS BY THE TRADE CONTRACTOR PROVIDING THE EQUIPMENT.

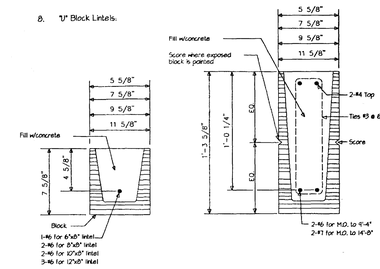
GENERAL LINTEL NOTES

1. Openings for which no specific lintels or lintel sizes are indicated shall have one angle for each 4" of masonry, or an approved equivalent thereof as follows:

ANGLES SIZE	MAX. M.O.	BEARING EACH END
3 1/2" X 3 1/2" X 5/16"	3'-6"	6"
3 1/2" X 4" X 5/16"	5'-0"	6"
3 1/2" X 5" X 5/16"	6'-0"	8"
3 1/2" X 6" X 5/16"	8'-0"	8"

2. For 6" partitions use wt. 7 x 13 for spans up to 7'-0" with 6" bearing each end.
3. Fill two courses directly under lintel bearing with grout for 16" length x 16" depth.
4. See ARCHITECTURAL & MECHANICAL drawings for size and location of openings.
5. When openings occur in bearing walls or the height of masonry above the lintel is less than the opening width or when a control joint is located directly above or within 16" of the jamb opening and drawings do not otherwise indicate a specific lintel design, consult with the architect to confirm lintel requirements.
6. Within the existing building, new openings in concrete masonry walls where no specific lintels or lintel sizes are indicated shall have the following sizes.



MAX. M.O.	WALL THICKNESS	LINTEL SIZE	BEARING PLATE
6'-0"	8"	(3) 3 1/2"X6"X3/8"(LLV)	7"X8"X1/2"
9'-0"	8"	W8X18 + 5/16" PLATE	7"X8"X1/2"
12'-0"	8"	W8X28 + 5/16" PLATE	7"X8"X1/2"

   Plates indicated in above lintels shall have a width 1" less than the wall thickness.

7. At new shear walls AND NEW exterior wall where no specific lintels or lintel sizes are indicated, provide the following sizes.

MAX. M.O.	WALL THICKNESS	LINTEL SIZE	BEARING PLATE
7'-0"	10" - 14"	W8X13 + 5/16" PLATE	10"X8"X1/2"
12'-0"	10" - 14"	W8X28 + 3/8" PLATE	10"X8"X1/2"

8. "L" Block Lintels.

   6"x8", 8"x8", 10"x8" & 12"x8" lintel for M.O. to 8'-8" 8" bearing (min.) each end See note 3 above

   8"x16", 10"x16" & 12"x16" lintel for M.O. to 14'-8" 12" bearing (min.) each end See note 3 above

9. Lintels over adjacent opening with piers between less than 2'-4" wide shall be continuous over piers. Masonry units of such piers shall be filled with grout for full story height.
10. Connect lintel to structural steel columns when there is less then 16" of masonry between the masonry opening and the outer most face of column.
11. Reference structural drawings for notes and details regarding reinforcing and grouting requirements.
12. For lintels at unit ventilators in building parts "D" and "E", see detail on structural drawings.

This drawing and details on it, as an instrument of service, is the property of the architect and may be used for this specific project and shall not be loaned, copied or reproduced without written consent of the architect.

CONSTRUCTION NARRATIVE:

THIS PROJECT IS COMPRISED OF THE CONSTRUCTION OF A NEW BUILDING ADDITION TO ADD 12 NEW CLASSROOMS. 11 NEW PARKING SPACES SHALL BE PROVIDED ON THE SOUTH SIDE OF THE WEST PARKING LOT. BUILDING CONSTRUCTION MACHINES AND EQUIPMENT WILL ACCESS THE SITE THROUGH THE WEST PARKING LOT. A 1:1 ROCK SLOPE WILL BE EXCAVATED ON THE WEST SIDE TO PROVIDE ROOM FOR THE NEW BUILDING AND WALKWAY. CONSTRUCTION MATERIAL WILL BE STORED ADJACENT TO THE NEW BUILDING.

GENERAL CONSTRUCTION NOTES:

1. EXISTING UTILITIES, TOPOGRAPHY AND PROPERTY LINE INFORMATION SHOWN ON THIS PLAN IS TAKEN FROM EXISTING RECORDS AND FIELD SURVEY PERFORMED BY CARROCCIO-COVILL AND ASSOCIATES, LLC. REFER TO "PROPERTY & TOPOGRAPHIC SURVEY CENTRAL MIDDLE SCHOOL", DATED AUGUST 27, 1997 FOR ADDITIONAL INFORMATION.
2. EXISTING SUBSURFACE STRUCTURES AND UTILITIES HAVE BEEN DETERMINED FROM EXISTING RECORDS. THESE RECORDS ARE NOT GUARANTEED TO BE COMPLETE OR ACCURATE. TO AVOID CONFLICT WITH THE PROPOSED WORK AND EXISTING UTILITIES, THE CONTRACTOR SHALL CHECK EXISTING INVERTS AND PERTINENT DATA, EXCAVATE TEST HOLES AND NOTIFY "CALL BEFORE YOU DIG". IF A CONFLICT EXISTS, PROMPTLY NOTIFY THE DESIGN ENGINEER PRIOR TO CONSTRUCTION.
3. ALL SITE CONSTRUCTION SHALL CONFORM TO THE TOWN OF GREENWICH STANDARD SPECIFICATIONS AND THE CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL. IN THE ABSENCE OF TOWN STANDARDS, REFER TO THE STATE OF CONNECTICUT DEPARTMENT OF TRANSPORTATION FORM 814.
4. ALL STORM SEWER PIPE SHALL BE REINFORCED CONCRETE PIPE (RCP) WITH MORTARED JOINTS. CATCH BASINS AND YARD DRAINS SHALL BE PRECAST CONCRETE WITH 4" SUMPS.
5. WATER SERVICE TO THE PROPOSED BUILDING SHALL BE PROVIDED BY CONNECTICUT AMERICAN WATER COMPANY VIA THE EXISTING WATER SERVICE SERVING THE SCHOOL.
6. SANITARY SEWER, ELECTRIC, TELEPHONE AND OTHER UTILITY SERVICES SHALL BE PROVIDED FROM THE EXISTING SCHOOL BUILDINGS.
7. GENERAL FILL SHALL BE CLEAN, FREE DRAINING AND FREE OF ORGANIC MATERIAL WITH NO STONES LARGER THAN 8 INCHES. APPROVAL OF THE FILL MATERIAL IS REQUIRED BY THE DESIGN ENGINEER.
8. A 4" LAYER OF TOPSOIL SHALL BE SPREAD OVER ALL LAWN, LANDSCAPE AND SLOPE AREAS. FINAL SEEDING OF DISTURBED AREAS SHALL BE COMPLETED AS SOON AS PRACTICABLE AND COVERED WITH HAY TO PREVENT EROSION DURING THE GERMINATION PERIOD.
9. ALL EROSION AND SEDIMENT CONTROL MEASURES WILL BE INSTALLED PRIOR TO CONSTRUCTION WHENEVER POSSIBLE. REFER TO DRAWING C002 FOR ADDITIONAL SOIL & EROSION CONTROL NOTES.
10. REFER TO DRAWING C002 "CONSTRUCTION NOTES AND DETAILS" FOR ADDITIONAL INFORMATION.

SEDIMENT AND EROSION CONTROL NARRATIVE:

THE PURPOSE OF THE SEDIMENT AND EROSION CONTROL PLAN, DETAILS AND NOTES IS TO OUTLINE A PROGRAM THAT MINIMIZES THE SOIL EROSION DURING CONSTRUCTION. THE PRIMARY POLICIES OF THIS PROGRAM ARE:

A) AVOIDANCE & MINIMIZATION BY RETAINING THE NATURAL VEGETATION WHENEVER FEASIBLE AND EXPOSE THE SMALLEST PRACTICAL AREA AT ONE TIME.
B) TRAPPING PARTICLES AT THE SOURCE BY PROMPTLY STABILIZING AND REVEGETATING DISTURBED AREAS.
C) AVOIDING THE CONCENTRATION OF WATER AND RUNOFF.
D) AVOIDING THE CONTAMINATION OF STORM DRAINS.
E) MAINTAINING THE EROSION CONTROLS TO ENSURE THAT THEY ARE FUNCTIONING PROPERLY BY PERFORMING WEEKLY INSPECTIONS AND AFTER STORM EVENTS.
F) DISPOSAL OF COLLECTED SILT AND SEDIMENT LEGALLY AND IN KEEPING WITH THE INTENT OF THIS PLAN.

CONSTRUCTION SEQUENCE:

A. GENERAL
1. PROJECT START: SPRING 1998
PROJECT COMPLETION: FALL 1999
BASED ON RECEIVING TIMELY APPROVALS
2. THE PROPOSED CONSTRUCTION SEQUENCE IS PROVISIONAL.

B. SITE PREPARATION
1. REVIEW THE SEDIMENT AND EROSION CONTROL PLAN WITH THE CONSTRUCTION TEAM, SITE ENGINEER AND INLAND WETLANDS OFFICER.
2. DELINEATE THE LIMITS OF DISTURBANCE AND ESTABLISH THE STAGING AREAS, CONSTRUCTION TRAILER LOCATIONS AND TEMPORARY UTILITIES.
3. INSTALL THE TRACKING PAD FOR THE CONSTRUCTION ACCESS AND INSTALL SILT FENCE ALONG THE LIMITS OF DISTURBANCE AS SHOWN ON THE PLANS.
4. INSTALL ADDITIONAL SOIL AND EROSION CONTROLS AS REQUIRED.
5. FLAG AND/OR FENCE OFF ALL TREES TO BE PROTECTED.
6. CUT TREES TO BE REMOVED AND GRUB AREAS TO BE CLEARED WITHIN THE DEVELOPMENT ENVELOPE AS APPROPRIATE.
7. STRIP TOPSOIL AND STOCKPILE IN DESIGNATED AREAS. SURROUND TOPSOIL WITH SILT FENCE TO CONTAIN SEDIMENTS.

C. GENERAL SITE CONSTRUCTION:
1. PERFORM GENERAL EARTHWORK ACTIVITIES INCLUDING EXCAVATION AND FILLING AS REQUIRED.
2. ABANDON EXISTING UTILITIES AS MAY BE INDICATED ON THE PLANS.
3. ROUGH GRADE AND EXCAVATE THE BUILDING AREA AND PREPARE THE BUILDING SUBGRADE.
4. INSTALL THE STORM SEWER AND ADDITIONAL SEDIMENT AND EROSION CONTROLS ASSOCIATED WITH THE NEW STORM SEWER.
5. EXCAVATE AND ROUGH GRADE THE PROPOSED PARKING AREA. STABILIZE STEEP SLOPES ADJACENT TO THE NEW PARKING.
6. CONSTRUCT THE LANDSCAPE SLOPES AND SEED AND MULCH ALL LANDSCAPE AREAS.
7. STABILIZE DISTURBED AREAS AS SOON AS PRACTICAL.

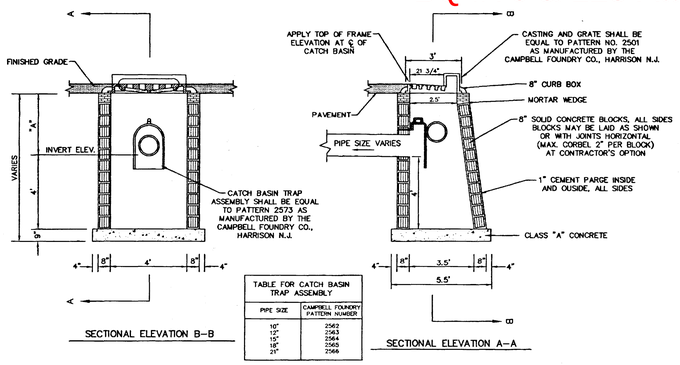
D. DUST CONTROL:
1. PREVENT BLOWING AND MOVEMENT OF DUST FROM EXPOSED SOIL SURFACES, AND REDUCE THE PRESENCE OF DUST WHICH MAY CAUSE OFF-SITE DAMAGE, BE A HEALTH HAZARD TO HUMANS, WILDLIFE AND PLANTLIFE, OR REDUCE TRAFFIC SAFETY HAZARD.
2. THIS MEASURE IS APPLICABLE TO AREAS SUBJECT TO DUST BLOWING AND SOIL MOVEMENT WHERE ON-SITE AND OFF-SITE DAMAGE IS LIKELY TO OCCUR IF PREVENTIVE MEASURES ARE NOT TAKEN.
3. USE TRAFFIC CONTROL TO RESTRICT TRAFFIC TO PREDETERMINED ROUTES. MAINTAIN AS MUCH NATURAL VEGETATION AS IS PRACTICABLE. USE PHASING OF CONSTRUCTION TO REDUCE THE AREA OF LAND DISTURBED AT ANY ONE TIME. THE USE OF TEMPORARY MULCHING, PERMANENT MULCHING, TEMPORARY VEGETATIVE COVER, OR SODDING WILL REDUCE THE NEED FOR DUST CONTROL. USE MECHANICAL SWEEPERS ON PAVED SURFACES WHERE NECESSARY TO PREVENT DUST BUILD UP. STATIONARY SOURCES OF DUST, I.E., ROCK CRUSHERS SHOULD UTILIZE FINE WATER SPRAYS TO CONTROL DUST.
4. INSTALLATION REQUIREMENTS
A. WATER –
THE EXPOSED SOIL SURFACE SHOULD BE MOISTENED PERIODICALLY WITH ADEQUATE WATER TO CONTROL DUST.
B. STONE –
COVER SURFACES WITH CRUSHED STONE OR COARSE GRAVEL. IN AREAS ADJACENT TO WATERWAYS USE CHEMICALLY STABLE AGGREGATE.
5. WHEN TEMPORARY DUST CONTROL MEASURES ARE USED, REPETITIVE TREATMENT SHALL BE APPLIED AS NEEDED TO ACCOMPLISH CONTROL.

E. GENERAL BUILDING CONSTRUCTION:
1. INSTALL THE BUILDING FOUNDATIONS AND FLOOR SLABS.
2. BACKFILL THE FOUNDATIONS AND CONNECT BUILDING UTILITIES.
3. CONSTRUCT THE BUILDING SUPERSTRUCTURE.
4. FINE GRADE ALL DISTURBED AREAS, STABILIZE AND SEED AS SOON AS PRACTICAL.
5. INSTALL PAVING ON DRIVES AND PARKING AREAS. COMPLETE ALL WALKWAYS AND SITE HARDSCAPE.
6. INSTALL LANDSCAPE PLANTINGS AND SEED.

F. GENERAL CLEAN UP:
1. REMOVE TEMPORARY SEDIMENT AND EROSION CONTROLS.
2. MAINTAIN PERMANENT SEDIMENT AND EROSION CONTROLS.
3. COMPLETE ALL PUNCH LIST ITEMS.

GENERAL SEDIMENT AND EROSION CONTROL NOTES:

1. SEDIMENT AND EROSION CONTROL MEASURES SHALL BE INSTALLED PRIOR TO THE START OF CONSTRUCTION.
2. COORDINATE THE CONSTRUCTION PHASING WITH THE TOWN OF GREENWICH INLAND WETLANDS AGENCY STAFF PRIOR TO BEGINNING WORK IN EACH PHASE.
3. EXISTING TREES TO BE SAVED SHALL BE PROTECTED BY FLAGGING AND/OR SNOW FENCING AT THE DRIP LINE WHICH SHALL BE MAINTAINED DURING CONSTRUCTION.
4. ANTI-TRACKING APRONS SHALL BE INSTALLED AT THE START OF CONSTRUCTION AND MAINTAINED THROUGHOUT CONSTRUCTION. APRONS SHALL CONSIST OF 2"- 4" CRUSHED STONE WITH A MINIMUM THICKNESS OF 4 INCHES. EACH APRON SHALL BE APPROXIMATELY 50 FEET LONG AND EXTEND THE WIDTH OF THE CONSTRUCTION ACCESS. THE LOCATION OF THE TRACKING PADS MAY CHANGE DURING THE VARIOUS PHASES OF CONSTRUCTION.
5. SILT FENCE AND OTHER SEDIMENT CONTROL MEASURES MUST BE INSTALLED IN ACCORDANCE WITH THE DRAWINGS AND SPECIFIC MANUFACTURER'S RECOMMENDATIONS.
6. SILT FENCE SHALL BE MIRAFI ENVIROFENCE OR EQUIVALENT APPROVED BY THE DESIGN ENGINEER. FILTER FABRIC SHALL BE MIRAFI 100X OR EQUIVALENT.
7. ADDITIONAL SEDIMENT AND EROSION CONTROLS MAY BE INSTALLED DURING THE CONSTRUCTION PERIOD IF FOUND NECESSARY BY THE INSPECTING ENGINEER OR ANY GOVERNING AGENCY.
8. AFTER EACH STORM EVENT OR AT LEAST ONCE WEEKLY, ALL SEDIMENT AND EROSION CONTROLS WILL BE INSPECTED. CORRECTIVE MEASURES TO MITIGATE ENVIRONMENTAL CONCERNS WILL BE ORDERED BY THE DESIGN ENGINEER OR GOVERNING AGENCY IF REQUIRED.
9. ALL PERMANENT AND TEMPORARY SEDIMENT CONTROL MEASURES WILL BE MAINTAINED IN EFFECTIVE CONDITION THROUGHOUT THE CONSTRUCTION PERIOD. UPON COMPLETION OF WORK, ALL TEMPORARY SEDIMENT CONTROL DEVICES SHALL BE REMOVED FROM THE SITE AND ANY COLLECTED SEDIMENTS FROM THE DEVICES AND CATCH BASINS SHALL BE DISPOSED OF LEGALLY AND IN KEEPING WITH THE INTENT OF THIS PLAN.
10. DUST CONTROL SHALL BE ACHIEVED WITH WATERING DOWN THE DISTURBED AREAS AS REQUIRED.
11. UPON THE INSTALLATION OF CATCH BASINS, IMMEDIATELY SURROUND THEM WITH HAYBALES AS PER THE DETAIL AND/OR PROVIDE SILT SACKS FOR THE BASIN TOPS.
12. ALL DEWATERING PUMPING MUST HAVE SEDIMENT AND EROSION CONTROL PROVISIONS TO MAINTAIN CLEAR WATER DISCHARGE. IF TRENCH DEWATERING IS REQUIRED, PUMP DISCHARGE SHALL PASS THROUGH A SEDIMENT FILTER TO OBTAIN CLEAR WATER DISCHARGE.
13. LAND DISTURBANCE SHALL BE KEPT TO A MINIMUM. ALL DISTURBED AREAS SHALL BE SEEDED AND MULCHED.
14. EFFECTED PORTIONS OF OFFSITE ROADS MUST BE SWEPT CLEAN WHEN REQUIRED OR AT LEAST ONCE A WEEK DURING CONSTRUCTION.
15. ALL EROSION AND SEDIMENTATION CONTROL MEASURES WILL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE "CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL," DATED JANUARY 1985.



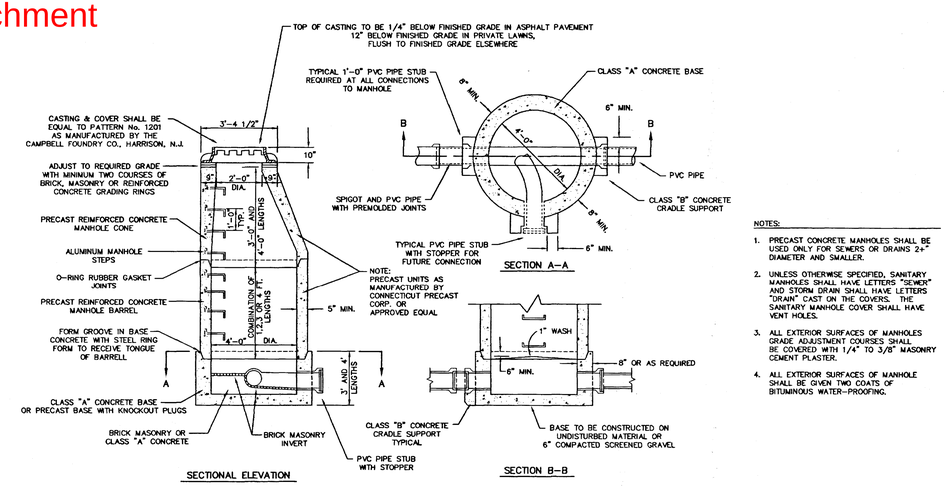


TABLE FOR CATCH BASIN TRAP ASSEMBLY

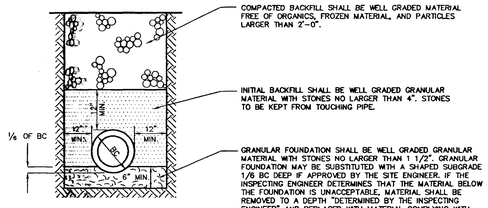
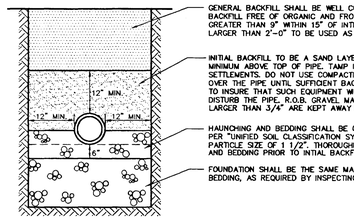
PIPE SIZE	CAMPBELL FOUNDRY PATTERN NUMBER
10"	2562
12"	2563
15" AND 18"	2564
24"	2565
30"	2566

NOTES:
1. DIMENSION "A" SHALL BE CONSISTENT WITH INVERT ELEVATION SHOWN ON CONTRACT DRAWING. WHEN NO INVERT ELEVATION IS SPECIFIED DIMENSION "A" SHALL BE SUCH AS TO PROVIDE MINIMUM OF 2'-6" COVER OVER PIPE.
2. INCREASE WALL THICKNESS TO 12" FOR THOSE PORTIONS OF WALL AT DEPTHS GREATER THAN 8'. INSIDE DIMENSIONS TO REMAIN THE SAME, FOOTING SIZE TO BE INCREASED 8".



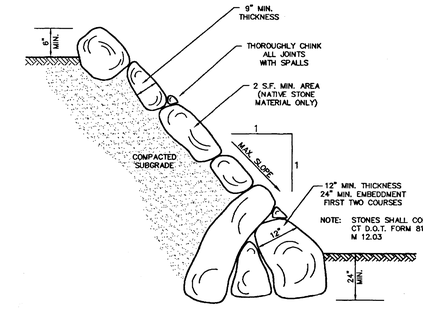
CATCH BASIN TYPE "C-1"
N.T.S.

NOTES:
1. PRECAST CONCRETE MANHOLES SHALL BE USED ONLY FOR SEWERS OR DRAINS 2+" DIAMETER AND SMALLER.
2. UNLESS OTHERWISE SPECIFIED, SANITARY MANHOLES SHALL HAVE LETTERS "SEWER" AND STORM DRAIN SHALL HAVE LETTERS "DRAIN" CAST ON THE COVERS. THE SANITARY MANHOLE COVER SHALL HAVE VENT HOLES.
3. ALL EXTERIOR SURFACES OF MANHOLES GRADE ADJUSTMENT COURSES SHALL BE COVERED WITH 1/4" TO 3/8" MASONRY CEMENT PLASTER.
4. ALL EXTERIOR SURFACES OF MANHOLE SHALL BE GIVEN TWO COATS OF BITUMINOUS WATER-PROOFING.



PRECAST CONCRETE MANHOLE TYPE P2
N.T.S.

ALL MATERIAL TO BE COMPACTED TO 95% OF THE MAXIMUM DRY DENSITY AS DETERMINED BY ASTM D1557 EXCEPT "COMPACTED BACKFILL" NOT UNDER PAVEMENT WHICH SHALL BE COMPACTED TO A DENSITY AT LEAST EQUAL TO THAT OF THE ADJACENT UNDISTURBED MATERIAL.



RCP PIPE TRENCH BEDDING DETAIL
N.T.S.

NOTE: GENERAL BACKFILL SHALL BE COMPACTED TO A DENSITY AT LEAST EQUAL TO THAT OF THE ADJACENT UNDISTURBED MATERIAL. ALL OTHER MATERIAL TO BE COMPACTED TO 95% OF THE MAXIMUM DRY DENSITY AS DETERMINED BY ASTM D1577. TAMPING AND COMPACTION TO BE IN ACCORDANCE WITH THE MANUFACTURERS INSTALLATION MANUAL AND ASTM D2821. GENERAL BACKFILL UNDER PAVEMENT TO BE COMPACTED TO 95% DENSITY.

EXISTING PASSENGER ELEVATOR INFORMATION

THE GROUND AND FIRST FLOOR OF THE ACADEMIC BUILDING IS ACCESSIBLE BY MEANS OF AN EXISTING PASSENGER ELEVATOR. THE PASSENGER ELEVATOR HAS AUTOMATIC OPERATION, SELF-LEVELING WITHIN 1/2-INCH OF THE FLOOR, DOOR REOPENING DEVICE, INTERIOR CAB SIZE OF 51 INCHES IN DEPTH BY 69 INCHES IN WIDTH AND A LEFT SIDE CAB DOOR WITH A CLEAR OPENING WIDTH OF 36 INCHES. THE CAR CONTROLS ARE LOCATED ON THE FRONT WALL RIGHT OF THE CAB DOOR, 3/4 INCHES IN SIZE WITH RAISED BUTTONS WHICH LIGHT WHEN CALL IS REGISTERED AND EXTINGUISHED WHEN ANSWERED, AND ARE IDENTIFIED WITH RAISED ARABIC CHARACTERS FOR NUMBERS WITH BRAILLE RIGHT OF THE BUTTON. THE VISUAL CAR POSITION INDICATOR IS LOCATED ABOVE THE CAR CONTROL PANEL. THE HALL CALL BUTTON IS KEY AND BUTTON OPERATION (3/4 INCHES IN SIZE WITH RAISED BUTTONS WHICH LIGHT WHEN CALL IS REGISTERED AND EXTINGUISHED WHEN ANSWERED) LOCATED ON THE WALL ADJACENT TO THE ELEVATOR HOISTWAY JAMBS AT 46 INCHES TO CENTERLINE ABOVE THE FLOOR. THE VISUAL SIGNALS ARE LOCATED ON THE WALL ABOVE THE CAB DOOR AND ARE ARROWS WHICH INDICATE THE DIRECTION OF TRAVEL. RAISED 2-INCH HIGH ALPHABET OR ARABIC CHARACTERS AND BRAILLE FLOOR DESIGNATIONS ARE PROVIDED AT 60 INCHES ABOVE THE FLOOR ON ONE SIDE OF THE HOISTWAY JAMB.

SYMBOLS LEGEND

CLASSROOM — ROOM NAME

(XXX) — ROOM NUMBER

GENERAL DEMOLITION NOTES:

1. THE DEMOLITION NOTES ARE FOR A DESCRIPTIVE GUIDE ONLY. IT IS NOT THE INTENT TO POINT TO EACH AND EVERY ITEM. THE G.C. WILL BE RESPONSIBLE FOR REMOVING ALL QUANTITIES OF EACH ITEM. WHERE NEW WORK IS RUN THROUGH EXISTING AREAS, THE G.C. IS TO DO ALL CUTTING AND PATCHING FOR ALL TRADES OF ALL ADJACENT SURFACES. COORDINATE W/ STRUCTURAL, MECHANICAL AND ELECTRICAL DRAWINGS.
2. COORDINATE DEMOLITION WITH CONSTRUCTION DOCUMENTS. DO NOT OVERDEMOLISH
3. SEE SPECIFICATIONS FOR ADDITIONAL DEMOLITION REQUIREMENTS.
4. SEE MECHANICAL, ELECTRICAL, PLUMBING AND FIRE PROTECTION DRAWINGS FOR ADDITIONAL DEMOLITION REQUIREMENTS PERTAINING TO THEIR TRADES.
5. DASHED LINES INDICATE CONSTRUCTION TO BE DEMOLISHED AND REMOVED.
6. PROVIDE SAW CUTTING AND SLAB REMOVAL FOR NEW BELOW FLOOR SANITARY, STORM, WATER-LINES, AND DRAINS. SEE PLUMBING DRAWINGS FOR EXTENT AND LOCATION.
7. SEE FLOOR PLANS FOR NEW LOCATIONS OF EXISTING EQUIPMENT / SHELVING / FURNITURE NOTED TO BE RELOCATED.
8. VERIFY EXISTING CONSTRUCTION IN THE FIELD.
9. PRIOR TO STARTING DEMOLITION COORDINATE WITH OWNER ANY SALVAGE REQUIREMENTS OF EQUIPMENT, MATERIALS, ETC.
10. IN ALL SPACES WHERE DEMOLITION IS INDICATED REMOVE WINDOW BLINDS AND PROJECTION SCREENS.
11. WHERE ONE WALL IS BEING REMOVED AND AN ADJACENT ONE IS TO REMAIN, THE CONTRACTOR SHALL PATCH THE WALL TO REMAIN TO MATCH EXISTING CONSTRUCTION.
12. SOME DEMOLITION OF MATERIALS INDICATED ON THIS DRAWING MAY BE INCLUDED IN THE HAZARDOUS MATERIALS DEMOLITION SECTION OF THE SPECIFICATIONS. THE CONTRACTOR SHALL COORDINATE THIS WORK PRIOR TO SUBMITTING HIS BID.

DEMOLITION NOTES:

ITEMS TO BE DEMOLISHED AND REMOVED

1. MASONRY WALLS
2. METAL/WOOD STUDS - GYPSUM OR PLASTER PARTITION
3. DOOR, FRAME, GLAZING AND ASSOCIATED HARDWARE
4. BLACKBOARD/ TACKBOARD
5. 1' X 1' CEILING TILE AND ASSOCIATED WOOD FURRING, SUPPORTS / SUSPENSION SYSTEM
6. CARPET, BASE, ADHESIVE, & V.A.T. / ADHESIVE BELOW CARPET
7. VINYL FLOORING, BASE, ADHESIVE
8. WINDOW BLINDS AND HARDWARE
9. EXTERIOR WINDOW AND DOOR SYSTEM
10. WALL HUNG AND/OR FLOOR MOUNTED WOOD CASEWORK
11. DOORS AND HARDWARE (FRAME REMAINS)
12. SUSPENDED ACOUSTIC TILE CEILING SYSTEM
13. SCIENCE ROOM WALL HUNG AND/OR FLOOR MOUNTED CASEWORK INCLUDING MECHANICAL UTILITIES
14. NOT USED
15. EMERGENCY SHOWER/EYE WASH AND ASSOCIATED PIPING
16. FUME HOOD AND ASSOCIATED DUCTWORK
17. DOOR, FRAME, SIDELIGHTS, GLASS AND ASSOCIATED HARDWARE
18. RECESSED MAT AND FRAME

GENERAL DOOR NOTES

1. ALL DOORS SHALL BE 1 3/4" THICK UNLESS OTHERWISE NOTED
2. ALL RATED DOORS AND DOORS FRONTING CORRIDORS EXCEPT RESTROOM DOORS SHALL HAVE POSITIVE LATCHING LOCKSETS OR LATCHSETS AND CLOSERS.
3. ALL RATED DOORS AND DOORS TO HAZARDOUS AREAS SHALL HAVE POSITIVE LATCHING LOCKSETS OR LATCHSETS AND CLOSERS.
4. ALL DOORS LEADING TO HAZARDOUS SPACES SHALL HAVE TACTILE MARKING.
5. ALL DOORS EXITING 100 OR MORE PERSONS SHALL HAVE PANIC EXIT DEVICES.
6. DOOR HARDWARE ACCESSIBLE TO PERSONS WITH DISABILITIES SHALL BE PROVIDED TO COMPLY WITH UNIFORM FEDERAL ACCESSIBILITY STANDARDS.
7. HAZARDOUS AREAS INCLUDE: CUSTODIAN SPACES, STORAGE ROOMS, MECHANICAL ROOMS, ELECTRICAL ROOMS, DOOR OPERATIONAL HARDWARE TO STUDENT SPACES DOES NOT REQUIRE TACTILE MARKINGS, HOWEVER, SOME STAGE DOORS DO.
8. THE CONTRACTOR SHALL INSURE THAT 1 THROUGH 5 ARE IMPLEMENTED IN NEW BUILDING AREAS.
9. ALL HOLLOW METAL DOORS AND FRAMES SHALL BE PAINTED.
10. ALL EXTERIOR DOORS SHALL HAVE WEATHERSTRIPPING.
11. DOORS 013, 120, 163 SHALL HAVE 180 DEGREE CLOSERS.
12. SEE EXTERIOR ELEVATION DRAWING # A403 FOR GLAZING TY
13. ALL CEILING HIGH ALUM. AND HOLLOW METAL FRAMES WITH NO WALL ABOVE SHALL BE BRACED TO STRUCTURE ABOVE WITH 3 5/8" METAL STUDS AT 16" O.C.

ROOM FINISH LEGEND

FLOOR TYPES

0. - EXISTING TO REMAIN
1. - VINYL COMPOSITION TILE
2. - CARPET
3. - CERAMIC TILE
4. - RUBBER NOSING, TREAD, & RISER
5. - RECESSED ENTRANCE MAT

BASE TYPES

0. - EXISTING TO REMAIN
1. - RUBBER
2. - CERAMIC TILE

WALL TYPES

0. - EXISTING TO REMAIN
1. - PAINTED
2. - VITREOUS WALL SURFACING
3. - CERAMIC TILE WAINSCOT 4'-0" HIGH
4. - VINYL WALL COVERING

CEILING TYPES

0. - EXISTING TO REMAIN
1. - 2' X 4' ACOUSTICAL CLG. BD. (TYPE - 1)
2. - 2' X 4' ACOUSTICAL CLG. BD. - (TYPE - 2)
3. - 2' X 4' ACOUSTICAL CLG. BD. (TYPE - 3)
4. - PAINTED GYPSUM BOARD
5. - 2' X 2' ACOUSTICAL CLG. BD. TO MATCH EXIST.

GENERAL NOTES

1. INTERIOR FINISHES IN ALL EXITS SHALL BE CLASS "A".
2. INTERIOR FINISHES AT ALL ACCESS TO EXITS SHALL BE CLASS "A OR CLASS "B".
3. INTERIOR FINISHES AT ALL OTHER SPACES SHALL BE CLASS "A OR CLASS "B".
4. WHERE WALLS, CEILINGS & EXPOSED CONSTRUCTION ARE INDICATED ON ROOM FINISH SCHEDULE TO BE PAINTED, ALL NEW MISCELLANEOUS METAL, INCLUDING STAIR CONSTRUCTION, HANDRAILS, EXPOSED LINTELS, PRIMED FINISH MECH'L EQUIPMENT, EXPOSED PIPING, DUCTWORK, CONDUIT, ETC., SHALL ALSO BE PAINTED.
5. IN SPACES WHERE NO NEW FINISHES ARE INDICATED, FINISH NEW OR PATCHED CONSTRUCTION TO MATCH EXISTING.
6. ALL GYP. BD. CEILING DROPS, BEAM ENCLOSURES, ETC. SHALL BE PAINTED.

This drawing and details on it, as an instrument of service, is the property of the architect and may be used for this specific project and shall not be loaned, copied or reproduced without written consent of the architect.

GENERAL STRUCTURAL NOTES

GENERAL

GOVERNING CODE: 1994 STATE OF CONNECTICUT BASIC BUILDING CODE (BOCA BASIC NATIONAL BUILDING CODE 1990, BOCA ACCUMULATIVE SUPPLEMENT 1992).

DESIGN LOADS:

NEW FLOOR AREAS: CORRIDORS: DEAD LOAD 65 PSF, LIVE LOAD 80 PSF
CLASSROOMS: DEAD LOAD 65 PSF +20 PSF PARTITIONS, LIVE LOAD 40 PSF

ROOF LOAD:

ROOF SNOW LOAD CRITERIA: Pg = 30 PSF, Ce = 0.7 AND I = 1.0, WITH INCREASES FOR SNOW DRIFTING, UNBALANCES AND SLIDING PER SECTION 1111 (1990 BOCA).

MINIMUM ROOF LIVE LOAD = 30 PSF

ROOF DEAD LOAD = 20 PSF

WIND LOAD CRITERIA: SECTION 1112 (1990 BOCA) WITH BASIC WIND SPEED = 80 MPH, BUILDING CATEGORY I, I = 1.03, EXPOSURE CLASSIFICATION "B".

MINIMUM WIND LOAD ON PRIMARY STRUCTURE = 18 PSF

WIND LOADS ON SECONDARY ELEMENTS SHALL CONFORM WITH ASCE 7-88.

TYPICAL WIND LOAD ON EXTERIOR WALLS = 24 PSF
MAXIMUM WIND LOAD AT CORNERS = 29 PSF
NET WIND UPLIFT ON STEEL JOIST ROOFS = 9 PSF

SEISMIC LOAD CRITERIA: AS PER SECTION 1113 (1990 BOCA SUPPLEMENT) WITH Av = .13, Aa = .13, S = 1.0, R = 4.5.

SEISMIC LOAD ON PRIMARY STRUCTURE = 7% OF MASS

ASSUMED BEARING PRESSURE ON UNDISTURBED SOIL: 5000 PSF
ASSUMED BEARING PRESSURE ON COMPACTED FILL: 5000 PSF

1. SHOULD ANY OF THE DETAILED INSTRUCTIONS SHOWN ON THE PLANS CONFLICT WITH THE GENERAL STRUCTURAL NOTES, THE SPECIFICATIONS, OR WITH EACH OTHER, THE STRICTEST PROVISION SHALL GOVERN.
2. THE STRUCTURE IS DESIGNED TO BE SELF-SUPPORTING AND STABLE AFTER THE BUILDING IS FULLY COMPLETED. IT IS THE CONTRACTOR'S SOLE RESPONSIBILITY TO DETERMINE ERECTION PROCEDURE AND SEQUENCE AND TO INSURE THE SAFETY OF THE BUILDING AND ITS COMPONENT PARTS DURING ERECTION. THIS INCLUDES THE ADDITION OF WHATEVER SHORING, SHEETING, TEMPORARY BRACING, GUYS OR TIEDOWNS MIGHT BE NECESSARY. SUCH MATERIAL SHALL REMAIN THE CONTRACTOR'S PROPERTY AFTER COMPLETION OF THE PROJECT.
3. THE STRUCTURE UTILIZES SHEAR WALLS TO PROVIDE LATERAL STABILITY. THEREFORE, TEMPORARY BRACING, GUYS, ETC. MUST BE MAINTAINED UNTIL ALL MASONRY SHEAR WALLS HAVE BEEN ERECTED AND ATTACHED TO STEEL FRAMING.
4. LOADS, OPENINGS AND STRUCTURE IN ANY WAY RELATED TO REQUIREMENTS OF OTHER (NON-STRUCTURAL) DISCIPLINES ARE SHOWN FOR BIDDING PURPOSES ONLY. THE CONTRACTOR SHALL OBTAIN FROM THE HEATING AND VENTILATING, ELECTRICAL, PLUMBING AND OTHER SUBCONTRACTORS THE FINAL APPROVED SIZE AND LOCATION OF ALL OPENINGS AND WORK TO BE PROVIDED FOR THEIR TRADE IN ROOFS, FLOORS AND WALLS, WHETHER SHOWN OR NOT SHOWN ON STRUCTURAL DRAWINGS. CONTRACTOR SHALL BE RESPONSIBLE FOR TRANSMISSION OF REQUIREMENTS, LOCATIONS AND DETAILS TO STRUCTURAL SUBCONTRACTORS. EXCESS COST RELATED TO VARIATION IN MECHANICAL REQUIREMENTS ARE NOT TO BE BORNE BY THE OWNER.
5. MECHANICAL EQUIPMENT WEIGHTS USED IN DESIGN OF SUPPORTING ELEMENTS HAVE BEEN INDICATED ON THE DRAWINGS. CONTRACTOR SHALL NOTIFY THE ARCHITECT PRIOR TO INSTALLATION IF ACTUAL WEIGHT EXCEEDS WEIGHT SHOWN ON DRAWINGS.
6. IT IS THE CONTRACTOR'S SOLE RESPONSIBILITY TO FOLLOW ALL APPLICABLE SAFETY CODES AND REGULATIONS DURING ALL PHASES OF CONSTRUCTION.
7. SHOP DRAWINGS ARE TO BE CHECKED BY THE CONTRACTOR AND SUBCONTRACTOR AND BEAR CHECKER'S INITIALS BEFORE BEING SUBMITTED TO THE ARCHITECT FOR APPROVAL.
8. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS, ANGLES AND EXISTING CONDITIONS BEFORE PROCEEDING WITH ANY WORK.
9. ALL SECTIONS AND DETAILS SHALL BE CONSIDERED TYPICAL AND APPLY FOR THE SAME AND SIMILAR SITUATIONS THROUGHOUT THE BUILDING, UNLESS OTHERWISE SPECIFICALLY NOTED.

FOUNDATIONS

1. BACKFILLING SHALL BE ACCOMPLISHED TO EQUAL HEIGHTS ON BOTH SIDES OF FOUNDATION WALLS TO PREVENT MOVEMENTS DUE TO UNBALANCED EARTH PRESSURE. WHERE EARTH IS ON ONE SIDE ONLY, BACKFILLING AND COMPACTION SHALL NOT START UNTIL FLOOR SLAB OR ADEQUATE BRACING IS PROVIDED FOR WALL SUPPORT (EXCEPT AT RETAINING WALLS).
2. ALL FOOTINGS ARE TO REST ON UNDISTURBED NATURAL SOIL, AS DEFINED IN THE SPECIFICATIONS, OR CONTROLLED COMPACTED FILL, REGARDLESS OF ELEVATIONS SHOWN ON DRAWINGS. FOOTING BOTTOM ELEVATIONS SHALL NOT BE HIGHER THAN INDICATED ON THE FOUNDATION PLAN.
3. ALL SOIL SURROUNDING AND UNDER ALL FOOTINGS SHALL BE PROTECTED FROM FREEZING AND FROST ACTION DURING THE COURSE OF CONSTRUCTION.
4. BOTTOM OF ALL EXTERIOR FOOTINGS SHALL BE AT LEAST 3'-6" BELOW FINISHED GRADE.
5. FOOTING BOTTOMS SHALL STEP WHERE INDICATED AT THE RATE OF 1 UNIT VERTICAL TO 2 UNITS HORIZONTAL WITH A MAXIMUM VERTICAL STEP OF 2'-0".
6. WHERE FOOTINGS ARE IN CLOSE PROXIMITY OF SUBSURFACE PIPING, BOTTOM OF FOOTINGS SHALL BE AT LEAST 6" BELOW INVERT ELEVATION OF PIPING, UNLESS OTHERWISE SHOWN ON DRAWINGS.
7. KEEP FOUNDATION EXCAVATIONS FREE OF WATER AT ALL TIMES.
8. USE LEAN CONCRETE (f'c=1500) OR CONTROLLED COMPACTED FILL FOR OVER-EXCAVATION OF FOOTINGS.
9. PLACEMENT OF ALL COMPACTED FILL MUST BE UNDER SUPERVISION OF AN APPROVED TESTING LABORATORY (SEE SPECIFICATIONS). CONCRETE FOUNDATIONS SHALL NOT BE PLACED UNTIL SUBBASE HAS BEEN CHECKED IN PLACE AND APPROVED BY TESTING LABORATORY.
10. CONTROL JOINT SPACING IN FOUNDATION WALLS SHALL NOT EXCEED 30 FEET. 50% OF HORIZONTAL REINFORCEMENT SHALL EXTEND THROUGH JOINT AND HAVE A CLASS "B" SPLICE (PER ACI 318-89).
11. WHERE REQUIRED, CONSTRUCTION JOINTS SHALL BE KEYED AND OCCUR AT CONTROL JOINT INTERVALS.
12. THE LOCATION AND ELEVATION OF EXISTING FOOTINGS INDICATED ARE BASED ON DRAWINGS BY: MARCHANT & MINGES ENGINEERS, DATED APRIL 30, 1957, WHICH HAVE BEEN PROVIDED TO THE DESIGNERS BY THE OWNER. THIS INFORMATION IS PROVIDED FOR BIDDING PURPOSES ONLY. ACTUAL EXISTING FOUNDATIONS MAY VARY FROM WHAT IS INDICATED, AND MUST BE VERIFIED IN FIELD PRIOR TO PREPARATION OF SHOP DRAWINGS. NOTIFY ARCHITECT IF EXISTING CONDITIONS PRECLUDE USE OF DETAILS AS SHOWN.

SLAB ON GRADE

1. CONTROL JOINTS ARE TO BE CREATED IN SLABS ON GRADE. JOINTS SHALL BE SAW CUT 1/8" WIDE AND TO A DEPTH EQUAL TO 1/4 OF THE SLAB THICKNESS. LOCATE JOINTS 15'-0" ON CENTER (PLUS OR MINUS 5'-0") IN EACH DIRECTION, UNLESS OTHERWISE SHOWN ON DRAWINGS. CONSTRUCTION JOINTS AS REQUIRED SHALL BE KEYED AND LOCATED AT CONTROL JOINT INTERVALS.
2. SEE ARCHITECTURAL DRAWINGS FOR LOCATION AND SIZE OF DEPRESSED AREAS IN CONCRETE SLABS AND FOR CONCRETE PADS. MAINTAIN FULL SLAB THICKNESS IN DEPRESSED AREAS, UNLESS OTHERWISE SHOWN.
3. SEE ARCHITECTURAL DRAWINGS FOR LOCATION OF ALL MASONRY WALLS FOR WHICH NO FOOTING IS SHOWN. SEE DETAILS FOR SLAB REINFORCING REQUIREMENTS AT ALL WALL LOCATIONS.

CONCRETE

MATERIALS:

CONCRETE SHALL DEVELOP STRENGTH IN 28 DAYS AS FOLLOWS:

LOCATION		STRENGTH (PSI)
	FOUNDATIONS	3000
	WALLS	3000
	SLABS ON GRADE	4000
	SLABS ON METAL DECK	4000

1. ALL DETAILING, FABRICATION AND ERECTION OF REINFORCING BARS MUST FOLLOW THE LATEST ACI CODE AND THE LATEST ACI "MANUAL OF STANDARD PRACTICE FOR DETAILING REINFORCED CONCRETE STRUCTURES".
2. REINFORCING STEEL SHALL BE 60,000 PSI YIELD.
3. NO TACK WELDING OF REINFORCING WILL BE PERMITTED.
4. UNLESS NOTED OTHERWISE, ALL LAP SPLICES SHALL BE CLASS B, IN ACCORDANCE WITH ACI 318-89.
5. WELDED WIRE FABRIC SHALL CONFORM TO ASTM A-185.
6. WIRE MESH REINFORCEMENT MUST LAP ONE MESH SIZE AT SIDES AND ENDS AND BE WIRED TOGETHER.
7. WELDED WIRE FABRIC SIDE LAPS SHALL BE STAGGERED TO AVOID FOUR MESH THICKNESS AT COINCIDING END LAP AND SIDE LAP LOCATION.
8. NO CALCIUM CHLORIDE OR ADMIXTURES CONTAINING MORE THAN 0.1% CHLORIDE BY WEIGHT OF ADMIXTURE SHALL BE USED IN THE CONCRETE.
9. CONTRACTOR SHALL ANTICIPATE DEFLECTION OF UNCAMBERED STEEL AT SUPPORTED SLABS, AND PROVIDE ADDITIONAL CONCRETE AS REQUIRED.
10. AT INTERSECTIONS OF REINFORCED CONCRETE WALLS, PROVIDE CORNER DOWELS OF SAME SIZE AND AT THE SAME SPACING AS THE SMALLER HORIZONTAL REINFORCING. DOWELS SHALL HAVE A CLASS B LAP WITH HORIZONTAL REINFORCING IN EACH DIRECTION.
11. PROVIDE CORROSION RESISTANT ACCESSORIES IN ALL EXPOSED CONSTRUCTION.
12. ALL KEYS IN CONCRETE WALLS SHALL BE 2 X 4 UNLESS NOTED OTHERWISE.
13. CONCRETE PIERS: PLACE CONCRETE PIERS AND WALLS TO SOLIDLY SET PIER REINFORCING AND SET WALL REINFORCING THROUGH PIER VERTICAL BARS. PROVIDE DOWELS WITH STANDARD HOOK FROM FOOTING AT ALL PIERS. SIZE AND QUANTITY OF DOWELS TO MATCH VERTICAL PIER REINFORCING (CLASS "B" SPLICE).
14. SEE ARCHITECTURAL, MECHANICAL AND EQUIPMENT DRAWINGS FOR CONCRETE PADS, SLEEVES, OPENINGS, RECESSES, AND BUILT-IN WORK IN CONCRETE ELEMENTS.
15. THE CONTRACTOR SHALL FURNISH, LOCATE AND INSTALL ALL ACCESSORIES FOR PROPER ANCHORAGE OF WOOD AND METAL FRAMING, WOOD BLOCKING, BRICK WORK AND MASONRY UNITS. HE SHALL BE SOLELY RESPONSIBLE FOR FURNISHING, LOCATING AND ENSURING PROPER QUANTITY OF ALL FASTENING DEVICES.
16. ALL CONCRETE TO REMAIN EXPOSED TO VIEW SHALL RECEIVE A SMOOTH RUBBED FINISH (SEE SPECIFICATIONS).
17. ALL CONCRETE CORNERS WITH BOTH SIDES EXPOSED TO VIEW SHALL BE SQUARE UNLESS OTHERWISE SHOWN OR NOTED. THE EDGE SHALL BE RUBBED, PRODUCING A SMOOTH, DENSE SURFACE WITHOUT PITS OR IRREGULARITIES.
18. PROVIDE CONTINUOUS VERTICAL DOVETAIL SLOTS AT 16 INCH CENTERS HORIZONTALLY FOR ALL CONCRETE WALLS ABUTTING A MASONRY WALL OR VENEER, UNLESS OTHERWISE NOTED.
19. PROVIDE CLEARANCE FROM EDGE OF REINFORCING TO EDGE OF CONCRETE AS FOLLOWS:

FOOTINGS (AGAINST EARTH)	3"
COLUMNS AND PIERS (VERTICAL REINFORCING)	2"
WALLS, INTERIOR FACE	3/4"
WALLS, EXTERIOR FACE (#5 AND SMALLER)	1 1/2"
SLABS (INTERIOR)	3/4"
SLABS (EXTERIOR)	1 1/2"
SLABS ON GRADE (MAT.)	1/3 X THK. FROM TOP SURFACE

20. PROVIDE THE FOLLOWING AT OPENINGS IN ALL CONCRETE WALLS AND FRAMED SLABS, UNLESS OTHERWISE INDICATED:

1-#5 AT EACH FACE ON EACH SIDE OF OPENING, EXTENDING 2'-0" BEYOND OPENING.
1-#5 X 4'-0" LONG AT EACH FACE DIAGONALLY AT EACH CORNER.

STRUCTURAL STEEL

MATERIALS:

WIDE FLANGE STRUCTURAL STEEL SHAPES	ASTM A 572, GR.50
STEEL PLATES AND ANGLES	ASTM A 36
STRUCTURAL STEEL TUBING	ASTM A500, GRADE B
BOLTS:	ASTM A325
ANCHOR BOLTS	ASTM A307
WELDING ELECTRODE	ASTM E 70

1. DESIGN, FABRICATION, AND ERECTION OF STRUCTURAL STEEL SHALL CONFORM TO CURRENT AMERICAN INSTITUTE OF STEEL CONSTRUCTION SPECIFICATION.
2. WELDING SHALL CONFORM TO THE CODE FOR "ARC AND GAS WELDING IN BUILDING CONSTRUCTION" OF THE AMERICAN WELDING SOCIETY.
3. ALL LOOSE BEAM LINTELS SHALL HAVE 8" MINIMUM BEARING. SEE ARCHITECTURAL JAMB DETAILS FOR LENGTHS.
4. FOR MISCELLANEOUS STEEL SEE ARCHITECTURAL DRAWINGS.
5. ALL WELDING SHALL BE DONE BY A CERTIFIED WELDER IN ACCORDANCE WITH AWS STANDARDS.
6. CONNECTIONS:
   CONNECTIONS SHALL BE DESIGNED BY THE FABRICATOR AND CONSTRUCTED IN ACCORDANCE WITH THE LATEST EDITION OF THE A.I.S.C. MANUAL OF STEEL CONSTRUCTION. CONNECTIONS SHALL BE PROVIDED TO CONFORM TO THE REQUIREMENTS OF TYPE 2 CONSTRUCTION UNLESS OTHERWISE DETAILED.
   CONNECTIONS SHALL BE DESIGNED TO ACCOMMODATE REACTIONS INDICATED ON THE DRAWINGS.
   IF NO REACTION IS INDICATED AT A PARTICULAR BEAM END, DESIGN CONNECTION FOR 6 KIPS.
   MINIMUM CONNECTION ANGLE THICKNESS SHALL BE 5/16".
   IN ADDITION TO PROVIDING ADEQUATE BOLTS TO ACCOMMODATE REACTIONS, THE FOLLOWING MINIMUM NUMBER OF BOLT ROWS SHALL BE USED:

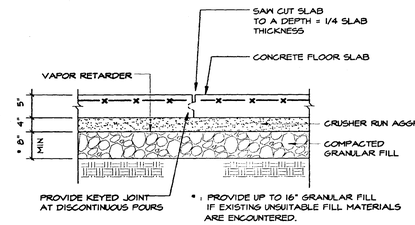
MEMBER DEPTH	MINIMUM BOLT ROWS
12" or Less	2
14" to 18"	3
21" to 24"	4
27" to 30"	5
Over 30"	6

   CONNECTIONS SHALL BE MADE USING 3/4" DIAMETER ASTM A325 BOLTS (SNUG TIGHT OR SLIP CRITICAL) OR WELDS, UNLESS NOTED OTHERWISE. IF TENSION CONTROL BOLTS ARE USED, CONNECTIONS SHALL BE DESIGNED FOR SLIP CRITICAL BOLT ALLOWABLE LOAD VALUES.
   PROVIDE SLOTTED BOLTED CONNECTIONS WHERE SHOWN WITH 13/16" X 1 7/8" SLOTTED HOLES USING ASTM A 325 BOLTS WITH WASHERS. NUTS SHALL BE FASTENED SNUG TIGHT, THEN UNTIGHTENED BY ONE-HALF TURN. PEEN THREADS TO PREVENT FURTHER LOOSENING OF NUT.
   USE LARGER OF 1/4" FILLET WELDS OR MINIMUM SIZE PER AISC REQUIREMENTS WHERE NO WELD SIZE IS SHOWN ON DRAWINGS.
   WELDS IN EXCESS OF 24" IN LENGTH SHALL BE 3" STITCH WELDS AT 12" ON CENTERS, UNLESS SPECIFICALLY SHOWN ON DRAWINGS TO BE CONTINUOUS.
   MOMENT CONNECTIONS SHALL BE DESIGNED TO DEVELOP FULL MOMENT CAPACITY OF THE ELEMENTS CONNECTED, UNLESS SPECIFIC MOMENT IS INDICATED ON THE DRAWINGS.
7. NO WELDING OR FINAL BOLTING SHALL BE DONE UNTIL AS MUCH OF THE STRUCTURE THAT WILL BE STIFFENED THEREBY HAS BEEN PROPERLY ALIGNED.
8. SEQUENCE OF PLACING WELDS SHALL BE SUCH AS TO AVOID DISTORTION OF MEMBERS.
9. SUBSTITUTION OF STRUCTURAL STEEL MEMBERS IS PERMITTED TO FACILITATE DELIVERY AT NO ADDITIONAL COST TO THE OWNER. SUBSTITUTED MEMBERS MUST BE OF THE SAME NOMINAL DEPTH AS THE MEMBER ORIGINALLY INDICATED AND HAVE A WEIGHT GREATER THAN THAT INDICATED. BEAM FLANGES MUST NOT INFRINGE ON ADJACENT ARCHITECTURAL ELEMENTS.

STRUCTURAL STEEL (CONTINUED)

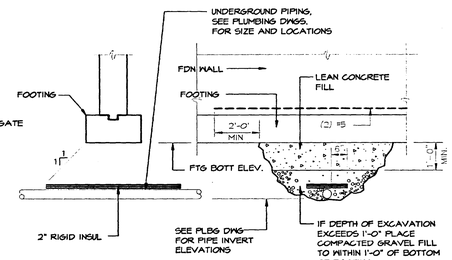
10. ALL STRUCTURAL STEEL BEAMS AND COLUMNS ADJACENT TO MASONRY SHALL HAVE THE FOLLOWING MASONRY ANCHORAGE:
    16 GAGE GALVANIZED CHANNEL SLOTS (DUR-O-WAL INC. D/A 401) WELDED TO COLUMNS AND BEAMS WITH 1/4" GALVANIZED STRAP ANCHORS (DUR-O-WAL INC. D/A 914) SPACED 1'-4" O.C. AT COLUMNS AND 1'-4" AT BEAMS (UNLESS OTHERWISE NOTED). INSTALL PER MANUFACTURER'S SPECIFICATIONS.
11. STEEL MEMBERS SHOWN CONNECTED TO MASONRY WITH EXPANSION ANCHORS SHALL HAVE 3/4" DIAMETER EXPANSION ANCHORS AT 2'-8" ON CENTERS IN VERTICALLY SLOTTED HOLES, UNLESS OTHERWISE INDICATED.
12. PROVIDE 9/16" DIAMETER HOLES FOR WOOD NAILERS AS REQUIRED BY ARCHITECTURAL DRAWINGS.
13. PROVIDE BITUMASTIC PROTECTION COATING FOR ALL STRUCTURAL STEEL BELOW GRADE.
14. EXISTING STEEL SURFACES TO RECEIVE FIELD WELDS SHALL BE THOROUGHLY CLEANED UNTIL FREE FROM PAINT, RUST, GREASE, ETC.

METAL ROOF DECK



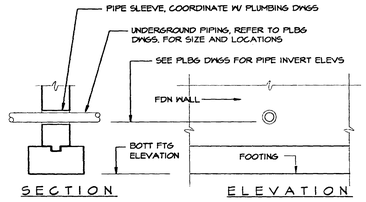
1. MATERIALS:
   TYPICAL METAL DECK SHALL BE 1 1/2" GALVANIZED WIDE RIB TYPE WITH NESTING SIDE SEAMS OF GAGE INDICATED ON THE DRAWINGS.
   DECK SHALL CONFORM TO "BASIC DESIGN SPECIFICATION" AS ADOPTED BY THE STEEL DECK INSTITUTE.
   METAL ROOF DECK SHALL BE FURNISHED IN SHEET LENGTHS SUFFICIENT TO EXTEND OVER FOUR SUPPORTS (3 SPANS) WHEREVER POSSIBLE.
2. ATTACHMENT:
   METAL DECK SHALL BE WELDED TO SUPPORTING STEEL WITH PUDDLE WELDS (5/8" DIAMETER MINIMUM) SPACED NOT MORE THAN 12" ON CENTER.
   WELD METAL ROOF DECK TO STEEL MEMBERS PARALLEL TO SPAN OF DECK USING 5/8" DIAMETER PUDDLE WELDS AT 12" ON CENTER.
   INTERMEDIATE SIDE CONNECTIONS SHALL BE MADE WITH #10 SELF TAPPING SCREWS. THE MAXIMUM SPACING OF SIDE LAP CONNECTIONS SHALL BE 3'-0".

COMPOSITE FLOOR DECK



1. MATERIALS:
   METAL FLOOR DECK SHALL BE GALVANIZED AND OF DEPTH AND GAGE INDICATED ON THE DRAWINGS. METAL FLOOR DECK SHALL BE FORMED WITH EMBOSSMENTS TO PROVIDE A MECHANICAL LOCK BETWEEN THE STEEL FLOOR AND CONCRETE SLAB.
   METAL FLOOR DECK SHALL BE FURNISHED IN SHEET LENGTHS SUFFICIENT TO EXTEND OVER 4 SUPPORTS (3 SPANS).
2. ATTACHMENT:
   METAL FLOOR DECK SHALL BE FASTENED TO SUPPORTING STEEL, INCLUDING CAST IN PLACE PERIMETER STEEL ANGLES, WITH ATTACHMENTS EQUIVALENT TO 3/4" DIAMETER PUDDLE WELDS SPACED NOT MORE THAN 12" ON CENTER. ADJACENT DECK UNITS SHALL BE FASTENED TOGETHER AT SIDE LAPS SUCH THAT THE CONNECTION SPACING DOES NOT EXCEED 36" ON CENTER.

STEEL JOISTS



1. STEEL JOISTS SHALL CONFORM TO AND BE ERECTED IN ACCORDANCE WITH THE LATEST SPECIFICATIONS AND CODE OF STANDARD PRACTICE OF THE STEEL JOIST INSTITUTE AND AS SHOWN ON THE DRAWINGS.
2. BRIDGING FOR STEEL JOISTS SHALL BE AS SHOWN AND NOT LESS THAN CALLED FOR BY THE STEEL JOIST INSTITUTE SPECIFICATION AND CODE OF STANDARD PRACTICE.
3. HEADERS AND/OR FASTENERS BETWEEN JOISTS SHALL BE FASTENED TO TOP CHORD AND LOCATED OVER AN UPPER PANEL POINT OF A JOIST, UNLESS OTHERWISE SHOWN.
4. EXTEND ALL JOISTS 1" PAST CENTERLINE OF SUPPORTING MEMBER WHERE POSSIBLE.
5. ADJACENT JOISTS OF THE SAME DEPTH SHALL HAVE WEB MEMBERS IN LINE TO PERMIT PASSAGE OF MECHANICAL DUCTS.
6. ANCHOR ALL STEEL JOIST BRIDGING LINES TO INTERSECTING CONCRETE WALLS, MASONRY WALLS, AND/OR STEEL BEAMS WITH LATERAL ANCHORS UNLESS SHOWN OTHERWISE.
7. JOISTS AND JOIST EXTENDED ENDS, WHETHER CANTILEVERED OR SUPPORTED, SHALL BE DESIGNED TO SUSTAIN UNIFORM LOAD CAPACITY OVER FULL SPAN INDICATED IN THE SJI LOAD TABLES FOR STEEL JOISTS, UNLESS NOTED OTHERWISE ON DRAWINGS WITH "SP" DESIGNATION.
8. JOISTS ON COLUMN LINES SHALL BE ANCHORED BY BOLTING. IF THERE IS NO JOIST ON COLUMN CENTERLINE, THE JOIST NEAREST THE COLUMN CENTERLINE SHALL BE ANCHORED BY BOLTING.
9. WELD ALL JOISTS TO SUPPORTING STEEL WITH 1 1/2" OF 3/16" FILLET WELD EACH SIDE OF BEARING, UNLESS OTHERWISE SHOWN.
10. MAXIMUM LIVE LOAD DEFLECTION SHALL BE 1/360 OF JOIST SPAN, UNLESS OTHERWISE NOTED ON DRAWINGS.
11. WHERE DIAGONAL BRIDGING INTERFERES WITH MECHANICAL INSTALLATIONS, REMOVE CROSS BRIDGING AFTER TOTAL DEAD LOAD IS APPLIED AND REPLACE WITH HORIZONTAL ANGLES 2" X 2" x 3/16" AT TOP AND BOTTOM CHORDS.

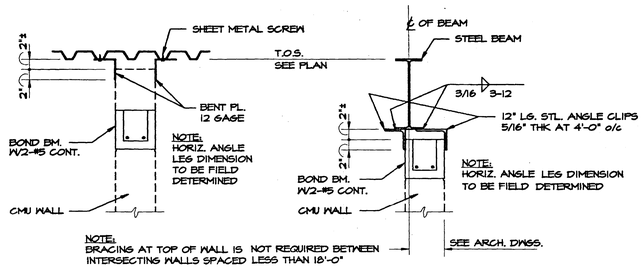
CONCRETE MASONRY NOTES

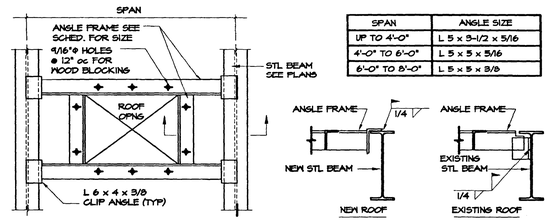
CONCRETE MASONRY



MATERIALS:

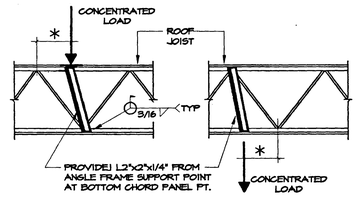
HOLLOW LOAD BEARING UNITS: ASTM C 90
MORTAR: (TYPE S) ASTM C 270
GROUT FOR REINFORCED MASONRY: ASTM C 476

1. WALLS INDICATED ON STRUCTURAL DRAWINGS ARE FOR REFERENCE ONLY. SEE ARCHITECTURAL DRAWINGS FOR LOCATION, THICKNESS AND COMPOSITION OF MASONRY WALLS.
2. ALL EXTERIOR MASONRY WALLS SHALL CONTAIN THE FOLLOWING REINFORCING:
   - 1-#6 BAR AT 48" ON CENTER.
   - 1-#6 BAR AT BOTH SIDES OF DOOR AND WINDOW OPENINGS.
   - 1-#4 BAR MINIMUM ABOVE AND BELOW ALL WINDOW OPENINGS AND ABOVE ALL DOOR OPENINGS. PROVIDE ADDITIONAL BARS ABOVE DOORS AND WINDOWS AS REQUIRED IN ACCORDANCE WITH LINTEL SCHEDULE.
   - 1-#4 AT TOP OF ALL WALLS, UNLESS OTHERWISE INDICATED.
   - 2-#6 BAR AT ENDS OF ALL WALLS.
   - STANDARD LADUR TYPE DESIGN DUR-O-WAL HORIZONTAL REINFORCING AT 16" O.C. VERTICAL.
3. INTERIOR SHEAR WALLS, WHERE INDICATED, SHALL CONTAIN THE SAME REINFORCING AS EXTERIOR WALLS.
4. ALL OTHER INTERIOR MASONRY WALLS SHALL CONTAIN THE FOLLOWING MINIMUM REINFORCING:
   - 1-#4 AT ALL SIDES OF DOOR AND WINDOW OPENINGS.
   - 1-#4 AT TOP AND ENDS OF ALL WALLS.
   - STANDARD LADUR TYPE DESIGN DUR-O-WAL HORIZONTAL REINFORCING AT 16" O.C. VERTICAL.
5. ALL VERTICAL REINFORCING SHALL EXTEND FOR THE FULL HEIGHT OF THE MASONRY, AND SHALL PASS INTO OR THROUGH BOND BEAMS.
6. CELLS CONTAINING REINFORCING BARS AND ALL CELLS BELOW GRADE SHALL BE GROUTED SOLID. ALL OTHER CELLS SHALL REMAIN HOLLOW EXCEPT WHERE NOTED.
7. ALL BOLTS OR ANCHORS SHALL BE SOLIDLY EMBEDDED IN MORTAR OR GROUT. IF BOND BEAM IS NOT LOCATED AT BOLT OR ANCHOR ELEVATION, PROVIDE LATH AND FILL CELL LOCALLY TO PROVIDE SUBSTRATE FOR BOLT OR ANCHOR.
8. ALL COLUMNS WITHIN SHEAR WALLS AND EXTERIOR WALLS SHALL BE SOLIDLY EMBEDDED IN GROUT.
9. USE 2 COURSES (16") OF SOLID MASONRY BELOW EACH BEAM OR LINTEL BEARING EXCEPT AS NOTED.
10. PROVIDE CONTINUOUS GROUTED BOND BEAM WHERE MASONRY TIES CONCRETE MASONRY TO STEEL FRAMING.
11. HOLLOW UNITS SHALL BE LAID WITH FULL MORTAR COVERAGE ON HORIZONTAL AND VERTICAL FACE SHELLS, EXCEPT THAT WEBS SHALL ALSO BE BEDDED IN ALL COURSES OF BEARING WALLS, PIERS, COLUMNS AND PILASTERS, AND IN THE STARTING COURSE ON FOOTINGS AND SOLID FOUNDATION WALLS, AND WHERE ADJACENT TO CELLS OR CAVITIES WHICH ARE TO BE REINFORCED AND / OR FILLED WITH GROUT.
12. MORTAR PROTRUSIONS EXTENDING INTO CELLS OR CAVITIES TO BE REINFORCED AND/OR GROUTED SHALL BE REMOVED.
13. ALL MASONRY WALLS SHALL BE BRACED AT THE TOP UNLESS BRACED HORIZONTALLY BY COLUMNS OR INTERSECTING WALLS AT A MAXIMUM SPACING OF 12 FEET.



MINIMUM REINFORCING REQUIREMENTS FOR CMU WALLS
NOT TO SCALE

CMU WALL @ UNDERSIDE OF DECK CMU WALL @ STEEL BEAM/JOIST



TYP. BRACING AT TOP OF INTERIOR CMU WALLS

③ PROVIDE WITH FULL BACK PLATE.
④ .02" FIN THICKNESS

GENERAL NOTES:

1. THE BMCS CONTRACTOR SHALL RUN LOW VOLTAGE WIRING FROM THE FIRE ALARM CONTROL PANEL TO ALL BMCS PANEL. THE FIRE ALARM CONTRACTOR SHALL PROVIDE SPACES AND ZONE DESIGNATIONS FOR THE BMCS CONTRACTOR.
2. THE BMCS CONTRACTOR SHALL RUN 120V CIRCUITS FROM SPARE CIRCUIT BREAKERS IN THE NEAREST ELECTRICAL PANEL TO POWER EACH LOW VOLTAGE TRANSFORMER OR CONTROL PANEL USED FOR CONTROLS.
3. THE BMCS CONTRACTOR SHALL PROVIDE ALL AUTOMATICALLY OPERATED: DAMPERS, SMOKE DAMPERS & VALVES. PROVIDE TRANSFORMERS AND LOW VOLTAGE WIRING.
4. COORDINATE WITH BMCS CONTRACTOR FOR LOCATIONS OF ALL CONTROL ACCESSORIES TO BE INSTALLED IN PIPING AND DUCTWORK. PROVIDE ALL REQUIRED TAPPINGS. CONTROL VALVES, WELLS, FITTINGS & DAMPERS WILL BE FURNISHED BY BMCS CONTRACTOR INSTALLED UNDER THE MECHANICAL CONTRACTOR SCOPE OF WORK.
5. THE CEILING VOID IN THE ADDITION AND THE EXISTING TUNNEL ARE USED AS RETURN AIR PLENUMS. ALL ITEMS INSTALLED IN THESE AREAS MUST BE APPROVED FOR SUCH USE.
7. SEAL PIPE & DUCT PENETRATIONS OF WALLS & FLOORS.
8. MECHANICAL EQUIPMENT OR REGISTERS MOUNTED IN BLOCK WALLS SHALL CONFORM TO BLOCK COURSING. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT LOCATION & MOUNTING HEIGHTS.
9. STARTERS ARE FURNISHED BY THE MECHANICAL CONTRACTOR AND INSTALLED BY THE ELECTRICAL CONTRACTOR.
10. REFER TO MANUFACTURER'S CERTIFIED DRAWINGS FOR EQUIPMENT DIMENSIONS AND MAINTAIN RECOMMENDED CLEARANCES.
11. DRAWINGS AND SKETCHES ARE DIAGRAMMATIC AND INTENDED TO SHOW APPROXIMATE ROUTING OF PIPING AND LOCATION OF EQUIPMENT. IT IS THE MECHANICAL CONTRACTOR'S RESPONSIBILITY TO VERIFY ALL FIELD CONDITIONS AND MAKE PROVISIONS TO PERFORM THE WORK ACCORDINGLY.
12. SEISMIC CERTIFICATION AND ANALYSIS:
SEISMIC RESTRAINT CALCULATIONS MUST BE PROVIDED FOR ALL CONNECTIONS OF EQUIPMENT TO THE STRUCTURE. CALCULATIONS TO SUPPORT SEISMIC RESTRAINT DESIGNS MUST BE STAMPED BY A REGISTERED PROFESSIONAL ENGINEER WITH AT LEAST FIVE YEARS OF SEISMIC DESIGN EXPERIENCE. ANALYSIS MUST INDICATE CALCULATED DEAD LOADS, DERIVED LOADS AND MATERIALS UTILIZED FOR CONNECTIONS TO EQUIPMENT AND STRUCTURE. ANALYSIS MUST DETAIL ANCHORING METHODS, BOLT DIAMETER, EMBEDMENT AND/OR WELD LENGTH. A SEISMIC DESIGN ERRORS AND OMISSIONS INSURANCE CERTIFICATE MUST ACCOMPANY SUBMITTALS.
PROCURE THE SERVICES OF A MANUFACTURER'S SEISMIC REPRESENTATIVE TO REVIEW THE PIPING INSTALLATION, PROVIDE SEISMIC CALCULATIONS AND DIRECT THE CONTRACTOR AS TO LOCATION AND AND TYPE OF SEISMIC SUPPORTS REQUIRED FOR NEW PIPING, DUCTWORK & EQUIPMENT.
13. REFER TO ARCHITECTURAL REFLECTED CEILING PLANS FOR EXACT LOCATION OF DIFFUSERS & REGISTERS.

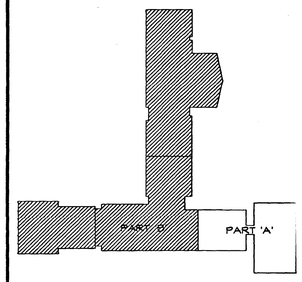
PLAN DEMOLITION NOTES

1. REMOVE & DISPOSE OF EMERGENCY EYE WASH.
   - A) REMOVE COLD WATER PIPING FROM WALL AND CEILING BACK TO THE MAIN FEED PIPE AND CAP PIPE.
2. REMOVE & DISPOSE OF COUNTERTOP SINK AND ALL TRIM.
   - A) REMOVE HOT WATER AND COLD WATER PIPING BACK INTO WALL CAVITY AND CAP IN WALL CAVITY.
   - B) REMOVE WASTE PIPING BACK TO SANITARY RISER AND PLUG FITTING IN WALL CAVITY.
3. REMOVE EXISTING PIPING SERVING EXISTING PLUMBING FIXTURES ON FIRST FLOOR. CAP OR PLUG PIPING AT EXISTING MAIN AS REQUIRED.
4. REMOVE EXISTING PIPING BACK TO POINT SHOWN AND PLUG OR CAP.
5. REMOVE EXISTING 1½" CW PIPING BACK TO EXISTING 2½" CW PIPING AND TEMPORARALY CAP.

DEMOLITION GENERAL NOTES:



1. THE DEMOLITION NOTES ARE FOR DESCRIPTIVE GUIDE ONLY. THE CONTRACTOR IS RESPONSIBLE FOR REMOVING ALL QUANTITIES OF EACH ITEM. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING HIS WORK WITH ALL TRADES, MECHANICAL, ELECTRICAL AND PLUMBING. SEE SPECIFICATIONS FOR ADDITIONAL DEMOLITION REQUIREMENTS.
2. DISPOSE OF ALL REMOVED ITEMS OFF SITE OR IN ON SITE DUMPSTER PROVIDED SPECIFICALLY FOR THIS WORK.
3. SEE ARCHITECTURAL DRAWINGS FOR ANY ADDITIONAL DEMOLITION REQUIREMENTS.
4. HAZARDOUS AND/OR ASBESTOS MATERIALS TO BE REMOVED BY OWNER UNDER SEPARATE CONTRACT. BEFORE STARTING ANY WORK UNDER THE CONTRACT, VERIFY WITH THE GENERAL CONTRACTOR AND NOTIFY THE ARCHITECTS IN WRITING, THAT, IN ACCORDANCE WITH THE LATEST REVISION OF THE FEDERAL ASBESTOS NESHAP (NATIONAL EMISSION STANDARD FOR HAZARDOUS AIR POLLUTANTS), THE FOLLOWING ITEMS HAVE BEEN COMPLETED:

   AN EPA APPROVED ASBESTOS SURVEY HAS BEEN MADE OF THE BUILDING WHERE THE WORK WILL BE PERFORMED.
   THE EPA HAS BEEN NOTIFIED THAT DEMOLITION AND/OR RENOVATION WORK WILL OCCUR IN THE BUILDING WHERE THE WORK WILL BE PERFORMED.

5. CROSSHATCHED LINES INDICATE EXISTING PIPING TO BE DEMOLISHED AND REMOVED.
6. SOLID LINES INDICATE EXISTING PIPING TO REMAIN.

MOUNTING HEIGHTS FOR HANDICAPPED ACCESSIBLE FIXTURES

SCALE: NONE

FOR ADDITIONAL MOUNTING INFORMATION REFER TO ARCHITECTURAL DRAWING #0001.

PLUMBING GENERAL NOTES

1.) CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS PRIOR TO STARTING WORK. REFER PROBLEMATIC CONDITIONS TO ENGINEER.

2.) MAKE SUBMITTALS OF SHOP DRAWINGS AS SPECIFIED.

3.) DRAWINGS ARE DIAGRAMMATIC AND INDICATE GENERAL ARRANGEMENT OF WORK. BASIC DESIGN CONCEPTS INDICATED ARE MINIMAL AND MUST BE FOLLOWED OR BETTERED. DO NOT SCALE DRAWINGS.

4.) WORK IS NOT SHOWN IN FINITE DETAIL BUT IS INTENDED TO INCLUDE ITEMS NECESSARY FOR COMPLETION AND PROPER OPERATION.

5.) PROVIDE REQUIRED SUPPORTS AND HANGERS FOR PIPING, FIXTURES AND EQUIPMENT, SO LOADING WILL NOT EXCEED ALLOWABLE LOADINGS OF STRUCTURE.

6.) ALL EQUIPMENT, FIXTURES, PIPING, ETC., TO BE REMOVED, SHALL NOT BE REMOVED FROM THE PREMISES WITHOUT THE OWNER'S APPROVAL.

7.) ALL PIPING TO BE REMOVED SHALL BE PROPERLY PLUGGED AND CAPPED.

8.) NO DEAD ENDS SHALL BE LEFT ON ANY PIPING UPON COMPLETION OF WORK.

9.) ALL SYSTEMS SHALL BE LEFT IN PERFECT WORKING ORDER UPON COMPLETION OF ALL NEW WORK.

10.) FIXTURES (GENERAL): "FIRST QUALITY", NEW COMPLETE WITH TRIMMINGS AND FITTINGS, INCLUDING FAUCETS, SUPPLIES, STOPS, TRAPS, TAILPIECES, WASTE PLUGS, CASINGS, HANGERS, PLATES, BRACKETS, ANCHORS, SUPPORTS, HARDWARE AND FASTENING DEVICES.

11.) WHERE FIXTURES OR TRIM ARE DAMAGED OR BROKEN DURING THE INSTALLATION, THEY SHALL BE REPLACED WITH NEW FIXTURES.

12.) TRIMMINGS AND FITTINGS: CONSTRUCTED OF FORGED, CAST, ROLLED OR EXTRUDED BRASS OR BRONZE WITH MONEL AND OTHER SUITABLE NON-CORROSIVE PARTS: DESIGNED WITH PARTS SUBJECT TO WEAR OR DETERIORATION EASILY RENEWABLE. NO DIE CASTINGS AND STAMPINGS OTHER THAN BRASS OR STAINLESS STEEL.

13.) EXAMINE ROUGH-IN WORK OF POTABLE WATER AND WASTE PIPING SYSTEMS TO VERIFY ACTUAL LOCATIONS OF PIPING CONNECTIONS PRIOR TO INSTALLING FIXTURES. CORRECT ANY INCORRECT LOCATION OF PIPING, AND OTHER UNSATISFACTORY CONDITIONS FOR INSTALLATION OF PLUMBING FIXTURES.

14.) EXERCISE CARE IN HANDLING OF FIXTURES, TRIM, PIPE, AND FITTINGS. USE TOOLS DESIGNED TO PREVENT DAMAGE TO SURFACE FINISHES.

15.) SET FIXTURES LEVEL AND UNIFORMLY, WITH CONNECTIONS AT RIGHT ANGLES TO WALL AND PROPERLY CENTERED. LAY OUT ROUGHING ACCURATELY AND IN COORDINATION WITH SPACE AND FINISH REQUIREMENTS. IF FIELD CUT-OUTS AND HOLES ARE REQUIRED, USE PROPER CUTTING AND DRILLING TOOLS TO MAINTAIN INTEGRITY OF FINISHED SURFACE. PROVIDE CUT-OUT TEMPLATES FOR COUNTERTOP INSERT ITEMS.

16.) LOCATE WASTE OUTLETS AND WATER SUPPLIES AT CONSTANT HORIZONTAL LEVELS, WITH WASTE OUTLET CENTERED ON FIXTURE DRAIN CONNECTION AND WATER SUPPLIES SPACED EQUALLY RIGHT TO LEFT.

17.) SUPPORT WALL HUNG FIXTURES RIGIDLY FROM BUILDING CONSTRUCTION, NOT FROM PIPING, BY MEANS OF CONCEALED METAL SUPPORTING MEMBERS DESIGNED TO CARRY WEIGHT OF FIXTURE UNDER CONDITIONS OF UNUSUAL LOADING, WITH NO STRESS PLACED ON WASTE CONNECTION OR ANY OTHER PART OF SYSTEM.

18.) SECURE FLOOR MOUNT SUPPORTS TO SLAB. SECURE WALL MOUNT SUPPORTS TO 1/4" THICK METAL BACKUP PLATE SECURED TO WALL CONSTRUCTION. DO NOT USE WIRE, NAILS, OR OTHER MAKESHIFT DEVICES TO SECURE SUPPORTING MEMBERS.

19.) USE VANDALPROOF DEVICES TO SECURE FIXTURES, TRIMMINGS AND FITTINGS TO DETER UNAUTHORIZED REMOVAL. PROVIDE CHROME PLATED BRASS WASHERS AND CAP NUTS FOR EXPOSED BOLT ENDS.

20.) PROVIDE ESCUTCHEONS, THREADED OR HELD IN PLACE WITH THREADED PART OR SET SCREW, ON PIPING AND FIXTURE SUPPORTS PROTRUDING FROM WALL OR FLOOR, AND ON WSBLE CONNECTIONS TO FIXTURES.

21.) MAKE CONNECTION BETWEEN INTEGRAL TRAPPED FIXTURES AND DRAINAGE PIPING GAS AND WATERTIGHT, WITH CLOSET COUPLING OR FLANGE, CLOSET RING GASKET AND NON-CORROSIVE BOLTING MATERIALS.

22.) USE SPACING DEVICES TO SUPPORT AND STABILIZE WATER PIPING.

23.) PAINT NON-CORROSIVE FERROUS METAL SURFACES OF FIXTURES, INCLUDING BRACKETS, HANGERS, AND PLATES WITH PRIME COAT OF PAINT.

24.) UPON COMPLETION OF WORK, REMOVE PROTECTIVE COVERS AND THOROUGHLY CLEAN SURFACES, TRAPS AND STRAINERS. CHECK ALL ITEMS FOR PROPER OPERATION. TIGHTEN PACKINGS AND RETAINING DEVICES.

25.) ADJUST FLUSH VALVES TO PROVIDE MINIMUM FLOW CONSISTENT WITH CLEANING REQUIREMENTS OF FIXTURES. ADJUST SUPPLIES TO PROVIDE ADEQUATE FLOW WITHOUT SPLASHING, AND WITH FLOW RATE OF HOT AND COLD WATER EQUAL IN VELOCITY, EXCEPT AS OTHERWISE REQUIRED.

26.) SECURE AND PAY COSTS OF PERMITS, CERTIFICATES, LICENSES, INSPECTIONS AND APPROVALS.

27.) OBTAIN CERTIFICATE OF APPROVAL FROM RESPONSIBLE BUILDING OFFICIAL.

28.) SUPPLY TWO COPIES OF A WARRANTY COUNTERSIGNED AND GUARANTEED BY CONTRACTOR, STATING THAT IMPERFECT SYSTEM OPERATION AND ALL DEFECTS IN LABOR AND MATERIALS OF PLUMBING WORK WILL BE REPAIRED WITHOUT COST TO OWNER FOR A PERIOD OF ONE YEAR FROM DATE OF SUBSTANTIAL COMPLETION, AND STATING THAT ALL PLUMBING EQUIPMENT HAS BEEN FULLY SERVICED AND LEFT IN PROPER OPERATING CONDITION.

29.) GUARANTEE THAT SERVICING WILL BE PROVIDED WITHOUT COST DURING GUARANTEE PERIOD.

30.) TEST PLUMBING SYSTEMS TO SATISFACTION OF BUILDING OFFICIAL. DO NOT CLOSE IN, CONCEAL, OR COVER UP ANY PLUMBING WORK UNTIL IT HAS BEEN TESTED, INSPECTED AND APPROVED.

31.) FLUSH PIPING, PRIOR TO TESTING, TO REMOVE FOREIGN MATERIALS WHICH MAY HAVE ENTERED DURING COURSE OF INSTALLATION. CLEAN FILTERS AND STRAINERS AFTER FLUSHING.

32.) ALL PIPING PENETRATIONS THRU NEW RATED WALLS SHALL BE SEALED WITH LISTED FIREPROOFING MATERIALS. SEE ARCHITECTURAL PLANS FOR EXACT LOCATIONS.

33.) PLUMBERS WORK SHALL END 5'-0" AWAY FROM EXTERIOR FOUNDATION AND SITE CONTRACTORS WORK SHALL BEGIN AT THAT POINT.

34.) PROVIDE SEISMIC BRACING AND SUPPORTS FOR ALL PIPING AND EQUIPMENT PER BOCA BUILDING CODE. SEE HVAC DRAWINGS FOR DETAILS.

35.) LOCATION OF ALL FULL-OPEN VALVES AND SHUTOFF VALVES SHALL BE INSTALLED PER BOCA PLUMBING CODE SECTION P-1504.1 AND P-1504.2 WHETHER SPECIFICALLY SHOWN ON DRAWINGS OR NOT.

36.) ITEMS NEEDING SAWCUTTING AND PATCHING SHALL BE COORDINATED BETWEEN TRADES. ONLY MAJOR PIECES ARE SHOWN ON DRAWINGS AND DO NOT INDICATE ALL LOCATIONS. PLUMBER SHALL BE RESPONSIBLE FOR CONCEALING ALL NEW WORK, UNLESS NOTED OTHERWISE.

37.) SET AND CONNECT ALL FIXTURES WITH HOT AND COLD WATER, VENT AND DRAINAGE AS REQUIRED AND PROTECT FIXTURES UNTIL FINAL ACCEPTANCE AND TEST.

38.) CLEAN ALL FLUSH VALVES AFTER TWO WEEKS OPERATION.

39.) FIXTURES SHALL BE COMPLETE WITH CHROME PLATING ON EXPOSED IRON OR PIPE, TRAPS, ANCHOR BOLTS, HANGERS, STRAINERS, STOP VALVES AT EVERY FIXTURE AND OTHER INCIDENTAL ITEMS FURNISHED AS STANDARD.

40.) ALL FIXTURES SHALL BE CAULKED TIGHT TO WALLS AND FINISHED SURFACES SO THAT NO VOIDS SHALL REMAIN.

41.) ALL FLOOR DRAINS SHALL RECEIVE WATER FROM TRAP PRIMER VALVES - TYPICAL. SEE DETAIL J ON DRAWING P.501.

42.) ALL PLUMBING FIXTURE'S BACK PLATES AND ESCUTCHEONS RECTANGULAR IN NATURE SHALL BE INSTALLED FLUSH WITH THE WALL SURFACE. THE VERTICAL EDGE SHALL BE INSTALLED IN A VERTICAL POSITION PERPENDICULAR TO A HORIZONTAL PLANE AND THE HORIZONTAL EDGE SHALL BE INSTALLED IN A HORIZONTAL (LEVEL) POSITION.

43.) TRADE CONTRACTOR'S NOTE:
ALL EQUIPMENT SHOWN ON THESE DRAWINGS AND IN PROJECT SPECIFICATION IS BASED ON SPECIFIED MANUFACTURERS. ANY MODIFICATION AND/OR SUBSTITUTION OF SAID EQUIPMENT IS SUBJECT TO COMPLETE COORDINATION OF ALL CONNECTIONS, SERVICES, OPENING SIZES, AND ANY OTHER CONSTRUCTION RELATED REQUIREMENTS BY THE TRADE CONTRACTOR PROVIDING THE EQUIPMENT.

SCHEDULE OF LUMINAIRES

TYPE VOLTS	MANUFACTURER CATALOG NUMBER	LAMPS SOURCE	DESCRIPTION	REMARKS
A1 120V	Hubbell # RS236MA02-BL Daylite or Williams	(3) 32 W	Fluorescent 2'x4' lay-in Troffer, three (3) lamps (T8), electronic ballast, hinged door frame, acrylic plastic lens panel (.125 thick)	Recessed
A1M 120V	Hubbell # RS236MA02-EM, Daylite or Williams	(3) 32 W	Fluorescent 2'x4' lay-in Troffer, Similar to Type "A1" except center lamp on self-contained emergency ballast.	Recessed
A1A 120V	Hubbell # RA236MA02-A1	(2) 32W	Similar to Type "A1" except 2'x2' housing size and "J" shaped	Recessed
A1AM 120V	Hubbell # RA236MA02-EM	(2) 32W	Similar to Type "A1A" except one (1) lamp on self-contained emergency ballast.	Recessed
A2 120V	Hubbell # RC236MA02-BI	(2) 32W	Fluorescent 1'x4' lay-in Troffer, two (2) lamps (T8), electronic ballast, hinged door frame, acrylic plastic lens panel (.125 thick)	Recessed
A2M 120V	Hubbell # RC236MA02-EM	(2) 32W	Similar to Type "A2" except one (1) lamp on self-contained emergency ballast.	Recessed
B1 120V	Ledalite # 25261025-24-I-12-EO-EM	(12) 32W	Fluorescent luminaire, two (2) lamps with direct/indirect distribution (50% DN/50% UP), twenty four (24'-0") foot, one-piece aluminum extrusion open top and specular parabolic lower down. Air-craft cable suspension, flat canopy. Electronic ballast. Exact housing/canopy color to be determined during shop drawing	Pendant Provide 2' suspension.
B1M 120V	Ledalite # 25261025-24-I-12-EO-EM	(12) 32W	Similar to Type "B1" except one (1) lamp on self-contained emergency ballast.	Pendant
B1A 120V	Ledalite # 25261025-20-I-12-EO	(10) 32W	Similar to Type "B1" except twenty foot (20'-0") long housing.	Pendant
B1B 120V	Ledalite # 25261025-08-I-12-EO	(10) 32W	Similar to Type "B1" except twenty foot (20'-0") long housing.	Pendant
B1C 120V	Ledalite # 25261025-8-I-12-EO	(4) 32W	Fluorescent luminaire, two (2) lamps with direct/indirect distribution, similar to Type "B1" except eight foot (8'-0") long housing.	Pendant
B1CM 120V	Ledalite #	(4) 32W	Fluorescent luminaire, two (2) lamps with direct/indirect distribution, similar to Type "B1C" except one (1) lamp on self-contained emergency ballast.	Pendant
C1 120V	Alkco # SF332	(1) 32W	Under cabinet task light, solid front, flat lens panel, 4'-0" long housing.	Surface
C1A 120V	Alkco # SF325	(1) 25W	Under cabinet task light, similar to Fixture type "C1" except 3'-0" long housing	Surface
D1 120V	Kurt Versen #634EB	(2) 26W	Fluorescent down-light, two (2) lamps, specular clear alzak reflector, electronic ballast.	Recessed
D1M 120V	Kurt Versen # 634EB-EM	(2) 26W	Similar to Type "D1" except one (1) lamp on self-contained emergency ballast.	Recessed
D2 120V	Kurt Versen # PR12-EB	(1) 26W	Fluorescent down-light, one (1) lamp, specular clear alzak reflector.	Recessed
F1 120V	Lite Control # LCA1254618-CMM-TH	(4) 25W	Indirect cove light, two (2) lamp, T8, electronic ballasts 6'-0" Long housing.	Surface
F1M 120V	Lite Control # LCA1254618-CMM-TH Linear Lighting or I.C.E.	(4) 25W	Indirect cove light, two (2) lamp, Similar to Type "F1" except one (1) lamp on self-contained emergency ballast.	Surface
G1 120V	Linear Lighting # 5380P-1-2-18-120-NS-C21-GG-NO-24, Peerless, ICE or PAL	(12) 32W	Indirect fluorescent luminaire, two (2) T8 lamps, electronic ballast. One (1) piece extruded aluminum 24'-0" long housing with perforated upper housing, air-craft cable suspension, flat canopy. Exact color to be determined during shop-drawing review.	Pendant Provide 2' suspension.
G1A 120V	Linear Lighting	(10) 32W	Similar to Type "G1" except 20'-0" long housing.	Pendant
G1B 120V	Linear Lighting	(8) 32W	Similar to Type "G1" except 16'-0" long housing	Pendant
G1C 120V	Linear Lighting	(6) 32W	Similar to Type "G1" except 12'-0" long housing.	Pendant
G1D1 120V	Linear Lighting	(4) 32W	Similar to Type "G1" except 8'-0" long housing.	Pendant
G1DM 120V	Linear Lighting	(4) 32W	Similar to Type "G1" except one (1) lamp on emergency battery ballast, Bodine #150.	Pendant
H1 120V	Day-O-Lite # DLS-10RRA	(14) 32W	Indirect fluorescent luminaire (mounts on top of wood beam) steel housing, 16'-0" long row. See details.	Surface
H1A 120V	Day-O-Lite # MF-DLS-10RRA	(6) 32W UP (4) 32W DN	Direct/Indirect fluorescent luminaire, Asymetric reflector up, two (2) lamp up x one (1) lamp dn w/ cross baffle shielding, 16'-0" lg. Extruded aluminum housing. Exact color to be determined during shop-dwg review.	Wall
H1M 120V	Day-O-Lite # DLS-10RRA-EM	(14) 32W	Similar to Type "H1" except two (2) lamps on emergency ballast battery unit.	Surface
J1 120V	Louis Poulsen #PH6-184 White	(1) 300W	Decorative chandelier, 25.6" dia. X 19.3 over all hgt. graduated reflector shades.	Pendant
K1 120V	Day-O-Lite Linear Lighting or I.C.E.	(12) 32W UP (6) 32W DN	Direct/Indirect fluorescent luminaire, two (2) lamps up w/asymetric reflector and one (1) lamp down. Extruded aluminum housing, 24'-0" long. See details.	Wall
K1A 120V	Day-O-Lite	(8) 32W UP (4) 32W DN	Direct/Indirect fluorescent luminaire, Similar to Type "K1" except 12'-0" long housing.	Wall
L1 120V	Hubbell # NRD-308-4M-PC-EM	(1) 26W	Exterior light fixture, prismatic reflector, 20° F ballast operation, with emergency ballast.	Wall
N1 120V	Day-O-Lite Alan Series Linear Lighting or I.C.E.	(6) 32W	Continuous fluorescent wall washer, extruded aluminum housing, 24'-0" long row, acrylic ribbed lens at bottom and at wall side, electronic ballast. Exact paint color to be determined at the site.	Wall
P1 120V	Prudential # P-101-48-GTE	(1) 32W	Single lamp strip light, 4'-0" long housing w/5/8" eggcrate acrylic plastic cube & mounting grid. See dwg A002.	Surface
QIM 120V	Hubbell #HEM42-MAC	(2) 32W	Prop-around, 4'-0" long fluorescent luminaire, acrylic plastic, two (2) lamp, one (1) lamp on emergency battery ballast, Bodine #350.	Surface Electronic Ballast.
X1 120V	PRESCOLITE #LED-R-1-NB-M,	(1) 1.5W LED	EMERGENCY TYPE EXIT LIGHT, SINGLE FACE EITHER WALL OR CEILING MOUNTED, ALUMINUM HOUSING, WHITE FINISH	SURFACE DUAL LITE OR HIGH-LITES
X2 120V	PRESCOLITE #LED-R-2-NB-M	(2) 1.5W LED	SIMILAR TO TYPE "X1" EXCEPT DOUBLE-FACE.	SURFACE DUAL LITE OR HIGH-LITES
X3 120V	PRESCOLITE #LED-R-1-NB-M,	(1) 1.5W LED	"AREA OF RESCUE ASSISTANCE" SIGN SINGLE FACE COMPLETE WITH NI-CAD BATTERY.	SURFACE DUAL LITE OR HIGH-LITES

NOTES:
1. ALL LAMPS SHALL BE EITHER F25T8/SP35RS OR F32T8/SP35RS.
2. ALL BALLAST SHALL BE ELECTRONIC, MOTOROLA, MAGNATEK OR TRIAD.
3. PROVIDE BODINE #350 EMERGENCY BALLAST IN ALL "AIM" FIXTURES LOCATED IN CORRIDORS AND STAIR WELLS AND BODINE #850 IN REMAINING AREAS.
4. ALL FLUORESCENT FIXTURES SHOWN ALIGNED IN TANDEM TO BE INSTALLED TO APPEAR AS A SINGLE CONTINUOUS LUMINAIRE.
5. ALL INCANDESCENT LAMPS SHALL BE RATED FOR 130 VOLTS.
6. ALL EXIT LIGHTS SHALL BE WALL MOUNTED, U.O.N. OR CEILING MOUNTED AS CLOSE TO WALL AS POSSIBLE.
7. UNLESS OTHERWISE NOTED, ALL LUMINAIRES INDICATED WITH THE LETTER_M PRECEDING THE FIXTURE TYPE, ie. "AIM" SHALL BE USED FOR EMERGENCY LIGHTING. WHERE MULTIPLE LAMPS ARE PRESENT ONLY ONE (1) LAMP SHALL BE USED FOR EMERGENCY.

NOTES:
1. MCB; MAIN CIRCUIT BREAKER, MLO; MAIN LUGS ONLY, MFS; MAIN FUSED SWITCH.
2.
3.

TYPICAL ELECTRICAL PLAN NOTES:

1. WHEREVER POSSIBLE, RE-USE EXISTING BRANCH CIRCUIT(S) FOR NEW EQUIPMENT (U.O.N); EXISTING CIRCUIT(S) THAT ARE ABANDONED SHALL BE CLEARLY IDENTIFIED AT PANELBOARD DIRECTORY AS 'SPARE' AND ALL CONDUCTORS ASSOCIATED WITH SPARE CIRCUIT(S) SHALL BE REMOVED.
2. EXACT LOCATION OF ALL 'EXISTING TO REMAIN' MATERIAL AND ALL 'EXISTING TO BE RELOCATED' MATERIAL SHALL BE ESTABLISHED AND VERIFIED IN FIELD.
3. FOR EXACT LOCATION OF ALL MECHANICAL, PLUMBING, FIRE PROTECTION, AND OWNER FURNISHED EQUIPMENT, REFER TO DRAWINGS OF THOSE TRADES, AND COORDINATE ALL ELECTRICAL WORK WITH THOSE RESPECTIVE CONTRACTORS.
4. ELECTRICAL CONTRACTOR TO PROVIDE ALL NECESSARY NEW CIRCUIT BREAKERS IN EXISTING PANELBOARDS AS REQUIRED BY THESE DRAWINGS.
5. ALL NEW DUPLEX RECEPTACLES SHALL BE TIED TO NEAREST AVAILABLE 20A-1P, 120V BRANCH CIRCUIT (U.O.N); NO CIRCUIT IS TO BE LOADED TO MORE THAN 80% OF BREAKER RATING.
6. ALL NEW OUTLETS SHALL MATCH EXISTING DEVICES (IN THAT SPACE) FOR STYLE, COLOR, AND MOUNTING HEIGHT (U.O.N).
7. ALL ITEMS INDICATED ON ELECTRICAL PLANS SHALL BE NEW, UNLESS OTHERWISE INDICATED AS EXISTING TO REMAIN (E) OR EXISTING TO BE RELOCATED (RL) OR (RR).
8. FOR EXACT LOCATION OF LIGHTING FIXTURES AND ALL OTHER CEILING MOUNTED MATERIAL, REFER TO REFLECTED CEILING PLAN(S).
9. ALL NEW AND RELOCATED LIGHTING FIXTURES SHALL BE TIED TO EXISTING BRANCH CIRCUITS AND CONTROL, UNLESS INDICATED OTHERWISE.
10. IN AREAS WHERE NO ELECTRICAL WORK IS INDICATED, ALL EXISTING LIGHTING, CONTROL, AND BRANCH CIRCUIT(S) AND WIRING DEVICES ARE EXISTING (TO REMAIN).
11. IN AREAS WHERE ONE FIXTURE IS SHOWN TO BE CONTROLLED BY A SWITCH OR SWITCH(ES), ALL OTHER CEILING MOUNTED FIXTURES IN THAT SPACE SHALL BE CONTROLLED BY THE SAME SWITCH(ES).
12. ALL EXISTING, RELOCATED, AND NEW EMERGENCY LIGHTING FIXTURES AND EXIT SIGNS SHALL MONITOR NEAREST LIGHTING BRANCH CIRCUIT AHEAD OF ANY CONTROL DEVICES (U.O.N); FEED FIXTURES FROM SAME BRANCH CIRCUIT.
13. ALL SALVAGEABLE EQUIPMENT, FIXTURES, DEVICES, ETC. NOT BEING REUSED SHALL BE TURNED OVER TO BUILDING OWNER'S REPRESENTATIVE FOR STORAGE AND/OR FOR USE IN NEW WORK.
14. WHERE THE REMOVAL OF ANY DEVICE, FIXTURE, AND/OR EQUIPMENT INTERRUPTS THE CONTINUITY OF AN EXISTING (TO REMAIN) CIRCUIT, PROVIDE ALL CONNECTIONS, CONDUIT, AND CONDUCTORS NECESSARY TO MAINTAIN AND/OR EXTEND EXISTING CIRCUIT CONTINUITY.
15. WHERE BOXES REMAIN AFTER REMOVAL OF FIXTURES AND ELECTRICAL DEVICES FROM EXISTING (TO REMAIN) CONSTRUCTION, PROVIDE BLANK COVER FOR EACH OUTLET BOX.
16. REMOVAL OF ANY ELECTRICAL MATERIAL SHALL INCLUDE THE REMOVAL OF ALL CONTROL (INCLUDING SWITCHES), WIRES, AND CONDUIT (WHERE PRACTICAL) ASSOCIATED WITH SUCH MATERIAL, UNLESS OTHERWISE NOTED.
17. RELOCATION OF ANY ELECTRICAL MATERIAL SHALL INCLUDE THE EXTENSION OF ALL BRANCH CIRCUIT FEEDERS AND ALL CONTROL CIRCUITS TO NEW LOCATION.
18. ALL EXISTING DUPLEX RECEPTACLES LOCATED WITHIN 6'-0" OF ANY WATER SOURCE (SUCH AS SINKS, WATER COOLERS, OR GRADE, ETC.) TO BE REPLACED WITH NEW GFI TYPE DUPLEX RECEPTACLE (WHETHER INDICATED OR NOT).
19. IT IS THE INTENT OF THESE DRAWINGS THAT THE ENTIRE EXISTING FIRE ALARM SYSTEM SHALL BE REMOVED AND REPLACED WITH A NEW COMPLETE SYSTEM; HOWEVER, THIS BUILDING MUST REMAIN PROTECTED AT ALL TIMES.
20. WHERE NEW DEVICES AND/OR EQUIPMENT ARE INDICATED ON EXISTING (TO REMAIN) MASONRY WALLS, USE WIREMOLD SURFACE BOXES AND WIREMOLD SERIES 700 RACEWAY(S); WHERE NEW DEVICES AND/OR EQUIPMENT ARE INDICATED ON EXISTING (TO REMAIN) STUD WALLS (SHEETROCK OR GYPSUM BOARD SURFACES), USE FLUSH BOXES AND CONCEAL ALL RACEWAYS WITHIN WALL CONSTRUCTION.
21. ALL EXISTING TO REMAIN DIRECTIONAL EMERGENCY LIGHTING FIXTURES SHALL BE RE-AIMED TO PROVIDE EMERGENCY ILLUMINATION AT PATH OF EGRESS.

ELECTRICAL NOTE LEGEND:

1. LOCATE SWITCHES HERE FOR CONTROL OF SWITCH CONTROL A THROUGH F WITHIN MEDIA CENTER.
2. LOCATE DEVICES WITHIN CHARGING DESK, EXACT LOCATION TO BE DETERMINED AT THE SITE AND/OR DURING SHOP DRAWING REVIEW.
3. #4000 WIREMOLD RACEWAY COMPLETE WITH CENTER DIVIDER AND CONTINUOUS COVER. PROVIDE HUBBELL #1653625 SINGLE SUPPRESSION TYPE RECEPTACLES LOCATED AS INDICATED. IN ADDITION PROVIDE CATEGORY 5 DATA OUTLETS LOCATED AS INDICATED AND CATEGORY 5 DATA CABLES, TERMINATE DATA CABLES IN DATA ROOM #110. LOCATE RACEWAY BELOW COUNTER, 18" A.F.F..
4. SIMILAR TO NOTE #3, EXCEPT MOUNT WIREMOLD RACEWAY TO FURNITURE, EXACT MOUNTING METHOD TO BE DETERMINED AT THE SITE.
5. FLUSH FLOOR BOX WITH THREE (3) DUPLEX RECEPTACLES, #1653625, SURGE SUPPRESSION TYPE AND BRASS COVER PLATES.
6. FLUSH FLOOR BOX WITH FOUR (4) RJ45, CATEGORY FIVE (5) DATA OUTLETS
7. UNLESS OTHERWISE NOTED, DISCONNECT AND REMOVE ALL EXISTING LIGHTING FIXTURES, RECEPTACLES, FIVE ALARM EQUIPMENT, ETC. AND REPLACE WITH NEW. REUSE EXISTING WIRING WHERE EVER POSSIBLE.
8. TECHNOLOGY NOTES:
   EACH INSTRUCTIONAL AREA SHOULD HAVE A WALL PLATE WITH RF MASTER ANTENNA VIDEO OUTLET, RF OUTLET CONNECTED BY CONDUIT TO THE CLASSROOM COMPUTER AREA BY IN-WALL CONDUIT (WITH AN RF OUTLET ALSO AT THE COMPUTER END TO BE USED WITH A COMPUTER DISPLAY ADAPTER), AND TWO ELECTRICAL OUTLETS MOUNTED AT WHATEVER STANDARD HEIGHT YOU USE FOR WALL MOUNTING (10"). WE REQUIRE A MOUNTED WALL OR CEILING DEVICE THAT WILL HOLD BOTH A 27 PLUS INCH DISPLAY MONITOR AS WELL AS A VCR (THE REASON FOR THE SECOND AC OUTLET).

   TV WALL PLATES: BLONDER TONGUE #V-1GF-FT, OFO TYPE

   FEED COVERS: MULBERRY #84101 IVORY ENAMELED METAL.

   TV CABLE: ALPHA OR EQUIVALENT RG-6 TRIPPLE-SHIELD COAX WITH BRAIDED AND FOIL SHIELD. THIS DIVISION OF AT&T IS KNOWN AS LUCENT

   DATA WALL PLATES: AT&T M28A-246 (8 POSITION), M14A-246 (4 POSITION) OR M12A-246 (2 POSITION). NOTE: 8 POSITION PLATES REQUIRE A 2 GANG BOX. OTHERS ARE SINGLE GANG.

   DATA OUTLETS (JACK ASSEMBLIES): AT&T M100BH-246 (RJ45). NOW MPS 100BH.

   DATA CABLE: AT&T #1061C, 4 PAIR, LEVEL 5 UTP (UNLESS PLENUM CABLE IS REQUIRED).

   RACK: CHATSWORTH 190H X 380H X 180D, WALL MOUNTED, OPEN FRAME RACK, SWING OUT TYPE FOR REAR ACCESS:
   PATCH PANEL: ATT 110CAT5-48 OR 96
   CONCENTRATOR CHASSIS: ASANTE AH2072
   12 PORT MODULES: ASANTE AH2072-RJ45
   MANAGEMENT MODULE: ASANTE AH2072-NMM
9. PEDESTAL TYPE, DOUBLE DUPLEX, MOUNTED TO TOP OF WORK STATION. WIRING FROM CONDUIT STUB-UP BELOW. EXACT ROUTING TO BE DETERMINED AT THE SITE.
10. DISCONNECT AND REMOVE EXISTING LIGHT FIXTURES AND REPLACE IN ORIGINAL LOCATION TO FACILITATE REMOVAL OF ANY EXISTING CEILING TILES TO ACCOMMODATE NEW HVAC, PLUMBING PIPING. RECONNECT TO EXISTING WIRING.
11. PROVIDE DIMMING BALLASTS FOR EACH TYPE "G1" LIGHT FIXTURE IN COMPUTER LABS, LUTRON ELECTRONIC HI-LUME SERIES WITH NOVA, SLIDE STYLE DIMMER SWITCHES AS REQUIRED.
12. DISCONNECT AND REMOVE EXISTING LIGHT FIXTURES INCLUDING ALL WIRING, etc. AND REPLACE WITH NEW AS INDICATED PROVIDE NEW WIRING, RACEWAYS, SWITCHING AND NEW HOME RUNS AS REQUIRED.

_____/_____	_____/_____	_____/_____

   Note: Subcontractor's must have a current EMR less than or equal to 1.0 to qualify for Turner Construction's Bid List. Should your EMR exceed 1.0, the Contractor must demonstrate and document that it has or will initiate programs, policies, and attitudes which will result in a safety conscious performance in order to be included on Turner's Approved Contractor List. In this case it is the sole discretion of Turner to approve or disapprove a SUBCONTRACTOR.

2. Please use the three most recent year's OSHA No. 300/200 Log to fill in the number of cases for each of the following categories: (attach a copy of your last three years of OSHA 300/200 logs.)

Year	_____	_____	_____
No. of fatalities (Column G from 300) or (Columns 1 + 8 from200)	_____	_____	_____
No. of lost & restricted workday cases (Column H + I) or (Columns 2 + 9)	_____	_____	_____
No. of medical treatment cases (Column J) or (Columns 6 + 13)	_____	_____	_____
No. of lost workday cases (Column H) or (Columns 3 + 10)	_____	_____	_____
Employee Hours Worked	_____	_____	_____
OSHA Recordable Incidence Rate	_____	_____	_____
OSHA Lost Workday Incidence Rate	_____	_____	_____

   Note: --Items in parenthesis come from your OSHA 300/200 Log
   --**Recordable Incidence Rate = [G, H, I, & J] or [1,2,6,8,9,13] x 200,000 / Employee Hours Worked**
   --Lost Workday Incidence Rate = [H] or [3 + 10] x 200,000 / Employee Hours Worked
   --Employee Hours Worked = total number of hours worked during the year by all employees

3. How many OSHA violation(s) has your Company received in the last three years?
   (Yr. = # violations)

   _____ = _____ _____ = _____ _____ = _____

   Any willful OSHA violations: _____ Yes _____ No _____
   Please give a brief description of the violation(s); use additional paper if necessary

   _____
   _____
   _____

Safety Prequalification Form (Continued)

Any employee deaths in the past 3 years? ___ Yes ___ No
If yes, please give a brief description of the circumstances: _____

4. Do you have a qualified person responsible for safety within your Company: ___ Yes ___ No
Please describe his/her qualifications: _____

5. Does this person do safety inspections on all of your projects: ___ Yes ___ No Frequency _____

6. Do you have a written Company Safety Policy and Program and will you provide copies if requested: ___ Yes ___ No

7. Does your Company have a substance abuse policy: ___ Yes ___ No
If Yes, please check which are included in the policy:

Pre-hire/Initial Employment _____
Cause _____
Post Accident/Incident _____
Random _____
Periodic _____

8. Do you have a return to work\light duty program? ___ Yes ___ No
If yes, please describe: _____

9. Have you ever implemented 100% fall protection ___ Yes ___ No
If requested can you provide us with a site-specific program addressing the fall hazards in your work? ___ Yes ___ No

10. Do you require documented safety meetings for your employees? Indicate which, and how often.

Field Supervisors: ___ Yes ___ No Frequency _____

New Hires: ___ Yes ___ No Frequency _____

Employees: ___ Yes ___ No Frequency _____

SUBCONTRACTOR/VENDORs: ___ Yes ___ No Frequency _____

11. Does your Company provide safety training for all employees: ___ Yes ___ No
If yes, please list training provided.

(Turner will require that at least one full time on-site person must have completed the 30 hour OSHA training)

12. Do you have home office representatives (not directly involved in the project) who will visit and audit the project for safety:
___ Yes ___ No Frequency _____

Safety Prequalification Form (Continued)

13. Does your Company set annual safety goals? ____ Yes ___ No
If yes, please list training provided.

_____
_____

14. Does your Company have a program recognizing your employees for safety performance excellence? Yes No

15. Does your Company have a disciplinary program in place for safety violations? ___ Yes ___ No
16. Does your Company review the safety management systems of your sub-subcontractors ? ___ Yes ___ No

17. Does your Company conduct accident/incident investigations? ___ Yes ___ No

18. List all supervisory employees who have completed an OSHA 30 Hour Training Program.

Employee Name	OSHA 30 Hour Date of Certification

The undersigned warrants and represents the data provided is accurate in all respects.

MULTIPLE OBLIGEE
BID BOND

Bond #_____

KNOW ALL MEN BY THESE PRESENTS; that.....
(Name of Subcontractor)
.....

a.....corporation with principal offices located at.....

.....
(Address)
as Principal (hereinafter "Principal"), and .....as Surety,
(Name of Surety)
a .....corporation with home offices located at.....

.....
(Address)
(hereinafter "Surety"), are held and firmly bound unto TURNER CONSTRUCTION COMPANY a New York Corporation (hereinafter "Turner") and.....

.....
(Hereinafter collectively referred to as "Obligees") in the sum of .....
.....(Enter dollar amount required or percent of Bid price) for the payment whereof Principal and Surety bind themselves, and their respective heirs, administrators, executors, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, the Principal has submitted to Turner a certain bid, dated . . . .20 . . . . for the performance of . . . . . .
(Description of Work)
. . . . . (hereinafter "Bid").

NOW THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if Turner shall accept the Bid of Principal and the Principal shall in accordance with such Bid:

1) enter into a contract with Turner,

2) furnish Bonds for the faithful performance of such contract and for the payment of all persons performing labor or furnishing materials in connection therewith; and

3) shall in all other respects perform the agreement created by the acceptance of such Bid;

Then this obligation shall be null and void; otherwise it shall remain in full force and effect.

IN WITNESS WHEREOF, the Principal and Surety have hereunto caused this Bond to be duly

executed and acknowledged as set forth below this .....day of ....., 20....

END OF SECTION 00 0110

SECTION 01 1000 - SUMMARY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Project information.

B. Contract description.

C. Owner occupancy.

D. Contractor use of site and premises.

E. Work restrictions.

F. Specification sections applicable to all contracts.

G. Specification and drawing conventions.

1.2 PROJECT INFORMATION

A. Project Name: Central Middle School.

B. Owner's Name: Greenwich Public Schools.

C. Architect's Name: The S/L/A/M Collaborative.

D. Contract Documents, dated Juy 8, 2024 were prepared for the Project by The SLAM Collaborative, Somerset Square, 80 Glastonbury Boulevard, Glastonbury, Connecticut 06033-4415.

E. The Project consists of the construction of a two-story 156,000 s.f. secondary school facility and associated site work, including parking, vehicular circulation, and athletic fields.

1.3 CONTRACT DESCRIPTION

A. Contract Type: Multiple prime contracts, each based on a Stipulated Price as described in Document 00 5000 - Contracting Forms and Supplements.

1.4 OWNER OCCUPANCY

A. Owner intends to occupy the Project upon Substantial Completion.

B. Owner may allow others to occupy the Project for installation of materials and equipment during construction. Cooperate with suppliers and installers of such work.

C. Cooperate with Owner to minimize conflict and to facilitate Owner's operations.

D. Schedule the Work to accommodate Owner occupancy.

1.5 CONTRACTOR USE OF SITE AND PREMISES

A. Construction Operations: Limited to areas determined by Construction Manager in consultation with Owner.
   1. Locate and conduct construction activities in ways that will limit disturbance to site.
   2. Repair damage caused by construction operations.
   3. Protect the building and its occupants during the construction period.
   4. Permit Owner occupancy and public use of adjacent areas outside the Project limit lines.

B. Arrange use of site and premises to allow:
   1. Work by Others.

C. Provide access to and from site as required by law and by Owner:
   1. Emergency Building Exits During Construction: Keep all exits required by code open during construction period; provide temporary exit signs if exit routes are temporarily altered.
   2. Do not obstruct roadways, sidewalks, or other public ways without permit.

1.6 WORK RESTRICTIONS

A. Comply with restrictions on construction operations.
   1. Comply with limitations on use of public streets, work on public streets, rights of way, and other requirements of authorities having jurisdiction.

B. Nonsmoking Building: Smoking is not permitted within the building or within 25 feet of entrances, operable windows, or outdoor-air intakes.

C. Smoking and Controlled Substance Restrictions: Use of tobacco products, alcoholic beverages, and other controlled substances within the existing building is not permitted.

D. Employee Identification: Provide identification tags for Contractor personnel working on project site. Require personnel to use identification tags at all times.

1.7 SPECIFICATION SECTIONS APPLICABLE TO EVERY CONTRACT

A. Unless otherwise noted, provisions of the sections listed below apply to every contract. Specific items of work listed under individual contract descriptions constitute exceptions.

B. Section 01 2000 - Price and Payment Procedures.

C. Section 01 2300 - Alternates.

D. Section 01 2500 - Substitution Procedures.

E. Section 01 3000 - Administrative Requirements.

F. Section 01 3329.04 - Material Content Form

G. Section 01 3566.42 - Sustainability Compliance Procedures - CT-HPBS.

H. Section 01 4000 - Quality Requirements.

I. Section 01 4219 - Reference Standards.

J. Section 01 6000 - Product Requirements.

K. Section 01 7000 - Execution and Closeout Requirements.

L. Section 01 7800 - Closeout Submittals.

1.8 SPECIFICATION AND DRAWING CONVENTIONS

A. Basic Contract definitions are included in the General Conditions of the Contract.

B. Terms such as "directed," "requested," "authorized," "selected," "approved," "required," and "permitted" means "directed by the Architect," and similar phrases. However, no implied meaning shall be interpreted to extend the Architect's responsibility into the Contractor's area of construction supervision.

C. The term "approved," where used in conjunction with the Architect's action on the Contractor's submittals, applications, and requests, is limited to the duties and responsibilities of the Architect as stated in the General and Supplementary Conditions. Such approval shall not release the Contractor from responsibility to fulfill Contract requirements unless otherwise provided in the Contract Documents.

D. The term "Regulations" includes laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, as well as rules, conventions, and agreements within the construction industry that control performance of the Work, whether lawfully imposed by authorities having jurisdiction or not.

E. The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation, and similar operations."

F. The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations."

G. The term "provide" means "to furnish and install, complete and ready for intended use."

H. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. The conventions are as follows:
   1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
   2. Text Color: Text used in the Specifications, including units of measure, manufacturer and product names, and other text may appear in multiple colors or underlined as part of a hyperlink; no emphasis is implied by text with these characteristics.
   3. Hypertext: Text used in the Specifications may contain hyperlinks. Hyperlinks may allow for access to linked information that is not included in the Specifications. Unless otherwise noted, linked information is not part of the Contract Documents.
   4. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

I. Installer: The Contractor or an entity engaged by the Contractor, either as an employee, subcontractor, or sub-subcontractor, for performance of a particular construction activity, including installation, erection, application, and similar operations.
   1. Installers are required to be experienced in the work they are engaged to perform.
   2. The term "experienced," when used with the term "Installer" means having successfully completed a minimum of 5 previous projects similar in size and scope to this Project, being familiar with the precautions required, and having complied with requirements of the authorities having jurisdiction.

J. Project Site: Space available to the Contractor for performance of construction activities, either exclusively or in conjunction with others performing other construction activities as part of the Project.
   1. The extent of the Project Site is indicated on the Drawings.

K. Testing Laboratories: A "testing laboratory" is an independent entity engaged to perform specific inspections or tests, either at the Project Site or elsewhere, and to report on and, if required, to interpret results of those inspections or tests.

L. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One of more of the following are used on Drawings to identify materials and products:
   1. Terminology: Materials and products are identified by the typical generic terms used in the individual specification sections.
   2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 1000

SECTION 01 2000 - PRICE AND PAYMENT PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedures for preparation and submittal of applications for progress payments.

B. Documentation of changes in Contract Sum and Contract Time.

C. Change procedures.

D. Correlation of Contractor submittals based on changes.

E. Procedures for preparation and submittal of application for payment at substantial completion.

F. Procedures for preparation and submittal of application for final payment.

1.2 RELATED REQUIREMENTS

A. Section 01 7800 - Closeout Submittals: Project record documents.

1.3 SCHEDULE OF VALUES

A. Use Schedule of Values Form: AIA G703, edition stipulated in the Agreement.

B. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit draft to Architect for approval.

C. Forms filled out by hand will not be accepted.

D. Submit Schedule of Values in duplicate within 15 days after date of Owner-Contractor Agreement.

E. Format: Utilize the Table of Contents of this Project Manual. Identify each line item with number and title of the specification section. Identify site mobilization.

F. Include separately from each line item, a direct proportional amount of Contractor's overhead and profit.

G. Revise schedule to list approved Change Orders, with each Application For Payment.

1.4 APPLICATIONS FOR PROGRESS PAYMENTS

A. Payment Period: Submit at intervals stipulated in the Agreement.

B. Electronic media printout including equivalent information will be considered in lieu of standard form specified; submit sample to Architect for approval.

C. Forms filled out by hand will not be accepted.

D. Execute certification by signature of authorized officer.

E. Use data from approved Schedule of Values. Provide dollar value in each column for each line item for portion of work performed and for stored products.

F. List each authorized Change Order as a separate line item, listing Change Order number and dollar amount as for an original item of work.

G. Submit one electronic and three hard-copies of each Application for Payment.

H. Stored Materials:Include amounts in Application for Payment applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.
   1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment for stored materials.
   2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
   3. Provide summary documentation for stored materials indicating the following:
      a) Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
      b) Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
      c) Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

I. When Architect requires substantiating information, submit data justifying dollar amounts in question. Provide one copy of data with cover letter for each copy of submittal. Show application number and date, and line item by number and description.

1.5 MODIFICATION PROCEDURES

A. For minor changes not involving an adjustment to the Contract Sum or Contract Time, Architect will issue instructions directly to Contractor.

B. For other required changes, Architect will issue a document signed by Owner instructing Contractor to proceed with the change, for subsequent inclusion in a Change Order.
   1. The document will describe the required changes and will designate method of determining any change in Contract Sum or Contract Time.
   2. Promptly execute the change.

C. For changes for which advance pricing is desired, Architect will issue a document that includes a detailed description of a proposed change with supplementary or revised drawings and specifications, a change in Contract Time for executing the change with a stipulation of any overtime work required and the period of time during which the requested price will be considered valid. Contractor shall prepare and submit a fixed price quotation within ____ days.

D. Computation of Change in Contract Amount: As specified in the Agreement and Conditions of the Contract.

E. Substantiation of Costs: Provide full information required for evaluation.
   1. On request, provide the following data:
      a) Quantities of products, labor, and equipment.
      b) Taxes, insurance, and bonds.
      c) Overhead and profit.
      d) Justification for any change in Contract Time.
      e) Credit for deletions from Contract, similarly documented.
   2. Support each claim for additional costs with additional information:
      a) Origin and date of claim.
      b) Dates and times work was performed, and by whom.
      c) Time records and wage rates paid.
      d) Invoices and receipts for products, equipment, and subcontracts, similarly documented.
   3. For Time and Material work, submit itemized account and supporting data after completion of change, within time limits indicated in the Conditions of the Contract.

F. Execution of Change Orders: Architect will issue Change Orders for signatures of parties as provided in the Conditions of the Contract.

G. After execution of Change Order, promptly revise Schedule of Values and Application for Payment forms to record each authorized Change Order as a separate line item and adjust the Contract Sum.

H. Promptly revise progress schedules to reflect any change in Contract Time, revise sub-schedules to adjust times for other items of work affected by the change, and resubmit.

I. Promptly enter changes in Project Record Documents.

1.6 APPLICATION FOR PAYMENT AT SUBSTANTIAL COMPLETION

A. Following issuance of the Certificate of Substantial Completion, submit at Application for Payment. This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
   1. Administrative actions and submittals that shall precede or coincide with this application include the following:
      a) Occupancy permits.
      b) Warranties and maintenance agreements.
      c) Test/adjust/balance records.
      d) Maintenance instructions.
      e) Changeover information related to Owner's occupancy.
      f) Final cleaning.
      g) Application for reduction of retainage and consent of surety.

1.7 APPLICATION FOR FINAL PAYMENT

A. Prepare Application for Final Payment as specified for progress payments, identifying total adjusted Contract Sum, previous payments, and sum remaining due.

B. Include the following submittals with the Application for Final Payment:
   1. Transmittal of project construction records to the Owner.

2. Insurance certificates for products and completed operations where required.
3. Proof that taxes, fees, and similar obligations were paid.
4. Waivers and releases.

C. Application for Final Payment will not be considered until the following have been accomplished:
1. All closeout procedures specified in Section 01 7000.
2. Completion of items specified for completion after Substantial Completion.
3. Removal to temporary facilities and services.
4. Change of door locks to Owner's access.

Construction Change Directive No. XX

To:		**Date:**	
		Contract For:	
Project No.:		**Contract Date:**	
Project:			
Distribution:			

You are hereby directed to make the following change(s) in this Contract:

Proposed Adjustments

1. The Proposed basis of adjustment to the Contract Sum or Guaranteed Maximum Price is:
   Lump Sum increase / decrease of $
   Unit Price of $ per
   as provided in Subparagraph 7.3.3 of AIA Document A201, 2017 edition.
   as follows:
2. The Contract Time is proposed to be adjusted / remain unchanged. The proposed adjustment, if any, is an increase / a decrease of days.

When signed by the Owner and Architect and received by the Contractor, the document becomes effective IMMEDIATELY as a Construction Change Directive (CCD), and the Contractor shall proceed with the change described above.

Signature by the Contractor indicates the Contractor's agreement with the proposed adjustments in the Contract Sum and Construction Contract Time set forth in this Change Directive.

SECTION 01 2100 - ALLOWANCES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Lump Sum Trade allowances.

B. Unit-cost Trade Allowances

C. Quantity Trade Allowances

D. Payment and modification procedures relating to Trade Allowances.

1.2 RELATED REQUIREMENTS

A. Section 01 2000 - Price and Payment Procedures: Additional payment and modification procedures.

1.3 LUMP SUM, UNIT COST AND QUANTITY TRADE ALLOWANCES

A. Trade Allowance shall include cost to Trade Contractor of labor, specific products and materials ordered or directed under allowance and shall include supervision, taxes, freight, and delivery to Project site.
   1) Do not include Trade Contractor's or subcontractor's indirect expense in the Change Order cost.
   2) No change to Trade Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or labor type of the same scope and nature as originally indicated.

B. Refer to Division 0 documents for contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to labor, and materials ordered under trade allowance.

C. Trade Contractor Responsibilities:
   1. Value of Trade Allowance is to be indicated on Schedule of Values with pay application.
   2. Perform work of Allowance as directed by Contractor only.
   3. Provide Time and Material tickets to Superintendent for confirmation of Time and Material utilized.
   4. Submit invoices for actual quantities and materials utilized at the site for each allowance.
   5. Contractor to issue zero cost change order noting value of in contract Trade Allowance to be billed within Trade monthly application against original Schedule of Value.
   6. Prepare Change Order if necessary.

D. Differences in costs will be adjusted by Change Order. Any unused portion of Trade Allowance is to be returned to Owner via deduct change order based upon approved rates.

1.4 ALLOWANCES SCHEDULE

A. Refer to Bid Package Scope of Work for more information regarding Trade Allowances to include.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 2100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 2201 - UNIT PRICES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. List of unit prices, for use in preparing Bids.

B. Measurement and payment criteria applicable to Work performed under a unit price payment method.

C. Defect assessment and non-payment for rejected work.

1.2 RELATED REQUIREMENTS

A. Document 00 4000 - Procurement Manual: Refer to "Invitation to Bid" section for preparation of pricing for Unit Prices.

B. Section 31 6616 - Aggregate Piers: Unit prices and pricing notes for aggregate piers.

1.3 COSTS INCLUDED

A. Unit Prices included on the Bid Form shall include full compensation for all required labor, products, tools, equipment, plant, transportation, services and incidentals; erection, application or installation of an item of the Work; overhead and profit.

1.4 UNIT QUANTITIES SPECIFIED

A. Quantities indicated in the Bid Form are for bidding and contract purposes only. Quantities and measurements of actual Work will determine the payment amount.

1.5 MEASUREMENT OF QUANTITIES

A. Measurement methods delineated in the individual specification sections complement the criteria of this section. In the event of conflict, the requirements of the individual specification section govern.

B. Take all measurements and compute quantities. Measurements and quantities will be verified by Architect.

C. Assist by providing necessary equipment, workers, and survey personnel as required.

D. Measurement by Volume: Measured by cubic dimension using mean length, width and height or thickness.

E. Measurement by Area: Measured by square dimension using mean length and width or radius.

F. Linear Measurement: Measured by linear dimension, at the item centerline or mean chord.

1.6 PAYMENT

A. Payment for Work governed by unit prices will be made on the basis of the actual measurements and quantities of Work that is incorporated in or made necessary by the Work and accepted by the Architect, multiplied by the unit price.

B. Payment will not be made for any of the following:
   1. Products wasted or disposed of in a manner that is not acceptable.
   2. Products determined as unacceptable before or after placement.
   3. Products not completely unloaded from the transporting vehicle.
   4. Products placed beyond the lines and levels of the required Work.
   5. Products remaining on hand after completion of the Work.
   6. Loading, hauling, and disposing of rejected Products.

1.7 DEFECT ASSESSMENT

A. Replace Work, or portions of the Work, not complying with specified requirements.

B. If, in the opinion of Owner, it is not practical to remove and replace the Work, Owner will direct one of the following remedies:
   1. The defective Work may remain, but the unit price will be adjusted to a new unit price at the discretion of Owner.
   2. The defective Work will be partially repaired to the instructions of the Owner, and the unit price will be adjusted to a new unit price at the discretion of Owner.

C. The individual specification sections may modify these options or may identify a specific formula or percentage price reduction.

1.8 SCHEDULE OF UNIT PRICES - DIV. 02 - FOR HAZARDOUS BUILDING MATERIALS

A. Unit Price No. 1: Small Containment Preparation Containment (Less than 160 square\260 linear feet of asbestos containing material). Pricing for containments with larger amounts of materials are to be INCLUDED in the unit prices themselves listed below. There is no separate unit price for containments with larger amounts.
   1. $ _____ per containment

B. Unit Price No. 2: Floor Tile/Flooring Materials and Mastics (Includes all layers of carpeting, adhesives, multiple layers of floor tiles/flooring materials/linoleum/sheet flooring/vinyl stairwell flooring/wood/slate/ceramic/grout/mud bed/terrazzo/concrete/mastics, levelastics, contaminated flooring materials and substrates, etc.) Removal and Disposal as ACM.
   1. $ _____ per square foot

C. Unit Price No. 3: Cove Base and Adhesives (multiple layers) (including contaminated substrates) Removal and Disposal as ACM.
   1. $ _____ per linear foot

D. Unit Price No. 4: Mudded Pipe Fitting Insulation Removal and Disposal as ACM.
   1. $ _____ per fitting/joint

E. Unit Price No. 5: Glove Bag Removal and Disposal as ACM.

1. $ _____ per bag

F. Unit Price No. 6: Pipe and Pipe Fitting Insulation Removal and Disposal as ACM.
   1. $ _____ per linear foot

G. Unit Price No. 7: Pipe/Duct Insulation Buried under Floor Slabs Removal and Disposal as ACM.
   1. $ _____ per linear foot

H. Unit Price No. 8: Duct Insulation/Adhesives/Seam/Flange Sealant (including contaminated substrates) Removal and Disposal as ACM.
   1.

I. Unit Price No. 9: Air Duct Vibration Isolation Cloth Removal and Disposal as ACM.0
   1. $ _____ per cloth

J. Unit Price No. 10: Light Backing Paper Insulation Removal and Disposal as ACM.
   1. $ _____ per light fixture

K. Unit Price No. 11: Sink Undercoating Removal and Disposal as ACM.
   1. $ _____ per sink

L. Unit Price No. 12: Countertop/Millwork/Cabinet/Adhesives/Science Desk Tops Removal and Disposal as ACM.
   1. $ _____ per square foot

M. Unit Price No. 13: Transite Cement Board Removal and Disposal as ACM.
   1. $ _____ per square foot
   2. $ _____ per linear foot (buried transite piping)

N. Unit Price No. 14: Fire Door/Insulation Removal and Disposal as ACM.
   1. $ _____ per door

O. Unit Price No. 15: Wall Adhesives and Contaminated Substrates (mirrors/blackboards/bulletin boards, wood panel walls, etc.) Removal and Disposal as ACM.
   1. $ _____ per square foot

P. Unit Price No. 16: Vermiculite and Associated/Contaminated Wall/Ceiling Materials Removal and Disposal as ACM.
   1. $ _____ per square foot

Q. Unit Price No. 17: Ceramic Wall and Floor Tiles Adhesives, Damp-Proofing, Mud Bed/Grout and Contaminated Substrates Removal and Disposal as ACM.
   1. $ _____ per square foot

R. Unit Price No. 18: Wall/Ceiling Board/Sheetrock/Taping/Joint Compounds (multiple layers) and Removal and Disposal as ACM.
   1. $ _____ per square foot

S. Unit Price No. 19: Wall/Ceiling Plaster (multiple layers) and Supporting Systems and Contaminated Substrates Removal and Disposal as ACM.

1. $ _____ per square foot

T. Unit Price No. 20: Electrical Insulation Removal and Disposal as ACM.
   1. $ _____ per linear foot

U. Unit Price No. 21: Wall, Ceiling Tile and Glue Daubs and Contaminated Substrates Removal and Disposal as ACM.
   1. $ _____ per square foot

V. Unit Price No. 22: Water Fountain/Damp-Proofing Removal and Disposal as ACM.
   1. $ _____ per fountain

W. Unit Price No. 23: Custodial Slop Sink/Damp-Proofing Removal and Disposal as ACM.
   1. $ _____ per slop sink

X. Unit Price No. 24: Freezers/Damp-Proofing/Contaminated Cork/Contaminated Substrates/Other Material Removal and Disposal as ACM.
   1. $ _____ per freezer

Y. Unit Price No. 25: Incinerator/Boiler/Brick/Mortar/Interior and Exterior Insulation/Mastic/Fireproofing Materials/Gaskets/Roping Removal and Disposal as ACM.
   1. $ _____ per boiler/incinerator

Z. Unit Price No. 26: Gymnasium Flooring Materials (All Layers) and Mastics/Damp-proofing (including cleaning concrete substrates) Removal and Disposal as ACM.
   1. $ _____ per square foot

AA. Unit Price No. 27: Caulking, Glazing and Sealant Compounds (includes substrates and contaminated materials) Removal and Disposal as ACM.
   1. $ _____ per linear foot
   2. $ _____ per square foot
   3. $ _____ per window opening (multiple windows/sizes exist in openings)
   4. $ _____ per door opening (multiple doors/sizes exist in openings)

BB. Unit Price No. 28: Caulking, Glazing and Sealant Compounds (includes substrates and contaminated materials) Removal and Disposal as PCB>50 ppm Bulk Product Waste.
   1. $ _____ per linear foot
   2. $ _____ per square foot
   3. $ _____ per window opening (multiple windows/sizes exist in openings)
   4. $ _____ per door opening (multiple doors/sizes exist in openings)

CC. Unit Price No. 29: Caulking, Glazing and Sealant Compounds (includes substrates and contaminated materials) Removal and Disposal as ACM and PCB>50 ppm Bulk Product Waste.
   1. $ _____ per linear foot
   2. $ _____ per square foot
   3. $ _____ per window opening (multiple windows/sizes exist in openings)
   4. $ _____ per door opening (multiple doors/sizes exist in openings)

DD. Unit Price No. 30: Interior/Exterior Wall/Ceiling/Floor/Paint Removal and Disposal as PCB>50 Bulk Product Waste.

1. $ _____ per ton

EE. Unit Price No. 31: Interior/Exterior Wall/Ceiling/Floor/Paint Removal and Disposal as PCB<50 CT DEEP Regulated Waste.
1. $ _____ per ton

FF. Unit Price No. 32: Interior/Exterior Wall/Ceiling/Floor Removal and Disposal as PCB Remediation Waste.
1. $ _____ per ton

GG. Unit Price No. 33: Exterior Asphalt/Concrete Removal and Disposal as PCB Remediation Waste.
1. $ _____ per ton

HH. Unit Price No. 34: Exterior Soil Removal and Disposal as PCB Remediation Waste.
1. $ _____ per ton

II. Unit Price No. 35: Roofing Core/Field Base Material (includes multiple layers and substrates) Removal and Disposal as ACM.
1. $ _____ per square foot

JJ. Unit Price No. 36: Roof Flashing (includes multiple layers and substrates) Removal and Disposal as ACM.
1. $ _____ per square foot

KK. Unit Price No. 37: Damp-proofing/Tars/Mastics – Interior/Exterior Walls/Floors/Ceilings/Slab/Foundation and Associated Substrate/Adjacent Materials (includes multiple layers, contaminated materials and substrates) Removal and Disposal as ACM.
1. $ _____ per square foot
2. $ _____ per ton with substrate

LL. Unit Price No. 38: Off-Site Transportation and Disposal of Natural Soil.
1. $ _____ per ton.
   a) "Natural" Soil: Soils have no detectable concentrations of non-naturally occurring compounds.

MM. Unit Price No. 39: Off-Site Transportation and Disposal of Polluted Soil.
1. $ _____ per ton.
   a) "Polluted" Soils contain concentrations of non-naturally occurring compounds detected above laboratory reporting limits, but below the CTDEEP RSR criteria in accordance with RCSA 22a-133k-1(a)(45). Polluted soils can be reused on-site with the preparation of a Materials Management Plan and approval from the Engineer.

NN. Unit Price No. 40: Off-Site Transportation and Disposal of Contaminated Soil.
1. $ _____ per ton.
   a) "Contaminated Materials" contain concentrations of compounds that exceed CT DEEP RSR criteria in accordance with RCSA 22a-133k. Contaminated materials (concrete, soil, sediment, groundwater or surface water) can NOT be reused on-site and must be disposed of at an off-site disposal facility.

OO. Unit Price No. 41: Off-Site Transportation and Disposal of Hazardous Waste/Soils.

1. $ _____ per ton.
   a) "Hazardous Waste/Soils" Includes all soil/fill material that exceeds regulatory limits for hazardous substances as defined in 40 CFR, Part 261.20 Subpart C – Characteristics of Hazardous Waste. This material CANNNOT be reused on-site and must be disposed of at an off-site approved disposal facility.

PP. Unit Price No. 42: Off-Site Transportation and Disposal of Hazardous Lead-Based Paint Demolition Debris.
1. $ _____ per 40-yard dumpster.
2. $ _____ per 100-yard dumpster.

1.9 SCHEDULE OF UNIT PRICES - DIV. 03-14

A. Structural Steel, more than 30 LBS/LF - New Construction, Div 05.
1. Per ton, $_____, furnished and installed.

B. Structural Steel, less than, or equal to 30 LBS/LF – New Construction; Div 05
1. Per ton, $_____, furnished and installed.

C. Beam Penetrations, field fabricated and installed - each Type; Div 05
1. 6" x 6", $ _____, furnished and installed.
2. 8" x 8", $ _____, furnished and installed.
3. 12" x 12", $ _____, furnished and installed.

D. Epoxy anchor, 0.75 inch by 8 inches, full manufacturer in-place system installation ; Div 05.
1. Each, $_____, furnished and installed.

E. Alternate Flooring Adhesive; Section 09 0561. Square foot $_____.

F. MVE Control System; Section 09 0561. Square foot $ _____.

G. Traffic Signage; Each type with/post/bollard/base in place; Div. 10.
1. Each type $_____.

1.10 SCHEDULE OF UNIT PRICES - DIV. 21-28

A. Provide an additional sprinkler head including arm-over piping with an addition (6) six feet of piping to get back to nearest branch line; Div. 21
1. Per sprinkler head installed $_____.

B. Provide an additional duplex receptacle including wiring to nearest normal power panel with sufficient capacity, faceplate, back-box, conduits, bushing, and pull string. Also include cutting and patching of typical interior partition; Div. 26.
1. Per receptacle installed $_____.

C. Provide an additional duplex receptacle including wiring to nearest emergency power panel with sufficient capacity, faceplate, back-box, conduits, bushing, and pull string. Also include cutting and patching of typical interior partition; Div. 26
1. Per receptacle installed $_____.

D. Provide an additional exit sign including power wiring and conduit system from the nearest emergency electrical power panel. Extension of the nearest exit sign circuit is acceptable if the base bid circuit capacity is sufficient: Div. 26
   1. Per exit sign installed $_____.

E. Provide an additional fire alarm pull station, including wiring to panel. Also include cutting and patching of typical interior partition; Div. 28.
   1. Per pull station installed $_____.

F. Provide an additional combination audible/visual fire alarm device, including wiring to panel. Also include cutting and patching of typical interior partition; Div. 28
   1. Per fire alarm device installed $_____.

G. Provide an additional ceiling smoke detector including wiring and conduit system to the nearest node. Also include cutting and patching of typical acoustical ceiling panel; Div. 28
   1. Per smoke detector installed $_____.

H. Provide an additional carbon monoxide detector including wiring and conduit system to the nearest node. Also include cutting and patching of typical acoustical ceiling panel and/or typical interior partition; Div. 28
   1. Per carbon monoxide detector installed $_____.

I. Provide an additional combination audible/visual fire alarm device, including wiring to panel. Also include cutting and patching of typical interior partition; Div. 28
   1. Per fire alarm device installed $_____.

J. Single Data or Voice Outlet; Div 26 & 27.
   1. Provide an additional back-box, conduits, cable, bushing, and pull string. Include cutting and patching of typical interior partition, to accommodate installation of Single Data Outlet, including terminations, cable mounting devices, labeling, testing, documentation, installation and supervision.
   2. One (1) Category 6 rated RJ45 jack mounted on a single gang faceplate with one (1) Category 6, plenum rated, unshielded twisted pair cable installed to relevant IDF or MDF patch panel.
      a) Category 6 cable shall terminate onto an available port on the IDF or MDF patch panel.
      b) Cable length: Assume 285 feet.
   3. Per outlet installed $_____.

K. Dual Data Outlet; Div 26 & 27
   1. Provide an additional back-box, conduits, cable, bushing, and pull string. Include cutting and patching of typical interior partition, to accommodate installation of Dual Data Outlet, including terminations, cable mounting devices, labeling, testing, documentation, installation and supervision.
   2. Two (2) Category 6 rated RJ45 jacks, mounted on a single gang faceplate with one (2) Category 6, plenum rated, unshielded twisted pair cable installed to relevant IDF or MDF patch panel.
      a) Category 6 cable shall terminate onto an available port on the IDF or MDF patch panel.
      b) Cable length to assume 285 feet.

3. Per outlet installed $_____.

L. Wireless Access Point location; Div 26 & 27
   1. Provide pathway, and cable for additional WAP. Include cutting and patching of typical interior partition and/or ceiling tile, to accommodate installation of Wireless Access Point location, including terminations, cable mounting devices, labeling, testing, documentation, installation and supervision.
   2. One (1) Category 6 rated RJ45 plug, terminated onto (1) Category 6, plenum rated, unshielded twisted pair cable, with a 20ft. service loop, and installed to relevant IDF or MDF patch panel.
      a) Category 6 cable shall terminate onto an available port on the the IDF or MDF patch panel.
      b) Cable length to assume 285 feet.
   3. Per WAP installed $_____.

1.11 SCHEDULE OF UNIT PRICES - DIV. 31-32

A. Preparation of aggregate pier design, one mobilization, one modulus test, pre-auger each aggregate pier location, pre-drill or pre-excavate 50% of pier locations, installation of aggregate pier elements, and demobilization (See Note AG-1 below); Div 31
   1. Lump sum $_____.

B. Pre-drill aggregate pier location using down-hole hammer (See Note AG-2 below); Div 31
   1. Linear foot $_____.

C. Pre-excavate aggregate pier location, remove oversize materials that could obstruct aggregate pier, backfill excavation with excavated soils or imported borrow to satisfaction of aggregate pier designer (See Note AG-2 below); Div 31
   1. Linear foot $_____ .

D. Additional aggregate piers (See Note AG-3 below); Div 31.
   1. Linear foot $_____ .

E. Additional aggregate piers (See Note AG-3 below); Div 31.
   1. Linear foot $_____ .

F. Additional modulus tests; Div 31.
   1. Each $_____.

G. Additional mobilizations/demobilizations; Section 31 6616, page 11, Item 7.
   1. Each $_____.

H. Additional Contractor-provided information: Div 31.
   1. Total number of aggregate piers in base bid design: Quantity _____.
   2. Average installed pier length in base bid design:: Linear Foot _____.
   3. Volume of crushed stone import in base bid design: Cubic Yard _____.

I. NOTES AG-1 to AG-3

1. **AG-1**: Contractor's base bid shall include pre-drill or pre-excavate of 50% of the Contractor's design number of piers and based on the Contractor's average design pier length, in addition to pre-auger. Payment for pre-drill or pre-excavate will be based on actual installed length of pre-drill or pre-excavate in accordance with the unit costs provided under Item 2 and Item 3.
2. **AG-2**: Contractor will only be paid for one of pre-drill or pre-excavate - whichever is the method used to achieve the final installation depth.
3. **AG-3**: Additional aggregate pier unit cost shall only apply to additional piers required to be installed outside the limits of unsuitables shown on the Drawings. Unit cost shall be based on aggregate pier installation with pre-auger. Unit cost for pre-drill/pre-excavate, as applicable, will be paid in addition to aggregate pier with pre-auger unit cost.

J. Bituminous concrete paving regular duty, in place with base, Div 32.
   1. Square Foot $ _____.

K. Bituminous concrete paving heavy duty, in place with base, Div. 32
   1. Square Foot $ _____.

L. Bituminous concrete walk paving, in place with base, Div. 32.
   1. Square Foot $ _____.

M. Pavement Stripping – 4" wide striping, Div. 32.
   1. Linear Foot $ _____.

N. Gravel subbase placed and compacted, Div. 32
   1. Cubic Yard $ _____.

O. Processed aggregate, placed and compacted, Div. 32
   1. Cubic Yard $ _____.

P. Unit masonry pavers, in place with base, Div 32
   1. Square Foot $ _____.

Q. Washed stone aggregate surfacing, in place with geotextile fabric and base, Div. 32
   1. Square Foot $ _____.

R. Natural infield & warning track surfacing, spread and compacted, Div. 32.
   1. Cubic Yard $ _____.

S. Granite Curbing, in place with base, each, Div. 32
   1. Straight Section, Linear Foot $ _____.
   2. Curved Section, Linear Foot $ _____.

T. Chain link fence, each, Div. 32.
   1. 4-foot-tall fence, Linear Foot $ _____.
   2. 4-foot gate, Linear Foot $ _____.
   3. 6-foot-tall fence, Linear Foot $ _____.
   4. 6-foot gate, Linear Foot $ _____.
   5. 8-foot-tall fence, Linear Foot $ _____.
   6. 10-foot-tall fence, Linear Foot $ _____.
   7. 12-foot-tall fence, Linear Foot $ _____.

U. Segmental retaining walls with base, backfill, geotextile fiber and anchoring system, Div. 32.
   1. Face Foot $ _____.

V. Athletic Field Seeding/Sodding, each, Div. 32 .
   1. Seeding, Square Foot $ _____.
   2. Per Alternate 2 - Sodding, Square Foot $ _____.

W. Turf and Grasses, each, Div. 32.
   1. Seeding - Lawn, Square Foot $ _____.
   2. Seeding - Conservation Mix, Square Foot $ _____.

X. Plants, Div. 32.
   1. All planting listed on the plant list (each type), in place, with mulch.
      a) Each $ - Furnish as separate attachment.
   2. Mulch placed and fine raked, Cubic Yard $ _____.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 2201

SECTION 01 2300 - ALTERNATES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Description of Alternates.

1.2 ACCEPTANCE OF ALTERNATES

A. Alternates quoted on Bid Forms will be reviewed and accepted or rejected at Owner's option. Accepted Alternates will be identified in the Owner-Contractor Agreement.

B. Coordinate related work and modify surrounding work to integrate the Work of each Alternate.

1.3 SCHEDULE OF ALTERNATES

A. Alternate No. 01 - Provide sod in lieu of seeding at the Baseball and Rectangular fields:

B. Alternate No. 02 - Provide sod in lieu of seeding at the Softball field:

C. Alternate No. 03 - Courtyards: Provide pavers in lieu of concrete:

D. Alternate No. 04 - Add painted graphics at all gym walls:
   1. Alternate Item: Drawing number A111.4 including elevations 1B, 1D, 1E, 3B.

E. Alternate No. 05 - Add full-height wall tile at sink wall in the following restrooms: 1105, 1104, 2021, 2027, 2055, 2061, 2092 and 2098.
   1. Alternate Item: Refer to Finish Plans and Finish Product List for type of tile.
   2. Alternate Item: Drawing number A131 and Section 09 3000.

F. Alternate No. 06 - Add dimensional letter signage at the following:
   1. Auditorium doors.
   2. Cafeteria.
   3. Art room.
   4. Construction Tech room.
   5. Main reception window.
   6. Gymnasium.
   7. See Drawings for specific dimensional letter signage at each location.
   8. Alternate Item: Section 10 1419.

G. Alternate No. 07 - Provide 250kW natural gas fueled generator in lieu of diesel fueled generator.

H. Alternate No. 08 - Delete lightning protection system:

I. Alternate No. 09 - Provide 80 mil roofing membrane and 30-year warranty in lieu of 60 mil roofing membrane and 20-year warranty:
   1. Alternate Item: Section 07 5423.

J. Alternate No. 10 – The hazardous buildings material contractor shall remove and dispose of PCB greater than 50PPM containing paint/painted materials as PCB bulk product waste
   1. Alternate Item: Section 02 8432

K. Alternate No. 11 - The hazardous buildings material contractor shall remove and dispose of PCB less than 50PPM containing paint/painted materials as PCB CTDEEP regulated waste.
   1. Alternate Item: Section 02 8432.

L. Alternate No. 12 - Aggregate pier ground improvement shall be provided as an alternate to complete removal and replacement of existing fill or buried organic-containing materials from below building structures.
   1. Alternate Item: Section 31 6616.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION - NOT USED

END OF SECTION 01 2300

SECTION 01 2500 - SUBSTITUTION PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Procedural requirements for proposed substitutions.

1.2 RELATED REQUIREMENTS

A. Section 01 2300 - Alternates, for product alternatives affecting this section.

B. Section 01 3000 - Administrative Requirements: Submittal procedures, coordination.

C. Section 01 6000 - Product Requirements: Fundamental product requirements, product options, delivery, storage, and handling.

1.3 DEFINITIONS

A. Substitutions: Changes from Contract Documents requirements proposed by Contractor to materials, products, assemblies, and equipment.
   1. Substitutions for Cause: Proposed due to changed Project circumstances beyond Contractor's control.
      a) Product unavailability.
      b) Regulatory changes.
      c) Warranty terms unavailability.
   2. Substitutions for Convenience: Proposed due to possibility of offering substantial advantage to the Project.

1.4 REFERENCE STANDARDS

A. CSI/CSC Form 1.5C - Substitution Request (During the Bidding/Negotiating Stage); Current Edition.

B. CSI/CSC Form 13.1A - Substitution Request (After the Bidding/Negotiating Phase); Current Edition.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 GENERAL REQUIREMENTS

A. A Substitution Request for products, assemblies, materials, and equipment constitutes a representation that the submitter:
   1. Has investigated proposed product and determined that it meets or exceeds the quality level of the specified product, equipment, assembly, or system.
   2. Agrees to provide the same warranty for the substitution as for the specified product.

3. Agrees to coordinate installation and make changes to other work that may be required for the work to be complete, with no additional cost to Owner.
4. Waives claims for additional costs or time extension that may subsequently become apparent.
5. Agrees to reimburse Owner and Architect for review or redesign services associated with re-approval by authorities.

B. Document each request with complete data substantiating compliance of proposed substitution with Contract Documents. Burden of proof is on proposer.
1. Note explicitly any non-compliant characteristics.

C. Content: Include information necessary for tracking the status of each Substitution Request, and information necessary to provide an actionable response.
1. Forms indicated in the Project Manual are adequate for this purpose, and must be used.

D. Limit each request to a single proposed substitution item.
1. Submit an electronic document, combining the request form with supporting data into single document.

3.2 SUBSTITUTION PROCEDURES DURING PROCUREMENT

A. Submittal Time Restrictions:
1. Instructions to Bidders specifies time restrictions and the documents required for submitting substitution requests during the bidding period.

B. Submittal Form (before award of contract):
1. Submit substitution requests by completing CSI/CSC Form 1.5C - Substitution Request. See this form for additional information and instructions. Use only this form; other forms of submission are unacceptable.

3.3 SUBSTITUTION PROCEDURES DURING CONSTRUCTION

A. Submittal Form (after award of contract):
1. Submit substitution requests by completing CSI/CSC Form 13.1A - Substitution Request. See this form for additional information and instructions. Use only this form; other forms of submission are unacceptable.

B. Submit request for Substitution for Cause within 14 days of discovery of need for substitution, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.

C. Submit request for Substitution for Convenience immediately upon discovery of its potential advantage to the project, but not later than 14 days prior to time required for review and approval by Architect, in order to stay on approved project schedule.
1. In addition to meeting general documentation requirements, document how the requested substitution benefits the Owner through cost savings, time savings, greater energy conservation, or in other specific ways.
2. Document means of coordinating of substitution item with other portions of the work, including work by affected subcontractors.
3. Bear the costs engendered by proposed substitution of:

a) Owner's compensation to the Architect for any required redesign, time spent processing and evaluating the request.
b) Other construction by Owner.
c) Other unanticipated project considerations.

D. Substitutions will not be considered under one or more of the following circumstances:
1. When they are indicated or implied on shop drawing or product data submittals, without having received prior approval.
2. Without a separate written request.
3. When acceptance will require revisions to Contract Documents.

3.4 RESOLUTION

A. Architect may request additional information and documentation prior to rendering a decision. Provide this data in an expeditious manner.

B. Architect will notify Contractor in writing of decision to accept or reject request.
1. Architect's decision following review of proposed substitution will be noted on the submitted form.

3.5 ACCEPTANCE

A. Accepted substitutions change the work of the Project. They will be documented and incorporated into work of the project by Change Order, Construction Change Directive, Architectural Supplementary Instructions, or similar instruments provided for in the Conditions of the Contract.

3.6 CLOSEOUT ACTIVITIES

A. See Section 01 7800 - Closeout Submittals, for closeout submittals.

B. Include completed Substitution Request Forms as part of the Project record. Include both approved and rejected Requests.

3.7 ATTACHMENTS

A. A facsimile of the Substitution Request Forms (During Bidding and During Construction) required to be used on the Project is included after this section.

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.
Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution.

SECTION 01 3000 - ADMINISTRATIVE REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General administrative requirements.

B. Electronic document submittal service.

C. Preconstruction meeting.

D. Progress meetings.

E. Construction progress schedule.

F. Coordination drawings.

G. Submittals for review, information, and project closeout.

H. Submittals for design-related professional design services (delegated design).

I. Number of copies of submittals.

J. Requests for Interpretation (RFI) procedures.

K. Submittal procedures.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures - CT-HPBS: Reporting related to sustainability compliance.

B. Section 01 6000 - Product Requirements: General product requirements.

C. Section 01 7000 - Execution and Closeout Requirements: Additional coordination requirements.

D. Section 01 7800 - Closeout Submittals: Project record documents; operation and maintenance data; warranties and bonds.

1.3 GENERAL ADMINISTRATIVE REQUIREMENTS

A. Comply with requirements of Section 01 7000 - Execution and Closeout Requirements for coordination of execution of administrative tasks with timing of construction activities.

B. Make the following types of submittals to Architect:
   1. Requests for Interpretation (RFI).
   2. Requests for substitution.
   3. Shop drawings, product data, and samples.
   4. Test and inspection reports.

5. Design data.
6. Manufacturer's instructions and field reports.
7. Applications for payment and change order requests.
8. Progress schedules.
9. Coordination drawings.
10. Correction Punch List and Final Correction Punch List for Substantial Completion.
11. Closeout submittals.

1.4 PROJECT COORDINATOR

A. Project Coordinator: Construction Manager.

B. Cooperate with the Project Coordinator in allocation of mobilization areas of site; for field offices and sheds, for building access, traffic, and parking facilities.

C. During construction, coordinate use of site and facilities through the Project Coordinator.

D. Comply with Project Coordinator's procedures for intra-project communications; submittals, reports and records, schedules, coordination drawings, and recommendations; and resolution of ambiguities and conflicts.

E. Comply with instructions of the Project Coordinator for use of temporary utilities and construction facilities. Responsibility for providing temporary utilities and construction facilities is identified in Section 01 1000 - Summary.

F. Coordinate field engineering and layout work under instructions of the Project Coordinator.

G. Make the following types of submittals to Architect through the Project Coordinator:
1. Requests for Interpretation.
2. Requests for substitution.
3. Shop drawings, product data, and samples.
4. Test and inspection reports.
5. Design data.
6. Manufacturer's instructions and field reports.
7. Applications for payment and change order requests.
8. Coordination drawings.
9. Closeout submittals.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 ELECTRONIC DOCUMENT SUBMITTAL SERVICE

A. All documents transmitted for purposes of administration of the contract are to be in electronic (PDF, MS Word, or MS Excel) format, as appropriate to the document, and transmitted via an Internet-based submittal service that receives, logs and stores documents, provides electronic stamping and signatures, and notifies addressees via email.

1. Besides submittals for review, information, and closeout, this procedure applies to Requests for Interpretation (RFIs), progress documentation, contract modification documents (e.g. supplementary instructions, change proposals, change orders), applications for payment, field reports and meeting minutes, Contractor's correction punchlist, and any other document any participant wishes to make part of the project record.
2. Contractor and Architect are required to use this service.
3. It is Contractor's responsibility to submit documents in allowable format.
4. Subcontractors, suppliers, and Architect's consultants will be permitted to use the service at no extra charge.
5. Users of the service need an email address, internet access, and PDF review software that includes ability to mark up and apply electronic stamps (such as Adobe Acrobat, www.adobe.com, or Bluebeam PDF Revu, www.bluebeam.com), unless such software capability is provided by the service provider.
6. Paper document transmittals will not be reviewed; emailed electronic documents will not be reviewed.
7. All other specified submittal and document transmission procedures apply, except that electronic document requirements do not apply to samples or color selection charts.

B. Training: One, one-hour, web-based training session will be arranged for all participants, with representatives of Architect and Contractor participating; further training is the responsibility of the user of the service.

C. Project Closeout: Architect will determine when to terminate the service for the project and is responsible for obtaining archive copies of files for Owner.

3.2 PRECONSTRUCTION MEETING

A. Project Coordinator will schedule a meeting after Notice of Award.

B. Attendance Required:
1. Owner.
2. Architect.
3. Contractor.

C. Agenda:
1. Execution of Owner-Contractor Agreement.
2. Submission of executed bonds and insurance certificates.
3. Distribution of Contract Documents.
4. Submission of list of subcontractors, list of products, schedule of values, and progress schedule.
5. Submission of initial Submittal schedule.
6. Schedule of meetings during construction.
7. Designation of personnel representing the parties to Contract and Architect.
8. Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.
9. Construction facilities, controls and construction aids.
10. Temporary utilities.
11. Contractor's quality control/quality assurance program.
12. Scheduling.

13. Requirements for Substantial Completion.
14. Project Closeout procedures and submittals.

D. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

3.3 PROGRESS MEETINGS

A. Schedule and administer meetings throughout progress of the work at maximum bi-monthly intervals.

B. Make arrangements for meetings, prepare agenda with copies for participants, preside at meetings.

C. Attendance Required:
1. Contractor.
2. Owner.
3. Architect.
4. Contractor's superintendent.
5. Major subcontractors.

D. Agenda:
1. Review minutes of previous meetings.
2. Review of work progress.
3. Field observations, problems, and decisions.
4. Identification of problems that impede, or will impede, planned progress.
5. Review of submittals schedule and status of submittals.
6. Review of RFIs log and status of responses.
7. Maintenance of progress schedule.
8. Corrective measures to regain projected schedules.
9. Planned progress during succeeding work period.
10. Maintenance of quality and work standards.
11. Effect of proposed changes on progress schedule and coordination.
12. Other business relating to work.

E. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

3.4 CONSTRUCTION PROGRESS SCHEDULE

A. Within 10 days after date of the Agreement, submit preliminary schedule.

B. If preliminary schedule requires revision after review, submit revised schedule within 10 days.

C. Within 20 days after review of preliminary schedule, submit draft of proposed complete schedule for review.
1. Include written certification that major contractors have reviewed and accepted proposed schedule.

D. Within 10 days after joint review, submit complete schedule.

E. Submit updated schedule with each Application for Payment.

3.5 COORDINATION DRAWINGS

A. Prepare coordination drawings as required by individual sections and where installation is not completely indicated on shop drawings, where limited space availability requires coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one contractor.
   1. Include project-specific information, shown accurately at a large enough scale to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:
      a) Base preparation of coordination drawings on applicable Drawings and include sections, elevations, and details as required to illustrate relationship of various systems and components.
      b) Coordinate the addition of trade-specific information to coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
      c) Include functional and spatial relationships of components of architectural, structural, civil, plumbing, fire-protection, mechanical, fire-alarm, and electrical systems.
      d) Provide space for routine maintenance and for replacement of components during the life of the installation.
      e) Indicate location and size of access doors required for access to concealed damplers, valves, and other controls.
      f) Illustrate required installation sequences.
      g) Indicate dimensions shown on Drawings. Note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Submit alternative sketches to Architect indicating proposed resolution of such conflicts.
      h) Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Organize coordination drawings in the following manner:
   1. Floor Plans and Reflected Ceiling Plans: Indicate architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical work. Show locations of visible ceiling-mounted devices in relation to acoustical ceiling grid system. Provide section drawings to supplement plan drawings as required to adequately represent the Work.
   2. Plenum Space: Indicate subframing for ceiling support, raised access floor, and wall systems, mechanical and electrical equipment, and related Work. Show location of components within plenums to accommodate layout of light fixtures and other components shown on Drawings. Indicate areas of conflict between light fixtures and other components.
   3. Mechanical Rooms: Submit coordination drawings for mechanical rooms, showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
   4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
   5. Slab Edge and Embedded Items: Show slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.

6. Mechanical and Plumbing Work: Indicate the following:
   a) Sizes and elevations of the bottom of ductwork, piping, and conduit runs. Include insulation, bracing, flanges, and support systems.
   b) Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
   c) Fire-rated enclosures around ductwork.
7. Electrical Work: Indicate the following:
   a) Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.
   b) Locations of light fixtures, exit lights, emergency battery packs, smoke detectors, and other fire-alarm devices.
   c) Location of panel boards, switchboards, switchgear, transformers, busways, generators, and motor-control centers.
   d) Location of pull boxes and junction boxes, dimensioned from column center lines.
8. Fire-Protection System: Indicate the following:
   a) Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

C. Review drawings prior to submission to Architect.

D. Architect will review coordination drawings to confirm that, in general, the Work is being coordinated, but not for the details of the coordination, which are the Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will notify Contractor accordingly, who shall make required modifications and resubmit.

E. Prepare coordination drawing electronic files in accordance with Section 01 3000 - Administrative Requirements.

F. Coordination Digital Data Files: Prepare coordination digital data files in accordance with the following requirements:
1. File Preparation Format:
   a) Same digital data software program, version, and operating system as original Drawings.
2. File Submittal Format: Submit or post coordination drawing files using format same as file preparation format.
3. BIM File Incorporation: Develop and incorporate coordination drawing files into BIM setup for the project.
   a) Perform three-dimensional component conflict analysis as part of preparation of coordination drawings. Resolve components conflicts prior to submittal. Indicate where conflict resolution requires modification of design requirements by Architect.
4. Architect will furnish Contractor one set of digital files of Drawings for use in the preparation of coordination digital files.
   a) Architect makes no representations as to the accuracy or completeness of digital data files as they relate to Drawings.
   b) Digital Data Software Program: Drawings are available in Revit 2023 digital data software program and operating system.
   c) Contractor shall execute a data licensing agreement in the form of Agreement included following this section.

3.6 REQUESTS FOR INTERPRETATION (RFI)

A. Definition: A request seeking one of the following:
   1. An interpretation, amplification, or clarification of some requirement of Contract Documents arising from inability to determine from them the exact material, process, or system to be installed; or when the elements of construction are required to occupy the same space (interference); or when an item of work is described differently at more than one place in Contract Documents.
   2. A resolution to an issue which has arisen due to field conditions and affects design intent.

B. Whenever possible, request clarifications at the next appropriate project progress meeting, with response entered into meeting minutes, rendering unnecessary the issuance of a formal RFI.

C. Preparation: Prepare an RFI immediately upon discovery of a need for interpretation of the Contract Documents. Failure to submit a RFI in a timely manner is not a legitimate cause for claiming additional costs or delays in execution of the work.
   1. Prepare a separate RFI for each specific item.
      a) Review, coordinate, and comment on requests originating with subcontractors and/or materials suppliers.
      b) Do not forward requests which solely require internal coordination between subcontractors.
   2. Prepare in a format and with content acceptable to Owner.
   3. Prepare using software provided by the Electronic Document Submittal Service.
   4. Combine RFI and its attachments into a single electronic file. PDF format is preferred.

D. Reason for the RFI: Prior to initiation of an RFI, carefully study all Contract Documents to confirm that information sufficient for their interpretation is definitely not included.
   1. Include in each request Contractor's signature attesting to good faith effort to determine from Contract Documents information requiring interpretation.
   2. Unacceptable Uses for RFIs: Do not use RFIs to request the following:
      a) Approval of submittals (use procedures specified elsewhere in this section).
      b) Approval of substitutions (see Section - 01 6000 - Product Requirements)
      c) Changes that entail change in Contract Time and Contract Sum (comply with provisions of the Conditions of the Contract).
      d) Different methods of performing work than those indicated in the Contract Drawings and Specifications (comply with provisions of the Conditions of the Contract).
   3. Improper RFIs: Requests not prepared in compliance with requirements of this section, and/or missing key information required to render an actionable response. They will be returned without a response, with an explanatory notation.
   4. Frivolous RFIs: Requests regarding information that is clearly indicated on, or reasonably inferable from, the Contract Documents, with no additional input required to clarify the question. They will be returned without a response, with an explanatory notation.

E. Content: Include identifiers necessary for tracking the status of each RFI, and information necessary to provide an actionable response.
   1. Official Project name and number, and any additional required identifiers established in Contract Documents.
   2. Owner's, Architect's, and Contractor's names.
   3. Discrete and consecutive RFI number, and descriptive subject/title.

4. Issue date, and requested reply date.
5. Reference to particular Contract Document(s) requiring additional information/interpretation. Identify pertinent drawing and detail number and/or specification section number, title, and paragraph(s).
6. Annotations: Field dimensions and/or description of conditions which have engendered the request.
7. Contractor's Suggested Resolution: A written and/or a graphic solution, to scale, is required in cases where clarification of coordination issues is involved, for example; routing, clearances, and/or specific locations of work shown diagrammatically in Contract Documents. If applicable, state the likely impact of the suggested resolution on Contract Time or the Contract Sum.

F. Attachments: Include sketches, coordination drawings, descriptions, photos, submittals, and other information necessary to substantiate the reason for the request.

G. RFI Log: Prepare and maintain a tabular log of RFIs for the duration of the project.
1. Indicate current status of every RFI. Update log promptly and on a regular basis.
2. Note dates of when each request is made, and when a response is received.
3. Highlight items requiring priority or expedited response.
4. Highlight items for which a timely response has not been received to date.
5. Identify and include improper or frivolous RFIs.

H. Review Time: Architect will respond and return RFIs to Contractor within seven calendar days of receipt. For the purpose of establishing the start of the mandated response period, RFIs received after 12:00 noon will be considered as having been received on the following regular working day.

I. Responses: Content of answered RFIs will not constitute in any manner a directive or authorization to perform extra work or delay the project. If in Contractor's belief it is likely to lead to a change to Contract Sum or Contract Time, promptly issue a notice to this effect, and follow up with an appropriate Change Order request to Owner.
1. Response may include a request for additional information, in which case the original RFI will be deemed as having been answered, and an amended one is to be issued forthwith. Identify the amended RFI with an R suffix to the original number.
2. Do not extend applicability of a response to specific item to encompass other similar conditions, unless specifically so noted in the response.
3. Upon receipt of a response, promptly review and distribute it to all affected parties, and update the RFI Log.
4. Notify Architect within seven calendar days if an additional or corrected response is required by submitting an amended version of the original RFI, identified as specified above.

3.7 SUBMITTALS FOR REVIEW

A. When the following are specified in individual sections, submit them for review:
1. Product data.
2. Shop drawings.
3. Samples for selection.
4. Samples for verification.

B. Submit to Architect for review for the limited purpose of checking for compliance with information given and the design concept expressed in Contract Documents.

C. Samples will be reviewed for aesthetic, color, or finish selection.

D. After review, provide copies and distribute in accordance with SUBMITTAL PROCEDURES article below and for record documents purposes described in Section 01 7800 - Closeout Submittals.

3.8 SUBMITTALS FOR INFORMATION

A. When the following are specified in individual sections, submit them for information:
1. Design data.
2. Sustainability design submittals and reports.
3. Certificates.
4. Test reports.
5. Inspection reports.
6. Manufacturer's instructions.
7. Manufacturer's field reports.
8. Other types indicated.

B. Submit for Architect's knowledge as contract administrator or for Owner.

3.9 SUBMITTALS FOR DESIGN-RELATED PROFESSIONAL DESIGN SERVICES (DELEGATED DESIGN)

A. Architect and/or their consultants will review each submittal for general Contract Document conformance; indicate action taken and direction to the Contractor.
1. Architect's "Delegated Design Review Stamp" will be applied to this type of submittal.

B. Delegated Design Review Stamp: Review of calculations and design services provided by the Contractor's Professional Engineer is only for general conformance with the Contract Documents. The Architect and/or Structural Engineer will not review the proposed design and calculations in detail, since the design and calculations for this element are solely the responsibility of the Contractor and the Contractor's Professional Engineer.
1. The Contractor and the Contractor's Professional Engineer shall remain responsible for design and code compliance.
2. Annotations shall not be construed as relieving the Contractor or the Contractor's Professional Engineer from compliance with the project's Contract Documents, including applicable codes, laws and regulations.
3. The Design Review performed by the Architect and/or Structural Engineer shall not be interpreted as an independent confirmation of attached calculations, as this confirmation is the responsibility of the Contractor's Professional Engineer.
4. The Contractor shall confirm and correlate quantities, dimensions, and existing conditions, and shall select fabrication processes and techniques of construction, coordinate their work with that of other trades, and perform their work in a safe and satisfactory manner.
5. PDF Submittals: Architect will indicate, via markup on each submittal, the appropriate action as follows:
6. Submittals by Web-Based Project Software: Architect will indicate, on project software website, the appropriate action, as follows:

3.10 SUBMITTALS FOR PROJECT CLOSEOUT

A. Submit Correction Punch List for Substantial Completion.

B. Submit Final Correction Punch List for Substantial Completion.

C. When the following are specified in individual sections, submit them at project closeout in compliance with requirements of Section 01 7800 - Closeout Submittals:
   1. Project record documents.
   2. Operation and maintenance data.
   3. Warranties.
   4. Bonds.
   5. Other types as indicated.

D. Submit for Owner's benefit during and after project completion.

3.11 NUMBER OF COPIES OF SUBMITTALS

A. Electronic Documents: Submit one electronic copy in PDF format; an electronically-marked up file will be returned. Create PDFs at native size and right-side up; illegible files will be rejected.

B. Samples: Submit the number specified in individual specification sections; one of which will be retained by Architect.
   1. After review, produce duplicates.
   2. Retained samples will not be returned to Contractor unless specifically so stated.

3.12 SUBMITTAL PROCEDURES

A. General Requirements:
   1. Use a single transmittal for related items.
   2. Submit all product data required for each specification section as one submittal. Piecemeal submittals will not be reviewed.
   3. Identify each item using the specification section number followed by a unique sequential two-digit submittal identifier and single-digit submittal revision number. For example, 04-2100-01-0, where "04-2100" is the specification section number, "01" is the submittal identifier, and "0" is the revision number. The first submittal would use Revision Number "0".
   4. Identify: Project; Contractor; subcontractor or supplier; pertinent drawing and detail number; and specification section number and article/paragraph, as appropriate on each copy.
   5. Apply Contractor's stamp, signed or initialed certifying that review, approval, verification of products required, field dimensions, adjacent construction work, and coordination of information is in accordance with the requirements of the work and Contract Documents.
   6. Deliver each submittal on date noted in submittal schedule, unless an earlier date has been agreed to by all affected parties, and is of the benefit to the project.
      a) Upload submittals in electronic form to Electronic Document Submittal Service website.
   7. Schedule submittals to expedite the Project, and coordinate submission of related items.
      a) For each submittal for review, allow 15 days excluding delivery time to and from the Contractor.

b) For sequential reviews involving Architect's consultants, Owner, or another affected party, allow an additional 7 days.
c) Resubmittal Review: Allow 15 days for review of each resubmittal.
d) For sequential reviews involving approval from authorities having jurisdiction (AHJ), in addition to Architect's approval, allow an additional 30 days.
e) No extension of Contract Time will be authorized because of failure to transmit submittals to the Architect sufficiently in advance of the Work to permit processing.

8. Identify variations from Contract Documents and product or system limitations that may be detrimental to successful performance of the completed work.
9. When revised for resubmission, identify all changes made since previous submission.
10. Incomplete submittals will not be reviewed, unless they are partial submittals for distinct portion(s) of the work, and have received prior approval for their use.
11. Submittals received from sources other than Contractor will be returned without review.
12. Submittals not requested will be recognized, and will be returned "Not Reviewed",

B. Product Data Procedures:
1. Submit only information required by individual specification sections.
2. Collect required information into a single submittal.
3. Do not submit (Material) Safety Data Sheets for materials or products.

C. Shop Drawing Procedures:
1. Prepare accurate, drawn-to-scale, original shop drawing documentation by interpreting Contract Documents and coordinating related work.
2. Do not reproduce Contract Documents to create shop drawings.
3. Generic, non-project-specific information submitted as shop drawings do not meet the requirements for shop drawings.

D. Samples Procedures:
1. Transmit related items together as single package.
2. Identify each item to allow review for applicability in relation to shop drawings showing installation locations.

3.13 SUBMITTAL REVIEW

A. Submittals for Review: Architect and Construction Manager will review each submittal, and approve, or take other appropriate action.

B. Submittals for Information: Architect will acknowledge receipt and review. See below for actions to be taken.

C. Architect's actions will be reflected by marking each returned submittal using virtual stamp on electronic submittals.
1. Notations may be made directly on submitted items and/or listed on appended Submittal Review cover sheet.

D. Submittals for Review: PDF Submittals; Architect's and consultants' actions on items submitted for review:
1. Actions taken by indication on PDF submittals have the following meanings:
a) "APPROVED": Final unrestricted release; Work covered by the submittal may proceed provided it complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.

b) "APPROVED AS CORRECTED": Final-but-restricted-release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and it complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.
c) "APPROVED AS CORRECTED - RESUBMIT FOR RECORD WITH ALL CORRECTIONS INCORPORATED": Final-but-restricted-release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and it complies with the requirements of the Contract Documents. Submit corrected copies for distribution to all parties. Payment for the Work depends on that compliance.
d) "NOT APPROVED": Submittal is fundamentally not in compliance. No corrections or notations will be made. Do not proceed with the Work covered by the submittal in any aspect. Do not use or allow others to use these submittals. Discard submittal and prepare a new submittal immediately.
e) "NO ACTION REQUIRED": Submittal either not required for this item or provided for information or record purposes only. Follow Contract requirements in all cases.

E. Submittals for Information: Architect's and consultants' actions on items submitted for information:
1. Items for which no action was taken:
a) "Received" - to notify the Contractor that the submittal has been received for record only.
2. Items for which action was taken:
a) "Reviewed" - no further action is required from Contractor.

F. Submittals for Design-Related Professional Design Services (Delegated Design): PDF Submittals; Architect's and consultants' actions on items submitted for delegated design:
1. Actions taken by indication on PDF Submittals; have the following meanings:
a) "SEE COMMENTS": Final-but-restricted release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.
b) "NO COMMENTS": Final unrestricted release; Work covered by the submittal may proceed provided it complies with the requirements of the Contract Documents. Payment for the Work depends on that compliance.
c) "NO ACTION REQUIRED": Submittal either not required for this item or provided for information or record purposes only. Follow Contract requirements in all cases.
d) "REVISE AND RESUBMIT": Do not proceed with the Work covered by the submittal, including purchasing, fabrication, delivery, or other activity for the product submitted. Revise or prepare a new submittal according to Architect’s notations and corrections.
e) "RESUBMIT FOR RECORD WITH ALL CORRECTIONS INCORPORATED": Final-but-restricted-release; Work covered by the submittal may proceed provided it complies with notations or corrections on the submittal and it complies with the requirements of the Contract Documents. Submit corrected copies for distribution to all parties. Payment for the Work depends on that compliance.

END OF SECTION 01 3000

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

Electronic File Transfer Agreement

Dear: {Contractor/Client/Consultant name}:

At your request, The S/L/A/M Collaborative, Inc. ("SLAM") or S/L/A/M Architects, Landscape Architects & Engineers, P.C ("SLAM") will provide electronic files for your convenience and use in the preparation of shop drawings related to *(name of project)*, subject to the following terms and conditions:

We make no representation as to the compatibility of these files with your hardware or your software.

Data contained on these electronic files are part of our instruments of service and shall not be used by you for any purpose other than as a convenience and for no other use other than specifically for the referenced project. Any other use or reuse will be at your sole risk and without liability or legal exposure to us. You agree to make no claim and hereby waive, to the fullest extent permitted by law, any claim or cause of action of any nature against us, our officers, directors, employees, agents or consultants that may arise out of or in connection with your use of the electronic files.

Furthermore, you shall, to the fullest extent permitted by law, indemnify and hold us harmless against all damages, liabilities or costs, including reasonable attorneys' fees and defense costs, arising out of or resulting from your use of the electronic files.

These electronic files are not Construction Documents. Differences may exist between these electronic files and corresponding hard-copy Construction Documents. We make no representation regarding the accuracy or completeness of the electronic files you receive. In the event a conflict arises between the signed or sealed hard-copy Construction Documents prepared by us and the electronic files, the signed or sealed hard-copy Construction Documents shall govern. You are responsible for determining if any conflict exists. By your use of these electronic files, you are not relieved of your duty to fully comply with the Contract Documents, including, and without limitations, the need to check, confirm and coordinate all dimensions and details, take field measurements, verify field conditions and coordinate your work with that of the contractors and subcontractors for the project.

Because information presented on the electronic files can be modified, unintentionally or otherwise, we reserve the right to remove all indicia of ownership and / or involvement from each electronic display.

UNDER NO CIRCUMSTANCES SHALL DELIVERY OF THE ELECTRONIC FILES FOR USE BY YOU BE DEEMED A SALE BY US, AND WE MAKE NO WARRANTIES, EITHER EXPRESS OR IMPLIED, OF MERCHANTABILITY AND FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL WE BE LIABLE FOR ANY LOSS OR PROFIT OR ANY CONSEQUENTIAL DAMAGES AS A RESULT OF YOUR USE OR REUSE OF THESE ELECTRONIC FILES.

AGREED TO BY:

BIM Access License Agreement

This Agreement is made by and between The S/L/A/M Collaborative, Inc. ("S/L/A/M") and _____ ("Licensee") as of the _____ day of _____ in the year Two Thousand _____, and shall govern the Licensee's use of the Building Information Model prepared by S/L/A/M for the ***Central Middle School*** Project ("Project"), located at ***Greenwich, CT.***
For purposes of this Agreement, the Building Information Model(s) is defined as a database that can be utilized to express a digital representation of the physical and functional characteristics of the Project and is referred to in this Agreement as the "Model(s)," which term may be used herein to describe a Model Element, a single Model or multiple Models used in the aggregate. "Building Information Modeling" means the process and technology used to create the Model.

The S/L/A/M Collaborative, Inc. ("S/L/A/M") hereby provides a non-exclusive license to the Licensee for the duration of the Project for access to the Models for the Licensee's use for construction coordination and modeling of construction related activities for the Project, subject to the following terms and conditions:

S/L/A/M will furnish the Licensee with access to use the following Models for the Project in exchange for the associated license fees identified below:

Fee waived

The Model(s) that are the subject of this Agreement are compatible with BIM file Revit 2014 ***[Enter software version]*** Format, and the Licensee is responsible for obtaining the rights to such hardware and software to assure the compatibility of these Models with its own hardware and software beyond the specified release of the referenced software and hardware specifications.

The Licensee, in its activities of construction coordination and modeling of construction related activities, is permitted to share the Model(s) with trade contractors, subcontractors and vendors (collectively, "Third Parties") with whom the Licensee is in privity of contract for the Project. In such case, the Licensee shall require any and all such Third Parties to comply with the terms of this Agreement without exception, and the Licensee shall indemnify S/L/A/M against any claims, actions or proceedings initiated by any of those Third Parties.

Data contained in the Model(s) is part of S/L/A/M's Instruments of Service and shall not be used by Licensee or anyone else receiving these Model(s) through or from the Licensee for any purpose other than use in construction coordination and modeling of construction related activities specific to and solely for the referenced Project. Any other use or reuse of the Model(s) by the Licensee or by any other party receiving the Model(s) from the Licensee shall be at the Licensee's sole risk and without any liability or legal exposure whatsoever to S/L/A/M. The Licensee shall make no claim and hereby waives, to the fullest extent permitted by law, any claim or cause of action of any nature against S/L/A/M, its officers, directors, employees, agents or consultants that may arise out of or in connection with the use of the Model(s) by the Licensee or by any other party receiving the Model(s) from the Licensee.

Furthermore, the Licensee shall, to the fullest extent permitted by law, indemnify and hold harmless S/L/A/M, and its officers, directors, employees, agents or consultants against and from all damages, liabilities or costs, including reasonable attorneys' fees and defense costs, arising out of or resulting from the use of the Model(s) by the Licensee or by any other party receiving the Model(s) from the Licensee.

The Licensee, by executing this Agreement, hereby acknowledges and agrees that the Model(s) are not Construction Documents, and that differences may exist between the Model(s) and the hard-

copy Construction Documents for the Project. Due to the inherent nature of how the Models are designed and created, often times requiring the use of multiple and different software packages, S/L/A/M makes no representation regarding the accuracy or completeness of the Model(s) that are the subject of this Agreement. In the event of any conflict or inconsistency in the information between the signed or sealed hard-copy Construction Documents and the Model(s,) the signed or sealed hard-copy Construction Documents shall prevail. The Licensee is responsible for determining if any such conflict or inconsistency exists. By its use of the Models, the Licensee and any other of its Third Parties are not relieved of their duty to fully comply with the requirements of the Contract Documents, including, and without limitations, the need to check, confirm and coordinate all dimensions and details, take field measurements, verify field conditions and coordinate the Licensee's or other Third Party's work with that of the other trades, subcontractors, vendors and materialmen, whether or not any such party is in privity of contract with the Licensee or the Owner for the Project.

The Licensee acknowledges and agrees that this Agreement, and the Licensee's use of the Model(s) as set forth herein, do not affect the Licensee's obligations, duties and responsibilities including, but not limited to, construction means, methods, sequence, techniques or coordinating all portions of the Work of construction in accordance with the Contract Documents and any health or safety precautions required by any regulatory agencies.

Because information presented in the Model(s) can be modified, unintentionally or otherwise, S/L/A/M reserves the right, but is not required, to remove all indicia of ownership from the Models.

UNDER NO CIRCUMSTANCES SHALL DELIVERY OF THE MODELS FOR USE BY THE LICENSEE BE DEEMED A SALE BY S/L/A/M, AND S/L/A/M MAKES NO WARRANTIES OR REPRESENTATIONS, EITHER EXPRESS OR IMPLIED, OF MERCHANTABILITY AND FITNESS FOR ANY PARTICULAR PURPOSE. IN NO EVENT SHALL S/L/A/M BE LIABLE FOR ANY LOSS OF PROFIT OR ANY CONSEQUENTIAL DAMAGES AS A RESULT OF THE LICENSEE'S OR ANY THIRD PARTY'S USE OR REUSE OF THE MODEL(S).

Any claim, dispute or other matter in question arising out of or related to this Agreement shall be subject to mediation as a condition precedent to binding arbitration by either party. Mediation and arbitration shall be conducted in accordance with the Construction Industry Mediation and Arbitration Rules of the American Arbitration Association currently in effect, but the parties may agree to the use of an independent mediator and alternate dispute resolution provider. Any mediation or arbitration proceeding arising out of or relating to this Agreement shall held in the greater Hartford region as mutually agreed between the parties.

This Agreement shall be governed by and construed in accordance with the laws of the State of Connecticut.

Both parties to this Agreement acknowledge and agree that this Agreement has been freely entered into, and that, in any dispute over the meaning, interpretation, validity or enforceability of this Agreement or any of its terms or conditions, there shall be no presumption whatsoever against either party by virtue of that party having drafted this Agreement of any portion hereof.

This Agreement may only be modified by a written amendment that is agreed to, and signed by, both parties to this Agreement.

This Agreement is entered into as of the day and year first written above.

The S/L/A/M Collaborative, Inc.

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 3566.42 - SUSTAINABILITY COMPLIANCE PROCEDURES - CT HPBS

PART 1 GENERAL

1.1 PROJECT APPROACH

A. This project is required to comply with the State of Connecticut High Performance (Green) Building Standards for State Agency Buildings and School Buildings (abbreviated here to CT-HPBS).

B. This section includes general requirements and procedures for compliance with the CT-HPBS, which are based on certain U.S. Green Building Council (USGBC) LEED prerequisites and credits needed to obtain LEED Silver certification per the USGBC's "LEED 2009 for Schools - New Construction and Major Renovations".
   1. It has been determined that the project shall not be submitted to obtain LEED certification. However, the requirements as specified in this Section and other Sections in Divisions 01 through 33 shall be followed to assure compliance with CT-HPBS.
   2. Other LEED prerequisites and credits needed to obtain LEED certification and /or CT-HPBS compliance are dependent on product selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
   3. Additional LEED prerequisites and credits needed to obtain the indicated LEED certification and/or CT-HPBS compliance are dependent on the Architect's design and other aspects of the project that are not part of the work of the Contract.

C. Contractor is not responsible for the application for Sustainability certification, nor for determination of methods of achieving Sustainability credits unless specifically so indicated.

D. Many of the Sustainability credits can be achieved only through intelligent design of the project and are beyond the control of the Contractor. However, certain credits relate to the products and procedures used for construction. Therefore, full cooperation of the Contractor and subcontractors is essential to achieving final certification goal, and they must familiarize themselves with the relevant requirements, and provide the necessary information and instructions to product suppliers and installers.

E. Since Contractor and subcontractors may not be familiar with detailed CT-HPBS sustainability procedures, this section includes a list of other specifications sections that contain related requirements for products and procedures necessary for achievement of targeted Sustainability certification level.
   1. Achievement of many prerequisites and credits is dependent on proper performance by Contractor and subcontractors, using specific required project management and work execution means and methods.
   2. Achievement of other credits involves quantifying percentages of installed products by weight and cost; these require careful recordkeeping and reporting by the Contractor.

F. A copy of the CT HPBS Compliance Checklist is attached at the end of this section, for information only.

1.2 SECTION INCLUDES

A. General requirements and procedures for compliance with State of Connecticut High Performance (Green) Building Standards for State Agency Buildings and School Buildings (abbreviated here to CT HPBS)

1.3 RELATED REQUIREMENTS

A. General and Technical Sections: Sections that include requirements intended to achieve Sustainability Credits include, but are not limited to, the following:
   1. Divisions 01 through 33 Sections for CT HPBS requirements specific to the work of those sections. Those requirements may or may not include reerenes to LEED.

B. DIVISION 01 - GENERAL REQUIREMENTS
   1. Section 01 5719 - Temporary Environmental Controls.
      a) Basic construction procedures.
      b) Contractor's IAQ management plan and construction procedures.
      c) Building flush out is required, but at Contractor's option, may be performed before occupancy or partially after occupancy.
   2. Section 01 6000 - Product Requirements.
      a) Definitions of:
         1) Reused Products.
         2) Recycled Content.
         3) Bio-Based content.
         4) Sustainable forestry certified Wood.
         5) Source Location.
         6) Environmental Product Declarations.
         7) Health Product Declarations.
         8) Cradle-to-Cradle.
         9) GreenScreen Chemical Hazard Analysis.
         10) Manufacturer's Inventory of Product Content.
      b) Regionally-sourced products.
         1) Contractor is not required to provide any particular minimum percentage of regionally-sourced products; however, Contractor is required to collect and submit information necessary to determine whether the material is eligible for application of cost multiplier for products sourced within 100 miles of the project site.
   3. Section 01 6116 - Volatile Organic Compound (VOC) Content Restrictions: List of indoor-emissions-restricted products and VOC-content-restricted products, requirements, evidence required, and reporting.
   4. Section 01 7000 - Execution and Closeout Requirements.
      a) Dust control and basic surface drainage.
      b) HEPA vacuuming of all carpet and soft surfaces.
   5. Section 01 7419 - Construction Waste Management and Disposal: Requirements for landfill diversion and reporting.
   6. Section 01 7800 - Closeout Submittals: Maintenance and operation manuals for commissioned systems.
   7. Section 01 9113 - General Commissioning Requirements.

C. DIVISION 03 - CONCRETE
   1. Section 03 3000 - Cast-in-Place Concrete: Replacement of Portland cement, to some extent, with recycled content.

D. DIVISION 06 - WOOD, PLASTICS, AND COMPOSITES
   1. Note: Definition of sustainable forestry certified wood is in Section 01 6000.
   2. Section 06 1000 - Rough Carpentry: Requirement to use sustainable forestry certified wood.
   3. Section 06 2000 - Finish Carpentry: Requirement to use sustainable forestry certified wood.
   4. Section 06 4100 - Architectural Wood Casework: Requirement to use sustainable forestry certified wood.
   5. Section 06 4200 - Wood Paneling: Requirement to use sustainable forestry certified wood.

E. DIVISION 07 - THERMAL AND MOISTURE PROTECTION
   1. Section 07 5423 - Thermoplastic Polyolefin (TPO) Roofing.
      a) Unballasted white or light-colored roofing with minimum SRI specified.
   2. Section 07 8400 - Firestopping.
      a) Emissions-compliant firestopping sealants.
   3. Section 07 9200 - Joint Sealants.
      a) Emissions-compliant sealants.

F. DIVISION 08 - OPENINGS
   1. Section 08 1416 - Flush Wood Doors: For sustainable forestry certified wood.
   2. Section 08 4313 - Aluminum-Framed Storefronts: For daylighting and views.
   3. Section 08 4413 - Glazed Aluminum Curtain Walls: For daylighting and views.
   4. Section 08 6300 - Metal-Framed Skylights: For daylighting.
   5. Section 08 8000 - Glazing: For daylighting and views.

G. DIVISION 09 - FINISHES
   1. Section 09 2116 - Gypsum Board Assemblies: Deck-to-deck sealed partitions around rooms where hazardous gases or chemicals are present or used.
   2. Section 09 5100 - Acoustical Ceilings: Low-Emitting Materials.
   3. Section 09 6429 - Wood Strip and Plank Flooring.
      a) Sustainable forestry certified wood.
      b) VOC-restrictions for flooring.
      c) VOC-restrictions for adhesives.
   4. Section 09 6500 - Resilient Flooring: VOC restrictions.
   5. Section 09 6813 - Tile Carpeting: Carpet tile complying with CRI Green Label Plus requirements.
   6. Section 09 9123 - Interior Painting: Emissions-compliant interior opaque paints and coatings.

H. DIVISION 10 - SPECIALTIES

I. DIVISION 31 - EARTHWORK
   1. 31 2500 - Soil Erosion and Sediment Controls.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Conference: Conduct conference at project site. Review CT-HPBS requirements and action plans for compliance with requirements.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for additional submittal procedures requirements.

B. General: Submit sustainable design submittals required by other Sections.

C. Sustainable design submittals are in addition to other submittals.

PART 2 PRODUCTS

2.1 MATERIALS AND PRODUCTS

A. Provide products and procedures necessary to comply with CT-HPBS requirements indicated as Contractor's responsibility. Although other sections may specify some requirements that contribute to these CT-HPBS requirements, Contractor shall provide additional materials and procedures necessary to comply with the requirements indicated.

B. Recycled Content: Building materials shall have recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content for Project constitutes a minimum of 20 percent of cost of materials used for Project.

C. Local Materials: Use a minimum of 20 percent of building materials extracted from or manufactured within a 500-mile radius of the building site.

2.2 LOW-EMITTING MATERIALS

A. The following materials shall be certified for low emissions of volatile organic compounds (VOCs) using specifications or certification programs listed in the Connecticut Building Standard Guidelines Compliance Manual for High Performance Buildings.
   1. 50% of adhesives and sealants used in the interior of the building.
   2. Acoustic ceiling tiles and wall panels.
   3. Interior paints.
   4. Wall coverings.
   5. Carpet systems and associated adhesives.
   6. Composite and solid wood flooring.
   7. Resilient flooring and associated adhesives.

B. Provide material and products certified as low-VOC-emitting by one of the following organizations:
   1. Scientific Certification Systems - Indoor Advantage - Gold.
   2. GREENGUARD Certification Program.
   3. Carpet and Rug Institute's Green Label/Green Label Plus.
   4. Scientific Certification Systems Floorscore (for flooring products)

5. Green Seal-GS-11 (paints and coatings).
6. Green Seal-GS-36 (adhesives and sealants).
7. If any paints, coatings, adhesives, or sealants are not certified through any of the above organizations, the product must meet or exceeed the requirements of the South Coast Air Quality Management Distric (SCAQMD) Rule 1113 - for paints and coatings - or Rule 1168 - for adhesives and sealants. Supporting documentation must be provided to show the products meet those rules.

C. Composite Wood and Agrifiber Products: All composite wood and agrifiber products used within the shell of the building shall meet the California Department of Health Services *Standard Practice for the Testing of Volatile Organic Emssions from Various Sources Using Small Scale Environmental Chambers*, including 2004 Addenda. Downloadable version available at http://www.cal-iaq.org/VOC/.
   1. Alternative Compliance: Composite wood and agrifiber products must be documented not to contain added urea-formaldehyde resins. Adhesives used to fabricate wood and agrifiber assemblies on-site must be free of added urea-formaldehyde resins.
   2. Applicable products include particleboard, medium-density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores.

2.3 ENERGY STAR PRODUCTS

A. Energy consuming products installed in the building shall be ENERGY STAR compliant if the product has an ENERGY STAR specification.

PART 3 EXECUTION

3.1 PROCEDURES

A. General: Conduct project management and construction operations in a manner consistent with, and in support of successful achievement of Owner's targeted compliance level.
   1. Collect and report the quantities, costs, weights, volumes and/or sourcing information for materials and products noted.
      a) Collect information for the volume used for following products:
         1) Interior paints and coatings applied on site.
         2) Interior adhesives and sealants applied on site.
   2. Collect VOC and other emissions information for:
      a) Interior paints and coatings applied on site. Calculated by volume.
      b) Interior adhesives and sealants applied on site (including flooring adhesive). Calculated by volume.
      c) Composite Wood. 100 percent not covered by other product categories.
      d) Furniture (include in calculations if part of scope of work). Calculated by cost.

B. Construction Waste Management and Disposal: Implement approved waste management plan during the entire duration of the Contract.

C. Commissioning Authority Activities: Cooperate with Commissioning Authority to coordinate construction and closeout activities scheduling.

3.2 SMOKING POLICY

A. General: Smoking policy on the project site is implemented for the following reasons:
   1. As a mandatory requirement for CT-HPBS compliance.
   2. Protection and promotion of health of all persons on the project site.

B. Smoking is not permitted anywhere on project site.

3.3 CONSTRUCTION WASTE MANAGEMENT

A. Comply with applicable requirements of Section 01 7419 - Construction Waste Management and Disposal.
   1. Project Sustainability Goal: Recycle or salavage at least 75 percent of non-hazardous construction and demolition debris.

END OF SECTION 01 3566.42

Indoor Air Quality Field Report

Pollutant	Plan	Compliant	Comments
Smoking	Signage posted in building to prohibit any smoking		
Daily Cleanup	All debris removed at the end of each day		
Trash	Use of mobile trash bins in the building		
Electrical Cords	Electrical cords organized and out of walking paths		
Cut Rooms/Areas	Contractors protecting floor or using collection pans to prevent oils from penetrating and staining floors		

Material Storage

Paint and Cleaning Supplies	Material is kept outside or in a contained area vented directly to the outside		
New porous material delivery (i.e. drywall, acoustical tile, carpet, etc	Materials not delivered into the space when VOCs or moisture is present. If moisture is present materials will be blocked off the ground at least 1.5" and covered with a breathable waterproof		
Mechanical Room	No material stored in mechanical rooms		
Other Material Deliveries	All new material delivered into the conditioned space, blocked off the floor, covered to protect from dust, VOCs, and moisture		

Construction Operations

Construction Dust	Walk-off mats provided at all egress points to areas receiving finished flooring		
Construction Dirt	Boot scrape provided at all exterior entrances to building		
Liquid Spills	Spills cleaned up immediately and damaged materials replaced		
Concrete Block Sawing	Water used to cut block		
Drywall Cutting	Rotocut saws used with vacuum attachments or dust producing area is isolated & workers using PPE		
Drywall Sanding	Vacuum sanders used and workers using PPE		
Wood Saws	Work performed outside or vacuum attachments used		
Drilling	Vacuum attachments used or wetting and PPE when necessary		
Gas Powered Equipment	No gas or other fume producing equipment used in the building after enclosure, unless it can be vented directly		

Emissions Control	No idling policy indoors or outside. Prevent exhaust fumes from idling vehicles, equipment, or fossil fueled tools from entering the building		

Construction Byproducts

Drywall Dust	All workers in exposed areas wearing masks. Unprotected workers protected via dust partitioning or scheduled to work different hours		
Construction Dust	Work area swept daily with environmentally friendly sweeping		
Soldering & Welding	Area vented directly to the outside or smoke eaters used, and PPE provided to workers		
Isolating Areas	Contamination of other spaces prevented, whether they are finished or not. Seal doorways, windows, or tent off area as needed using temporary barriers, such as plastic separations		
Depressurized Areas	Allow differential between construction areas and clean areas. Exhaust to the outdoors using 100% outdoor air, if		

HVAC Installation and Operation

All Delivered Ductwork	All ductwork and associated elbows and fittings delivered to the jobsite sealed		
Insulated Ductwork	If delivered into open building, cap all ductwork and waterproof seals. During installation waterproof joints and capping at the end of each workday.		
During Ductwork Installation	All ductwork and HVAC equipment openings covered at the end of the day		
During HVAC Operation	Temporary filtration media with a MERV of at least 8 installed at all intake openings		
Immediately Before Occupancy	All HVAC equipment filters replaced with new

SECTION 01 3573 - DELEGATED DESIGN PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Summary of Delegated Design portion of Work.

B. Permitting for Delegated Design portion of Work.

C. Delegated Design submittals.

D. Coordinate and assume full responsibility for design, engineering, submittals, fabrication, transportation, and installation of this work.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures, project meetings, progress schedules and documentation, reports, coordination.

B. Section 01 4000 - Quality Requirements: Procedures for testing, inspection, mock-ups, reports, certificates; use of reference standards.

C. Section 01 4533 - Code-Required Special Inspections and Procedures.

D. Section 01 6000 - Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

E. Section 01 7000 - Execution and Closeout Requirements: Examination, preparation, and general installation procedures; preinstallation meetings; cutting and patching; cleaning and protection; starting of systems; demonstration and instruction; closeout procedures except payment procedures; requirements for alterations work.

F. Section 01 7800 - Closeout Submittals: Project record documents, operation and maintenance (O&M) data, warranties and bonds.

1.3 DEFINITIONS

A. Delegated Design: Professional design service or certification specifically required of the Contractor in the specifications.

B. AHJ: Authorities Having Jurisdiction, defined in AIA Document A201.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual specification sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.

C. Preliminary Design: Submit drawings and product data that describe Contractor's design prior to performing engineering calculations and final drawings.
   1. Architect will evaluate proposed design and comment on conformance with intent of Contract Documents.
   2. Preliminary review is for aesthetic and general function concerns and will not constitute approval of engineering.
   3. Purpose of this submittal is to avoid engineering and detailing an unacceptable proposal.

D. Final Design: Submit drawings, product data and engineering calculations that describe Contractor's final design.

E. Permit Review: Submit Delegated Design documents to AHJ for review and approval as a Deferred Submittal. Architect will deliver submittal to the AHJ and be the main point of contact with the AHJ.
   1. Review by Architect or Architect's consultant prior to submittal to the AHJ is required. Allow adequate time for Architect's review as described in Section 01 3000 - Administrative Requirements.
   2. Make corrections noted by Architect.
   3. Obtain permits prior to executing work component.
   4. Comply with AHJ requirements.
   5. Execute corrections to Delegated Design work required by AHJ at no cost to Owner and prior to Substantial Completion.
      a) Notify Architect of changes required by AHJ as soon as they are known.
   6. Include design criteria, design assumptions, structural calculations, fabrication, and construction details, required clearances, and interface requirements.
      a) Delegated Design drawings are in addition to shop drawings.
   7. Affix Design Professional's State License seal on submittals.

F. Engineer's qualifications.

G. Product Data, Shop Drawings and Samples: Comply with requirements in Section 01 3000 - Administrative Requirements for each product of Delegated Design portion of work. Product submittals are in addition to submittals for permit and design data.

H. Erection Drawings: Indicate Connections of steel assemblies.

I. Designer's Qualification Statement.

J. Manufacturer's Qualification Statement.

K. Installer's Qualification Statement.

L. Maintenance Contracts.

1.5 QUALITY ASSURANCE

A. Engineer Qualifications: Perform design under direct supervision of a Professional Engineer experienced in providing engineering services of the find indicated and licensed in the State in which the Project is located.

B. Design requirements specific to Delegated Design portions of the Work are indicated on Drawings and in sections that specify the component.

C. Pre-Submittal Meeting: Contractor shall meet with Architect, consultant, and Delegated Designer to discuss requirements of work-portion, submittals, scheduling, and sequencing prior to start of Delegated Design.

1.6 DELEGATED DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
   1. If criteria indicated are insufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated Design Services Certification: In addition to shop drawings, product data, and other required submittals, submit digitally signed PDF file and three paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.
   1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

C. Schedule design process and submittals required for Delegated Design portions to fit within construction schedule.

D. Allow adequate time for AHJ review. Contact AHJ for time estimate and coordination of schedule.

E. Architect's approval of final design is required prior to submittal to the AHJ. Allow time specified in Section 01 3000 - Administrative Requirements for Architect's review prior to submittal to the AHJ.

F. Provide complete, operational systems that perform their intended use.

G. Engineer Delegated Design portions of the Work for gravity, lateral, and seismic loads.
   1. Load criteria is indicated on the Drawings and in the specific product sections.
   2. Indicate reactions to structure.

H. Execute the design intent as indicated on the Drawings and in the specific product sections.

I. Obtain permits and inspections and pay fees required by the AHJ.

J. The Owner will not pay for progress delays, additional Work, additional products, restocking, or re-working required by Contractor's failure to coordinate Delegated Design work with other project work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 SCHEDULE OF DELEGATED DESIGN SPECIFICATION SECTIONS

A. Section 04 2000 - Unit Masonry: Engineered design of anchors for wide wall cavities.

B. Section 05 1200 - Structural Steel Framing: Structural steel connections designed by steel fabricator.

C. Section 05 2100 - Steel Joist Framing.

D. Section 05 4000 - Cold-Formed Metal Framing: Exterior wall stud design and cantilevered partial wall support systems.

E. Section 05 5000 - Metal Fabrications.

F. Section 05 5100 - Metal Stairs.

G. Section 05 7000 - Decorative Metal Railings.

H. Section 05 7100 - Monumental Stairs.

I. Section 07 4213.23 - Metal Composite Material Wall Panels: Cladding support system.

J. Section 07 4646 - Fiber Cement Wall Panels: Cladding support system.

K. Section 08 4413 - Aluminum Storefronts.

L. Section 08 4413 - Glazed Aluminum Curtain Walls.

M. Section 08 6300 - Metal-Framed Skylights.

N. Section 08 9200 - Louvered Equipment Enclosures.

O. Section 10 7516 - Ground Set Flagpoles.

P. Section 11 6833 - Athletic Field Equipment.

Q. Section 12 6613 - Telescoping Bleachers; Certification of design by professional engineer.

R. Section 12 9300 - Site Furnishings.

S. Fire Protection Sections 21 0400, 21 0516, 21 0548, 21 1313, and 21 3000.

T. Section 22 0548 - Vibration and Seismic Controls for Plumbing Piping and Equipment.

U. Section 23 0529 - Hangers and Supports for HVAC Piping, Ductwork, and Equipment.

V. Section 23 0548 - Vibration and Seismic Controls for HVAC Piping and Equipment.

W. Section 23 0573 - Overcurrent Protection Device Coordination Study

X. Section 26 4113 - Lightning Protection for Structures.

Y. Section 27 4100 - Speaker and Electric Rigging.

Z. Section 28 5319 - Distributed Antenna System.

AA. Section 32 3118 - Metal Fences and Gates.

BB. Secton 32 3223 - Segmental Retaining Walls.

CC. Section 32 8423 - Irrigation Systems.

END OF SECTION 01 3573

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 4000 - QUALITY REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Submittals.

B. Quality assurance.

C. Testing and inspection agencies and services.

D. Contractor's construction-related professional design services.

E. Contractor's design-related professional design services.

F. Control of installation.

G. Mock-ups.

H. Tolerances.

I. Manufacturers' field services.

J. Defect Assessment.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 4219 - Reference Standards.

C. Section 01 6000 - Product Requirements: Requirements for material and product quality.

1.3 REFERENCE STANDARDS

A. IAS AC89 - Accreditation Criteria for Testing Laboratories; 2018.

1.4 DEFINITIONS

A. Contractor's Professional Design Services: Design of some aspect or portion of the project by party other than the design professional of record. Provide these services as part of the Contract for Construction.
   1. Design Services Types Required:
      a) Construction-Related: Services Contractor needs to provide in order to carry out the Contractor’s sole responsibilities for construction means, methods, techniques, sequences, and procedures.
      b) Design-Related: Design services explicitly required to be performed by another design professional due to highly-technical and/or specialized nature of a portion of the project. Services primarily involve engineering analysis, calculations, and design, and are not intended to alter the aesthetic aspects of the design.

B. Design Data: Design-related, signed and sealed drawings, calculations, specifications, certifications, shop drawings and other submittals provided by Contractor, and prepared directly by, or under direct supervision of, appropriately licensed design professional.

1.5 CONTRACTOR'S CONSTRUCTION-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Provide such engineering design services as may be necessary to plan and safely conduct certain construction operations, pertaining to, but not limited to the following:
1. Temporary sheeting, shoring, or supports.
2. Temporary scaffolding.
3. Temporary bracing.
4. Temporary foundation underpinning.
5. Temporary stairs or steps required for construction access only.
6. Temporary hoist(s) and rigging.
7. Investigation of soil conditions to support construction equipment.

1.6 CONTRACTOR'S DESIGN-RELATED PROFESSIONAL DESIGN SERVICES

A. Coordination: Contractor's professional design services are subject to requirements of project's Conditions for Construction Contract.

B. Base design on performance and/or design criteria indicated in individual specification sections.
1. Submit a Request for Interpretation to Architect if the criteria indicated are not sufficient to perform required design services.

C. Scope of Contractor's Professional Design Services: Provide for the following items of work:
1. Refer to Section 01 3573 - Delegated Design Procedures for schedule of applicable specification sections.

1.7 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Designer's Qualification Statement: Submit for Architect's knowledge as contract administrator, or for Owner's information.
1. Include information for each individual professional responsible for producing, or supervising production of, design-related professional services provided by Contractor.
a) Full name.
b) Professional licensure information.
c) Statement addressing extent and depth of experience specifically relevant to design of items assigned to Contractor.

C. Design Data: Submit for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents, or for Owner's information.
1. Include calculations that have been used to demonstrate compliance to performance and regulatory criteria provided, and to determine design solutions.

2. Include required product data and shop drawings.
3. Include a statement or certification attesting that design data complies with criteria indicated, such as building codes, loads, functional, and similar engineering requirements.
4. Include signature and seal of design professional responsible for allocated design services on calculations and drawings.

D. Test Reports: After each test/inspection, promptly submit two copies of report to Architect and to Contractor.
1. Include:
   a) Date issued.
   b) Project title and number.
   c) Name of inspector.
   d) Date and time of sampling or inspection.
   e) Identification of product and specifications section.
   f) Location in the Project.
   g) Type of test/inspection.
   h) Date of test/inspection.
   i) Results of test/inspection.
   j) Compliance with Contract Documents.
   k) When requested by Architect, provide interpretation of results.
2. Test report submittals are for Architect's knowledge as contract administrator for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents, or for Owner's information.

E. Certificates: When specified in individual specification sections, submit certification by the manufacturer and Contractor or installation/application subcontractor to Architect, in quantities specified for Product Data.
1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.
2. Certificates may be recent or previous test results on material or product, but must be acceptable to Architect.

F. Manufacturer's Instructions: When specified in individual specification sections, submit printed instructions for delivery, storage, assembly, installation, start-up, adjusting, and finishing, for the Owner's information. Indicate special procedures, perimeter conditions requiring special attention, and special environmental criteria required for application or installation.

G. Manufacturer's Field Reports: Submit reports for Architect's benefit as contract administrator or for Owner.
1. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents.

H. Erection Drawings: Submit drawings for Architect's benefit as contract administrator or for Owner.
1. Submit for information for the limited purpose of assessing compliance with information given and the design concept expressed in the Contract Documents.

1.8 QUALITY ASSURANCE

A. Testing Agency Qualifications:

1. Prior to start of work, submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.
2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
3. Qualification Statement: Provide documentation showing testing laboratory is accredited under IAS AC89.

B. Designer Qualifications: Where professional engineering design services and design data submittals are specifically required of Contractor by Contract Documents, provide services of a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1.9 TESTING AND INSPECTION AGENCIES AND SERVICES

A. Owner will employ and pay for services of an independent testing agency to perform specified testing.

B. Employment of agency in no way relieves Contractor of obligation to perform Work in accordance with requirements of Contract Documents.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Architect before proceeding.

D. Comply with specified standards as minimum quality for the work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Have work performed by persons qualified to produce required and specified quality.

F. Verify that field measurements are as indicated on shop drawings or as instructed by the manufacturer.

G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, and disfigurement.

3.2 MOCK-UPS

A. Before installing portions of the Work where mock-ups are required, construct mock-ups in location and size indicated for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work. The purpose of mock-up is to demonstrate the proposed range of aesthetic effects and workmanship.

B. Accepted mock-ups establish the standard of quality the Architect will use to judge the Work.

C. Integrated Exterior Mock-ups: Construct integrated exterior mock-up as indicated on drawings. Coordinate installation of exterior envelope materials and products as required in individual Specification Sections. Provide adequate supporting structure for mock-up materials as necessary.

D. Tests shall be performed under provisions identified in this section and identified in the respective product specification sections.

E. Assemble and erect specified items with specified attachment and anchorage devices, flashings, seals, and finishes.

F. Architect will use accepted mock-ups as a comparison standard for the remaining Work.

G. Where mock-up has been accepted by Architect and is specified in product specification sections to be removed, protect mock-up throughout construction, remove mock-up and clear area when directed to do so by Architect.

3.3 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. Should manufacturers' tolerances conflict with Contract Documents, request clarification from Architect before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

3.4 TESTING AND INSPECTION

A. Testing Agency Duties:
   1. Test samples of mixes submitted by Contractor.
   2. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.
   3. Perform specified sampling and testing of products in accordance with specified standards.
   4. Ascertain compliance of materials and mixes with requirements of Contract Documents.
   5. Promptly notify Architect and Contractor of observed irregularities or non-compliance of Work or products.
   6. Perform additional tests and inspections required by Architect.
   7. Submit reports of all tests/inspections specified.

B. Limits on Testing/Inspection Agency Authority:
   1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.
   2. Agency may not approve or accept any portion of the Work.
   3. Agency may not assume any duties of Contractor.
   4. Agency has no authority to stop the Work.

C. Contractor Responsibilities:
   1. Deliver to agency at designated location, adequate samples of materials proposed to be used that require testing, along with proposed mix designs.
   2. Cooperate with laboratory personnel, and provide access to the Work and to manufacturers' facilities.
   3. Provide incidental labor and facilities:
      a) To provide access to Work to be tested/inspected.
      b) To obtain and handle samples at the site or at source of Products to be tested/inspected.
      c) To facilitate tests/inspections.
      d) To provide storage and curing of test samples.
   4. Notify Architect and laboratory 24 hours prior to expected time for operations requiring testing/inspection services.
   5. Employ services of an independent qualified testing laboratory and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.
   6. Arrange with Owner's agency and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.

D. Re-testing required because of non-compliance with specified requirements shall be performed by the same agency on instructions by Architect.

E. Re-testing required because of non-compliance with specified requirements shall be paid for by Contractor.

3.5 MANUFACTURERS' FIELD SERVICES

A. When specified in individual specification sections, require material or product suppliers or manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

3.6 DEFECT ASSESSMENT

A. Replace Work or portions of the Work not complying with specified requirements.

B. If, in the opinion of Construction Manager, it is not practical to remove and replace the work, Construction Manager will direct an appropriate remedy or adjust payment.

END OF SECTION 01 4000

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 4219 - REFERENCE STANDARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Requirements relating to referenced standards.

B. Reference standards full title and edition date.

1.2 QUALITY ASSURANCE

A. For products or workmanship specified by reference to a document or documents not included in the Project Manual, also referred to as reference standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Comply with the reference standard of date of issue specified in this section, except where a specific date is established by applicable code.

C. Should specified reference standards conflict with Contract Documents, request clarification from the Architect before proceeding.

D. Neither the contractual relationships, duties, or responsibilities of the parties in Contract nor those of the Architect shall be altered by Contract Documents by mention or inference otherwise in any reference document.

PART 2 CONSTRUCTION INDUSTRY ORGANIZATION DOCUMENTS

2.1 AA -- ALUMINUM ASSOCIATION, INC.

A. AA DAF-45 - Designation System for Aluminum Finishes; 2003 (Reaffirmed 2009).

B. AA SAAA-46 - Standards for Anodized Architectural Aluminum; 1978.

C. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2017a.

2.2 AI -- THE ASPHALT INSTITUTE

2.3 AIA -- THE AMERICAN INSTITUTE OF ARCHITECTS

A. AIA A232 - General Conditions of the Contract for Construction, Construction Manager as Adviser Edition; 2009.

B. AIA A533 - Guide for Supplementary Condition, Construction Manager as Advisor Edition; 2009.

C. AIA A701 - Instructions to Bidders; 2018.

D. AIA G612 - Owner's Instructions to the Architect; 2017.

E. AIA G701 - Change Order; 2017.

F. AIA G702CMa - Application and Certificate for Payment, Construction Manager-Adviser Edition; 1992.

G. AIA G704CMa - Certificate of Substantial Completion, Construction Manager-Adviser Edition; 1992.

H. AIA G709 - Proposal Request; 2018.

I. AIA G710 - Architect's Supplemental Instructions; 2017.

J. AIA G714 - Construction Change Directive; 2017.

K. AIA G716 - Request for Information; 2004.

2.4 AISC -- AMERICAN INSTITUTE OF STEEL CONSTRUCTION, INC.

A. AISC 201 - AISC Certification Program for Structural Steel Fabricators, Standard for Steel Building Structures; 2006.

B. AISC 207 - Certification Standard for Steel Fabrication and Erection, and Manufacturing of Metal Components; 2016.

C. AISC 325 - Steel Construction Manual; 2017.

2.5 ANSI -- AMERICAN NATIONAL STANDARDS INSTITUTE

A. ANSI/FM 4474 - American National Standard for Evaluating the Simulated Wind Uplift Resistance of Roof Assemblies Using Static Positive and/or Negative Differential Pressures; 2004 (R2010).

2.6 ASCE -- AMERICAN SOCIETY OF CIVIL ENGINEERS

A. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

2.7 ASHRAE -- AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR-CONDITIONING ENGINEERS, INC.

A. ASHRAE (FUND)-2017 - ASHRAE Handbook - Fundamentals; 2017.

B. ASHRAE (HVACA) - ASHRAE Handbook - HVAC Applications; Most Recent Edition Cited by Referring Code or Reference Standard.

C. ASHRAE (REFR) - ASHRAE Handbook - Refrigeration; Most Recent Edition Cited by Referring Code or Reference Standard.

D. ASHRAE (HVACS) - ASHRAE Handbook - HVAC Systems and Equipment; Most Recent Edition Cited by Referring Code or Reference Standard.

E. ASHRAE Std 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size; 2017 (Amended (2020).

F. ASHRAE Std 55 - Thermal Environmental Conditions for Human Occupancy; 2020.

G. ASHRAE Std 62.1 - Ventilation for Acceptable Indoor Air Quality; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

H. ASHRAE Std 62.1-2019 - Ventilation for Acceptable Indoor Air Quality; 2019, with Errata and Amendments (2021).

I. ASHRAE Std 68 - Laboratory Method of Testing to Determine the Sound Power in a Duct; 1997.

J. ASHRAE Std 70 - Method of Testing the Performance of Air Outlets and Inlets; 2006 (Reaffirmed 2011).

K. ASHRAE Std 84 - Method of Testing Air to Air Heat/Energy Exchangers; 2020.

L. ASHRAE Std 90.1 I-P - Energy Standard for Buildings Except Low-Rise Residential Buildings; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

M. ASHRAE Std 111 - Measurement, Testing, Adjusting, and Balancing of Building HVAC Systems; 2008 (Reaffirmed 2017).

N. ASHRAE Std 126 - Method of Testing HVAC Air Ducts; 2016.

O. ASHRAE Std 129 - Measuring Air-Change Effectiveness.; 1997 (Reaffirmed 2002).

P. ASHRAE Std 130 - Methods of Testing Air Terminal Units; 2016.

Q. ASHRAE Std 135 - A Data Communication Protocol for Building Automation and Control Networks; 2020.

R. ASHRAE Std 140 - Method of Test for Evaluating Building Performance Simulation Software; 2020, with Addenda (2023).

S. ASHRAE Std 180 - Standard Practice for Inspection and Maintenance of Commercial-Building HVAC Systems; 2018.

T. ASHRAE Std 189.1 - Standard for the Design of High-Performance Green Buildings; 2017.

U. ASHRAE Std 202 - Commissioning Process for Buildings and Systems; 2018.

2.8 ASTM A SERIES -- ASTM INTERNATIONAL

A. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling; 2019.

B. ASTM A29/A29M - Standard Specification for General Requirements for Steel Bars, Carbon and Alloy, Hot-Wrought; 2020.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

D. ASTM A48/A48M - Standard Specification for Gray Iron Castings; 2003 (Reapproved 2016).

E. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

F. ASTM A74 - Standard Specification for Cast Iron Soil Pipe and Fittings; 2020.

G. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

H. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

I. ASTM A148/A148M - Standard Specification for Steel Castings, High Strength, for Structural Purposes; 2020, with Editorial Revision.

J. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

K. ASTM A645/A645M - Standard Specification for Pressure Vessel Plates, 5% and 5-1/2% Nickel Alloy Steels, Specially Heat Treated; 2010 (Reapproved 2016).

L. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

M. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Required Hardness, Solution Hardened, and Bake Hardenable; 2023, with Editorial Revision.

2.9 ASTM B SERIES -- ASTM INTERNATIONAL

A. ASTM B75/B75M - Standard Specification for Seamless Copper Tube; 2020.

B. ASTM B88 - Standard Specification for Seamless Copper Water Tube; 2020.

C. ASTM B88M - Standard Specification for Seamless Copper Water Tube (Metric); 2020.

D. ASTM B302 - Standard Specification for Threadless Copper Pipe, Standard Sizes; 2017.

E. ASTM B306 - Standard Specification for Copper Drainage Tube (DWV); 2020.

2.10 ASTM C SERIES -- ASTM INTERNATIONAL

A. ASTM C273/C273M - Standard Test Method for Shear Properties of Sandwich Core Materials; 2020.

B. ASTM C478 - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections; 2019.

C. ASTM C478M - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections (Metric); 2019.

D. ASTM C923M - Standard Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes, and Laterals (Metric); 2018.

E. ASTM C1262 - Standard Test Method for Evaluating the Freeze-Thaw Durability of Manufactured Concrete Masonry Units and Related Concrete Units; 2010.

2.11 ASTM D SERIES -- ASTM INTERNATIONAL

A. ASTM D779 - Standard Test Method for Determining the Water Vapor Resistance of Sheet Materials in Contact with Liquid Water by the Dry Indicator Method; 2016.

B. ASTM D785 - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials; 2008 (Reapproved 2015).

C. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials; 2017.

D. ASTM D1079 - Standard Terminology Relating to Roofing and Waterproofing; 2020.

E. ASTM D2310 - Standard Classification for Machine-Made "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe; 2006 (Reapproved 2012).

F. ASTM D4397 - Standard Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications; 2016.

G. ASTM D6878/D6878M - Standard Specification for Thermoplastic Polyolefin Based Sheet Roofing; 2019.

H. ASTM D8257/D8257M - Standard Specification for Mechanically Attached Polymeric Roof Underlayment Used in Steep Slope Roofing; 2020.

2.12 ASTM E SERIES -- ASTM INTERNATIONAL

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

B. ASTM E108 - Standard Test Methods for Fire Tests of Roof Coverings; 2020a.

C. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings; 2000 (Reapproved 2006).

D. ASTM E1980 - Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces; 2011 (Reapproved 2019).

2.13 ASTM F SERIES -- ASTM INTERNATIONAL

2.14 AWS – AMERICAN WELDING SOCIETY

A. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

B. AWS B5.1 - Specification for the Qualification of Welding Inspectors; 2013, with Amendment (2014).

C. AWS D9.1/D9.1M - Sheet Metal Welding Code; 2018.

2.15 BHMA -- BUILDERS HARDWARE MANUFACTURERS ASSOCIATION

A. BHMA (CPD) - Certified Products Directory; Current Edition.

B. BHMA A156.9 - American National Standard for Cabinet Hardware; 2015.

2.16 CRRC -- COOL ROOF RATING COUNCIL

A. CRRC-1 - Standard; Cool Roofs Rating Council; 2017.

2.17 CSI/CSC – CONSTRUCTION SPECIFICATIONS INSTITUTE/CONSTRUCTION SPECIFICATIONS CANADA

A. CSI/CSC Form 13.1A - Substitution Request (After the Bidding/Negotiating Phase); Current Edition.

2.18 FM -- FACTORY MUTUAL GLOBAL

A. FM (AG) - FM Approval Guide; Current Edition.

B. FM 4470 - Approval Standard for Single-Ply, Polymer-Modified Bitumen Sheet, Built-Up Roof (BUR) and Liquid Applied Roof Assemblies for use in Class 1 and Noncombustible Roof Deck Construction; 2016.

2.19 ICC -- INTERNATIONAL CODE COUNCIL, INC.

A. ICC A117.1 - Accessible and Usable Buildings and Facilities; 2017.

B. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

C. ICC (IECC) - International Energy Conservation Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

D. ICC (IFC) - International Fire Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

E. ICC (IFGC) - International Fuel Gas Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

F. ICC (IMC) - International Mechanical Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

END OF SECTION 01 4219

THIS PAGE INTENTIONALLY LEFT BLANK

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 4339 - MOCKUPS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Mockups.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures, project meetings, progress schedules and documentation, reports, coordination.

B. Section 01 4000 - Quality Requirements: Procedures for testing, inspection, reports, certificates; use of reference standards.

C. Section 01 6000 - Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

D. Sections with materials and products to be furnished and installed as components of an integrated exterior mockup include, but are not limited to, the following:
1. Section 04 2000 - Unit Masonry.
2. Section 04 7323 – Manufactured Building Stone Masonry
3. Section 05 5400 – Cold-Formed Metal Framing.
4. Section 05 5000 - Metal Fabrications.
5. Section 06 1000 - Rough Carpentry
6. Section 07 2100 - Thermal Insulation.
7. Section 07 2726 – Fluid-Applied Membrane Air Barriers.
8. Section 07 4213.23 – Metal Composite Material Wall Panels.
9. Section 07 4646 - Fiber-Cement Wall Panels.
10. Section 07 6200 - Sheet Metal Flashing and Trim.
11. Section 08 4313 - Aluminum-Framed Storefronts.
12. Section 08 4413 - Glazed Aluminum Curtain Walls.
13. Section 08 8000 – Glazing.
14. Section 08 9200 – Louvered Equipment Enclosure.

1.3 DEFINITIONS

A. Mockups (General): Full-size physical assemblies that are constructed on-site. Mockups are not samples.

B. Integrated Exterior Mockups: Mockups of the exterior envelope erected separately from the building but on project site, consisting of mulitple products, assemblies, and subassemblies.
1. A standalone, integrated exterior envelope mockup is included in this project. Refer to Drawing A315 for mockup design and assemblies

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: For integrated exterior mockups.
   1. Include plans, sections, and elevations, indicating materials and size of mockup construction.
   2. Indicate manufacturer and model number of individual components.
   3. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.5 QUALITY ASSURANCE

A. Pre-Construction Conference: Prior to construction of the mockups, schedule a conference at the job site for the purpose of reviewing the requirements and intent of mockups.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.1 MOCKUPS

A. Before installing portions of the Work where mockups are required, construct mockups in location and size indicated for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work. The purpose of mockups is to verify selections made under sample submittals, to demonstrate the proposed range of aesthetic effects and workmanship, and where indicated, qualities of materials and execution.
   1. Mockups will be used to make final material selection, to review coordination, testing, or operation, to show interface between dissimilar materials, evaluate installation techniques, demonstrate compliance with specified installation tolerances, and evaluate compatibility of selected components.
   2. Completed mockups will serve as a mutual understanding of the workmanship and methods to be used on actual installation.

B. See Section 01 4000 - Quality Requirements for additional requirements.

C. Notify Architect fifteen (15) working days in advance of dates and times when mockups will be constructed and available for review.

D. Provide supervisory personnel who will oversee mockup construction. Provide workers that will be employed during the construction at Project.

E. Perform tests under provisions identified in this section and identified in the respective product specification sections.

F. Assemble and erect mockups complete with specified attachment and anchorage devices, flashings, seals, and finishes.

G. Obtain Architect's approval of mockups before ordering materials and starting work, fabrication, or construction.
   1. Architect will issue written comments within seven (7) working days of initial review and each subsequent follow up review of each mockup.

2. Make corrections as necessary until Architect's approval is issued.

H. Accepted mockups establish the standard of quality the Architect will use to judge the Work.

I. Where mockup has been accepted by Architect and is specified in product specification sections to be removed, protect mockup throughout construction, remove mockup and clear area when directed to do so by Architect.

J. Where possible salvage and recycle the demolished mockup materials.

K. Integrated Exterior Mockups: Construct integrated exterior mockup in accordance with approved shop drawings. Coordinate installation of exterior envelope materials and products for which mockups are required in individual specification sections. Provide adequate supporting structure for mockup materials as necessary. Comply with requirements in this article.
   1. Provide the following integrated exterior mockup:
      a) Exterior wall assembly systems and finishes, including all transitions and interfaces between different materials and walls to openings/curtain wall and storefronts. Construct as a single comprehensive mockup.
         1) Refer to Drawing A315 for configuration and components of the mockup.

3.2 FIELD QUALITY CONTROL

A. See Section 01 4000 - Quality Requirements, for additional requirements.

B. Coordination of Other Tests and Inspections: Owner will employ independent testing agency to test and/or inspect integrated building mock-up; provide access as required to accommodate timely performance.

END OF SECTION 01 4339

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 4533 - CODE-REQUIRED SPECIAL INSPECTIONS AND PROCEDURES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Code-required special inspections.

B. Testing services incidental to special inspections.

C. Submittals.

D. Manufacturers' field services.

E. Fabricators' field services.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 4219 - Reference Standards.

C. Section 01 6000 - Product Requirements: Requirements for material and product quality.

1.3 ABBREVIATIONS AND ACRONYMS

A. AHJ: Authority having jurisdiction.

B. IAS: International Accreditation Service, Inc.

C. NIST: National Institute of Standards and Technology.

1.4 DEFINITIONS

A. Code or Building Code: ICC (IBC), International Building Code, Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements and specifically, Chapter 17 - Special Inspections and Tests.

B. Authority Having Jurisdiction (AHJ): Agency or individual officially empowered to enforce the building, fire and life safety code requirements of the permitting jurisdiction in which the Project is located.

C. Special Inspection:
   1. Special inspections are inspections and testing of materials, installation, fabrication, erection or placement of components and connections mandated by the AHJ that also require special expertise to ensure compliance with the approved Contract Documents and the referenced standards.
   2. Special inspections are separate from and independent of tests and inspections conducted by Owner or Contractor for the purposes of quality assurance and contract administration.

1.5 REFERENCE STANDARDS

A. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2021.

B. IAS AC89 - Accreditation Criteria for Testing Laboratories; 2018.

C. IAS AC291 - Accreditation Criteria for Special Inspection Agencies; 2017.

D. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Special Inspection Agency Qualifications: Prior to the start of work, the Special Inspection Agency is required to:
   1. Submit agency name, address, and telephone number, names of full time registered Engineer and responsible officer.
   2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
   3. Submit certification that Special Inspection Agency is acceptable to AHJ.
   4. Submit documentation that Special Inspection Agency is accredited by IAS according to IAS AC291.

C. Testing Agency Qualifications: Prior to the start of work, the Testing Agency is required to:
   1. Submit agency name, address, and telephone number, and names of full time registered Engineer and responsible officer.
   2. Submit copy of report of laboratory facilities inspection made by NIST Construction Materials Reference Laboratory during most recent inspection, with memorandum of remedies of any deficiencies reported by the inspection.
   3. Submit certification that Testing Agency is acceptable to AHJ.
   4. Submit documentation that Testing Agency is accredited by IAS according to IAS AC89.

D. Special Inspection Reports: After each special inspection, Special Inspector is required to promptly submit at least two copies of report; one to Architect and one to the AHJ.
   1. Include:
      a) Date issued.
      b) Project title and number.
      c) Name of Special Inspector.
      d) Date and time of special inspection.
      e) Identification of product and specifications section.
      f) Location in the Project.
      g) Type of special inspection.
      h) Date of special inspection.
      i) Results of special inspection.
      j) Compliance with Contract Documents.

E. Test Reports: After each test or inspection, promptly submit at least two copies of report; one to Architect and one to AHJ.
   1. Include:
      a) Date issued.
      b) Project title and number.
      c) Name of inspector.
      d) Date and time of sampling or inspection.
      e) Identification of product and specifications section.
      f) Location in the Project.
      g) Type of test or inspection.
      h) Date of test or inspection.
      i) Results of test or inspection.
      j) Compliance with Contract Documents.

F. Certificates: When specified in individual special inspection requirements, Special Inspector shall submit certification by the manufacturer, fabricator, and installation subcontractor to Architect and AHJ, in quantities specified for Product Data.
   1. Indicate material or product complies with or exceeds specified requirements. Submit supporting reference data, affidavits, and certifications as appropriate.

1.7 SPECIAL INSPECTION AGENCY

A. Owner will employ services of a Special Inspection Agency to perform inspections and associated testing and sampling in accordance with ASTM E329 and required by the building code.

B. Employment of agency in no way relieves Contractor of obligation to perform work in accordance with requirements of Contract Documents.

1.8 TESTING AND INSPECTION AGENCIES

A. Owner may employ services of an independent testing agency to perform additional testing and sampling associated with special inspections but not required by the building code.

B. Employment of agency in no way relieves Contractor of obligation to perform work in accordance with requirements of Contract Documents.

1.9 QUALITY ASSURANCE

A. Special Inspection Agency Qualifications:
   1. Independent firm specializing in performing testing and inspections of the type specified in this section.
   2. Accredited by IAS according to IAS AC291.

B. Testing Agency Qualifications:
   1. Independent firm specializing in performing testing and inspections of the type specified in this section.
   2. Accredited by IAS according to IAS AC89.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 SCHEDULE OF SPECIAL INSPECTIONS, GENERAL

A. Frequency of Special Inspections: Special Inspections are indicated as continuous or periodic.
   1. Continuous Special Inspection: Special Inspection Agency is required to be present in the area where the work is being performed and observe the work at all times the work is in progress.
   2. Periodic Special Inspection: Special Inspection Agency is required to be present in the area where work is being performed and observe the work part-time or intermittently and at the completion of the work.

3.2 TESTING AGENCY DUTIES AND RESPONSIBILITIES

A. Testing Agency Duties:
   1. Provide qualified personnel at site. Cooperate with Architect and Contractor in performance of services.
   2. Perform specified sampling and testing of products in accordance with specified standards.
   3. Ascertain compliance of materials and mixes with requirements of Contract Documents.
   4. Promptly notify Architect and Contractor of observed irregularities or non-compliance of work or products.
   5. Perform additional tests and inspections required by Architect.
   6. Submit reports of all tests or inspections specified.

B. Limits on Testing or Inspection Agency Authority:
   1. Agency may not release, revoke, alter, or enlarge on requirements of Contract Documents.
   2. Agency may not approve or accept any portion of the work.
   3. Agency may not assume any duties of Contractor.
   4. Agency has no authority to stop the work.

C. On instructions by Architect, perform re-testing required because of non-compliance with specified requirements, using the same agency.

D. Contractor will pay for re-testing required because of non-compliance with specified requirements.

3.3 CONTRACTOR DUTIES AND RESPONSIBILITIES

A. Contractor Responsibilities, General:
   1. Deliver to agency at designated location, adequate samples of materials for special inspections that require material verification.
   2. Cooperate with agency and laboratory personnel; provide access to approved documents at project site, to the work, to manufacturers' facilities, and to fabricators' facilities.
   3. Provide incidental labor and facilities:
      a) To provide access to work to be tested or inspected.

b) To obtain and handle samples at the site or at source of Products to be tested or inspected.
c) To facilitate tests or inspections.
d) To provide storage and curing of test samples.

4. Notify Architect and laboratory 24 hours prior to expected time for operations requiring testing or inspection services.
5. Arrange with Owner's agency and pay for additional samples, tests, and inspections required by Contractor beyond specified requirements.

B. Contractor Responsibilities, Seismic Force-Resisting System, Designated Seismic System, and Seismic Force-Resisting Component: Submit written statement of responsibility for each item listed in the Statement of Special Inspections to AHJ and Owner prior to starting work. Statement of responsibility shall acknowledge awareness of special construction requirements and other requirements listed.

C. Contractor Responsibilities, Wind Force-Resisting System and Wind Force-Resisting Component: Submit written statement of responsibility for each item listed in the Statement of Special Inspections to AHJ and Owner prior to starting work. Statement of responsibility shall acknowledge awareness of special construction requirements and other requirements listed.

3.4 MANUFACTURERS' AND FABRICATORS' FIELD SERVICES

A. When specified in individual specification sections, require material suppliers, assembly fabricators, or product manufacturers to provide qualified staff personnel to observe site conditions, conditions of surfaces and installation, quality of workmanship, start-up of equipment, to test, adjust, and balance equipment as applicable, and to initiate instructions when necessary.

B. Report observations and site decisions or instructions given to applicators or installers that are supplemental or contrary to manufacturers' written instructions.

END OF SECTION 01 4533

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 5000 - TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Temporary utilities.

B. Temporary telecommunications services.

C. Temporary sanitary facilities.

D. Temporary Controls: Barriers, enclosures, and fencing.

E. Security requirements.

F. Vehicular access and parking.

G. Waste removal facilities and services.

H. Project identification sign.

I. Field offices.

1.2 REFERENCE STANDARDS

A. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2023d.

B. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009 (Reapproved 2016).

1.3 TEMPORARY UTILITIES

A. Owner will provide the following:
   1. Electrical power and metering, consisting of connection to existing facilities.
   2. Water supply, consisting of connection to existing facilities.

1.4 TELECOMMUNICATIONS SERVICES

A. Provide, maintain, and pay for telecommunications services to field office at time of project mobilization.

B. Telecommunications services shall include:
   1. Windows-based personal computer dedicated to project telecommunications, with necessary software and laser printer.
   2. Internet Connections: Minimum of one; Cable modem or faster.
   3. Project web site.

1.5 TEMPORARY SANITARY FACILITIES

A. Provide and maintain required facilities and enclosures. Provide at time of project mobilization.

B. Maintain daily in clean and sanitary condition.

1.6 BARRIERS

A. Provide barriers to prevent unauthorized entry to construction areas, to prevent access to areas that could be hazardous to workers or the public, to allow for owner's use of site and to protect existing facilities and adjacent properties from damage from construction operations and demolition.

B. Provide barricades and covered walkways required by governing authorities for public rights-of-way and for public access to existing building.

C. Provide protection for plants designated to remain. Replace damaged plants.

D. Protect non-owned vehicular traffic, stored materials, site, and structures from damage.

1.7 FENCING

A. Construction: Contractor's option.

B. Provide 6 foot high fence around construction site; equip with vehicular and pedestrian gates with locks.

1.8 SECURITY

A. Provide security and facilities to protect Work, existing facilities, and Owner's operations from unauthorized entry, vandalism, or theft.

1.9 VEHICULAR ACCESS AND PARKING

A. Comply with regulations relating to use of streets and sidewalks, access to emergency facilities, and access for emergency vehicles.

B. Coordinate access and haul routes with governing authorities and Owner.

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Provide means of removing mud from vehicle wheels before entering streets.

E. Provide temporary parking areas to accommodate construction personnel. When site space is not adequate, provide additional off-site parking.

1.10 WASTE REMOVAL

A. See Section 01 7419 - Construction Waste Management and Disposal, for additional requirements.

B. Provide waste removal facilities and services as required to maintain the site in clean and orderly condition.

C. Provide containers with lids. Remove trash from site periodically.

D. If materials to be recycled or re-used on the project must be stored on-site, provide suitable non-combustible containers; locate containers holding flammable material outside the structure unless otherwise approved by the authorities having jurisdiction.

E. Open free-fall chutes are not permitted. Terminate closed chutes into appropriate containers with lids.

1.11 PROJECT IDENTIFICATION

A. Provide project identification sign of design and construction required by the CT Department of Administrative Service and as indicated in the Project Sign Form SCG-3021 attached to this section.

B. Erect on site at location indicated.

C. No other signs are allowed without Owner permission except those required by law.

1.12 FIELD OFFICES

A. Office: Weathertight, with lighting, electrical outlets, heating, cooling equipment, and equipped with sturdy furniture, drawing rack, and drawing display table.

B. Provide space for Project meetings, with table and chairs to accommodate 6 persons.

C. Locate offices a minimum distance of 30 feet from existing and new structures.

1.13 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS

A. Remove temporary utilities, equipment, facilities, materials, prior to Date of Substantial Completion inspection.

B. Remove underground installations to a minimum depth of 2 feet. Grade site as indicated.

C. Clean and repair damage caused by installation or use of temporary work.

D. Restore new permanent facilities used during construction to specified condition.

SECTION 01 5639 - TEMPORARY TREE AND PLANT PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including Division 00 Bidding and Contracting Requirements, and other Division 01 General Requirements Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general protection and pruning of existing trees and plants that are affected by execution of the Work, whether temporary or permanent construction.

B. Related Requirements:

1. Division 01 Section "Temporary Facilities and Controls" for temporary site fencing.

2. Division 01 Section(s) “Construction Waste Management Disposal” and “Sustainability Compliance Procedures” for sustainability requirements.

3. Division 31 Section "Site Clearing" for removing existing trees and shrubs.

1.3 DEFINITIONS

A. Caliper: Diameter of a trunk measured by a diameter tape or the average of the smallest and largest diameters of multi-trunk trees at 6 inches (150 mm) above the ground for trees up to, and including, 4-inch (100-mm) size; and 12 inches (300 mm) above the ground for trees larger than 4-inch (100-mm) size.

B. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction, and indicated on Drawings.

C. Tree-Protection Zone: Area surrounding individual trees or groups of trees to be protected during construction, and defined by a circle concentric with each tree with a radius 1.5 times the diameter of the drip line unless otherwise indicated.

D. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. CTHPB Documentation Submittals: Comply with Section 01 3566.42 – Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

C. Samples for Verification: For each type of the following:

   1. Organic Mulch: 1-quart (1-L) volume of organic mulch; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch.
   2. Protection-Zone Fencing: Assembled Samples of manufacturer's standard size made from full-size components.

D. Tree Pruning Schedule: Written schedule detailing scope and extent of pruning of trees to remain that interfere with or are affected by construction. Schedule to be provided to Landscape Architect and Town of Greenwich Tree Warden.

   1. Species and size of tree.
   2. Location on site plan. Include unique identifier for each.
   3. Reason for pruning.
   4. Description of pruning to be performed.
   5. Description of maintenance following pruning.

E. Qualification Data: For qualified arborist and tree service firm.

F. Certification: From arborist, certifying that trees indicated to remain have been protected during construction according to recognized standards and that trees were promptly and properly treated and repaired when damaged.

G. Maintenance Recommendations: From arborist, for care and protection of trees affected by construction during and after completing the Work.

H. Existing Conditions: Documentation of existing trees and plantings indicated to remain, which establishes preconstruction conditions that might be misconstrued as damage caused by construction activities.

   1. Use sufficiently detailed photographs or videotape.
   2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plants designated to remain.

1.5 QUALITY ASSURANCE

A. Arborist Qualifications: Licensed arborist in jurisdiction where Project is located. Arborist to work in conjunction with Town of Greenwich arborist per Tree Warden.

B. Tree Service Firm Qualifications: An experienced tree service firm that has successfully completed temporary tree and plant protection work similar to that required for this Project and that will assign an experienced, qualified arborist to Project site during execution of the Work.

C. Quality-Control Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work without damaging trees and plantings. Include dimensioned diagrams for placement of protection zone fencing and signage, the arborist's and tree-service firm's responsibilities, instructions given to workers on the use and care of protection zones, and enforcement of requirements for protection zones

D. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to temporary tree and plant protection including, but not limited to, the following:

a. Construction schedule. Verify availability of materials, personnel, and equipment needed to make progress and avoid delays.
b. Enforcing requirements for protection zones.
c. Arborist's responsibilities.
d. Field quality control.

1.6 PROJECT CONDITIONS

A. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Foot traffic.
4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

B. Do not direct vehicle or equipment exhaust toward protection zones.

C. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones and organic mulch.

1.7 SPECIAL CONDITIONS

A. Protection and repair of impacts to above ground portions of street trees:
1. Prior to beginning any construction activities, a qualified arborist or tree service should remove all trees designated for removal. Where appropriate, the arborist or tree service should prune tree branches to a height of 14 feet over streets and 7-8 feel over sidewalks

to reduce the possibility of breaking or damaging limbs with equipment during construction.

2. During construction, extreme care should be exercised to avoid equipment damage to the tree trunks and lower branches. Damaged or broken branches and tree trunk injuries should be reported to the Owner's Representative and be professionally treated as soon as possible

B. Root Zone Protection

1. Before beginning any construction activities, trees to be retained shall be protected with fencing. The purpose of the fencing is to prevent root damage due to soil compaction. Soil compaction can be caused by heavy equipment, truck traffic, and stockpiling fill or other construction materials on the root system of a tree. As much of the tree's root zone as possible should be fenced off. The minimum area to be fenced off would be that area within the dripline of the tree; otherwise known as the Critical Root Zone. The fencing should be highly visible, of sturdy construction, and at least four feet high. Fences may be snow fence, chain link, synthetic fabric, or plastic fence.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Topsoil: Stockpiled topsoil from location shown on Drawings and conforming to Division 32 Section "Soil Preparation".

B. Organic Mulch: Free from deleterious materials and suitable as a top dressing for trees and shrubs, consisting of one of the following:

1. Type: Wood and bark chips.
2. Size Range: 3 inches (76 mm) maximum, 1/2 inch (13 mm) minimum.
3. Color: Natural.

C. Protection-Zone Fencing: Fencing fixed in position and meeting the following requirements. Previously used materials may be used when approved by Architect.

1. Plastic Protection-Zone Fencing: Plastic construction fencing constructed of high-density extruded and stretched polyethylene fabric with 2-inch (50-mm) maximum opening in pattern and weighing a minimum of 0.4 lb/ft. (0.6 kg/m); remaining flexible from minus 60 to plus 200 deg F (minus 16 to plus 93 deg C); inert to most chemicals and acids; minimum tensile yield strength of 2000 psi (13.8 MPa) and ultimate tensile strength of 2680 psi (18.5 MPa); secured with plastic bands or galvanized-steel or stainless-steel wire ties; and supported by tubular or T-shape galvanized-steel posts spaced not more than 8 feet (2.4 m) apart.

a. Height: 4 feet (1.2 m).
b. Color: High-visibility orange, nonfading.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Erosion and Sedimentation Control: Examine the site to verify that temporary erosion- and sedimentation-control measures are in place. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

B. For the record, prepare written report, endorsed by arborist, listing conditions detrimental to tree and plant protection.

3.2 PREPARATION

A. Locate and clearly identify trees, shrubs, and other vegetation to remain. Flag each tree trunk at 54 inches (1372 mm) above the ground.

B. Protect tree root systems from damage caused by runoff or spillage of noxious materials while mixing, placing, or storing construction materials. Protect root systems from ponding, eroding, or excessive wetting caused by dewatering operations.

C. Tree-Protection Zones: Mulch areas inside tree-protection zones and other areas indicated.

1. Apply 4-inch (100-mm) average thickness of organic mulch. Do not place mulch within 6 inches (150 mm) of tree trunks.

3.3 TREE- AND PLANT-PROTECTION ZONES

A. Protection-Zone Fencing: Install protection-zone fencing along edges of protection zones before materials or equipment are brought on the site and construction operations begin in a manner that will prevent people from easily entering protected area. Construct fencing so as not to obstruct safe passage or visibility at vehicle intersections where fencing is located adjacent to pedestrian walkways or in close proximity to street intersections, drives, or other vehicular circulation.

1. Posts: Set or drive posts into ground one-third the total height of the fence without concrete footings. Where a post is located on existing paving or concrete to remain, provide appropriate means of post support acceptable to Architect.

B. Maintain protection zones free of weeds and trash.

C. Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Design/Builder.

D. Maintain protection-zone fencing in good condition as acceptable to Architect and remove when construction operations are complete and equipment has been removed from the site.

1. Do not remove protection-zone fencing, even temporarily, to allow deliveries or equipment access through the protection zone.
2. Temporary access is permitted subject to preapproval in writing by arborist if a root buffer effective against soil compaction is constructed as directed by arborist. Maintain root buffer so long as access is permitted.

3.4 EXCAVATION

A. General: Excavate at edge of protection zones and for trenches indicated within protection zones according to requirements in Division 31 Section "Excavation Backfill Compaction and Dewatering".

B. Trenching near Trees: Where utility trenches are required within protection zones, hand excavate under or around tree roots or tunnel under the roots by drilling, auger boring, or pipe jacking. Do not cut main lateral tree roots or taproots; cut only smaller roots that interfere with installation of utilities. Cut roots as required for root pruning.

C. Cut roots approximately 3 inches (75 mm) back from new construction and as required for root pruning.

D. Do not allow exposed roots to dry out before placing permanent backfill. Provide temporary earth cover or pack with peat moss and wrap with burlap. Water and maintain in a moist condition. Temporarily support and protect roots from damage until they are permanently relocated and covered with soil.

3.5 ROOT PRUNING

A. Prune roots that are affected by temporary and permanent construction. Prune roots as follows:

1. Cut roots manually by digging a trench and cutting exposed roots with sharp pruning instruments; do not break, tear, chop, or slant the cuts. Do not use a backhoe or other equipment that rips, tears, or pulls roots.
2. Cut Ends: Do not paint cut root ends.
3. Temporarily support and protect roots from damage until they are permanently covered with soil.
4. Cover exposed roots with burlap and water regularly.
5. Backfill as soon as possible according to requirements in Division 31 Section "Earthwork".

B. Root Pruning at Edge of Protection Zone: Prune roots 12 inches (300 mm) outside of the protection zone, by cleanly cutting all roots to the depth of the required excavation.

C. Root Pruning within Protection Zone: Clear and excavate by hand to the depth of the required excavation to minimize damage to root systems. Use narrow-tine spading forks, comb soil to expose roots, and cleanly cut roots as close to excavation as possible.

3.6 CROWN PRUNING

A. Prune branches that are affected by temporary and permanent construction. Prune branches as follows:

1. Prune trees to remain to compensate for root loss caused by damaging or cutting root system. Provide subsequent maintenance during Contract period as recommended by arborist.
2. Pruning Standards: Prune trees according to ANSI A300 (Part 1) and the following:

    a. Type of Pruning: Cleaning and Raising.
    b. Specialty Pruning: Restoration Vista Utility.

3. Cut branches with sharp pruning instruments; do not break or chop.
4. Do not apply pruning paint to wounds.

B. Chip removed branches and spread over areas identified by Architect.

3.7 REGRADING

A. Lowering Grade outside Protection Zone: Where new finish grade is indicated below existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

B. Lowering Grade within Protection Zone: Where new finish grade is indicated below existing grade around trees and where lowering of grade is unavoidable, slope grade away from trees as recommended by arborist unless otherwise indicated. Minimize area and depth of grade lowering operations to the greatest extent possible.

1. Root Pruning: Prune tree roots exposed by lowering the grade. Do not cut main lateral roots or taproots; cut only smaller roots. Cut roots as required for root pruning.

C. Raising Grade outside of Protection Zone: Where new finish grade is indicated above existing grade around trees, slope grade beyond the protection zone. Maintain existing grades within the protection zone.

D. Minor Fill within Protection Zone: Where existing grade is 2 inches (50 mm) or less below elevation of finish grade and where raising of grade is unavoidable, fill with topsoil. Place topsoil in a single uncompacted layer and hand grade to required finish elevations. Minimize area and depth of grade raising operations to the greatest extent possible.

3.8 FIELD QUALITY CONTROL

A. Inspections: Engage a qualified arborist to direct plant-protection measures in the vicinity of trees, shrubs, and other vegetation indicated to remain and to prepare inspection reports.

3.9 REPAIR AND REPLACEMENT

A. General: Repair or replace trees, shrubs, and other vegetation indicated to remain or be relocated that are damaged by construction operations, in a manner approved by Landscape Architect.

1. Submit details of proposed root cutting and tree and shrub repairs.
2. Have arborist perform the root cutting, branch pruning, and damage repair of trees and shrubs.
3. Treat damaged trunks, limbs, and roots according to arborist's written instructions.
4. Perform repairs within 24 hours.
5. Replace vegetation that cannot be repaired and restored to full-growth status, as determined by Architect and Arborist.

B. Trees: Remove and replace trees indicated to remain that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.

1. Provide one new tree(s) of 6-inch (150-mm) caliper size for each tree being replaced that measures more than 6 inches (150 mm) in caliper size.

    a. Species: Species selected by Landscape Architect.

2. Plant and maintain new trees as specified in Division 32 Section "Plants".

C. Soil Aeration: Where directed by Landscape Architect, aerate surface soil compacted during construction. Aerate 10 feet (3 m) beyond drip line and no closer than 36 inches (900 mm) to tree trunk. Drill 2-inch- (50-mm-) diameter holes a minimum of 12 inches (300 mm) deep at 24 inches (600 mm) o.c. Backfill holes with an equal mix of augered soil and sand.

3.10 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Disposal: Remove excess excavated material, displaced trees, trash and debris, and legally dispose of them off Owner's property.

END OF SECTION 31 1010

SECTION 01 5719 - TEMPORARY ENVIRONMENTAL CONTROLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Construction procedures to promote adequate indoor air quality after construction.

B. Building flush-out after construction and before occupancy.

C. Testing indoor air quality after completion of construction.

1.2 PROJECT GOALS

A. Dust and Airborne Particulates: Prevent deposition of dust and other particulates in HVAC ducts and equipment.
   1. Cleaning of ductwork is not contemplated under this Contract.
   2. Contractor shall bear the cost of cleaning required due to failure to protect ducts and equipment from construction dust.

B. Airborne Contaminants: Procedures and products have been specified to minimize indoor air pollutants.
   1. Furnish products meeting the specifications.
   2. Avoid construction practices that could result in contamination of installed products leading to indoor air pollution.

1.3 REFERENCE STANDARDS

A. ASTM D5197 - Standard Test Method for Determination of Formaldehyde and Other Carbonyl Compounds in Air (Active Sampler Methodology); 2016.

B. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers; 2017, v1.2.

C. EPA 600/4-90/010 - Compendium of Methods for the Determination of Air Pollutants in Indoor Air; 1990.

D. EPA 625/R-96/010b - Compendium of Methods for the Determination of Toxic Organic Compounds in Ambient Air; 1999.

E. SMACNA (OCC) - IAQ Guidelines for Occupied Buildings Under Construction; 2007.

1.4 DEFINITIONS

A. Adsorptive Materials: Gypsum board, acoustical ceiling tile and panels, carpet and carpet tile, fabrics, fibrous insulation, and other similar products.

B. Contaminants: Gases, vapors, regulated pollutants, airborne mold and mildew, and the like, as specified.

C. Particulates: Dust, dirt, and other airborne solid matter.

D. Wet Work: Concrete, plaster, coatings, and other products that emit water vapor or volatile organic compounds during installation, drying, or curing.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Sustainability Documentation: Submit documentation required in this section.

C. Indoor Air Quality Management Plan: Describe, in detail, measures to be taken to promote adequate indoor air quality upon completion; use SMACNA (OCC) as a guide.
1. Submit not less than 60 days before enclosure of building.
2. Identify potential sources of odor and dust.
3. Identify construction activities likely to produce odor or dust.
4. Identify areas of project potentially affected, especially occupied areas.
5. Evaluate potential problems by severity and describe methods of control.
6. Describe construction ventilation to be provided, including type and duration of ventilation, use of permanent HVAC systems, types of filters and schedule for replacement of filters.
7. Describe cleaning and dust control procedures.

D. Interior Finishes Installation Schedule: Identify each interior finish that either generates odors, moisture, or vapors or is susceptible to adsorption of odors and vapors, and indicate air handling zone, sequence of application, and curing times.

E. Duct and Terminal Unit Inspection Report.

F. Air Contaminant Test Plan: Identify:
1. Testing agency qualifications.
2. Locations and scheduling of air sampling.
3. Test procedures, in detail.
4. Test instruments and apparatus.
5. Sampling methods.

G. Air Contaminant Test Reports: Show:
1. Location where each sample was taken, and time.
2. Test values for each air sample; average the values of each set of 3.
3. HVAC operating conditions.
4. Certification of test equipment calibration.
5. Other conditions or discrepancies that might have influenced results.

PART 3 EXECUTION

2.1 CONSTRUCTION PROCEDURES

A. Prevent the absorption of moisture and humidity by adsorptive materials by:

1. Sequencing the delivery of such materials so that they are not present in the building until wet work is completed and dry.
2. Delivery and storage of such materials in fully sealed moisture-impermeable packaging.
3. Provide sufficient ventilation for drying within reasonable time frame.

B. Begin construction ventilation when building is substantially enclosed.

C. Do not store construction materials or waste in mechanical or electrical rooms.

D. Prior to use of return air ductwork without intake filters clean up and remove dust and debris generated by construction activities.
1. Inspect duct intakes, return air grilles, and terminal units for dust.
2. Clean plenum spaces, including top sides of lay-in ceilings, outsides of ducts, tops of pipes and conduit.
3. Clean tops of doors and frames.
4. Clean mechanical and electrical rooms, including tops of pipes, ducts, and conduit, equipment, and supports.
5. Clean return plenums of air handling units.
6. Remove intake filters last, after cleaning is complete.

E. Do not perform dusty or dirty work after starting use of return air ducts without intake filters.

F. Use other relevant recommendations of SMACNA (OCC) for avoiding unnecessary contamination due to construction procedures.

2.2 BUILDING FLUSH-OUT

A. Contractor's Option: Either full continuous flush-out OR satisfactory air contaminant testing is required, not both.

B. Perform building flush-out before occupancy.

C. Do not start flush-out until:
1. All construction is complete.
2. HVAC systems have been tested, adjusted, and balanced for proper operation.
3. Inspection of inside of return air ducts and terminal units confirms that cleaning is not necessary.
4. New HVAC filtration media have been installed.

D. Building Flush-Out: Operate all ventilation systems at normal flow rates with 100 percent outside air until a total air volume of 14,000 cubic feet per square foot of floor area has been supplied.
1. Obtain Owner's concurrence that construction is complete enough before beginning flush-out.
2. Maintain interior temperature of at least 60 degrees F and interior relative humidity no higher than 60 percent.
3. If additional construction involving materials that produce particulates or any of the specified contaminants is conducted during flush-out, start flush-out over.
4. If interior spaces must be occupied prior to completion of the flush-out, supply a minimum of 25 percent of the total air volume prior to occupancy, and:
   a) Begin ventilation at least three hours prior to daily occupancy.

b) Continue ventilation during all occupied periods.
c) Provide minimum outside air volume of 0.30 cfm per square foot or design minimum outside air rate, whichever is greater.

E. Install new HVAC filtration media after completion of flush-out and before occupancy or further testing.

2.3 AIR CONTAMINANT TESTING

A. Contractor's Option: Either full continuous flush-out, or satisfactory air contaminant testing is required, not both.

B. Perform air contaminant testing before occupancy.

C. Do not start air contaminant testing until:
1. All construction is complete, including interior finishes.
2. HVAC systems have been tested, adjusted, and balanced for proper operation.
3. New HVAC filtration media have been installed.

D. Indoor Air Samples: Collect from spaces representative of occupied areas:
1. Collect samples while operable windows and exterior doors are closed, HVAC system is running normally as if occupied, with design minimum outdoor air, but with the building unoccupied.
2. Collect samples from spaces in each contiguous floor area in each air handler zone, but not less than one sample per 25,000 square feet; take samples from areas having the least ventilation and those having the greatest presumed source strength.
3. Collect samples from height from 36 inches to 72 inches above floor.
4. Collect samples from same locations on 3 consecutive days during normal business hours; average the results of each set of 3 samples.
5. Exception: Areas with normal very high outside air ventilation rates, such as laboratories, do not need to be tested.
6. When retesting the same building areas, take samples from at least the same locations as in first test.

E. Outdoor Air Samples: Collect samples at outside air intake of each air handler at the same time as indoor samples are taken.

F. Analyze air samples and submit report.

G. Volatile Organic Compounds Limits:
1. Formaldehyde: Not more than 27 parts per billion.
2. Total Volatile Organic Compounds (TVOCs): Not more than 500 micrograms per cubic meter.
3. Chemicals Listed in CAL (CDPH SM) Table 4-1, other than Formaldehyde: Not more than allowable concentrations listed in Table 4-1.

H. Air Contaminant Concentration Test Methods:
1. Formaldehyde: ASTM D5197, EPA 625/R-96/010b Method TO-11A, or EPA 600/4-90/010 Method IP-6A.
2. Particulates: EPA 600/4-90/010 Method IP-10.

3. Total Volatile Organic Compounds (TVOC): EPA 625/R-96/010b Method TO-1, TO-15, or TO-17; or EPA 600/4-90/010 Method IP-1.
4. Chemicals Listed in CAL (CDPH SM) Table 4-1, except Formaldehyde: ASTM D5197, or EPA 625/R-96/010b Method TO-1, TO-15, or TO-17.
5. Carbon Monoxide: EPA 600/4-90/010 Method IP-3, plus measure outdoor air; measure in ppm; report both indoor and outdoor measurements.

END OF SECTION 01 5719

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 6000 - PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. General product requirements.

B. Sustainable design-related product requirements.

C. Re-use of existing products.

D. Transportation, handling, storage and protection.

E. Product option requirements.

F. Substitution limitations.

G. Procedures for Owner-supplied products.

H. Maintenance materials, including extra materials, spare parts, tools, and software.

1.2 RELATED REQUIREMENTS

A. Section 01 2500 - Substitution Procedures: Substitutions made during procurement and/or construction phases.

B. Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS: Requirements for sustainability compliance procedures.

C. Section 01 4000 - Quality Requirements: Product quality monitoring.

D. Section 01 7419 - Construction Waste Management and Disposal: Waste disposal requirements potentially affecting product selection, packaging and substitutions.

1.3 REFERENCE STANDARDS

A. 16 CFR 260.13 - Guides for the Use of Environmental Marketing Claims; Federal Trade Commission; Recycled Content; Current Edition.

B. ASTM D6866 - Standard Test Methods for Determining the Biobased Content of Solid, Liquid, and Gaseous Samples Using Radiocarbon Analysis; 2021.

C. C2C (DIR) - C2C Certified Products Registry; Cradle to Cradle Products Innovation Institute; Current Edition.

D. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers; 2017, v1.2.

E. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products; 2014.

F. GreenScreen (LIST) - GreenScreen for Safer Chemicals List Translator; Clean Production Action; Current Edition.

G. GreenScreen (METH) - GreenScreen for Safer Chemicals Method v1.2; Clean Production Action; Current Edition.

H. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures; 2006.

I. ISO 14040 - Environmental management - Life cycle assessment - Principles and framework; 2006 (Amended 2020).

J. ISO 14044 - Environmental management - Life cycle assessment - Requirements and guidelines; 2006 (Amended 2020).

K. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services; 2017.

1.4 SUBMITTALS

A. Proposed Products List: Submit list of major products proposed for use, with name of manufacturer, trade name, and model number of each product.
   1. Submit within 15 days after date of Agreement.
   2. For products specified only by reference standards, list applicable reference standards.

B. Product Data Submittals: Submit manufacturer's standard published data. Mark each copy to identify applicable products, models, options, and other data. Supplement manufacturers' standard data to provide information specific to this Project.

C. Shop Drawing Submittals: Prepared specifically for this Project; indicate utility and electrical characteristics, utility connection requirements, and location of utility outlets for service for functional equipment and appliances.

D. Sample Submittals: Illustrate functional and aesthetic characteristics of the product, with integral parts and attachment devices. Coordinate sample submittals for interfacing work.
   1. For selection from standard finishes, submit samples of the full range of the manufacturer's standard colors, textures, and patterns.

E. Sustainable Design Submittals: Items necessary to document use of sustainable construction materials, products, and practices.
   1. See Section 01 3566.42 for Contractor's procedures necessary for achievement of targeted CT-HPBS sustainability compliance level.

1.5 QUALITY ASSURANCE

A. Bio-Based Content: Of vegetable or animal origin, not including products made by killing the animal.
   1. Determine percentage of bio-based content in accordance with ASTM D6866.
   2. Bio-based content must be sourced from a Sustainable Agriculture Network certified farm.

B. CAL (CDPH SM) v1.1: California Department of Public Health (CDPH) Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, v. 1.1–2010, for the emissions testing and requirements of products and materials.

C. Chain-of-Custody (COC): A procedure that tracks a product from the point of harvest or extraction to its end use, including successive stages of processing, transformation, manufacturing, and distribution.

D. Chain-of-Custody Certificates: Certificates signed by manufacturers and fabricators certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001.

E. Composite Wood and Agrifiber: Products made of wood particles and/or plant material pressed and bonded with adhesive or resin such as particleboard, medium density fiberboard (MDF), plywood, wheatboard, strawboard, panel substrates, and door cores.

F. Cradle-to-Cradle Certified: End use product certified Cradle-to-Cradle v2 Basic or Cradle-to-Cradle v3 Bronze, minimum, as evidenced by C2C (DIR).

G. Environmental Product Declaration (EPD): Publicly available, critically reviewed life cycle analysis having at least a cradle-to-gate scope.
   1. Good: Product-specific; compliant with ISO 14044.
   2. Better: Industry-wide, generic; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
   3. Best: Commercial-product-specific; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
   4. Where demonstration of impact reduction below industry average is required, submit both industry-wide and commercial-product-specific declarations; or submit at least 5 declarations for products of the same type by other manufacturers in the same industry.

H. GreenScreen Chemical Hazard Analysis: Ingredients of 100 parts-per-million or greater evaluated using GreenScreen (METH).
   1. Good: GreenScreen (LIST) evaluation to identify Benchmark 1 hazards; a Health Product Declaration includes this information.
   2. Better: GreenScreen Full Assessment.
   3. Best: GreenScreen Full Assessment by GreenScreen Licensed Profiler.
   4. Acceptable Evidence: GreenScreen report.

I. Health Product Declarations (HPD): Complete, published declaration with full disclosure of known hazards, prepared using one of the HPDC (HPD-OLT) online tools.

J. Manufacturer's Inventory of Product Content: Publicly available inventory of every ingredient identified by name and Chemical Abstract Service Registration Number (CAS RN).
   1. For ingredients considered a trade secret or intellectual property, the name and CAS RN may be omitted, provided the ingredient's role, amount, and GreenScreen Benchmark are given.

K. Recycled Content: Determine percentage of post-consumer and pre-consumer (post-industrial) content separately, using the guidelines contained in 16 CFR 260.13.
   1. Previously used, reused, refurbished, and salvaged products are not considered recycled.
   2. Wood fabricated from timber abandoned in transit to original mill is considered reused, not recycled.
   3. Determine percentage of recycled content of any item by dividing the weight of recycled content in the item by the total weight of materials in the item.
   4. Determine value of recycled content of each item separately, by multiplying the content percentage by the value of the item.
   5. Acceptable Evidence:
      a) For percentage of recycled content, information from manufacturer.
      b) For cost, Contractor's cost data.

L. Regional Materials: Materials that are extracted, harvested, recovered, and manufactured within a radius of 500 miles from the Project site.

M. Reused Products: Materials and equipment previously used in this or other construction, salvaged and refurbished as specified.
   1. Wood fabricated from timber abandoned in transit after harvesting is considered reused, not recycled.
   2. Acceptable Evidence: Information about the origin or source, from Contractor or supplier.

N. Source Location: Location of harvest, extraction, recovery, or manufacture; where information about source location is required to be submitted, give the postal address:
   1. In every case, indicate the location of final assembly.
   2. For harvested products, indicate location of harvest.
   3. For extracted (i.e. mined) products, indicate location of extraction.
   4. For recovered products, indicate location of recovery.
   5. For products involving multiple manufacturing steps, provide a description of the process at each step, with location.
   6. Acceptable Evidence:
      a) Manufacturer's certification.
      b) Life cycle analysis (LCA) performed by third-party.

O. Sustainably Harvested Wood: Solid wood, wood chips, and wood fiber certified or labeled by an organization accredited by one of the following:
   1. The Forest Stewardship Council, The Principles for Natural Forest Management; for Canada visit http://www.fsccanada.org, for the USA visit http://www.fscus.org.
   2. Acceptable Evidence: Copies of invoices bearing the certifying organization's certification numbers.

PART 2 PRODUCTS

2.1 EXISTING PRODUCTS

A. Do not use materials and equipment removed from existing premises unless specifically required or permitted by Contract Documents.

B. Unforeseen historic items encountered remain the property of the Owner; notify Owner promptly upon discovery; protect, remove, handle, and store as directed by Owner.

C. Existing materials and equipment indicated to be removed, but not to be re-used, relocated, reinstalled, delivered to the Owner, or otherwise indicated as to remain the property of the Owner, become the property of the Contractor; remove from site.

2.2 NEW PRODUCTS

A. Provide new products unless specifically required or permitted by Contract Documents.

B. See Section 01 4000 - Quality Requirements, for additional source quality control requirements.

C. Use of products having any of the following characteristics is not permitted:
1. Made using or containing CFC's or HCFC's.
2. Made of wood from newly cut old growth timber.
3. Containing lead, cadmium, or asbestos.

D. Where other criteria are met, Contractor shall give preference to products that:
1. If used on interior, have lower emissions, as defined in Section 01 6116.
2. If wet-applied, have lower VOC content, as defined in Section 01 6116.
3. Are extracted, harvested, and/or manufactured closer to the location of the project.
4. Result in less construction waste. See Section 01 7419
5. Are made of recycled materials.
6. If made of wood, are made of sustainably harvested wood, wood chips, or wood fiber.

2.3 PRODUCT OPTIONS

A. Products Specified by Reference Standards or by Description Only: Use any product meeting those standards or description.

B. Products Specified by Naming One or More Manufacturers: Use a product of one of the manufacturers named and meeting specifications, no options or substitutions allowed.

C. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named.

2.4 MAINTENANCE MATERIALS

A. Furnish extra materials, spare parts, tools, and software of types and in quantities specified in individual specification sections.

B. Deliver to Project site; obtain receipt prior to final payment.

PART 3 EXECUTION

3.1 SUBSTITUTION LIMITATIONS

A. See Section 01 2500 - Substitution Procedures.

3.2 OWNER-SUPPLIED PRODUCTS

A. Owner's Responsibilities:
   1. Arrange for and deliver Owner reviewed shop drawings, product data, and samples, to Contractor.
   2. Arrange and pay for product delivery to site.
   3. On delivery, inspect products jointly with Contractor.
   4. Submit claims for transportation damage and replace damaged, defective, or deficient items.
   5. Arrange for manufacturers' warranties, inspections, and service.

B. Contractor's Responsibilities:
   1. Review Owner reviewed shop drawings, product data, and samples.
   2. Receive and unload products at site; inspect for completeness or damage jointly with Owner.
   3. Handle, store, install and finish products.
   4. Repair or replace items damaged after receipt.

3.3 TRANSPORTATION AND HANDLING

A. Package products for shipment in manner to prevent damage; for equipment, package to avoid loss of factory calibration.

B. If special precautions are required, attach instructions prominently and legibly on outside of packaging.

C. Coordinate schedule of product delivery to designated prepared areas in order to minimize site storage time and potential damage to stored materials.

D. Transport and handle products in accordance with manufacturer's instructions.

E. Transport materials in covered trucks to prevent contamination of product and littering of surrounding areas.

F. Promptly inspect shipments to ensure that products comply with requirements, quantities are correct, and products are undamaged.

G. Provide equipment and personnel to handle products by methods to prevent soiling, disfigurement, or damage, and to minimize handling.

H. Arrange for the return of packing materials, such as wood pallets, where economically feasible.

3.4 STORAGE AND PROTECTION

A. Provide protection of stored materials and products against theft, casualty, or deterioration.

B. Designate receiving/storage areas for incoming products so that they are delivered according to installation schedule and placed convenient to work area in order to minimize waste due to excessive materials handling and misapplication. See Section 01 7419.

C. Store and protect products in accordance with manufacturers' instructions.

D. Store with seals and labels intact and legible.

E. Arrange storage of materials and products to allow for visual inspection for the purpose of determination of quantities, amounts, and unit counts.

F. Store sensitive products in weathertight, climate-controlled enclosures in an environment favorable to product.

G. For exterior storage of fabricated products, place on sloped supports above ground.

H. Provide off-site storage and protection when site does not permit on-site storage or protection.

I. Protect products from damage or deterioration due to construction operations, weather, precipitation, humidity, temperature, sunlight and ultraviolet light, dirt, dust, and other contaminants.

J. Comply with manufacturer's warranty conditions, if any.

K. Do not store products directly on the ground.

L. Cover products subject to deterioration with impervious sheet covering. Provide ventilation to prevent condensation and degradation of products.

M. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.

N. Prevent contact with material that may cause corrosion, discoloration, or staining.

O. Provide equipment and personnel to store products by methods to prevent soiling, disfigurement, or damage.

P. Arrange storage of products to permit access for inspection. Periodically inspect to verify products are undamaged and are maintained in acceptable condition.

END OF SECTION 01 6000

THIS PAGE INTENTIONALLY LEFT BLANK

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 6116 - VOLATILE ORGANIC COMPOUND (VOC) CONTENT RESTRICTIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Requirements for Indoor-Emissions-Restricted products.

B. Requirements for VOC-Content-Restricted products.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittal procedures.

B. Section 01 3566.42 - Sustainability Compliance Procedures

C. Section 01 4000 - Quality Requirements: Procedures for testing and certifications.

1.3 DEFINITIONS

A. Indoor-Emissions-Restricted Products: All products in the following product categories, whether specified or not:
   1. Interior paints and coatings applied on site.
   2. Interior adhesives and sealants applied on site, including flooring adhesives.
      a) See Section 01 3566.42 for specific extent.
   3. Flooring types indicated in Section 01 3566.42.
   4. Products making up wall and ceiling assemblies.

B. VOC-Content-Restricted Products: All products in the following product categories, whether specified or not:
   1. Interior paints and coatings applied on site.
   2. Interior adhesives and sealants applied on site, including flooring adhesives.

C. Interior of Building: Anywhere inside the exterior weather barrier.

D. Adhesives: All gunnable, trowelable, liquid-applied, and aerosol adhesives, whether specified or not; including flooring adhesives, resilient base adhesives, and pipe jointing adhesives.

E. Sealants: All gunnable, trowelable, and liquid-applied joint sealants and sealant primers, whether specified or not; including firestopping sealants and duct joint sealers.

F. Inherently Non-Emitting Materials: Products composed wholly of minerals or metals, unless they include organic-based surface coatings, binders, or sealants; and specifically the following:
   1. Concrete.
   2. Clay brick.
   3. Metals that are plated, anodized, or powder-coated.
   4. Glass.
   5. Ceramics.
   6. Solid wood flooring that is unfinished and untreated.

1.4 REFERENCE STANDARDS

A. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings; U.S. Environmental Protection Agency; current edition.

B. ASTM D3960 - Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings; 2005 (Reapproved 2018).

C. CAL (CDPH SM) - Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions From Indoor Sources Using Environmental Chambers; 2017, v1.2.

D. CARB (SCM) - Suggested Control Measure for Architectural Coatings; California Air Resources Board; 2007.

E. CHPS (HPPD) - High Performance Products Database; Current Edition at www.chps.net/.

F. CRI (GLP) - Green Label Plus Testing Program - Certified Products; Current Edition.

G. SCAQMD 1113 - Architectural Coatings; 1977 (Amended 2016).

H. SCAQMD 1168 - Adhesive and Sealant Applications; 1989 (Amended 2017).

I. SCS (CPD) - SCS Certified Products; Current Edition.

J. UL (GGG) - GREENGUARD Gold Certified Products; Current Edition.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: For each VOC-restricted product used in the project, submit evidence of compliance.

1.6 QUALITY ASSURANCE

A. Indoor Emissions Standard and Test Method: CAL (CDPH SM), using Standard Private Office exposure scenario and the allowable concentrations specified in the method, and range of total VOC's after 14 days.
   1. Wet-Applied Products: State amount applied in mass per surface area.
   2. Paints and Coatings: Test tinted products, not just tinting bases.
   3. Evidence of Compliance: Acceptable types of evidence are the following;
      a) Current UL (GGG) certification.
      b) Current SCS (CPD) Floorscore certification.
      c) Current SCS (CPD) Indoor Advantage Gold certification.
      d) Current listing in CHPS (HPPD) as a low-emitting product.
      e) Current CRI (GLP) certification.
      f) Test report showing compliance and stating exposure scenario used.
   4. Product data submittal showing VOC content is NOT acceptable evidence.
   5. Manufacturer's certification without test report by independent agency is NOT acceptable evidence.

B. VOC Content Test Method: 40 CFR 59, Subpart D (EPA Method 24), or ASTM D3960, unless otherwise indicated.
   1. Evidence of Compliance: Acceptable types of evidence are:
      a) Report of laboratory testing performed in accordance with requirements.

C. Testing Agency Qualifications: Independent firm specializing in performing testing and inspections of the type specified in this section.

PART 2 PRODUCTS

2.1 MATERIALS

A. All Products: Comply with the most stringent of federal, State, and local requirements, or these specifications.

B. Indoor-Emissions-Restricted Products: Comply with Indoor Emissions Standard and Test Method, except for:
   1. Inherently Non-Emitting Materials.

C. VOC-Content-Restricted Products: VOC content not greater than required by the following:
   1. Adhesives, Including Flooring Adhesives: SCAQMD 1168 Rule.
   2. Joint Sealants: SCAQMD 1168 Rule.
   3. Paints and Coatings: Each color; most stringent of the following:
      a) 40 CFR 59, Subpart D.
      b) SCAQMD 1113 Rule.
      c) CARB (SCM).

PART 3 EXECUTION

3.1 FIELD QUALITY CONTROL

A. Owner reserves the right to reject non-compliant products, whether installed or not, and require their removal and replacement with compliant products at no extra cost to Owner.

B. Additional costs to restore indoor air quality due to installation of non-compliant products will be borne by Contractor.

END OF SECTION 01 6116

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 7000 - EXECUTION AND CLOSEOUT REQUIREMENTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Examination, preparation, and general installation procedures.

B. Pre-installation meetings.

C. Surveying for laying out the work.

D. Cleaning and protection.

E. Starting of systems and equipment.

F. Closeout procedures, including Contractor's Correction Punch List, except payment procedures.

G. General requirements for maintenance service.

1.2 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on working in existing building; continued occupancy; work sequence; identification of salvaged and relocated materials.

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 4000 - Quality Requirements: Testing and inspection procedures.

D. Section 01 7419 - Construction Waste Management and Disposal: Additional procedures for trash/waste removal, recycling, salvage, and reuse.

E. Section 01 7800 - Closeout Submittals: Project record documents, operation and maintenance data, warranties, and bonds.

F. Section 01 9113 - General Commissioning Requirements: Contractor's responsibilities in regard to commissioning.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Survey Work: Submit name, address, and telephone number of Surveyor before starting survey work.
   1. On request, submit documentation verifying accuracy of survey work.
   2. Submit a copy of site drawing signed by the Land Surveyor, that the elevations and locations of the work are in compliance with Contract Documents.
   3. Submit surveys and survey logs for the project record.

1.4 QUALIFICATIONS

A. For surveying work, employ a land surveyor registered in the State in which the Project is located and acceptable to Architect. Submit evidence of surveyor's Errors and Omissions insurance coverage in the form of an Insurance Certificate. Employ only individual(s) trained and experienced in collecting and recording accurate data relevant to ongoing construction activities,

B. For field engineering, employ a professional engineer of the discipline required for specific service on Project, licensed in the State in which the Project is located. Employ only individual(s) trained and experienced in establishing and maintaining horizontal and vertical control points necessary for laying out construction work on project of similar size, scope and/or complexity.

C. For design of temporary shoring and bracing, employ a Professional Engineer experienced in design of this type of work and licensed in the State in which the Project is located.

1.5 PROJECT CONDITIONS

A. Use of explosives is not permitted.

B. Grade site to drain. Maintain excavations free of water. Provide, operate, and maintain pumping equipment.

C. Protect site from puddling or running water. Provide water barriers as required to protect site from soil erosion.

D. Perform dewatering activities, as required, for the duration of the project.

E. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

F. Dust Control: Execute work by methods to minimize raising dust from construction operations. Provide positive means to prevent air-borne dust from dispersing into atmosphere and over adjacent property.

G. Erosion and Sediment Control: Plan and execute work by methods to control surface drainage from cuts and fills, from borrow and waste disposal areas. Prevent erosion and sedimentation.
   1. Minimize amount of bare soil exposed at one time.
   2. Provide temporary measures such as berms, dikes, and drains, to prevent water flow.
   3. Construct fill and waste areas by selective placement to avoid erosive surface silts or clays.
   4. Periodically inspect earthwork to detect evidence of erosion and sedimentation; promptly apply corrective measures.

H. Noise Control: Provide methods, means, and facilities to minimize noise produced by construction operations.

I. Pest and Rodent Control: Provide methods, means, and facilities to prevent pests and insects from damaging the work.

J. Rodent Control: Provide methods, means, and facilities to prevent rodents from accessing or invading premises.

K. Pollution Control: Provide methods, means, and facilities to prevent contamination of soil, water, and atmosphere from discharge of noxious, toxic substances, and pollutants produced by construction operations. Comply with federal, state, and local regulations.

1.6 COORDINATION

A. See Section 01 1000 for occupancy-related requirements.

B. Coordinate scheduling, submittals, and work of the various sections of the Project Manual to ensure efficient and orderly sequence of installation of interdependent construction elements, with provisions for accommodating items installed later.

C. Notify affected utility companies and comply with their requirements.

D. Verify that utility requirements and characteristics of new operating equipment are compatible with building utilities. Coordinate work of various sections having interdependent responsibilities for installing, connecting to, and placing in service, such equipment.

E. Coordinate space requirements, supports, and installation of mechanical and electrical work that are indicated diagrammatically on drawings. Follow routing indicated for pipes, ducts, and conduit, as closely as practicable; place runs parallel with lines of building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.

F. In finished areas except as otherwise indicated, conceal pipes, ducts, and wiring within the construction. Coordinate locations of fixtures and outlets with finish elements.

G. Coordinate completion and clean-up of work of separate sections.

H. After Owner occupancy of premises, coordinate access to site for correction of defective work and work not in accordance with Contract Documents, to minimize disruption of Owner's activities.

PART 2 PRODUCTS [NOT USED]

PART 3 EXECUTION

3.1 EXAMINATION

A. The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.
   1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, gas service piping, and water-service piping; underground electrical services; and other utilities.

2. Furnish location data for work related to project that must be performed by public utilities serving project site.

B. Verify that existing site conditions and substrate surfaces are acceptable for subsequent work. Start of work means acceptance of existing conditions.

C. Verify that existing substrate is capable of structural support or attachment of new work being applied or attached.

D. Examine and verify specific conditions described in individual specification sections.

E. Take field measurements before confirming product orders or beginning fabrication, to minimize waste due to over-ordering or misfabrication.

F. Verify that utility services are available, of the correct characteristics, and in the correct locations.

3.2 PREPARATION

A. Verify space requirements and dimensions of items shown diagrammatically on Drawings.

B. Clean substrate surfaces prior to applying next material or substance.

C. Seal cracks or openings of substrate prior to applying next material or substance.

D. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying any new material or substance in contact or bond.

3.3 PRE-INSTALLATION MEETINGS

A. When required in individual specification sections, convene a preinstallation meeting at the site prior to commencing work of the section.

B. Require attendance of parties directly affecting, or affected by, work of the specific section.

C. Notify Architect four days in advance of meeting date.

D. Prepare agenda and preside at meeting:
1. Review conditions of examination, preparation and installation procedures.
2. Review coordination with related work.

E. Record minutes and distribute copies within two days after meeting to participants, with two copies to Architect, Owner, participants, and those affected by decisions made.

F. Layout Meeting:
1. Prior to establishing layout of new perimeter and structural column grid(s), review building location requirements. Review benchmark, control point, and layout and dimension requirements. Inform Architect and Construction Manager of scheduled meeting. Require representatives of each entity directly concerned with Project layout to attend.

3.4 LAYING OUT THE WORK

A. Verify locations of survey control points prior to starting work.

B. Promptly notify Architect of any discrepancies discovered.

C. Contractor shall locate and protect survey control and reference points.

D. Protect survey control points prior to starting site work; preserve permanent reference points during construction.

E. Promptly report to Architect the loss or destruction of any reference point or relocation required because of changes in grades or other reasons.

F. Replace dislocated survey control points based on original survey control. Make no changes without prior written notice to Architect.

G. Utilize recognized engineering survey practices.

H. Establish elevations, lines and levels. Locate and lay out by instrumentation and similar appropriate means:
   1. Site improvements including pavements; stakes for grading, fill and topsoil placement; utility locations, slopes, and invert elevations.
   2. Grid or axis for structures.
   3. Building foundation, column locations, ground floor elevations.
   4. Controlling lines and levels required for mechanical and electrical trades.

I. Periodically verify layouts by same means.

J. Maintain a complete and accurate log of control and survey work as it progresses.

3.5 GENERAL INSTALLATION REQUIREMENTS

A. In addition to compliance with regulatory requirements, conduct construction operations in compliance with NFPA 241, including applicable recommendations in Appendix A.

B. Install products as specified in individual sections, in accordance with manufacturer's instructions and recommendations, and so as to avoid waste due to necessity for replacement.

C. Make vertical elements plumb and horizontal elements level, unless otherwise indicated.

D. Install equipment and fittings plumb and level, neatly aligned with adjacent vertical and horizontal lines, unless otherwise indicated.

E. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.

F. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.

G. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces, unless otherwise indicated on Drawings.

H. Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions with manufacturer.
   1. Where mounting heights are not indicated, mount components at heights directed by Architect.
   2. Allow for building movement, including thermal expansion and contraction.
   3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installation. Deliver these items to project site in time for installation.

I. Make consistent texture on surfaces, with seamless transitions, unless otherwise indicated.

J. Make neat transitions between different surfaces, maintaining texture and appearance.

K. Maintain conditions required for product performance until Substantial Completion.

L. Repair or remove and replace damaged, defective, or nonconforming Work.

3.6 PROGRESS CLEANING

A. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.

B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, prior to enclosing the space.

C. Broom and HEPA vacuum clean interior areas prior to start of surface finishing, and continue cleaning to eliminate dust.

D. Collect and remove waste materials, debris, and trash/rubbish from site periodically and dispose off-site; do not burn or bury.

3.7 PROTECTION OF INSTALLED WORK

A. Protect installed work from damage by construction operations.

B. Provide special protection where specified in individual specification sections.

C. Provide temporary and removable protection for installed products. Control activity in immediate work area to prevent damage.

D. Provide protective coverings at walls, projections, jambs, sills, and soffits of openings.

E. Protect finished floors, stairs, and other surfaces from traffic, dirt, wear, damage, or movement of heavy objects, by protecting with durable sheet materials.

F. Protect work from spilled liquids. If work is exposed to spilled liquids, immediately remove protective coverings, dry out work, and replace protective coverings.

G. Prohibit traffic or storage upon waterproofed or roofed surfaces. If traffic or activity is necessary, obtain recommendations for protection from waterproofing or roofing material manufacturer.

H. Prohibit traffic from landscaped areas.

I. Remove protective coverings when no longer needed; reuse or recycle coverings if possible.

3.8 SYSTEM STARTUP

A. Coordinate with requirements of Section 01 9113 - General Commissioning Requirements.

B. Coordinate schedule for start-up of various equipment and systems.

C. Notify Architect and Owner seven days prior to start-up of each item.

D. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for conditions that may cause damage.

E. Verify tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer.

F. Verify that wiring and support components for equipment are complete and tested.

G. Execute start-up under supervision of applicable Contractor personnel and manufacturer's representative in accordance with manufacturers' instructions.

H. When specified in individual specification Sections, require manufacturer to provide authorized representative to be present at site to inspect, check, and approve equipment or system installation prior to start-up, and to supervise placing equipment or system in operation.

I. Submit a written report that equipment or system has been properly installed and is functioning correctly.

3.9 ADJUSTING

A. Adjust operating products and equipment to ensure smooth and unhindered operation.

3.10 FINAL CLEANING

A. Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

B. Clean interior and exterior glass, surfaces exposed to view; remove temporary labels, stains and foreign substances, polish transparent and glossy surfaces, vacuum carpeted and soft surfaces.
   1. Vacuum all carpeted and soft surfaces with a high-efficiency particulate arrestor (HEPA) vacuum clean in accordance with the Connecticut High Performance Building Standards mandatory requirements.

C. Remove all labels that are not permanent. Do not paint or otherwise cover fire test labels or nameplates on mechanical and electrical equipment.

D. Clean equipment and fixtures to a sanitary condition with cleaning materials appropriate to the surface and material being cleaned.

E. Clean filters of operating equipment.

F. Remove waste, surplus materials, trash/rubbish, and construction facilities from the site; dispose of in legal manner; do not burn or bury.

3.11 CLOSEOUT PROCEDURES

A. Make submittals that are required by governing or other authorities.

B. Accompany Project Coordinator on preliminary inspection to determine items to be listed for completion or correction in the Contractor's Correction Punch List for Contractor's Notice of Substantial Completion.

C. Notify Architect when work is considered ready for Architect's Substantial Completion inspection.

D. Submit written certification containing Contractor's Correction Punch List, that Contract Documents have been reviewed, work has been inspected, and that work is complete in accordance with Contract Documents and ready for Architect's Substantial Completion inspection.

E. Owner will occupy all of the building as specified in Section 01 1000.

F. Conduct Substantial Completion inspection and create Final Correction Punch List containing Architect's and Contractor's comprehensive list of items identified to be completed or corrected and submit to Architect.

G. Correct items of work listed in Final Correction Punch List and comply with requirements for access to Owner-occupied areas.

H. Notify Architect when work is considered finally complete and ready for Architect's Substantial Completion final inspection.

I. Complete items of work determined by Architect listed in executed Certificate of Substantial Completion.

3.12 MAINTENANCE

A. Provide service and maintenance of components indicated in specification sections.

B. Maintenance Period: As indicated in specification sections or, if not indicated, not less than one year from the Date of Substantial Completion or the length of the specified warranty, whichever is longer.

C. Examine system components at a frequency consistent with reliable operation. Clean, adjust, and lubricate as required.

D. Include systematic examination, adjustment, and lubrication of components. Repair or replace parts whenever required. Use parts produced by the manufacturer of the original component.

E. Maintenance service shall not be assigned or transferred to any agent or subcontractor without prior written consent of the Owner.

END OF SECTION 01 7000

THIS PAGE INTENTIONALLY LEFT BLANK

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 7419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 GENERAL

1.1 WASTE MANAGEMENT REQUIREMENTS

A. Employ processes that ensure the generation of as little waste as possible due to error, poor planning, breakage, mishandling, contamination, or other factors.

B. Minimize trash/waste disposal in landfills; reuse, salvage, or recycle as much waste as economically feasible.

C. Contractor Reporting Responsibilities: Submit periodic Waste Disposal Reports; report landfill disposal, incineration, recycling, salvage, and reuse regardless of to whom the cost or savings accrues; use the same units of measure on required reports.

D. Develop and follow a Waste Management Plan designed to implement these requirements.

E. The following sources may be useful in developing the Waste Management Plan:

F. Methods of trash/waste disposal that are not acceptable are:
   1. Burning on the project site.
   2. Burying on the project site.
   3. Dumping or burying on other property, public or private.
   4. Other illegal dumping or burying.

G. Regulatory Requirements: Contractor is responsible for knowing and complying with regulatory requirements, including but not limited to Federal, state and local requirements, pertaining to legal disposal of all construction and demolition waste materials.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Additional requirements for project meetings, reports, submittal procedures, and project documentation.

B. Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS: Procedures for sustainable design documentation.

C. Section 01 5000 - Temporary Facilities and Controls: Additional requirements related to trash/waste collection and removal facilities and services.

D. Section 01 6000 - Product Requirements: Waste prevention requirements related to delivery, storage, and handling.

E. Section 01 7000 - Execution and Closeout Requirements: Trash/waste prevention procedures related to demolition, cutting and patching, installation, protection, and cleaning.

1.3 DEFINITIONS

A. Clean: Untreated and unpainted; not contaminated with oils, solvents, caulk, or the like.

B. Construction and Demolition Waste: Solid wastes typically including building materials, packaging, trash, debris, and rubble resulting from construction, remodeling, repair and demolition operations.

C. Hazardous: Exhibiting the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity or reactivity.

D. Nonhazardous: Exhibiting none of the characteristics of hazardous substances, i.e., ignitibility, corrosivity, toxicity, or reactivity.

E. Nontoxic: Neither immediately poisonous to humans nor poisonous after a long period of exposure.

F. Recyclable: The ability of a product or material to be recovered at the end of its life cycle and remanufactured into a new product for reuse by others.

G. Recycle: To remove a waste material from the project site to another site for remanufacture into a new product for reuse by others.

H. Recycling: The process of sorting, cleansing, treating and reconstituting solid waste and other discarded materials for the purpose of using the altered form. Recycling does not include burning, incinerating, or thermally destroying waste.

I. Return: To give back reusable items or unused products to vendors for credit.

J. Reuse: To reuse a construction waste material in some manner on the project site.

K. Salvage: To remove a waste material from the project site to another site for resale or reuse by others.

L. Sediment: Soil and other debris that has been eroded and transported by storm or well production run-off water.

M. Source Separation: The act of keeping different types of waste materials separate beginning from the first time they become waste.

N. Toxic: Poisonous to humans either immediately or after a long period of exposure.

O. Trash: Any product or material unable to be reused, returned, recycled, or salvaged.

P. Waste: Extra material or material that has reached the end of its useful life in its intended use. Waste includes salvageable, returnable, recyclable, and reusable material.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Sustainable Design Submittals: Submit Waste Management Plan and Waste Disposal Reports in accordance with procedures specified in Section 01 3566.42 - Sustainability Compliance Procedures - CT HPBS.

C. Waste Management Plan: Include the following information:
   1. Analysis of the trash and waste projected to be generated during the entire project construction cycle, including types and quantities.
   2. Landfill Options: The name, address, and telephone number of the landfill(s) where trash/waste will be disposed of, the applicable landfill tipping fee(s), and the projected cost of disposing of all project trash/waste in the landfill(s).
   3. Landfill Alternatives: List all waste materials that will be diverted from landfills by reuse, salvage, or recycling.
   4. Meetings: Describe regular meetings to be held to address waste prevention, reduction, recycling, salvage, reuse, and disposal.
   5. Materials Handling Procedures: Describe the means by which materials to be diverted from landfills will be protected from contamination and prepared for acceptance by designated facilities; include separation procedures for recyclables, storage, and packaging.
   6. Transportation: Identify the destination and means of transportation of materials to be recycled; i.e. whether materials will be site-separated and self-hauled to designated centers, or whether mixed materials will be collected by a waste hauler.

D. Waste Disposal Reports: Submit at specified intervals, with details of quantities of trash and waste, means of disposal or reuse, and costs; show both totals to date and since last report.
   1. Submit updated Report with each Application for Progress Payment; failure to submit Report will delay payment.
   2. Submit Report on a form acceptable to Owner.
   3. Landfill Disposal: Include the following information:
      a) Identification of material.
      b) Amount, in tons or cubic yards, of trash/waste material from the project disposed of in landfills.
      c) State the identity of landfills, total amount of tipping fees paid to landfill, and total disposal cost.
      d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
   4. Incinerator Disposal: Include the following information:
      a) Identification of material.
      b) Amount, in tons or cubic yards, of trash/waste material from the project delivered to incinerators.
      c) State the identity of incinerators, total amount of fees paid to incinerator, and total disposal cost.
      d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.
   5. Recycled and Salvaged Materials: Include the following information for each:
      a) Identification of material, including those retrieved by installer for use on other projects.
      b) Amount, in tons or cubic yards, date removed from the project site, and receiving party.
      c) Transportation cost, amount paid or received for the material, and the net total cost or savings of salvage or recycling each material.
      d) Include manifests, weight tickets, receipts, and invoices as evidence of quantity and cost.

e) Certification by receiving party that materials will not be disposed of in landfills or by incineration.

6. Material Reused on Project: Include the following information for each:
   a) Identification of material and how it was used in the project.
   b) Amount, in tons or cubic yards.
   c) Include weight tickets as evidence of quantity.
7. Other Disposal Methods: Include information similar to that described above, as appropriate to disposal method.

PART 3 EXECUTION

2.1 WASTE MANAGEMENT PROCEDURES

A. See Section 01 3000 for additional requirements for project meetings, reports, submittal procedures, and project documentation.

B. See Section 01 5000 for additional requirements related to trash/waste collection and removal facilities and services.

C. See Section 01 6000 for waste prevention requirements related to delivery, storage, and handling.

D. See Section 01 7000 for trash/waste prevention procedures related to demolition, cutting and patching, installation, protection, and cleaning.

2.2 WASTE MANAGEMENT PLAN IMPLEMENTATION

A. Manager: Designate an on-site person or persons responsible for instructing workers and overseeing and documenting results of the Waste Management Plan.

B. Communication: Distribute copies of the Waste Management Plan to job site foreman, each subcontractor, Owner, and Architect.

C. Instruction: Provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all parties at the appropriate stages of the project.

D. Meetings: Discuss trash/waste management goals and issues at project meetings.
   1. Prebid meeting.
   2. Preconstruction meeting.
   3. Regular job-site meetings.

E. Facilities: Provide specific facilities for separation and storage of materials for recycling, salvage, reuse, return, and trash disposal, for use by all contractors and installers.
   1. Provide containers as required.
   2. Provide adequate space for pick-up and delivery and convenience to subcontractors.
   3. Keep recycling and trash/waste bin areas neat and clean and clearly marked in order to avoid contamination of materials.

F. Hazardous Wastes: Separate, store, and dispose of hazardous wastes according to applicable regulations.

G. Recycling: Separate, store, protect, and handle at the site identified recyclable waste products in order to prevent contamination of materials and to maximize recyclability of identified materials. Arrange for timely pickups from the site or deliveries to recycling facility in order to prevent contamination of recyclable materials.

H. Reuse of Materials On-Site: Set aside, sort, and protect separated products in preparation for reuse.

I. Salvage: Set aside, sort, and protect products to be salvaged for reuse off-site.

SECTION 01 7800 - CLOSEOUT SUBMITTALS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Project record documents.

B. Operation and maintenance data.

C. Warranties and bonds.

1.2 RELATED REQUIREMENTS

A. Section 01 3000 - Administrative Requirements: Submittals procedures, shop drawings, product data, and samples.

B. Section 01 7000 - Execution and Closeout Requirements: Contract closeout procedures.

C. Section 01 9113 - General Commissioning Requirements: Verification and compilation of data into operation and maintenance manuals.

D. Individual Product Sections: Specific requirements for operation and maintenance data.

E. Individual Product Sections: Warranties required for specific products or Work.

1.3 SUBMITTALS

A. Project Record Documents: Submit documents to Architect with claim for final Application for Payment.

B. Electronic Manual Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

C. Operation and Maintenance Data:
1. Submit electronic copy of preliminary draft or proposed formats and outlines of contents before start of Work. Architect will review draft and return one copy with comments.
2. For equipment, or component parts of equipment put into service during construction and operated by Owner, submit completed documents within ten days after acceptance.
3. Submit electronic copy of completed documents 15 days prior to final inspection. This copy will be reviewed and returned after final inspection, with Architect comments. Revise content of document set as required prior to final submission.
4. Submit electronic set of revised final documents in final form within 10 days after final inspection.

D. Warranties and Bonds:
1. For equipment or component parts of equipment put into service during construction with Owner's permission, submit documents within 10 days after acceptance.
2. Make other submittals within 10 days after Date of Substantial Completion, prior to final Application for Payment.

3. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit within 10 days after acceptance, listing the date of acceptance as the beginning of the warranty period.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 PROJECT RECORD DOCUMENTS

A. Maintain one set on site of the following record documents; record actual revisions to the Work:
   1. Drawings.
   2. Specifications.
   3. Addenda.
   4. Change Orders and other modifications to the Contract.
   5. Reviewed shop drawings, product data, and samples.
   6. Manufacturer's instruction for assembly, installation, and adjusting.

B. Ensure entries are complete and accurate, enabling future reference by Owner.

C. Store record documents separate from documents used for construction.

D. Record information concurrent with construction progress.

E. Do not use project record documents for construction purposes.

F. Specifications: Legibly mark and record at each product section description of actual products installed, including the following:
   1. Manufacturer's name and product model and number.
   2. Product substitutions or alternates utilized.
   3. Changes made by Addenda and modifications.

G. Record Drawings and Shop Drawings: Legibly mark each item to record actual construction including:
   1. Measured depths of foundations in relation to finish first floor datum.
   2. Revisions to routing of piping and conduits.
   3. Revisions to electrical circuitry.
   4. Actual equipment locations.
   5. Duct size and routing.
   6. Measured horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent surface improvements.
   7. Measured locations of internal utilities and appurtenances concealed in construction, referenced to visible and accessible features of the Work.
   8. Field changes to dimension and detail.
   9. Details not on original Contract drawings.
   10. Field records for variable and concealed conditions.
   11. Information on the Work that is shown only schematically.
   12. Changes made by Change Order or Construction Change Directive.

13. Changes made following Architect's written orders.

H. Miscellaneous Record Documents: Assemble miscellaneous record documents required by other specification sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind and file miscellaneous record documents and identify each, ready for continued use and reference.
   1. Include miscellaneous record documents directory organized by specification section number and title, electronically linked to each item of miscellaneous record documents.

3.2 OPERATION AND MAINTENANCE DATA

A. Source Data: For each product or system, list names, addresses and telephone numbers of Subcontractors and suppliers, including local source of supplies and replacement parts.

B. Product Data: Mark each sheet to clearly identify specific products and component parts, and data applicable to installation. Delete inapplicable information.

C. Drawings: Supplement product data to illustrate relations of component parts of equipment and systems, to show control and flow diagrams. Do not use Project Record Documents as maintenance drawings.

D. Typed Text: As required to supplement product data. Provide logical sequence of instructions for each procedure, incorporating manufacturer's instructions.

3.3 OPERATION AND MAINTENANCE DATA FOR MATERIALS AND FINISHES

A. For Each Product, Applied Material, and Finish:
   1. Product data, with catalog number, size, composition, and color and texture designations.
   2. Include lists of materials and local sources of materials and related services for repairs.

B. Instructions for Care and Maintenance: Manufacturer's recommendations for cleaning agents and methods, precautions against detrimental cleaning agents and methods, and recommended schedule for cleaning and maintenance.

C. Moisture protection and weather-exposed products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.

D. Additional information as specified in individual product specification sections.

E. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

3.4 OPERATION AND MAINTENANCE DATA FOR EQUIPMENT AND SYSTEMS

A. For Each Item of Equipment and Each System:
   1. Description of unit or system, and component parts.
   2. Identify function, normal operating characteristics, and limiting conditions.
   3. Include performance curves, with engineering data and tests.
   4. Complete nomenclature and model number of replaceable parts.

B. Where additional instructions are required, beyond the manufacturer's standard printed instructions, have instructions prepared by personnel experienced in the operation and maintenance of the specific products.

C. Operating Procedures: Include start-up, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shut-down, and emergency instructions. Include summer, winter, and any special operating instructions.

D. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and trouble shooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.

E. Provide servicing and lubrication schedule, and list of lubricants required.

F. Include manufacturer's printed operation and maintenance instructions.

G. Include sequence of operation by controls manufacturer.

H. Provide original manufacturer's parts list, illustrations, assembly drawings, and diagrams required for maintenance.

I. Provide control diagrams by controls manufacturer as installed.

J. Provide Contractor's coordination drawings, with color coded piping diagrams as installed.

K. Provide charts of valve tag numbers, with location and function of each valve, keyed to flow and control diagrams.

L. Provide list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.

M. Include test and balancing reports.

N. Additional Requirements: As specified in individual product specification sections.

3.5 ASSEMBLY OF OPERATION AND MAINTENANCE MANUALS

A. Electronic Manuals: Assemble manuals in the form of a multiple file composite electronic PDF file for each manual type required.
   1. Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
   2. Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a easily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

B. Cover: Identify each binder with typed or printed title OPERATION AND MAINTENANCE INSTRUCTIONS; identify title of Project; identify subject matter of contents.

C. Project Directory: Title and address of Project; names, addresses, and telephone numbers of Architect, Consultants, Contractor and subcontractors, with names of responsible parties.

D. Tables of Contents: List every item separated by a divider, using the same identification as on the divider tab; where multiple volumes are required, include all volumes Tables of Contents in each volume, with the current volume clearly identified.

E. Arrangement of Contents: Organize each volume in parts as follows:
   1. Project Directory.
   2. Table of Contents, of all volumes, and of this volume.
   3. Operation and Maintenance Data: Arranged by system, then by product category.
      a) Source data.
      b) Product data, shop drawings, and other submittals.
      c) Operation and maintenance data.
      d) Field quality control data.
      e) Photocopies of warranties and bonds.
   4. Design Data: To allow for addition of design data furnished by Architect or others, provide a tab titled "Design Data".

3.6 WARRANTIES AND BONDS

A. Obtain warranties and bonds, executed in duplicate by responsible Subcontractors, suppliers, and manufacturers, within 10 days after completion of the applicable item of work. Except for items put into use with Owner's permission, leave date of beginning of time of warranty until Date of Substantial completion is determined.

B. Verify that documents are in proper form, contain full information, and are notarized.

C. Co-execute submittals when required.

D. Retain warranties and bonds until time specified for submittal.

E. List circumstances and conditions that would affect validity of warranties or bonds. Include procedures to follow and required notifications for warranty claims.

F. Electronic Manual: Assemble manual in the form of a multiple file composite electronic PDF file for each manual required.
   1. Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
   2. Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a easily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

G. Cover: Identify each manual with printed title WARRANTIES AND BONDS, with title of Project; name, address and telephone number of Contractor and equipment supplier; and name of responsible company principal.

H. Table of Contents: Use the sequence of the Table of Contents of the Project Manual, with each item identified with the number and title of the specification section in which specified, and the name of product or work item.

I. Separate each warranty or bond with sheet keyed to the Table of Contents listing. Provide full information, using separate as necessary. List Subcontractor, supplier, and manufacturer, with name, address, and telephone number of responsible principal.

END OF SECTION 01 7800

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 01 7900 - DEMONSTRATION AND TRAINING

PART 1 GENERAL

1.1 SUMMARY

A. Demonstration of products and systems to be commissioned and where indicated in specific specification sections.

B. Training of Owner personnel in operation and maintenance is required for:
1. HVAC systems and equipment.
2. Electrical systems and equipment.
3. Conveying systems.
4. Items specified in individual product Sections.

C. Training of Owner personnel in care, cleaning, maintenance, and repair is required for:
1. Roofing, waterproofing, and other weather-exposed or moisture protection products.
2. Finishes, including flooring, wall finishes, ceiling finishes.
3. Fixtures and fittings.
4. Items specified in individual product Sections.

1.2 RELATED REQUIREMENTS

A. Section 01 7800 - Closeout Submittals: Operation and maintenance manuals.

B. Section 01 9113 - General Commissioning Requirements: Additional requirements applicable to demonstration and training.

C. Other Specification Sections: Additional requirements for demonstration and training.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures; except:
1. Make all submittals specified in this section, and elsewhere where indicated for commissioning purposes, directly to the Commissioning Authority.
2. Submit one copy to the Commissioning Authority, not to be returned.
3. Make commissioning submittals on time schedule specified by Commissioning Authority.
4. Submittals indicated as "Draft" are intended for the use of the Commissioning Authority in preparation of overall Training Plan; submit in editable electronic format, Microsoft Word 2003 preferred.

B. Draft Training Plans: Owner will designate personnel to be trained; tailor training to needs and skill-level of attendees.
1. Submit to Commissioning Authority for review and inclusion in overall training plan.
2. Submit not less than four weeks prior to start of training.
3. Revise and resubmit until acceptable.
4. Provide an overall schedule showing all training sessions.
5. Include at least the following for each training session:
a) Identification, date, time, and duration.
b) Description of products and/or systems to be covered.

c) Name of firm and person conducting training; include qualifications.
d) Intended audience, such as job description.
e) Objectives of training and suggested methods of ensuring adequate training.
f) Methods to be used, such as classroom lecture, live demonstrations, hands-on, etc.
g) Media to be used, such a slides, hand-outs, etc.
h) Training equipment required, such as projector, projection screen, etc., to be provided by Contractor.

C. Training Manuals: Provide training manual for each attendee; allow for minimum of two attendees per training session.
1. Include applicable portion of O&M manuals.
2. Include copies of all hand-outs, slides, overheads, video presentations, etc., that are not included in O&M manuals.
3. Provide one extra copy of each training manual to be included with operation and maintenance data.

D. Video Recordings: Submit digital video recording of each demonstration and training session for Owner's subsequent use.
1. Format: DVD Disc.
2. Label each disc and container with session identification and date.

1.4 QUALITY ASSURANCE

A. Instructor Qualifications: Familiar with design, operation, maintenance and troubleshooting of the relevant products and systems.
1. Provide as instructors the most qualified trainer of those contractors and/or installers who actually supplied and installed the systems and equipment.
2. Where a single person is not familiar with all aspects, provide specialists with necessary qualifications.

1.5 COORDINATION

A. Coordinate instruction schedule with Owner. Adjust schedule as required to minimize disruption to Owner's operations and and to ensure availability of Owner's personnel.

PART 2 PRODUCTS - NOT USED

PART 3 EXECUTION

3.1 DEMONSTRATION - GENERAL

A. Demonstrations conducted during system start-up do not qualify as demonstrations for the purposes of this section, unless approved in advance by Owner.

B. Demonstrations conducted during Functional Testing need not be repeated unless Owner personnel training is specified.

C. Demonstration may be combined with Owner personnel training if applicable.

D. Operating Equipment and Systems: Demonstrate operation in all modes, including start-up, shut-down, seasonal changeover, emergency conditions, and troubleshooting, and maintenance procedures, including scheduled and preventive maintenance.
   1. Perform demonstrations not less than two weeks prior to Substantial Completion.
   2. For equipment or systems requiring seasonal operation, perform demonstration for other season within six months.

E. Non-Operating Products: Demonstrate cleaning, scheduled and preventive maintenance, and repair procedures.
   1. Perform demonstrations not less than two weeks prior to Substantial Completion.

3.2 TRAINING - GENERAL

A. Commissioning Authority will prepare the Training Plan based on draft plans submitted.

B. Conduct training on-site unless otherwise indicated.

C. Owner will provide classroom and seating at no cost to Contractor.

D. Do not start training until Functional Testing is complete, unless otherwise specified or approved by the Commissioning Authority.

E. Provide training in minimum two hour segments.

F. The Commissioning Authority is responsible for determining that the training was satisfactorily completed and will provide approval forms.

G. Training schedule will be subject to availability of Owner's personnel to be trained; re-schedule training sessions as required by Owner; once schedule has been approved by Owner failure to conduct sessions according to schedule will be cause for Owner to charge Contractor for personnel "show-up" time.

H. Review of Facility Policy on Operation and Maintenance Data: During training discuss:
   1. The location of the O&M manuals and procedures for use and preservation; backup copies.
   2. Typical contents and organization of all manuals, including explanatory information, system narratives, and product specific information.
   3. Typical uses of the O&M manuals.

I. Product- and System-Specific Training:
   1. Review the applicable O&M manuals.
   2. For systems, provide an overview of system operation, design parameters and constraints, and operational strategies.
   3. Review instructions for proper operation in all modes, including start-up, shut-down, seasonal changeover and emergency procedures, and for maintenance, including preventative maintenance.
   4. Provide hands-on training on all operational modes possible and preventive maintenance.
   5. Emphasize safe and proper operating requirements; discuss relevant health and safety issues and emergency procedures.
   6. Discuss common troubleshooting problems and solutions.

7. Discuss any peculiarities of equipment installation or operation.
8. Discuss warranties and guarantees, including procedures necessary to avoid voiding coverage.
9. Review recommended tools and spare parts inventory suggestions of manufacturers.
10. Review spare parts and tools required to be furnished by Contractor.
11. Review spare parts suppliers and sources and procurement procedures.

J. Be prepared to answer questions raised by training attendees; if unable to answer during training session, provide written response within three days.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

B. Digital Video Recordings: Provide high-resolution, digital video in MPEG format, produced by a digital camera with minimum sensor resolution of 12 megapixels and capable of recording in full HD mode with vibration reduction technology.

END OF SECTION 01 7900

FOR REFERENCE: THIS SECTION WAS ISSUED FOR PHASE 1 AND PHASE 2

SECTION 019113 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 DESCRIPTION

A. Commissioning is a quality-oriented process for achieving, verifying, and documenting that the performance of facilities, systems, and assemblies meet defined objectives and criteria. The Commissioning process begins at project inception (during the pre-design phase) and continues through the life of the facility. The commissioning process includes specific tasks to be conducted during each phase in order to verify that design, construction, and training meet the Owner's Project Requirements.

B. The Goals of the Commissioning Process are to:

1. Verify that applicable equipment and systems are installed according to the contract documents, manufacturer's recommendations, and industry accepted minimum standards, and that they receive adequate operational checkout by installing contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that O&M documentation has been provided to the client.
4. Verify that the owner's operating personnel are adequately trained.

C. The commissioning process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning product.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions, Division 1, and other trade specific specification sections shall apply to this section.

B. Owner's Project Requirements and Basis of Design documents are included by reference for information only.

C. ASHRAE Guideline 0-2005, The Commissioning Process

1.3 SUMMARY

A. This section includes general requirements that apply to the implementation of the commissioning process without regard to specific systems, assemblies, and components.

B. Related sections include the following:

1. Section 013300 Submittal Procedures
2. Section 017823 Operation and Maintenance Data
3. Section 017900 Demonstration and Training
4. Division 21 Fire Suppression

5. Division 22 Plumbing
6. Division 23 Heating Ventilating and Air Conditioning (Mechanical)
7. Division 25 Integrated Automation
8. Division 26 Electrical
9. Division 27 Communications
10. Division 28 Electronic Safety and Security

1.4 DEFINITIONS

A. Acceptance - A formal action, taken by a person with appropriate provider (which may or may not be contractually defined) to declare that some aspect of the project meets defined requirements, thus permitting subsequent activities to proceed.

B. Approval - Acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the contract documents.

C. Basis of Design - A document that records the concepts, calculations, decisions, and product selections used to meet the Owner's Project Requirements and to satisfy applicable regulatory requirements, standards, and guidelines. The document includes both narrative descriptions and lists of individual items that support the design process.

D. Checklists, Construction Checklists, Installation Checklists, or Pre-Functional Checklists - Checklists that are developed by the CxA and completed by the Construction Team during all phases of the construction process to verify that materials, equipment, assemblies, and systems are installed in accordance with the Contract Documents.

E. Commissioning Authority or Agent (CxA) - The entity identified by the owner who leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process.

F. Commissioning Plan (CxP) - A document developed by the CxA that outlines the organization, schedule, roles and responsibilities, and documentation requirements of the Commissioning Process. The CxP is initially developed in the design phase.

G. Commissioning Process - A quality-focused process for enhancing the delivery of a project. The process focuses upon verifying and documenting that the facility and all of its systems and assemblies are planned, designed, installed, tested, operated, and maintained to meet the Owner's Project Requirements.

H. Commissioning Team - The individuals who through coordinated actions are responsible for implementing the commissioning process.

I. Data logging -The monitoring and recording of flows, currents, status, pressures, etc., of equipment using stand-alone data recorders separate from the control system or the trending capabilities of control systems.

J. Deferred Performance Tests (DPTs) - Performance tests that are performed, at the discretion of the CxA, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design, or other site conditions that disallow the test from being performed.

K. Deficiency, Non-Compliance, Non-Conformance - A condition in the installation or function of a component, piece of equipment, or system that is not in compliance with the contract documents.

L. Factory Testing - Testing of equipment on-site or at the factory, by factory personnel, with or without an owner's representative present.

M. Issues Log - A formal and ongoing record of problems or concerns – and their resolution – that have been raised by members of the commissioning team during the course of the commissioning process.

N. Owner's Project Requirements - A written document that details the functional requirements of a project and the expectations of how it will be used and operated. These include project goals, measurable performance criteria, cost considerations, benchmarks, success criteria, and supporting information. This is also referred to as the Project Intent or Design Intent.

O. Pre-Functional Testing – testing performed by the contractors to verify complete system operation and system readiness.

P. Quality Based Sampling - A process for evaluating a sub-set (sample) of the total population. The sample is based upon a known or estimated probability distribution of expected values; an assumed statistical distribution based upon data from a similar product, assembly, or system; or a random sampling that has scientific statistical basis.

Q. Seasonal Performance Tests - Performance tests that are deferred until the system(s) will experience conditions closer to their design conditions based on weather conditions.

R. Startup - The initial starting or activating of dynamic equipment, including completing construction checklists.

S. Systems Manual - A system-focused composite document that includes the operation manual, maintenance manual, and additional information of use to the owner during the occupancy and operations phase.

T. Functional Performance Test (FPT) - A protocol written by the CxA that defines methods, personnel, and expectations for tests conducted on components, equipment, assemblies, systems, and interfaces among systems. Performance testing includes the dynamic functions and operations of equipment and systems using manual or monitoring methods under various levels of operation. Systems are tested under various modes, such as during low cooling loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. The systems are run through all the control system's sequences of operation and components are verified to respond as the sequences state.

U. Training Plan or Instruction Program - A written document that details the expectations, schedule, and deliverables related to the training of project operating and maintenance personnel, users, and occupants.

V. Verification - The process by which specific documents, components, equipment, assemblies, systems, and interfaces among systems are confirmed to comply with the criteria

described in the Owner's Project Requirements.

W. Trending – The monitoring, by a building management system or other electronic data gathering equipment, and analyzing of the data gathered over a period of time.

1.5 COORDINATION

A. Coordination of the Cx process is the responsibility of all Cx Team members.

B. The CxA coordinates the commissioning activities through the construction manager or general contractor. All members shall work together to fulfill their contracted responsibilities and meet the objectives of the contract documents.

C. The CxA, through the Owner or CM, will provide sufficient notice to the contractor for scheduling commissioning activities with respect to the Owner's participation. The CM will integrate all commissioning activities into the overall project schedule. All parties will address scheduling problems and make necessary notifications in a timely manner in order to expedite the commissioning process.

1.6 REMOBILIZATION AND RETESTING FEES

A. In general, CxA testing will include one test of each system or equipment. The cost of any additional testing will be submitted to the Owner for review and direction. Following Owner review, the cost for additional testing to verify that performance is in accordance with the design intent may be deducted from the Contractor's final payment by the Owner.

B. In the event that a CxA site visit is scheduled in advance with the Contractor and testing is unable to be performed through no fault of the Owner and the CxA is not notified within 48 hours, the cost of the travel and time will be deducted from the contractor's final payment by the Owner.

1.7 COMMISSIONING PLAN

A. Commissioning during construction begins with an initial commissioning meeting conducted by the CxA where the commissioning process is reviewed with the project commissioning team members. This meeting shall be scheduled by the CM. Generally, the initial Cx Meeting will be scheduled within 60 days of the award of contracts related to commissioned systems and equipment.

B. Additional meetings will be required throughout construction, scheduled by the CxA, through the owner or CM, with necessary parties attending to plan, scope, coordinate, schedule future activities, and resolve problems. In general these meetings will be monthly with the frequency increasing towards substantial completion to accommodate start-ups, balancing, scheduling testing, and training.

C. The CxA reviews submittals for commissioned equipment and systems parallel with the Design Team for compliance with the OPR.

D. The construction checklists, developed by the CxA, are to be completed by the contractor (or its subcontractors), before and during the startup process and verified by the CxA.

E. The CxA may witness selected assembly mock-ups, equipment, and system start-ups.

F. The CxA develops equipment and system functional performance test (FPT) procedures. The FPT's are executed by the contractor and witnessed and documented by the CxA.

G. The CxA reviews the O&M documentation for completeness.

H. The CxA reviews the training plan provided by the contractor.

I. Deferred performance testing will be conducted as required.

1.8 COMMISSIONING TEAM

A. Members appointed by Contractor(s): Individuals, each having authority to act on behalf of the entity he or she represents, explicitly organized to implement the commissioning process through coordinated actions. The commissioning team shall consist of, but not be limited to, representatives of each contractor, including project superintendent and subcontractors, installers, suppliers, and specialists deemed appropriate by the CxA.

B. Members appointed by Owner:

1. CxA - An entity identified by the owner who leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process. Owner will engage the CxA under a separate contract.
2. Representatives of the facility Users and Operation and Maintenance personnel.
3. Architect and engineering design professionals.

1.9 RESPONSIBILITIES

Understanding and defining the roles of each participant are vital to the success of the Commissioning Process. This provides an outline of the responsibilities of each participant in the Commissioning Process. These responsibilities are typically formalized in the contracts between the Owner and the various parties and this section is not intended to supersede or negate any contracted relationships.

A. Owner (or Designated Representative)

1. Include the design professionals' Commissioning related responsibilities and scope of work in the design request for proposal and contract.
2. Oversee the development of the Owner's Project Requirements and approve any changes.
3. Designate a representative, ideally from the building's operations and maintenance team, to participate in the Commissioning Process including:

a. Design Phase coordination meetings
b. Construction Phase coordination meetings

c. Informal owner-training as equipment is installed and started
d. Maintenance orientation and inspections
e. System testing and verification meetings
f. Functional procedure review meetings before testing of systems
g. Training sessions
h. Verification demonstrations
i. Systems and assemblies tests
j. Final review at acceptance meeting

4. Review and approve any changes made to the Owner's Project Requirements.
5. Review, comment on, and accept the Commissioning Authority's progress and final reports.

B. Commissioning Authority (CxA)

C. The Commissioning Authority is responsible to verify that the Owner's Project Requirements for the project are satisfactorily achieved. The CxA leads, plans, schedules, and coordinates the commissioning team to implement the commissioning process. Specific tasks performed by the CxA include:

Design Phase

1. Develop and update the design phase commissioning plan.
2. Perform focused review of the design, drawings and specifications at various stages of development as required.
3. Review documents and responses from A/E to ensure that all previous comments have been addressed by the appropriate party.
4. Develop full commissioning specifications for all commissioned equipment. The specifications will be consistent in content, rigor and format to the referenced standards.

a. A detailed description of the responsibilities of all parties.
b. Details of the commissioning process.
c. Reporting and documentation requirements, including formats; alerts to coordination issues, deficiency resolution; construction checklist and start up requirement.
d. The functional testing processes.
e. Specific functional test requirements, including testing conditions and acceptance criteria for each piece of equipment being commissioned.
f. Review the Owner's Project Requirements and Basis of Design.
g. Develop a Design Phase Commissioning Plan.

Bid Phase

1. Answer commissioning related questions throughout the bid process.

Construction Phase

1. Perform the tasks and functions to be incorporated in the specifications ascribed to the CxA.
2. Coordinate and direct the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties.
3. Coordinate the commissioning work, with the Construction Manager, Contractor, Architect and Owner's representatives to ensure that commissioning activities are being scheduled into the master schedule.
4. Plan and conduct commissioning meetings and distribute minutes.
5. Coordinate control integration meetings where the owner, design team, mechanical engineers, building management system programmer, equipment factory representative and CxA discuss integration requirements between equipment, systems and disciplines to ensure the equipment and systems operate to meet the design intent.
6. Request and review information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures.
7. Review coordination drawings to ensure that trades are making a reasonable effort to coordinate work. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
8. Write and distribute construction checklists for commissioned equipment.
9. Perform site visits to observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.
10. Provide construction checklists for equipment/systems within the scope of work to the contractors.
11. Document construction checklist completion by reviewing completed checklists and by site observation.
12. Verify air and water systems balancing by reviewing completed TAB report.
13. With assistance and review from the installing contractor, CxA will write functional performance test procedures for equipment and systems.
14. Analyze functional performance trend logs and monitoring data to verify performance.
15. Coordinate, witness and document manual functional performance tests performed by installing contractors.
16. Maintain a master issues log and report all issues as they occur directly to the Owner's representative and the architect.
17. Verify the training of the Owner's operating personnel.
18. Review the preparation of the O&M manuals for commissioned equipment. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
19. Compile a final commissioning Report, which shall include:

    a. An executive summary that includes a summary of findings and system descriptions.
    b. All outstanding non-compliance items shall be specifically listed. Each non-compliance issue shall be referenced to the specific functional test, inspection, trend log, etc. where the deficiency is documented.

c. Also included in the Commissioning Record shall be the issues log, commissioning plan, progress reports, submittal and O&M manual reviews, training record, construction checklists, start-up reports, and functional tests.

20. Comply with the requirements of any applicable green-building rating systems (i.e. LEED, High Performance Buildings, Green Guide for Healthcare, etc.).

Warranty Period

1. Coordinate and supervise required opposite season or deferred testing as needed.
2. Return to the site approximately10 months into the warranty period and review with facility staff the current building operation and the condition of outstanding issues related to the original and seasonal commissioning. Also interview facility staff and identify problems or concerns they have with operating the building as originally intended.
3. Identify areas that may come under warranty or under the original construction contract. The CxA is not responsible for verifying that the deficiencies have been corrected.

D. Design Team

The primary role of the Design Team is to translate the Owner's Project Requirements into a complete design. Relative to commissioning, the design team's responsibilities vary depending on the specific project and contract, but may include:

1. Participate in the development and documentation of the initial Owner's Project Requirements.
2. Document revisions to the Owner's Project Requirements as approved by the Owner.
3. Document the Basis of Design.
4. Integrate the Commissioning Process requirements provided by CxA in the Contract Documents.
5. Respond to Commissioning Team design review comments.
6. Adequately detail the Operations and Maintenance of the systems and assemblies in Contract Documents.
7. Review and incorporate the CxA's comments from submittal reviews.
8. Participate in the initial Operation and Maintenance personnel training sessions. Include a presentation of the project's Basis of Design and descriptions of the associated systems.
9. Review functional test procedures.
10. Review the CxA's reports and logs and comment as appropriate.
11. Review and comment on the final Cx Report.

E. Construction Manager

The Construction Manager provides management, technical, and administrative expertise during the Construction phase to ensure the building Owner's goals relating to schedule and quality are met. The Construction Manager's responsibilities related to the Commissioning Process typically include:

1. Include any costs for Commissioning Process activities in the contract price.
2. Include Commissioning Process requirements and activities in all contractors' contracts.
3. Include Cx-related milestones in the construction schedule.
4. Ensure necessary accessibility to all equipment to allow for proper operation and maintenance of the building.
5. Provide individuals with the required background and authority to implement the Commissioning Process activities as outlined in the Contract Documents.
6. Issue a statement at the end of the project certifying that all work has been completed in accordance with the Contract Documents and the facility is operational.
7. Respond to Commissioning Process reports and correct deficiencies identified during installation verification or functional testing.
8. Review and comment on the final Cx Report.

F. Contractors

Many different contractors will be involved in the Commissioning Process. The various contractors may include the building contractors (general, mechanical and electrical), the

testing, adjusting, and balancing contractor, the building automation system contractor and others as required by the contract documents. As a member of the Commissioning Team, the responsibilities of the various building contractors include:

1. Include any costs for Commissioning Process activities in the contract price.
2. Include Commissioning Process requirements and activities in all subcontracts or equipment purchases.
3. Ensure the cooperation and participation of all subcontractors and manufacturers of equipment or systems to be commissioned.
4. Attend Commissioning Team meetings.
5. Include Cx-related milestones in the construction schedule.
6. Implement the training program as described in the Contract Documents. Coordinate related activities with the CxA.
7. Provide submittals to the Owner, Design Team, and CxA as detailed in the Contract Documents.
8. Respond to and resolve issues identified in the Cx Issues Log.
9. Notify the CxA when systems and assemblies are ready for installation verification and testing. For repetitive assemblies, notify the CxA upon the completion of the prototype for a First Piece or Mock-Up review.
10. Complete system and equipment checklists developed by the CxA. Complete the Checklists as the work is completed. Provide completed copies to the CxA at regular intervals for verification.
11. Complete Pre-Functional test procedures. Functional testing will not take place until all Pre-Functional Tests have been fully executed.
12. Functional testing. Once pre-functional tests are complete, functional test verification will be scheduled and demonstrated in the presence of the CxA.
13. Maintain the Project Record Documents in accordance with the requirements of the Contract Documents.

G. Manufacturers

The suppliers of major equipment are required to support the Commissioning Team in the following manner:

1. Provide all information required for the proper Start-up and Operation and Maintenance of the system or assembly in the initial submittal, as detailed in the Contract Documents.
2. Provide the requirements to maintain the warranty in the initial submittal, as detailed in the Contract Documents.
3. Coordinate and provide results of all factory tests required in the Contract Documents.
4. Participate in the training process as detailed in the Contract Documents.
5. Demonstrate operation and performance of equipment and assemblies as detailed in the Contract Documents.

H. Operations and Maintenance Staff

The Operations and Maintenance staff will participate in the Commissioning Process in the following areas:

1. Define Operations and Maintenance related requirements of the building.
2. Participate in design review for O&M impacts.
3. Review maintenance manual, record drawing and documentation requirements developed by the Design Team.
4. Define training program requirements.
5. Participate/witness functional performance testing.
6. Attend contractor and vendor training sessions.

1.10 EQUIPMENT/SYSTEMS TO BE COMMISSIONED

A. The following equipment/systems will be commissioned in this project:

HVAC/Mechanical:
Air Handling Units
Humidifiers
Fans
Demand Control Ventilators
Variable Air Volume Terminal Units
Lab Terminal Units
Chiller
Cooling Tower
Boiler
Pumps
Heat Exchangers
Pressure Reducing Valves
Energy Recover Ventilators
Refrigeration Systems
Ductless Split Air Conditioning Systems
Unit Heaters & Cabinet Unit Heaters
Building Management System

Electrical:
Emergency Generator
Automatic Transfer Switch
Lighting & Daylighting Controls
Renewable Energy Systems
Switchgear
Main Switchboards
Uninterrupted Power Supply
Telecommunications System
Security System

Fire Protection:
Fire Alarm System
Fire Suppression

Plumbing:
Domestic Hot Water System

Piping
Sanitary Waste Piping
Storm Drainage
Plumbing Fixtures

Envelope:
Roof
Walls
Windows
Doors

PART 2 - **PRODUCTS**

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup and initial checkout and required performance testing shall be provided by the contractor for the equipment being tested. This includes, but is not limited to, two-way radios, meters, and data recorders. Data recorders may be provided by the CxA at the option of the CxA.

B. Special equipment, tools, and instruments required for testing equipment according to these contract documents shall be included in the contractor's base bid price and shall be turned over to the owner at Project close-out.

C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance within the tolerances specified in the specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration to NIST traceable standards within the past year to an accuracy of 0.5 degree F and a resolution of + or - 0.1 degree F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year. All equipment shall be calibrated according to the manufacturer's recommended intervals and when dropped or damaged. Calibration tags shall be affixed or certificates readily available.

PART 3 - **EXECUTION**

3.1 OVERVIEW

Through the Construction Phase of the project, it is the responsibility of the CxA to coordinate and direct the Commissioning Process activities in a logical, sequential, and efficient manner using protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties.

3.2 CONDUCT PRE-CONSTRUCTION MEETING

The Pre-Construction Meeting is an opportunity for the CxA to meet with the Construction Team and discuss the general Commissioning Process. It is the ideal time to identify Commissioning Team members, discuss the integration of the Commissioning Process Schedule with the

Construction Schedule, review the submittal review requirements, review the inspection and testing process, and develop the formal lines of communication between all parties.

3.3 CONDUCT REGULAR COMMISSIONING MEETINGS

Once the Commissioning Team (Cx Team) has been formed, regular Commissioning Meetings are held. These meetings vary in frequency based upon the activity level at the time, but will generally be held monthly and will be coordinated to coincide with Construction Meeting days for convenience. At the Commissioning Meetings, past Commissioning Process activities are reviewed, future Commissioning Process activities are planned and coordinated, Commissioning documentation is requested and exchanged, and the Commissioning Schedule is updated and integrated into the Construction Schedule. The CxA will request all documentation necessary to develop the installation checklists, requirements for equipment start-ups, pre-functional and functional performance tests at these meetings and review the draft versions of these documents with the contractors that are responsible for implementing them. The CxA leads these meetings, records the minutes, and distributes the minutes with action items to all Cx Team members.

3.4 CONTRACTOR SUBMITTAL REVIEW

The CxA will review the Contractor submittals coincident with the Design Team and provide comments to the Design Team for inclusion with their review so a single set of review comments can be provided to the Contractors. The reviewed submittals will include commissioned equipment and coordination drawings that include commissioned equipment and systems, control drawings and sequences, and interfaces and interlocks between systems. In addition, the CxA will periodically review the final Design Team comments to ensure a quality review process.

The review will focus on operations, maintenance, and commissioning related issues with the goal of ensuring the submitted equipment complies with the Owner's Project Requirements. The CxA review will NOT include a detailed review of system capacities, sizes, and other technical data that are the responsibility of the Engineer of Record. CxA submittal reviews will frequently request additional information from the Contractors, including specific operations and maintenance data, performance curves, and targeted coordination drawings for areas of concern.

3.5 MAINTAIN ISSUES LOGS

Throughout the Construction Process, the CxA will maintain a Commissioning Issues Log. This log will document all Construction Phase issues that identifies the following fields.

A. The responsible party, either Construction Team member, Design Team member, or Owner

B. The exact location of the issue (floor and room)

C. The applicable system component, i.e. lighting, ductwork, pump, etc.

D. The project impact

E. Priority

F. A reference to the Contract Documents (if applicable)

G. A detailed description of the issue

H. A status, i.e. complete, incomplete, accepted, unverifiable

The issues log will be available online and reviewed at each Commissioning Meeting and each issue will be tracked by the CxA.

3.6 CONSTRUCTION CHECKLISTS

The Contractors will be responsible for completing documentation related to the installation, start-up, and testing of all commissioned equipment and systems.

The CxA will develop the installation checklists and will be available online to the Construction Team. The Construction Team will be responsible for completing the installation checklists for 100% of the commissioned systems and equipment. The checklists will include best practices related to the specific equipment or system, highlights of required installation details from the drawings and specifications, and equipment manufacturer, model number, serial number, and capacity verification information.

These checklists will be reviewed at every commissioning meeting with the expectation that checklists will be completed as the work progresses.

The CxA will use sampling strategies to field verify the proper completion of the checklists with sampling rates determined based upon the success of the verification process, the quantity of each type of equipment, and the relative importance of the equipment's operation related to the overall building operation.

The Functional Testing of the equipment and systems will not be scheduled until all relevant Installation Checklists are submitted to the Commissioning Agent.

3.7 PRE-FUNCTIONAL CHECKLISTS

In order to verify that the systems and equipment are ready for final Functional Testing witnessed by the CxA, the Contractor will perform Pre-Functional Testing independent of the CxA. Pre-Functional Testing shall consist of performing the complete Functional Testing (described below) with tests provided by the CxA. Through this process, the Contractor will validate the test procedure and provide a marked-up version of the test complete with results. Once a completed test is provided indicating successful operation of the system, the CxA will schedule the Functional Testing as described below.

3.8 SITE OBSERVATIONS

Periodically throughout the Construction process, the CxA will perform site visits to observe component and systems installations. These visits will be planned to coincide with selected planning and job-site meetings, installation milestones, component and assembly mock-ups, and equipment and system start-ups. A field report will be provided at the conclusion of each visit documenting the tasks accomplished during the visit.

3.9 FUNCTIONAL TESTING

The performance of the testing of all commissioned equipment and systems is the responsibility of the Contractors. The CxA will develop the functional performance tests with the assistance of the installing contractors, and upon the successful completion of Pre-Functional Testing as described above, will coordinate the testing process, and witness the tests that are performed by the Contractors. The CxA will coordinate the retesting of equipment to verify satisfactory performance is achieved.

The functional performance testing will include operating the systems and components through each of the written sequences of operation, other significant modes and miscellaneous alarms, power failure, and security alarm when impacted by and interlocked with commissioned equipment. Sensors and actuators shall be calibrated during construction check listing by the installing contractors and spot checked by the CxA during functional testing. Tests on HVAC equipment shall be done, if possible, in their proper operating season (cooling in summer, heating in winter). Any equipment that operates in both seasons, such as the heat pumps, should ideally be tested in both seasons. However, if this is not possible, some manipulation of setpoints and control points will be done to simulate the necessary conditions. Functional testing will be done using conventional manual methods and control system trend logs as required to provide a high level of confidence in proper system function, as deemed appropriate by the CxA and the Owner. A report will be provided that includes all of the issues identified during the testing process.

As a component of the test procedures, the CxA will identify specific system trends to be set up and then analyze the trend and monitoring data as a method of verifying performance.

3.10 TRAINING AND O&M REVIEW

Planning for the training of the Owner's operations and maintenance staff begins in the design phase with the development of training requirements.

The Owner's operations and maintenance staff will commence training sessions during the construction phase through a combination of formal and informal training activities. Although the informal training sessions, such a project walkthroughs or submittal reviews, will take place throughout the construction process, the formal training program should not be initiated until the successful completion of functional testing to ensure that the operations and maintenance personnel receive accurate training and are able to witness the systems operating properly during the training.

The CxA will verify the Contractor-provided training of the Owner's operating personnel. The training agendas, attendance logs, and materials will be reviewed by the CxA and any additional or supplemental training required for the Owner's operating personnel to properly and efficiently operate the building will be highlighted to the Owner by the CxA.

The CxA may attend select training sessions to participate, document, monitor, and provide quality control. If required, the sessions may be video recorded by the Contractors or Owner without CxA involvement or coordination of the recording.

The CxA will review the commissioned systems and equipment sections of the Operations and Maintenance (O&M) manuals prepared by the Contractors. Comments will be provided to the Design Team to allow one submittal review to be sent to the Contractor. The Contractor is to have the O&M manuals ready and available for use in the training process.

PART 4 - **OCCUPANCY AND OPERATIONS PHASE**

4.1 FINAL COMMISSIONING PROCESS REPORT

At the completion of the Commissioning Process, the CxA will provide a final report based on the framework of the Commissioning Plan. An Executive Summary will be included that provides a summary of the participants and their roles, a brief building description, an overview of the commissioning and testing scope, and a general description of testing and verification methods.

The final report will specifically identify all outstanding non-compliance issues, recommendations for improvement to equipment or operations, future actions required, and recommended changes to the Commissioning Process. In addition, the Report shall include a final issues log with all issues identified through the Commissioning Process, progress and field reports, submittal and O&M manual reviews, training record, test schedules, construction checklists, start-up reports, functional tests, and trend log analysis.

4.2 SEASONAL TESTING

Any equipment or system that cannot be adequately tested at the time of the initial testing due to seasonal operating issues will be retested in their primary operating season. Whenever possible, systems will be tested under load to verify system capacity and function.

4.3 WARRANTY REVIEW

The CxA will return to the site approximately10 months into the 12 month warranty period and review with facility staff the current building operation and condition of outstanding issues related to the original and seasonal commissioning. Any issues that may come under warranty or under the original construction contract will be identified. The CxA is not responsible for correcting or tracking deficiencies identified during the warranty review.

4.4 HIGH PERFORMANCE BUILDING RATING SYSTEMS (IF APPLICABLE)

In addition to the reports described above, all paperwork required to satisfy the High Performance Building Commissioning Requirements and/or of LEED EA Prerequisite 1, Fundamental Building Systems Commissioning and EA Credit 3, Enhanced Commissioning will be provided. This includes submittal paperwork and any work required for audits of these points.

Commissioning Plan Overview

1 COMMISSIONING PLAN OVERVIEW

1.1 General

The Commissioning Plan is a tool developed by the CxA to clearly define the processes and procedures required for a successful commissioning process. It is continually updated throughout the project and becomes the basis of the final commissioning report when complete.

1.2 Abbreviations and Definitions

The following are common abbreviations used in this document.

A/E	Architecture and Engineering Design Team	FPT	Functional Performance Test
CxA	Commissioning Authority	GC	General Contractor
CC	Controls Contractor	MC	Mechanical Contractor
CM	Construction Manager	PC	Plumbing Contractor
Cx	Commissioning	PM	Project Manager
Cx Plan	Commissioning Plan Document	Subs	Subcontractors to the CM
EC	Electrical Contractor	TAB	Test, Adjust, and Balance Contractor
FIF	Field Inspection Form	CIL	Commissioning Issues Log
OPR	Owner's Project Requirements	BOD	Basis of Design
ATC	Automatic Temperature Controls Contractor		

2 COMMISSIONING PROCESS DESCRIPTION

Commissioning is a systematic process designed to ensure that the building and its systems function properly to meet the Owner's requirements. This is typically achieved by applying quality control principles to all aspects of the project, from pre-design through the first year of occupancy and includes design reviews, inspections, equipment and systems testing, and training. The commissioning process is defined by several different organizations, the generally accepted best practice is ASHRAE Guideline 0-2005, *The Commissioning Process*. This guideline, available at www.ashrae.org, provides the foundation for building commissioning by defining the general process to be followed for the commissioning of all building systems.

The primary objectives of this Commissioning Process are:

1. Confirm and document that this facility fulfills the functional and performance requirements of the Owner, occupants, and operators.
2. Document the Owner's criteria for system function, performance, and maintainability; verify and document compliance with these criteria throughout design construction, start-up and the initial period of operation.
3. Ensure that complete operation and maintenance (O&M) manuals, as well as training on system operation, are provided to the building operators to allow the building to operate as intended.
4. Develop and coordinate the execution of a testing plan which will include observing and documenting performance of all commissioned systems to ensure they are functioning in accordance with the Owner's objectives and the contract documents.

3 BUILDING DESCRIPTION

Project Name	Central Middle School
Project Address	9 Indian Rock Ln, Greenwich, CT 06830
Building Type	Public School Grades 6, 7 & 8
Project Square Footage	~124,000 GSF
Owner	Town of Greenwich, CT

4 CONSTRUCTION PHASE

4.1 Overview

Through the Construction Phase of the project, it is the responsibility of the CxA to coordinate and direct the Commissioning Process activities in a logical, sequential, and efficient manner using protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties.

4.3 Conduct Commissioning Meetings

Once the Commissioning Team (Cx Team) has been formed, Commissioning Meetings will be held as required. These meetings vary in frequency based upon the activity level at the time, but generally are coordinated to coincide with Construction Meeting days for convenience. At the Commissioning Meetings, past Commissioning Process activities are reviewed, future Commissioning Process activities are planned and coordinated, Commissioning documentation is requested and exchanged, and the Commissioning Schedule is updated and integrated into the Construction Schedule. The CxA will request all documentation necessary to develop the installation checklists, contractor start-up checklists, and the functional performance tests at these meetings and review the draft versions of these documents with the contractors that are responsible for implementing them. The CxA leads these meetings, records the minutes, and distributes the minutes with action items to all Cx Team members.

The CxA reserves the right to modify the schedule periodically as needed to accommodate the commissioning activities and the construction schedule.

4.4 Contractor Submittal Review

The CxA will review the Contractor submittals coincident with the Design Team and provide comments to the Design Team for inclusion with their review so a single set of review comments can be provided to the Contractors. The reviewed submittals will include commissioned equipment identified in Appendix A and coordination drawings that include commissioned equipment and systems, control drawings and sequences, and interfaces and interlocks between systems. In addition, the CxA will periodically review the final Design Team comments to ensure a quality review process.

The review will focus on operations, maintenance, and commissioning related issues with the goal of ensuring the submitted equipment complies with the Owner's Project Requirements. The CxA review will NOT include a detailed review of system capacities, sizes, and other technical data that are the responsibility of the Engineer of Record. CxA submittal reviews will frequently request additional information from the Contractors, including specific operations and maintenance data, performance curves, and targeted coordination drawings for areas of concern.

4.5 Maintain Issues Logs

Throughout the Construction Process, the CxA will maintain an on-line Commissioning Issues Log. Members of the Cx team will be assigned a username and password to access the on-line system. As issues are identified, the responsible party will be able to log into the system and update the project team on the status and/or resolution of their incomplete issues. Once an item has been identified by the team member as complete, it will change to a pending status to alert the CxA that an item is ready for field verification. Each issue will be tracked by the CxA.

This log will document all Construction Phase issues through a sortable database that identifies the following fields.

1. The responsible party, either Construction Team member, Design Team member, or Owner
2. The exact location of the issue (floor and room)

3. The applicable system component, i.e. lighting, a specific piece of equipment, or a system
4. A detailed description of the issue
5. A status, i.e. complete, incomplete, accepted, unverifiable

The issues log will be continually updated and also reviewed at each Commissioning Meeting.

4.6 Installation Checklists

The Contractors will be responsible for completing documentation related to the installation, start-up, and testing of all commissioned equipment and systems. This documentation will be available online.

The CxA will develop the installation checklists and provide them to the Construction Team. The Construction Team will be responsible for completing the installation checklists for 100% of the commissioned systems and equipment. The checklists will include best practices related to the specific equipment or system, highlights of required installation details from the drawings and specifications, and equipment manufacturer, model number, serial number, and capacity verification information.

These checklists will be reviewed at every commissioning meeting with the expectation that checklists will be completed as the work progresses.

The CxA will use sampling strategies to field verify the proper completion of the checklists with sampling rates determined based upon the success of the verification process, the quantity of each type of equipment, and the relative importance of the equipment's operation related to the overall building operation.

The Functional Testing of the equipment and systems will not be scheduled until all relevant Installation/Prefunctional Checklists are submitted to the Commissioning Agent.

4.7 Prefunctional Checklists and Tests

The Contractors will be responsible for completing documentation related to the installation, start-up, and testing of all commissioned equipment and systems.

The Functional Testing of the equipment and systems will not be scheduled until all relevant Prefunctional Tests are submitted to the Commissioning Agent.

4.8 Site Observations

During the Construction process, the CxA will perform site visits to observe component and systems installations. These visits will be strategically planned to coincide with selected planning and job-site meetings, installation milestones, component and assembly mock-ups, and equipment and system start-ups. The CxA will use these site visits to verify the proper completion of installation and start-up checklists through sampling, witness selected HVAC pipe and duct testing if required, review air and water systems balancing, and generally track the progress of the construction. A field report will be provided at the conclusion of each visit documenting the tasks accomplished during the visit.

4.9 Testing

The performance of all of the building's systems and equipment and the completion of the testing of the commissioned equipment and systems are the responsibility of the Contractors. The CxA will develop the functional performance tests with the assistance of the installing contractors, coordinate the testing process, and witness the tests that are performed by the Contractors. In addition, the CxA will document selected tests of commissioned equipment overseen by regulatory authorities if required. The CxA will coordinate one day of retesting of equipment until satisfactory performance is achieved. However, witnessing of follow up testing will be at the expense of the Contractor. Added expenses, including time, travel, and incidentals for retesting

of failed system tests, or for tests that cannot be performed due to contractors' lack of preparedness, attendance, or system completeness, will be charged to the Contractors through the Owner.

Prior to the CxA witnessing functional testing for any commissioned systems, the Contractor will perform and complete internal functional testing with the CxA-provided functional tests. A Statement of Readiness must be provided before scheduling the verification of the functional testing by the CxA. While the Statement of Readiness will vary for each system, at a minimum, the following documentation must be provided: Installation Checklists, Prefunctional Checklists, equipment start-up reports, approved air and water balancing reports, and completed Functional Tests. All controls, graphics, safeties, and alarms must be fully operational.

Functional performance testing will include operating the systems and components through each of the written sequences of operation, other significant modes and miscellaneous alarms, power failure, and security alarm when impacted by and interlocked with commissioned equipment. Sensors and actuators shall be calibrated during construction check listing by the installing contractors and spot checked by the CxA during functional testing. Tests on HVAC equipment shall be done, if possible, in their proper operating season (cooling in summer, heating in winter). Any equipment that operates in both seasons, such as the heat pumps, should ideally be tested in both seasons. However, if this is not possible, some manipulation of setpoints and control points will be done to simulate the necessary conditions. Functional testing will be done using conventional manual methods, control system trend logs, and stand-alone data loggers as required to provide a high level of confidence in proper system function, as deemed appropriate by the CxA and the Owner.

As a component of the test procedures, the CxA will identify specific system trends to be set up and then analyze the trend and monitoring data as a method of verifying performance.

Systems that fail a functional performance test will not be retested under the base commissioning contract, but rather this will be addressed as added scope. However, if an isolated portion of a sequence fails, this portion will be retested with a maximum for all failures combined of one day of retesting.

4.10 Training and O&M Review

Planning for the training of the Owner's operations and maintenance staff begins in the design phase with the development of a training matrix. The matrix, indicates the breadth and depth of training desired by the Owner. The information from this matrix is incorporated into the Construction Documents by the Design Team to ensure that the appropriate level of training is procured and provided.

The Owner's operations and maintenance staff will commence training sessions during the construction phase through a combination of formal and informal training activities. Although the informal training sessions, such as project walkthroughs or submittal reviews, will take place throughout the construction process, the formal training program should not be initiated until the successful completion of functional testing to ensure that the operations and maintenance personnel receive accurate training and are able to witness the systems operating properly during the training.

The CxA will oversee and verify the Contractor-provided training of the Owner's operating personnel. The training agendas, attendance logs, and materials will be documented by the CxA and any additional or supplemental training required for the Owner's operating personnel to properly and efficiently operate the building will be highlighted to the Owner by the CxA.

The CxA will verify operating personnel training. The sessions will be video recorded (if required) by the Contractors or Owner without CxA involvement or coordination of the recording.

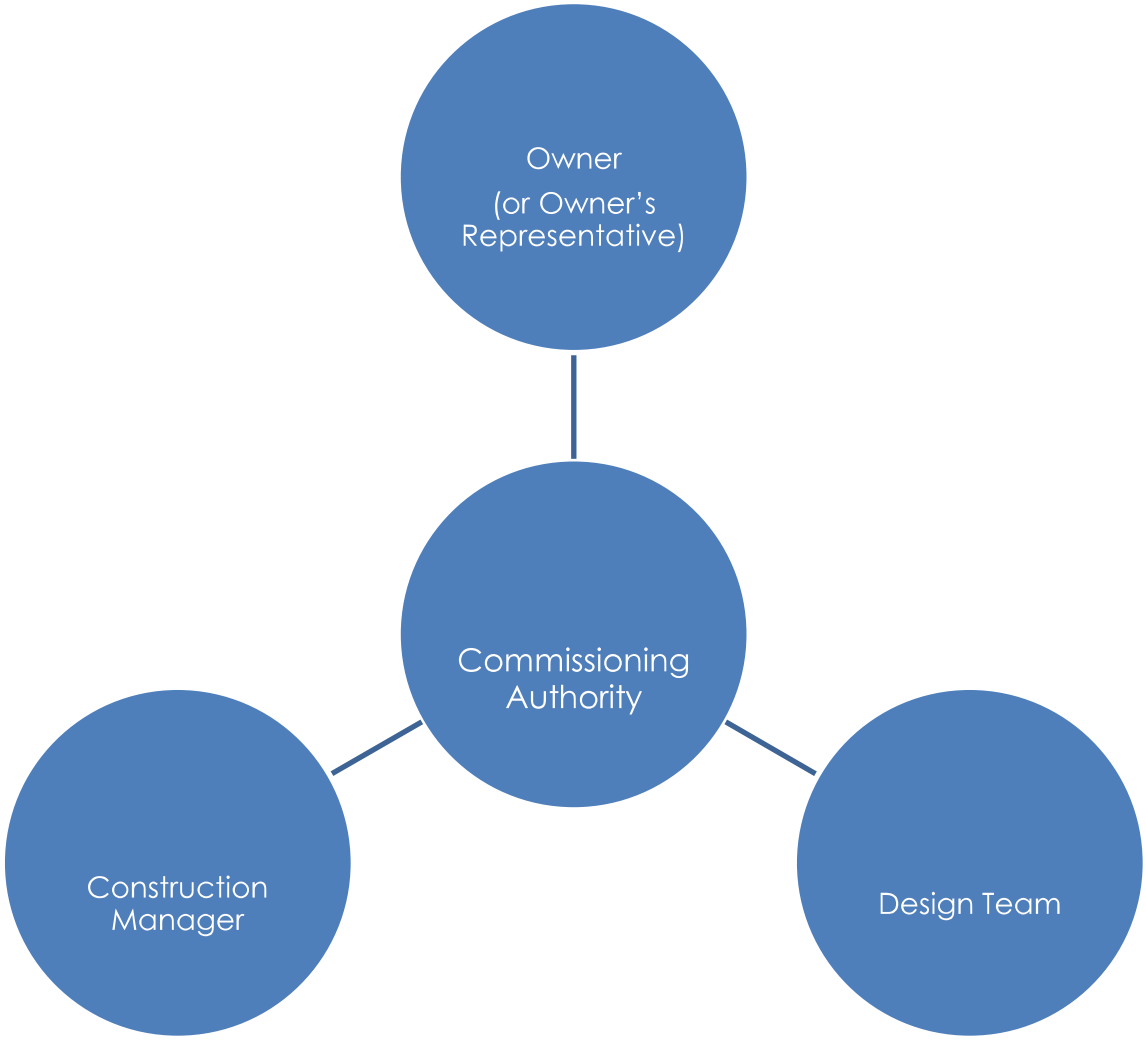
The CxA will review and verify the commissioned systems and equipment sections of the Operations and Maintenance (O&M) manuals prepared by the Contractors. Comments will be provided to the Design Team to allow one submittal review to be sent to the Contractor. The Contractor is to have the O&M manuals ready and available for use in the training process.

5 OCCUPANCY AND OPERATIONS PHASE

5.1 Final Commissioning Process Report

At the completion of the Commissioning Process, the CxA will provide a final report based on the framework of this Commissioning Plan. An Executive Summary will be included that provides a summary of the participants and their roles, a brief building description, an overview of the commissioning and testing scope, and a general description of testing and verification methods. Included with the summary will be a matrix that provides the disposition of the CxA regarding the adequacy of the commissioned equipment and system in the following five areas: equipment meeting the equipment specifications, equipment installation, functional performance and efficiency, equipment documentation, and operator training.

The final report will specifically identify all outstanding non-compliance issues, recommendations for improvement to equipment or operations, future actions required, and recommended changes to the Commissioning Process. In addition, the Report shall include a final issues log with all issues identified through the Commissioning Process, field reports, submittal and O&M manual reviews, training record, construction checklists, and functional tests.



5.2 Seasonal Testing

Any equipment or system that cannot be adequately tested at the time of the initial testing due to seasonal operating issues will be retested in its primary operating season. Whenever possible, systems will be tested under load to verify system capacity and function.

5.3 Warranty Review

The CxA will schedule a warranty review site visit approximately 10 months into the 12 month warranty period and review with facility staff the current building operation and condition of outstanding issues related to the original and seasonal commissioning. Any issues that may come under warranty or under the original construction contract will be identified and the CxA will assist the facility staff in requests for services to remedy outstanding problems. The CxA is not responsible for correcting deficiencies.

6 COMMUNICATIONS STRUCTURE

In general, the CxA communicates directly with the Construction Manager for issues related to construction deficiencies and scheduling of Cx activities and the Design Team for issues related to design. The Owner, or Owner's representative, is kept informed and consulted for decisions as necessary on all Cx issues and activities. In addition, the CxA has informal conversations with subcontractors in the field to discuss construction issues and related Cx activities. The CxA does not, under any circumstances, provide direction to subcontractors other than through the Construction Manager.

7 ROLES AND RESPONSIBILITIES

Understanding and defining the roles of each participant is vital to the success of the Commissioning Process. This section provides an outline of the responsibilities of each participant in the Commissioning Process. These responsibilities are typically formalized in the contracts between the Owner and the various parties and this section is not intended to supersede or negate any contracted relationships.

7.1 Owner (or Designated Representative)

- Include the design professionals' Commissioning related responsibilities and scope of work in the design request for proposal and contract.
- Oversee the development of the Owner's Project Requirements and approve any changes.
- Designate a representative, ideally from the building's operations and maintenance team, to participate in the Commissioning Process including
    - Design Phase coordination meetings
    - Construction Phase coordination meetings
    - Informal owner-training as equipment is installed and started
    - Maintenance orientation and inspections
    - System testing and verification meetings
    - Functional procedure review meetings before testing of systems
    - Training sessions
    - Verification demonstrations
    - Systems and assemblies tests
    - Final review at acceptance meeting
- Review and approve any changes made to the Owner's Project Requirements
- Review and approve the Construction Documents
- Review, comment on, and accept the Commissioning Authority's progress and final reports

7.2 Commissioning Authority

The Commissioning Authority is responsible to verify that the Owner's Project Requirements for the project are satisfactorily achieved. The CxA is comprised of building commissioning experts who maintain a broad understanding of all aspects of building construction, maintenance, and operations. Specific tasks performed by the CxA include:

Construction Phase

1. Perform the tasks and functions to be incorporated in the specifications ascribed to the CxA.
2. Coordinate and direct the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties. Frequently updated timelines and schedules and technical expertise.
3. Coordinate the commissioning work with the contractor, architect and Owner's representatives to ensure that commissioning activities are being scheduled into the master schedule.
4. Revise the construction phase commissioning plan developed during the design phase as required to include refined scope and schedule.
5. Plan and conduct commissioning meetings and distribute minutes.
6. Request and review information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures. Before start-up, gather and review current control sequence and interlocks. Work with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.

7. Review coordination drawings to ensure that trades are making a reasonable effort to coordinate work. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
8. Write and distribute construction checklists for commissioned systems and equipment.
9. Perform site visits to observe component and system installations. Attend selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.
10. Provide construction checklists for equipment/systems within the scope of work to the contractors.
11. Document construction checklist completion by reviewing completed checklists and by site observation.
12. Document system start-up by reviewing start-up reports and by select site observations.
13. Verify air and water systems balancing which may include spot testing, by reviewing completed reports, and by select site observation. Coordinate submittal review with the architect so that the CxA/A/E comments are combined into one review submitted to the contractor.
14. With assistance and review from the installing contractor, CxA will write functional performance test procedures for equipment and systems. This will include manual functional testing, energy management control system trending and may include stand-alone data-logging monitoring.
15. Analyze functional performance trend logs and monitoring data to verify performance.
16. Coordinate, witness and document manual functional performance tests performed by installing contractors.
17. Tests on respective HVAC equipment shall be executed, if possible, during both the heating and cooling seasons. However, some overwriting of control values to simulate conditions shall be allowed. Functional testing shall be done using conventional manual methods, control system trend logs, and read-outs or stand-alone data loggers, to provide a high level of confidence in proper system function, as deemed appropriate by the CxA and the Owner.
18. Prepare test plans for, assist with execution of, and document tests of commissioned equipment requiring oversight by regulatory authorities and ensure that such tests meet the testing rigor desired by the Owner.
19. Maintain a master issues log. Report all issues as they occur directly to the Owner's representative and the architect. Provide directly to the Owner's representative and the architect written progress reports and test results with recommended actions.
20. Oversee and verify the training plans to be implemented by the contractors for training of the Owner's operating personnel.
21. Compile a Commissioning Record.
22. Comply with the requirements of any applicable green-building rating systems (i.e. LEED, High Performance Buildings, Green Guide for Healthcare, etc.).

Warranty Period

1. Coordinate and supervise required opposite season or deferred testing and deficiency corrections.
2. Schedule a remote meeting approximately 10 months warranty period and review with facility staff the current building operation and the condition of outstanding issues related to the original and seasonal commissioning. Also interview facility staff and identify problems or concerns they have with operating the building as originally intended. Make suggestions for improvements and for recording these changes in the O&M manuals.
3. Identify areas that may come under warranty or under the original construction contract. Assist facility staff in requesting service to remedy outstanding problems. The CxA is not responsible for correcting deficiencies.

7.3 Construction Manager

The Construction Manager provides management, technical, and administrative expertise during the Construction phase to ensure the building Owner's goals relating to schedule and quality are met. The Construction Manager's responsibilities related to the Commissioning Process typically include:

- Include any costs for Commissioning Process activities in the contract price.
- Coordinate and include all Cx-related milestones into the overall construction schedule.
- Include Commissioning Process requirements and activities in all contractors' contracts.
- Ensure that sub or trade contractors execute their commissioning responsibilities according to the project specifications and Cx Plan.
- Ensure necessary accessibility to all equipment to allow for proper operation and maintenance of the building.
- Provide individuals with the required background and authority to implement the Commissioning Process activities as outlined in the Contract Documents.
- Issue a statement at the end of the project certifying that all work has been completed in accordance with the Contract Documents and the facility is operational.
- Respond to Commissioning Process reports and correct deficiencies identified during installation verification or functional testing.
- Review and comment on the final Cx Report.

7.4 Contractors

Many different contractors are involved in the Commissioning Process. The various contractors may include the building contractors (general, mechanical, plumbing, and electrical), the testing, adjusting, and balancing contractor, the building automation system (ATC) contractor and others as required by the contract documents. As a member of the Commissioning Team, the responsibilities of the various building contractors include:

- Include any costs for Commissioning Process activities in the contract price.
- Include Commissioning Process requirements and activities in all subcontracts or equipment purchases.
- Ensure the cooperation and participation of all subcontractors and manufacturers of equipment or systems to be commissioned.
- Attend Commissioning Team meetings.
- Include Cx-related milestones in the construction schedule.
- Implement the training program as described in the Contract Documents. Coordinate related activities with the CxA.
- Provide submittals to the Owner, Design Team, and CxA as detailed in the Contract Documents.

- Complete the Construction Checklists as the work is completed. Provide completed copies to the CxA at regular intervals for verification.
- Complete Pre-functional tests for all systems and equipment.
- Notify the CxA when systems and assemblies are ready for installation verification and testing. For repetitive assemblies, notify the CxA upon the completion of the prototype for a First Piece or Mock-Up review.
- Demonstrate the performance of assemblies and operate systems as required to fulfill the requirements of the Functional Test Procedures detailed in the Commissioning Plan and the Contract Documents.
- Maintain the Project Record Documents in accordance with the requirements of the Contract Documents.

7.5 **Manufacturers**

The suppliers of major equipment are required to support the Commissioning Team in the following manner:

- Provide all information required for the proper Start-up and Operation and Maintenance of the system or assembly in the initial submittal, as detailed in the Contract Documents.
- Provide the requirements to maintain the warranty in the initial submittal, as detailed in the Contract Documents.
- Coordinate and provide results of all factory tests required in the Contract Documents.
- Participate in the training process as detailed in the Contract Documents.
- Demonstrate the performance of assemblies and operate systems as required to fulfill the requirements of the Functional Test Procedures detailed in the Commissioning Plan and the Contract Documents.
- Confirm all packaged controls are functioning as designed and that interlocks and communications to the Building Management System are fully functional.

7.6 **Operations and Maintenance Staff**

The Operations and Maintenance staff will participate in the Commissioning Process in the following areas:

- Define Operations and Maintenance related requirements of the building.
- Participate in design review for O&M impacts.
- Review maintenance manual, record drawings and documentation requirements developed by the Design Team.
- Define training program requirements.
- Participate in/witness functional performance testing.
- Attend contractor and vendor training sessions.

APPENDIX A Commissioned Systems

Commissioned Systems

System or Equipment	Submittal Review	Installation Checklist	Functional Test
HVAC/Mechanical			
Air Handling Units	x	x	x
Humidifiers	x	x	x
Fans	x	x	x
Demand Control Ventilators	x	x	x
Variable Air Volume Terminal Units	x	x	x
Lab Terminal Units	x	x	x
Chiller	x	x	x
Cooling Tower	x	x	x
Boiler	x	x	x
Pumps	x	x	x
Heat Exchangers	x	x	x
Pressure Reducing Valves		x	x
Energy Recover Ventilators	x	x	x
Refrigeration Systems	x	x	x
Ductless Split Air Conditioning Systems	x	x	x
Unit Heaters & Cabinet Unit Heaters	x	x	x
Building Management System	x		x
Electrical			
Emergency Generator		x	x
Automatic Transfer Switch			x
Lighting & Daylighting Controls	x	x	x
Renewable Energy Systems	x	x	x
Switchgear		x	x
Main Switchboards		x	x
Uninterrupted Power Supply		x	x
Telecommunications System			x
Security System			x
Fire Protection			
Fire Alarm System			x
Fire Suppression			x
Plumbing			
Domestic Hot Water System	x	x	x
Piping		x

Roof		x	x
Walls		x	x
Windows	x	x	x
Doors	x	x	x

Note 1: Testing will be done by witnessing with approving authority and/or reviewing approving authority's report.

APPENDIX B Commissioning Milestone Schedule

Commissioning Milestone Schedule

The following Commissioning Process activities and milestones are to be integrated into the overall project schedules maintained either by the Design Team or the Construction Manager, depending on the phase of the project.

Milestone	Date	Status
Design Phase		
Design Review	FEB 2024	Underway
Develop Cx Plan	MAR 2024	Closed
Submittal Review	OCT 2024	Open
Construction Phase		
Develop construction checklists	JAN 2025	Open
Begin site visits to observe component and system installations	JUN 2025	Open
Review Controls submittal	JUL 2025	Open
Develop functional performance test procedures	AUG 2025	Open
Update Construction Phase Cx Plan	AUG 2025	Open
System fill and flush	MAR 2026	Open
DDC programming	MAR 2026	Open
Major Equipment Factory Startup	APR 2026	Open
Testing and balancing tasks	APR 2026	Open
Contractor performs preliminary Functional Tests	MAY 2026	Open
Contractors provide Statement of Readiness	MAY 2026	Open
CxA witnesses and documents Functional Tests	JUN 2026	Open
Operation and Maintenance Manual review	JUL 2026	Open
Training: Colliers & Daiken on site	JUL 2026	Open
Final Commissioning Process Report	AUG 2026	Open
Warranty Period		
Deferred seasonal testing	NOV 2026	Open
Near End of Warranty Review (One remote Meeting)	MAR 2027	Open

APPENDIX C Submittal Review Forms

This Page Intentionally Left Blank

Submittal Review Forms will be added in the Construction Phase Cx Plan

APPENDIX D Installation Checklists

This Page Intentionally Left Blank

Installation Checklists will be added in the Construction Phase Cx Plan

APPENDIX E Functional Performance Tests

This Page Intentionally Left Blank

Functional Performance Tests will be added in the Construction Phase Cx Plan

APPENDIX F Sample Training Plan (may be used by contractors)

Project Name

Project Training Plan – General Scope and Responsible Parties

Equipment/System	Spec Section	Total Hours (if spec'd)	Scope Code[1]	Trainee Type[2] (list no. of each)	Primary Responsible Contractor	Trainers' Company	Agenda Rec'd?	Planned Training Date(s)

[1]General Scope Codes: (Refer to the Training Agendas for the specific equipment for additional details.)

A Provide an overview of the purpose and operation of this equipment, including required interactions of trainees with the equipment.

B At an intermediate level, provide technical information regarding the purpose, operation and maintenance of this equipment, expecting that serious malfunctions will be addressed by factory representatives.

C At a very technical level, provide information regarding the purpose, operation, troubleshooting and maintenance of this equipment, expecting that almost all operation, service and repair will be provided by the trainees.

[2]Trainee Types:

FM = Facility Manager
FE = Facility Engineer
FT = Facility Technician/Maintenance
PM = Project Manager
U = Users/Occupants
O = Other

Owner Approval:

_____ _____

Owner Date

Commissioning Agent Approval:

_____ _____

Commissioning Agent Date

Project Name

Training and Orientation Agenda

Date:_____ Spec Section:_____

Equipment/System_____

Section 1. Audience and General Scope (Owner fills out this section and transmit entire form to responsible contractors.)

Intended Audience Type: ____Facility Manager ____Facility Engineer

____Facility Technician ____Project Manager ____User/Occupant

____Other_____

General objectives and scope of training: (check all that apply)

_____ A. Provide an overview of the purpose and operation of this equipment, including required interactions of trainees with the equipment.

_____ B. Provide technical information regarding the purpose, operation and maintenance of this equipment at an intermediate level, expecting that serious malfunctions will be addressed by factory representatives.

_____ C. Provide technical information regarding the purpose, operation, troubleshooting and maintenance of this equipment at a very detailed level, expecting that almost all operation, service and repair will be provided by the trainees.

Section 2. Instructors (General contractor fills in Company. Trainer fills out the balance, prior to training.)

SECTION 023000 - SUBSURFACE INVESTIGATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Pipe and utility subsurface investigations, test pits, which are required in order to properly locate, plan for and/or connect to the various existing pipelines.

B. Related Sections

1. Section 312300 - Excavation, Backfill, Compaction and Dewatering

2. Appendix F - Report entitled "Greenwich Central Middle School Construction-Vibration and Controls During Construction" by Gap Mountain Consulting Engineers, PLLC dated November 1, 2024. The Construction-Vibration and Controls report is provided to outline the requirements for monitoring and protection the existing school building from structural damage while it is occupied.

1.2 REFERENCES

A. 29 CFR Part 1926 Subpart P - OSHA Excavation Regulations 1926.560 through 1926.562 including Appendices A through F.

1.3 PIPELINE AND UTILITY INVESTIGATIONS

A. The Drawings show available data relative to existing underground pipe and utilities.

B. During the course of the Work, excavate to locate various existing pipelines and utilities, where they are involved in the Work.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

3.1 TEST PITS

A. Excavate test pits as indicated, or as requested by the Owner. Expose the top of the pipeline, and adjacent utilities, at each test pit location.

B. Perform test pits in accordance with the requirements of Section 31 2333, Trenching and Backfilling. Excavate the bottom 2 feet of the test pit by hand. Excavate to top of pipeline by hand. Test pits shall be braced, sheeted, and dewatered or as otherwise required for safe excavation and examination of the structure or utility to be exposed.

C. Measure the depth to the top of the pipeline, as well as to adjacent utilities, from the ground surface, at each test pit location. Record location, depth and size of pipelines and utilities uncovered during the test pits.

D. Prior to test pitting operations, delineate the general scope of the excavation or boring on the paved surface of the ground using white paint, or stakes or other suitable white markings on non-paved surfaces and coordinate with the appropriate agencies in accordance state regulations. Pre-marking will not be acceptable if such marks can interfere with traffic or pedestrian control or are misleading to the general public. Pre-marking will not be required of any continuous excavation that is over 500 feet in length

E. Excavate test pits of an appropriate size with equipment suitable for the location and character of the pit to be excavated.

F. All subsurface investigations shall be conducted in accordance 29 CFR Part 1926 Subpart P - OSHA Excavation Regulations 1926.650 through 1926.652 including Appendices A through F.

G. After examination by the Engineer, backfill and compact the test pits in accordance with Section 312300.

H. Repair paved surfaces in accordance with Landscape Architect Specification.

I. Repair lawn areas or grass surfaces in accordance with Landscape Architect Specification

END OF SECTION 023000

SECTION 02 4100 - DEMOLITION

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Building demolition excluding removal of hazardous materials and toxic substances.

B. Abandonment and removal of existing utilities and utility structures.

1.2 RELATED REQUIREMENTS

A. Section 01 1000 - Summary: Limitations on Contractor's use of site and premises.

B. Section 01 1000 - Summary: Description of items to be salvaged or removed for re-use by Contractor.

C. Section 01 3566.42 - Sustainability Compliance Procedures.

D. Section 01 5000 - Temporary Facilities and Controls: Site fences, security, protective barriers, and waste removal.

E. Section 015639 - Temporary Tree and Plant Protection: Pruning of existing trees to remain.

F. Section 01 6000 - Product Requirements: Handling and storage of items removed for salvage and relocation.

G. Section 01 7000 - Execution and Closeout Requirements: Project conditions; protection of bench marks, survey control points, and existing construction to remain; reinstallation of removed products; temporary bracing and shoring.

H. Section 01 7419 - Construction Waste Management and Disposal: Limitations on disposal of removed materials; requirements for recycling.

1.3 DEFINITIONS

A. Demolition: Dismantle, raze, destroy or wreck any building or structure or any part thereof.

B. Remove: Detach or dismantle items from existing construction and dispose of them off site, unless items are indicated to be salvaged or reinstalled.

C. Remove and Salvage: Detach or dismantle items from existing construction in a manner to prevent damage. Clean, package, label and deliver salvaged items to Owner in ready-for-reuse condition.

D. Remove and Reinstall: Detach or dismantle items from existing construction in a manner to prevent damage. Clean and prepare for reuse and reinstall where indicated.

E. Existing to Remain: Designation for existing items that are not to be removed and that are not otherwise indicated to be salvaged or reinstalled.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Site Plan: Indicate:
   1. Vegetation to be protected.
   2. Areas for temporary construction and field offices.

C. Demolition Plan: Submit demolition plan as required by OSHA and local AHJs.
   1. Indicate extent of demolition, removal sequencing, bracing and shoring, and location and construction of barricades and fences.
   2. Demolition firm qualifications.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Reports for Credit d5: Waste Disposal Reports tracking recycling and /or salvage of demolition debris, in accordance with Section 01 7419.

E. Project Record Documents: Accurately record actual locations of capped and active utilities and subsurface construction.

1.5 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Company specializing in the type of work required.

PART 2 PRODUCTS – NOT USED

PART 3 EXECUTION

3.1 DEMOLITION

A. Remove the entire building existing on the project site.

B. Remove all paving and curbs within site boundaries.

C. Remove other items indicated, for salvage, relocation, and recycling.

D. Fill excavations, open pits, and holes in ground areas generated as result of removals, using specified fill; compact fill as required so that required rough grade elevations do not subside within one year after completion.

3.2 GENERAL PROCEDURES AND PROJECT CONDITIONS

A. Comply with requirements in Section 01 7000.

B. Comply with applicable codes and regulations for demolition operations and safety of adjacent structures and the public.
   1. Obtain required permits.

2. Take precautions to prevent catastrophic or uncontrolled collapse of structures to be removed; do not allow worker or public access within range of potential collapse of unstable structures.
3. Provide, erect, and maintain temporary barriers and security devices.
4. Conduct operations to minimize effects on and interference with adjacent structures and occupants.
5. Do not close or obstruct roadways or sidewalks without permits from authority having jurisdiction.
6. Conduct operations to minimize obstruction of public and private entrances and exits. Do not obstruct required exits at any time. Protect persons using entrances and exits from removal operations.
7. Obtain written permission from owners of adjacent properties when demolition equipment will traverse, infringe upon, or limit access to their property.

C. Do not begin removal until receipt of notification to proceed from Owner.

D. Do not begin removal until built elements to be salvaged or relocated have been removed.

E. Do not begin removal until vegetation to be relocated has been removed and vegetation to remain has been protected from damage.

F. Protect existing structures and other elements to remain in place and not removed.
1. Provide bracing and shoring.
2. Prevent movement or settlement of adjacent structures.
3. Stop work immediately if adjacent structures appear to be in danger.

G. Minimize production of dust due to demolition operations. Do not use water if that will result in ice, flooding, sedimentation of public waterways or storm sewers, or other pollution.

H. Hazardous Materials:
1. If hazardous materials are discovered during removal operations, stop work and notify Architect and Owner; hazardous materials include regulated asbestos containing materials, lead, PCBs, and mercury.

I. Perform demolition in a manner that maximizes salvage and recycling of materials.
1. Comply with requirements of Section 01 7419 - Construction Waste Management and Disposal.
2. Dismantle existing construction and separate materials.
3. Set aside reusable, recyclable, and salvageable materials; store and deliver to collection point or point of reuse.

3.3 EXISTING UTILITIES

A. Coordinate work with utility companies. Notify utilities before starting work, comply with their requirements, and obtain required permits.

B. Protect existing utilities to remain from damage.

C. Do not disrupt public utilities without permit from authority having jurisdiction.

D. Do not close, shut off, or disrupt existing life safety systems that are in use without at least 7 days prior written notification to Owner.

E. Do not close, shut off, or disrupt existing utility branches or take-offs that are in use without at least 3 days prior written notification to Owner.

F. Locate and mark utilities to remain; mark using highly visible tags or flags, with identification of utility type; protect from damage due to subsequent construction, using substantial barricades if necessary.

G. Remove exposed piping, valves, meters, equipment, supports, and foundations of disconnected and abandoned utilities.

H. Prepare building demolition areas by disconnecting and capping utilities outside the demolition zone. Identify and mark, in same manner as other utilities to remain, utilities to be reconnected.

3.4 DEBRIS AND WASTE REMOVAL

A. Remove debris, junk, and trash from site.

B. Remove materials not to be reused on site; comply with requirements of Section 01 7419 - Waste Management.

C. Leave site in clean condition, ready for subsequent work.

D. Clean up spillage and wind-blown debris from public and private lands.

END OF SECTION 02 4100

SECTION 024113 - SITE UTILITY ABANDONMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including general and supplementary conditions and other Division 1 Specifications apply to this section.

1.2 SUMMARY

A. This section specifies the work to be performed by Contractor for abandonment of utilities at the Project Site. This Section includes:

1. Removal and abandonment of pipe, manholes, catch basins, conduit, duct bank, hand holes, wiring and pole bases, fixtures, poles.

2. Abandonment of above- and below-grade utilities and related facilities including but not necessarily limited to electric, tel-data, catv, conduits, utility structures, sewerage, grease traps, drainage, gas, and water, fire protection on, or serving the Project Area as shown on the Drawings or indicated herein.

B. Contractor shall coordinate work between all Subcontractors, sections, and trades required for the proper completion of the work.

C. Contractor is responsible for the health and safety of all Subcontractor workers during progress of the work.

D. Site utility removals and abandonments shall conform with the respective utility company standards to the extent required by the respective utility company.

E. All sanitary sewer abandonments shall conform with the Town of Greenwich Sewer Division requirements and the contractor shall obtain all required permits and approvals from the Town of Greenwich Sewer Division prior to any demolition, removal, or abandonment operations.

F. All water service abandonments and removals shall conform with the requirements of the Aquarion Water Company.

G. All electric and gas service abandonments and removals shall conform with Eversource Electric and Eversource Gas requirements.

H. All tel-data, cable tv, communications service abandonments and removals shall conform with Frontier Communications, Comcast and any other affected respective communications company affected by the demolition operations.

I. The contractor shall contact all affected utility companies to coordinate the timing and exact abandonments and demolition requirements prior to any demolition operations.

J. Related Sections

1. Appendix F - Report entitled "Greenwich Central Middle School Construction-Vibration and Controls During Construction" by Gap Mountain Consulting Engineers, PLLC dated November 1, 2024. The Construction-Vibration and Controls report is provided to outline the requirements for monitoring and protection the existing school building from structural damage while it is occupied.

1.3 SUBMITTALS

A. Abandonment procedures required by the owner of each utility prior to performing the work of utility termination/cutting/capping/plugging.

B. Material specifications and shop drawings for all materials and equipment furnished under this section, prior to performing the work of utility abandonment.

C. As-built drawings showing locations of all terminated/cut/capped/plugged utilities and service disconnections at or before project close-out.

PART 2 PRODUCTS

2.1 MATERIALS

A. Comply with the material specifications required by the owner of each utility. Where such material specifications may conflict with this Specification, utility owner's requirements shall prevail.

B. Borrow Material: Conform to applicable Specifications.

C. Portland Cement: ASTM C 150, Type II.

D. Mortar Aggregate: ASTM C 144, standard masonry type, clean, dry, free of deleterious materials.

E. Concrete: Design of mix in accordance with ASTM C-94, ASTM C-150, Type II Portland Cement, washed and graded sand, and aggregate with maximum size of 1-inch; or pre-packaged concrete mix with maximum aggregate size of 1-inch, ASTM C 387. Minimum 28-day compressive strength of 4000 psi.

F. Masonry Mix: Washed and graded mason sand, lime, and Portland Cement, ASTM C 270; or pre-packaged, dry, sand/lime/cement mortar mixture, ASTM C 387. Minimum 28-day compressive strength of 1200 psi.

G. Water: Potable, free of deleterious materials.

H. Solid Concrete Masonry Unit: ASTM C55, sized per pipe diameter to minimize requirements for cutting.

I. Controlled Low Strength Material (CLSM) is a self-consolidating, rigid setting material to be used in backfills, fills, structural fills and elsewhere as indicated on the plans, or as directed by the Engineer. The flow and set time characteristics of CLSM shall be designed to meet the specific job conditions. All CLSM material covered by this specification shall be designed to be hand excavatable at any time after placement. It shall be composed of a mixture of portland cement, aggregate, and water with the option of using fly ash, slag cement, air-entraining agents, and other approved admixtures.

1. Materials: All materials utilized in the CLSM mix design shall be in accordance with the applicable requirements of Article M.03.01

2. Composition: The composition of the CLSM shall be in accordance with the requirements set forth in Article M.03.01-General Composition of Concrete Mixes, as well as the applicable sections of ACI 229R.

3. The Contractor shall submit each proposed mix design, with all supporting data, to the Engineer for review and approval at least two weeks prior to its use. The setting time of CLSM materials shall be designed so as to achieve the strength necessary to comply with the time constraints called for under the Maintenance and Protection of Traffic requirements of the project specifications. The use of chloride accelerators is not permitted. The minimum compressive strength of the CLSM material shall be 30 pounds per square inch (psi) and the maximum compressive strength of the CLSM shall be 150 pounds per square inch (psi) when tested in accordance with ASTM D4832 after 56 days. The CLSM mix design shall utilize a nominal maximum size of No. 8 aggregate as specified in M.01.01.CLSM mixes shall have a minimum of 20% entrained air when tested in accordance with AASHTO T152.

PART 3 EXECUTION

3.1 GENERAL

A. Notify Call Before You Dig (CBYD) 72 hours prior to any excavation operation and obtain CBYD tracking number.

B. Notify utility owners in reasonable advance of the work and request the utility owner to stake out on the ground surface the underground facilities and structures. Notify the Engineer in writing of any refusal or failure to stake out such underground utilities after reasonable notice.

C. Contractor is solely responsible for providing coordination and obtaining permits with owners of the various utilities serving, or present at, the Project Site as required to complete termination and demolition work. Coordinate as required for termination of service, temporary termination of service, relocation of facilities, abandonment of facilities, demolition of facilities, cutting, capping, and bracing. Comply at all times with the procedures for terminations of utility services as required by the owner of each utility serving, or present at, the Project Site.

D. When utilities are encountered that are not indicated on the drawings, notify Engineer before proceeding with work in such area.

3.2 UTILITY TERMINATION

A. Terminate utilities serving the Project Site as indicated on the Drawings. Terminate, cut, cap, or plug utilities in accordance with each utility owner's requirements, including, but not necessarily limited to, scheduling of inspections by utility company personnel, permits, licenses, approvals, insurance, or bonds.

3.3 DEMOLITION

A. Do not demolish any utility until termination has been verified.

B. Remove and dispose of all overhead and underground utilities and related systems and appurtenances on the Project Site, including but not necessarily limited to water, electric, sanitary sewer, storm sewer, miscellaneous drainage, heating and cooling facilities, communications, exterior lighting supplies; utility poles, light standards, utility foundations, supports and ancillary equipment; hydrants and other similar supply facilities, valves and meters; site drainage and catch basins and related structures; sanitary sewerage piping, manholes, pumps, and related facilities; and other miscellaneous plumbing, piping and conveyances if called out on the plans.

3.4 BACKFILL

A. Replace soil material excavated for utility removal, termination, or abandonment in accordance with applicable Specifications.

1. Backfilling to grade is required with satisfactory soils.

2. Import satisfactory soils if none are available on site.

B. Provide OSHA-compliant barriers or smooth edges of all excavations to produce a stable slope, with smooth grade transitions and no vertical cuts from top of slope to lower limits of the excavation in compliance with the requirements of OSHA. Maximum slope into any excavated area under ideal soil conditions shall be 1 to 1 ½, vertical: horizontal.

3.5 PROTECTION

A. Subcontractor shall take measures to protect from damage those utilities, or portions thereof, which are designated to remain. Provide protection as required such as marking, blocking, bracing, stabilizing, supporting, and retaining.

B. Utilities to remain damaged by Subcontractor shall be repaired/replaced to the satisfaction of the utility owner at Contractor's expense.

3.6 DOCUMENTATION

A. Contractor shall provide as-built documentation for each utility termination, including location, depth, and method and material of construction for termination. Such as-built documentation shall be on the appropriate site plans.

B. Contractor shall physically mark the location of each subsurface utility termination with a surveyor's stake, with such stake identifying the utility type and depth below grade. Where the use of stakes at a utility termination location may be inappropriate, Subcontractor shall provide staking at an adjacent location(s) and include appropriate offset dimensions or other suitable demarcation.

SECTION 02 8200 – SELECTIVE HAZARDOUS BUILDING MATERIALS ABATEMENT DEMOLITION

PART 1 GENERAL

1.1 SUMMARY

A. Provide selective demolition to remove existing carpeting/multiple layers of flooring/wood/concrete and demolish multiple layers of ceilings/walls/floors /doors/windows/lighting/millwork/shelving/countertops/slop sinks/water fountains/science countertops/radiators/ventilators/piping/sinks/test tube racks/etc./elevators/shafts/lifts /showers/ceramic tiles/gymnasium flooring/ /door and window systems/lockers/concrete/ incinerators/chases/mechanical systems/wall paneling/equipment/boilers/tanks/piping/ ductwork/freezers/roofing/siding/masonry/stone/brick/ foundations/wall and ceiling systems/ raised flooring/wall materials (bulletin/chalk/white/etc. boards, mirrors), non-moveable objects, etc. as necessary to access all asbestos/PCB/other hazardous containing materials as specified herein, and as required for complete and proper abatement.

B. The hazardous building materials contractor (contractor) will be responsible for performing additional selective interior demolition throughout the original 1957 building (including tunnels, crawl spaces, basement areas and ductwork) and the 2000 addition which are scheduled for demolition. Contractor shall open walls and ceilings to check for hidden piping (as required for entire building) as well as demolishing millwork, cabinetry, sheetrock walls, all non-moveable objects, black/white/green/bulletin boards, flooring under top layer(s) of flooring, walls, chases etc. to located potential asbestos containing flooring materials and other suspect asbestos containing materials that may be hidden, buried, inaccessible. Contractor shall demolish concrete floors throughout to access buried piping that cannot be accessed from the tunnels/crawl spaces.

C. The contractor(s) will be responsible for hiring an engineer and other appropriate personnel to ensure that all required selective demolition and demolition activities are safe to perform for all personnel on site. The contractor(s) will be financially responsible for any damage that may occur to the site, on-site personnel, fines, penalties, etc. They will also be responsible for paying/reimbursing all legal fees/costs for all parties involved with the project should selective demolition or demolition activities cause injury or death to any persons on site.

D. Please note there are several layers of flooring, ceilings, walls, chases, non-moveable objects, roofing, etc. requiring demolition to access all asbestos/PCB containing or assumed materials, some of which are contaminated with asbestos and require removal and disposal as such.

E. Required permits shall be obtained by the Contractor at no additional cost to the Owner.

F. Notes: Contractor is responsible for removing all asbestos/PCB containing materials (behind walls, ceilings, windows, chases, doors, windows, concrete, non-moveable objects, etc.) in demolition areas as noted by the architect's specifications and drawings.

G. The contractor will be required to remove carpeting and other flooring, wood floors, multiple layers of wall and ceiling structures/systems, raised flooring, multiple layers of mixed flooring, non-moveable objects to gain access to the asbestos flooring and/or mastic and carpet adhesives in all areas. There may be more than one layer of flooring in some locations. All layers of floor tile, leveling materials, mastic, concrete, wood, thinset, sheet flooring, carpet adhesives, etc. are included in the base work, no extra change will be accepted. Demolition or moving typical non-movable objects by the abatement contractor is required to gain access to all flooring materials to be removed. SD sheets for chemicals to be used during the project must be submitted to the owners' representative prior to site delivery.

H. The contractor will be required to remove roofing, window and door systems, mechanical systems, wall, ceiling and floor applications/masonry and foundations and floor slabs to access all asbestos/PCB containing materials for abatement/remediation and packaging for recycling/removal/abatement and disposal.

1.2 PROJECT CONDITIONS

A . Occupancy:
1. Areas of the buildings in which demolition will occur will be unoccupied during work.

B. Existing Conditions:
1. After the project is begun, the Contractor is responsible for the condition of the structures to be selectively demolished.
2. Unforeseen Conditions: Should unforeseen conditions be encountered that affect design or function of project, investigate and fully submit an accurate, detailed, written report to the office of the Consultant. While awaiting a response, reschedule operations if necessary to avoid delay of overall project.

PART 2 PRODUCTS

NOT USED.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and sealed.

B. Insofar as is practicable, arrange operations to reveal unknown or concealed conditions for examination and verification before removal or demolition.

C. Verify actual conditions to determine, in advance, whether removal or demolition of any element will result in structural deficiency, overloading, failure, or unplanned collapse.
   1. Demolish and remove connections to all electrical gas, and plumbing fixtures required to remove asbestos containing materials.

3.2 PREPARATION

A. Traffic: Do not obstruct walks or public ways without the written permission of governing authorities and of the Owner. Where routes are permitted to be closed, provide alternate routes if required.

B. Protection:
   1. Provide for the protection of persons passing around or through the area of demolition.
   2. Perform demolition so as to prevent damage to adjacent improvements and facilities to remain.
   3. Protect walls, floors, and other new or existing work from damage during demolition operations.

C. Damages: Without cost to the Owner and without delay, repair any damage caused to facilities to remain.

3.3 POLLUTION CONTROLS

A. Control as much as practicable the spread of dust and dirt.

B. Observe environmental regulations.

C. Do not allow water usage resulting in freezing or flooding.

D. Do not allow adjacent improvements to remain to become soiled by demolition operations.

3.4 DEMOLITION - GENERAL

A. Remove: Items indicated to be removed shall be removed by the Contractor.

B. Existing to Remain: Construction or items indicated to remain shall be protected against damage during demolition operations. Where practical, and with the Owner's permission, the Contractor may elect to remove items to a suitable storage location during demolition and then properly clean and reinstall the items.

C. Perform work in a systematic manner.

D. Demolish and remove existing construction only to the extent required, as indicated in the Contract Documents.

E. Perform selective demolition using methods that are least likely to damage work to remain and which will provide proper surfaces for patching.

F. Remove debris daily.

G. Use any methods permitted by governing regulations and the requirements of the Contract Documents.

3.5 DISPOSAL OF DEMOLISHED MATERIALS

A. Promptly dispose of materials resulting from demolition operations. Non-contaminated material (materials not containing residue asbestos, lead, PCB or other hazardous, regulated or special waste) may be disposed of as construction waste. Do not allow materials to accumulate on site.

B. All rubbish and waste material from the Work shall be neatly stacked or kept in suitable containers and removed from the premises daily. The premises shall be kept clean and in an orderly condition at all times to the satisfaction of the Owner and the Consultant.

C. Transport materials resulting from demolition operations and legally dispose of off-site.

D. Off-site disposal location shall not be within one-half mile of any portion of the project site or within sight of the project site.

E. Remove decayed, vermin-infested, or otherwise dangerous or unsuitable materials and promptly dispose of off-site.

3.6 CLEANING

A. Throughout the construction period, the Contractor shall maintain the building and site free of rubbish, debris, surplus materials, and other items not required for the Work.

B. Remove such material from the site daily to prevent accumulations.

C. Remove all construction debris from work areas, and remove all hazardous waste and asbestos waste as required by the most current federal, state, and local regulations and the requirements of the specifications.

END OF SECTION 02 8200

SECTION 02 8213 – ASBESTOS ABATEMENT

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Supplementary Conditions and Division 1 Specifications Sections, apply to this Section.

B. Sections containing requirements related to this Section include, but are not limited to:
   1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
   2. Section 02 8313 – Lead-Based Paint Awareness
   3. Section 02 8416 – Universal Waste Removal and Recycling
   4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
   5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 CONSULTANT

A. The Owner shall retain Langan for the purposes of project management and monitoring during Asbestos Abatement. The Consultant will represent the Owner in all phases of the abatement project at the discretion of the Owner. The Asbestos Abatement Contractor will regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items. The State of Connecticut licensed Asbestos Consultant — Project Designer is Matthew Myers (license no. 000058).

1.3 USE OF THE CONTRACT DOCUMENTS

A. It shall be incumbent upon the Contractor to visit the Site and determine what exists, its condition, and what will be required to accomplish the Work intended by the Contract Documents. No increase in the Contract Sum will be permitted as a result of the Contractor's failure to visit the Site and understand the existing conditions.

B. All work shall comply with the Contract Documents and with applicable Codes, laws, regulations, and ordinances wherever applicable. The most stringent of all the foregoing shall govern.

C. It is not intended that the Specifications show every detail of the Work, but the Contractor shall be required to furnish within the Contract Sum all material and labor necessary for the completion of the Work in accordance with the intent of the Specifications.

D. In case of ambiguity among the Contract documents, the more stringent requirement as determined by the Consultant shall prevail.

E. The Work of this Contract includes making modifications as necessary, subject to approval by Owner in consultation with the Consultant, to correct any conflicts.

F. All items, not specifically mentioned in the Specifications but implied by trade practices to complete the work, shall be included.

G. This specification and drawings cover the proper and legal removal and disposal of all asbestos-containing materials (ACM) and asbestos contaminated waste from the Central Middle School project site located in Greenwich, Connecticut. The abatement activities shall comply with all aspects of the contract documents and Federal, State and local requirements.

H. Whenever there is a conflict or overlap within these specifications and between applicable codes and regulations, the most stringent provision specified shall apply.

1.4 EXAMINATION OF THE SITE

A. It is understood that the Contractor has examined the Site and made his own estimates of the facilities and difficulties attending the execution of the Work, and has based his price thereon.

B. Except for unforeseeable concealed conditions as determined by the Consultant, the Contractor shall make no claim for additional cost due to the existing conditions at the Site.

1.5 CONTRACTOR QUALIFICATIONS

A. All bidders shall submit a record of prior experience in asbestos abatement projects, listing no less than three (3) completed jobs in the past year, with all projects of similar size and scope. The Contractor shall list the experience and training of the project foremen and all on-site personnel. The information that should be included is as follows:
   1. Project Name and Address
   2. Owner's Name and Address
   3. Architect/Consultant
   4. Contract Amount
   5. Date of Completion
   6. Extras and Changes

B. The Contractor selected must appear on the approved list of Asbestos Abatement contractors on file at the State of Connecticut Department of Public Health (CT DPH) and hold a valid license for asbestos abatement within the State of Connecticut.

C. Submit a written statement regarding whether the Contractor has ever been found out-of-compliance with federal or state asbestos and/or lead regulations pertaining to worker protection, removal, transport, or disposal.

D. The Contractor shall be responsible for obtaining all necessary or required permits from the Federal, State and local agencies having jurisdiction over this asbestos abatement project. Failure on behalf of the Contractor to obtain these permits shall not result in any extension for the timely results of completion of the work set forth in the Contract. The Contractor shall be responsible

and shall be required to pay any administrative penalties imposed on the owner for actions taken or lack thereof by the Contractor.

E. Work includes any and all selective demolition and protective measures required to access and remove ACM and maintain a safe working environment.

F. Upon completion of asbestos removal, the contractor shall provide completed, signed and notarized statements indicating that all asbestos-containing materials identified in the scope of work and project description (Section 1.08 and 1.09) were properly removed and disposed of in accordance with applicable Federal, State, and local regulations.

G. All contractors submitting a bid for this work shall visit the work site, attend a pre-bid meeting and walk-through, to be scheduled by the Owner, and be familiar with the work in its entirety. The contractors pre-meeting attendance and bid submission affirms his/her acceptance of the work, site, and building conditions as is.

H. The contractor shall be responsible for paying the utility bills for the use of power and water (unless owner agrees to supply at no cost to contractor). However, if any such temporary facilities cannot be provided, it shall be the contractor's responsibility to provide all temporary connections and hook-ups as well as obtaining permits and paying all fees for making such services available for his work as is necessary. If necessary, the Contractor shall provide temporary services as specified herein, and as required or as necessary to carry out the work. This may include such items as portable generators, water tank trucks, pumps and necessary accessories or the means and equipment and services necessary to temporarily connect to and maintain such services from adjacent utility systems. The use of portable generators will require 24 hour a day, 7 day a week continuous operation if negative air machines in containments are powered by them. This continuous operation must remain in place from the time the pre-abatement visual is completed up until clearance re-occupancy sampling results have passed. The contractor will pay the owner a $2,500 penalty should the power found to not be running the negative air machines in active abatement containments. This penalty will apply daily and the contractor is also responsible for paying all CT DPH fines that may be imposed on the contractor and owner. The contractor shall also comply with any local permits that may be required as well as local noise ordinances.

I. All Contractor personnel involved with asbestos removal work must be thoroughly familiar with the standard operating procedures of the Contractor for removal work as well as all applicable Federal and State regulations governing asbestos removal work.

J. The Supervisor and Asbestos Abatement workers shall be accredited in accordance with EPA regulation 40 CFR Part 763, subpart E, Appendix C; and CT DPH regulations as outlined in Section 19a-332a-1 through 19a-332a-16 (Standards for Asbestos Abatement), and Section 20-440-1 through 20-440-9 (Licensure and Training Requirements for Persons Engaged in Asbestos Abatement and Consulting Services).

K. The Contractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the Contractor of its obligation to furnish all labor and materials necessary to perform the work. Any

discrepancies noted shall be brought to the attention of the Owner and Engineer prior to bidding the project. No claims for extras shall be made during construction/abatement/demolition.

L. Work includes necessary selective demolition and protective measures required to access and remove ACM and maintain a safe working environment. Asbestos containing materials that would be impacted by selective demolition of wall, ceiling and floor cavities shall be performed within negative pressure enclosure.

M. It is the sole responsibility of the Contractor to determine what, if any patents are applicable to the Project. The Contractor will pay all royalties and/or license fees, and will defend all suits or claims for infringement of any patent rights and save the Owner, Architect, Asbestos Safety Control Monitor, Design Sub-Consultant, and Construction Manager harmless from loss, including attorney's fees, on account thereof.

N. The Contractor shall coordinate with the Consultant and maintain the project schedule.

O. The abatement contractor shall hold and document daily pre-abatement safety tool box meeting to review safe work practices and emergency communication program for the project. The abatement contractor's supervisor and the consultant's project monitor must also ensure that proper fire extinguishing equipment is present. The supervisor shall be knowledgeable in use of fire extinguishing equipment, and emergency exit plans.

1.6 TESTING LABORATORY SERVICES

A. The Contractor shall submit to the Consultant the name; address and qualifications of proposed laboratories intended to be utilized for sample analysis as required by this section and the laboratories must be approved by CT DPH.

1.7 ADDITIONAL GENERAL REQUIREMENTS

A. The Asbestos Abatement Contractor shall employ a competent Asbestos Abatement Supervisor with at least three (3) years' experience on projects of similar scope and magnitude who shall be responsible for all work involving asbestos abatement as described in the specifications and defined in applicable regulations, and have full time daily supervision of the same. The Supervisor shall be the competent person as defined by OSHA regulations.

B. The Contractor shall allow the work of this contract to be inspected if required by local, state, federal, and any other authorities having jurisdiction over such work. The Contractor shall immediately notify the Owner and Consultant and shall maintain written evidence of such inspection for review by the Owner and Consultant.

C. The Contractor shall incur the cost of all fines resulting from regulatory non-compliance as issued by federal, state, and local agencies. The Contractor shall incur the cost of all work requirements mandated by federal, state, and local agencies as a result of regulatory non-compliance or negligence.

D. The Contractor shall immediately notify the Owner and Consultant of the delivery of all permits, licenses, certificates of inspection, of approval, or occupancy, etc., and any other such instruments required under codes by authorities having jurisdiction, regardless of who issued, and shall cause them to be displayed to the Owner and Consultant for verification and recording.

1.8 SCOPE OF WORK

A. This specification and drawings HBM-01, 02 & 03 cover the proper and legal removal and disposal of all asbestos-containing materials (ACM) and asbestos contaminated waste from the Central Middle School project site located in Greenwich, Connecticut. The abatement activities shall comply with all aspects of the contract documents and Federal, State and local requirements. There is interior and exterior, friable and non-friable asbestos containing materials (thermal system insulation and miscellaneous materials) identified on the site. Building materials assumed to contain greater than 50 ppm PCBs are located throughout the original 1957 building (see PCB specifications). XRF screening found that some ceramic, metal, and wood components have lead-based paint or lead. All materials should be considered to contain some amounts of lead. Universal wastes are located throughout the building.

1.9 PROJECT DESCRIPTION

A. Central Middle School was constructed in 1957 with an addition in 2000. The school has two stories with approximately 112,000 square feet of gross area. Interior areas consist of classrooms, offices, auditorium, gymnasium, media center, kitchen, cafeterias, toilet rooms, storage rooms, boiler/mechanical rooms, and tunnel/crawlspace/mechanical duct areas.

B. The base bid work includes the removal and disposal of all asbestos containing materials as identified herein, and on the architect's drawings by workers meeting requirements of OSHA 1926.1101 for Class 1 and 2 work. The base bid work will include the cost for removal and disposal of asbestos-containing flooring materials, pipe and pipe fitting insulation, sink undercoating, ceramic floor and cove base materials, wood wall panel adhesive, chalkboard/ bulletin board and other wall glue daubs/adhesives, several types of interior and exterior caulking/glazing/sealant compounds, and roof penetration flashing. Many building materials are assumed to contain PCBs > 50 ppm and will be removed and disposed of as mixed asbestos/PCB waste (see PCB specification). Alternate pricing is requested for painted building materials for possible PCB disposal. Work includes filing and permitting all necessary applications, notifications, requirements and fees; insurance; necessary design services; providing skilled, licensed and certified labor; materials; and equipment necessary for proper preparation, handling, removal and legal disposal of all asbestos-containing materials and asbestos contaminated waste from the subject building in accordance with all requirements of applicable federal, state and local regulations, these specifications and the contract drawings. The following materials and amounts are included in the base bid work.

Base Bid – Original 1957 Building

Material	Location	Estimated Quantity of ACM
Pipe and/or Pipe Fitting, Pipe Hanger and Roof Drain Insulation – Thermal System Insulation	Kitchen/Kitchen Office/Kitchen Storage Room Areas, Large Custodial Storage Room (Adjacent 101), Throughout Building in Inaccessible Locations (Chases, Behind Ceilings, Walls, Under Stage, Auditorium Cat Walk, etc.), and Limited Areas of Tunnel/Crawl/Mechanical Duct Spaces (Some Going into Stone/Concrete Walls)	ALL – Estimate 1,000 Linear Feet (Includes removing contaminated fiberglass) Negotiated Unit Pricing will be used to add or deduct to the estimated asbestos quantity if the amount removed is different by less/more than 20%
Black and Pink Sink Undercoating – Miscellaneous Materials	Classrooms 206, 207 and 218	ALL - 5 Sinks (Double Sinks)
Ceramic Floor and Cove Base Mud Bed and Adhesive/Backing – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated)	Nurse's Office Toilet Room, Main Office Conference Room Toilet Room and Boys Locker Room Toilet and Shower Areas	ALL - 1,800 Square Feet
Wood Wall Panel Adhesive (Black) – Miscellaneous Material (Adjacent Materials/Substrates are Contaminated)	Main Office and Conference Room	ALL - 660 Square Feet

Material	Location	Estimated Quantity of ACM
9”x9”/Lower Layer Floor Tiles – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated) Some of the black flooring mastic throughout the building was found to contain less than one percent asbestos by TEM analysis. Contractor(s) must comply with OSHA regulations and some landfills may not accept this waste as clean construction debris. Contractor(s) are responsible for proper disposal and no change orders will be accepted for proper disposal and no change orders will be accepted if concrete flooring with black mastic cannot be used as fill for the site.	Classrooms 206, 106 and 101, Classroom 203 Closet, Cafeteria, Staff Cafeteria, Corridor Along Classrooms 201 - 207, Elevator Mechanical Room, Small Closets in Main Office Conference Room and Classrooms 105-107, 112, 113, 205-207 and 217-225 (May Exist Throughout Building Underneath Gypsum Walls, Millwork, Fixed/Non-Moveable Objects, Inaccessible Areas)	ALL - 7,000 Square Feet Negotiated Unit Pricing will be used to add or deduct to the estimated asbestos quantity if the amount removed is different by less/more than 20%
Bulletin Board, “Chalk” Board and Other Wall Adhesives/Glue Daubs – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated – Multiple Layers of Boards/Materials Also)	Throughout Building	ALL - Estimate 9,500 Square Feet Negotiated Unit Pricing will be used to add or deduct to the estimated asbestos quantity if the amount removed is different by less/more than 20%

Material	Location	Estimated Quantity of ACM
Ceiling/Deck Caulking Compound – Miscellaneous Material (Located at Ceilings/Deck Panels and Metal Beams/Columns) (Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Second Floor	ALL – Throughout All Areas of Second Floor Negotiated Unit Pricing will be used to add, if additional asbestos-containing caulking compounds are found on the First Floor during selective demolition and require abatement
Interior Window Glazing Compounds – Miscellaneous Materials (Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Main Office Wall, Classrooms 201/201A and Gymnasium Offices	ALL - L Shaped Window Wall (Main Office). Classrooms 201/201A and Gymnasium Offices
Interior Wall/Wall and Wall/Column Caulking Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Classrooms 201, 201 Spray Booth, 201A, 202 - 207, Throughout Main Office Areas, Teachers Break/Faculty Room and Nurse Areas, Throughout Building Corridors and Stairwells, Throughout Gymnasium Areas, Corridor Custodial Closets and Throughout Building (Several are Grout/Mortar Only)	ALL

Material	Location	Estimated Quantity of ACM
Interior/Exterior Door/Window/Door Window/Wall/Column Caulking and Glazing Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Entry/Exit Areas to Building Adjacent Custodial Office, Main Office, Cafeteria, Room 208 and Gymnasium	ALL - Ten Openings (Multiple Sizes and Multiple Door/Window Walls)
Interior/Exterior Vent Caulking Compounds – Miscellaneous Material (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Building Perimeter Walls	ALL - Eight Vent Openings
Interior/Exterior Door/Window/Wall/Column Caulking and Glazing Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Building Perimeter Walls	ALL - 17 Door/Window Openings (Multiple Sizes)

Material	Location	Estimated Quantity of ACM
Interior/Exterior Window/Wall/Column/Window Walls/Door Caulking and Glazing Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Building Perimeter Walls/Window Walls	ALL (Multiple Sizes)
Exterior Wall/Wall Expansion and Column Caulking Compounds – Miscellaneous Materials (Multiple Layers/Types of Materials and Adjacent Materials/Substrates are Contaminated) (Some Materials at Gymnasium and Auditorium are Assumed Behind Building Where They Abut Lower Elevations and Behind Roof Flashing Trim Throughout) (Assumed PCB Bulk Product Waste > 50 ppm also)	Throughout Exterior	ALL
Roofing Penetration Flashing Materials (Tar on Wood – Bottom Layer) – Miscellaneous Material (Adjacent Materials/Substrates are Contaminated)	Throughout Building Exterior	ALL

PLEASE SEE PCB REMEDIATION SPECIFICATIONS FOR POSSIBLE ADD ALTERNATE WORK.

C. Abatement and Remediation in all areas will start with removing materials at the ceiling/roof deck level and end with the materials at the flooring level. The hazardous building materials contractor will coordinate and perform enough selective demolition/demolition to access all materials to be removed/abated/remediated. The hazardous building materials contractor will be responsible for performing additional selective interior demolition throughout the original 1957 original building and the 2000 addition which are scheduled for demolition. Contractor shall open walls and ceilings to check for hidden piping (as required for entire building in areas of work) as well as demolishing millwork, cabinetry, all non-moveable objects, bulletin/chalk/white/etc. boards, mirrors, flooring, walls, chases etc. to located potential asbestos containing flooring materials and other suspect asbestos containing materials that may be hidden, buried, inaccessible. **Assume the abatement work will include full containments throughout the entire interior of the 1957 original building.** Exterior abatement/remediation will be either removed in containment (interior) or the abatement/remediation contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (or farther - enough to prevent building materials from touching unprotected ground and floor surfaces). The contractor will pay for all contamination/remediation/ abatement of interior and exterior surfaces, including ground surfaces if Langan deems they have contaminated these surfaces. The contractor will supply lifts, scaffolding, staging, etc. to Langan in areas of remediation/abatement until all visual inspections and sampling has passed. The contractor will supply labor to assist in PCB verification sampling (including cleaning/re-cleaning) throughout as well as removing and disposing of all waste created by PCB verification sampling (if sampling is required). The contractor will provide temporary shoring in areas that require it.

D. Additional materials as discovered outside of those listed will be covered by unit prices if all is not listed as the quantity. Quantities are estimates only and should be verified by the Contractor. Safety data sheets for chemicals to be used during the project must be submitted to the Owner's Representative prior to site delivery.

E. The contractor is responsible for providing temporary water, power, and heat as needed at the site. Temporary lighting/Blast Trac machines/Negative air units within the work areas must be connected to Ground Fault Circuit Interrupter (GFCI) Power Panels installed by a State of Connecticut licensed electrician and located outside of the work areas. The contractor shall be responsible for paying for the use of power and water unless the owner agrees to supply free of charge. It shall also be the contractor's responsibility to provide all fixed and temporary connections and hook-ups as well as obtaining permits and paying all fees for making such services available for his work as is necessary. The Contractor shall provide services as specified herein, and as required or as necessary to carry out the work. This will include such items as temporary hard line installation, portable generators for short term work, water tank trucks, pumps and necessary accessories or the means and equipment and services necessary to temporarily connect to and maintain such services from adjacent utility systems. The contractor is responsible for contacting all utility services and getting power connections from the electrical lines located on or adjacent to the properties. All power and water must be supplied 24 hours a

day throughout the abatement project. CT DPH will be notified immediately if active containments do not have sufficient negative pressure throughout the abatement process until acceptable reoccupancy air results are received. The use of portable generators will require 24 hours a day, 7 day a week continuous operation if negative air machines in containments are powered by them. This continuous operation must remain in place from the time the pre-abatement visual is completed up until clearance re-occupancy sampling results have passed. The contractor will pay the owner a $2,500 penalty should the power found to not be running the negative air machines in active abatement containments. This penalty will apply daily and the contractor is also responsible for paying all CT DPH fines that may be imposed on the contractor and owner.

F. The general/abatement contractors shall only use heavy equipment operators that have proper asbestos and/or HAZWOPER training when disturbing/removing/moving and packing asbestos, lead and PCB containing materials. Acceptable training for asbestos can be 32 or 40 hour asbestos worker/supervisor with annual refresher training. 40 hour HAZWOPER training and annual refresher training is required for operators handling lead and/or PCB containing/contaminated materials. All operators must also have current medicals, fit test data and wear respirators during work.

G. The remediation/asbestos abatement contractor, their subcontractors, waste transporters and/or landfill(s) do not have permission to take/analyze building materials for PCB content/ concentrations without written permission from the building owner prior to such sampling. Should the contractor or other parties listed above take/analyze PCB samples without the owner's permission and PCB's are found to be >1 ppm, the hazardous materials/remediation contractor will be responsible for **all costs** associated with the abatement/remediation/replacement of all the interior/exterior building materials and adjacent surfaces, including soil/asphalt/concrete/etc. as well as all costs associated with project delays, attorney fees for all parties affected and all costs resulting from CT DEEP/EPA requirements that may occur as a result.

H. The remediation/asbestos abatement contractor, their subcontractors, waste transporters must submit landfill information to Langan and the owner prior to the shipment of any waste. The contractor(s)/hauler(s) cannot ship waste until Langan and the owner have approved the landfill the contractor/hauler is/are proposing to ship the waste to. PCB TCLP sampling of the waste may be required by the landfills permits and this testing must be performed by the contractor (if testing is approved by Langan and the owner), with Langan present during sampling, and the results made available to Langan and the owner prior to waste shipment. If Langan is not present during the sampling, Langan may perform additional PCB TCLP sampling to confirm the contractor's results and these results will supersede the contractors sample results.

I. The contractor(s) will be responsible for hiring an engineer and other appropriate personnel to ensure that all required selective demolition and demolition activities are safe to perform for all personnel on site. The contractor(s) will be financially responsible for any damage that may occur to the site, on-site personnel, fines, penalties, etc. They will also be responsible for paying/reimbursing all legal fees/costs for all parties involved with the project should selective demolition or demolition activities cause injury or death to any persons on site.

J. The Owner shall retain a Consultant for the purposes of project management and monitoring during asbestos abatement. The Consultant will represent the Owner in all phases of the abatement project at the discretion of the Owner. The asbestos abatement contractor will regard the consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items. The State of Connecticut licensed Asbestos Consultant — Project Designer is Matthew Myers (license no. 000058).

1.10 DEFINITIONS

A. The following definitions relative to asbestos abatement apply:
1. Abatement - Procedures to control fiber release from asbestos-containing materials; includes removal, encapsulation, and enclosure.
2. Air Monitoring - The process of measuring the fiber concentration of an area or of a person.
3. Amended Water - Water to which a surfactant has been added.
4. Asbestos - The name given to a number of naturally occurring fibrous silicates. This includes the serpentine forms and the amphiboles and includes chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite, or any of these forms, which have been chemically altered.
5. Asbestos Felt - a product made by saturating felted asbestos with asphalt or other suitable bindery, such as a synthetic elastomer.
6. Asbestos Fibers - Those particles with a length greater than five (5) microns and a length to diameter ratio of 3:1 or greater.
7. Asbestos Work Area - a regulated area as defined by OSHA 29 CFR 1926.1101 where asbestos abatement operations are performed which is isolated by physical barriers to prevent the spread of asbestos dust, fibers, or debris. The regulated area shall comply with requirements of regulated area for demarcation, access, respirators, prohibited activities, competent persons and exposure assessments and monitoring.
8. Asphalt Shingles, Composition Shingles or Strip Slates: (Pitched Roof Shingle) - a roofing material manufactured by saturating a dry felt with asphalt then coating the saturated felt with a harder asphalt mixed with a fine mineral, glass fiber, asbestos or organic stabilizer. All or part of the weather side may be covered with mineral granules, or with powdered talc or mica.
9. Base Flashing (roof) - the flashing provided by upturned edges of a water tight membrane on a roof. May contain metal and associated waterproofing material or combination of roofing felts and waterproofing at the joint between a roofing surface and a vertical surface such as a wall or parapet. Also base flashing may be present at perimeter of completely flat roof.
10. Built-Up Roofing (Composition Roofing, Felt and Gravel Roofing, Gravel Roofing) - a continuous roof covering made up of laminations or plies of saturated or coated roofing felts, alternated with layers of asphalt or coal-tar pitch and surfaced with gravel, paint or finish coat.
11. Caulking - resilient mastic compound often having a silicone bituminous or rubber base; used to seal cracks, fill joints, and prevent leakage. Typical applications: around windows, and doors. Caulking is at joints between two dissimilar materials. (i.e. masonry to wood, masonry to steel)

12. Clean Room - An uncontaminated area or room, which is a part of the worker decontamination enclosure with provisions for storage of workers' street clothes and protective equipment.
13. Clearance Sampling - Final air sampling performed aggressively after the completion of the abatement project in a regulated area.
    Air samples collected by the air sampling professional having a fiber concentration of less than 0.01 fibers/cc of air in each of five (5) samples collected inside the containment will denote acceptable clearance sampling by Phase Contrast Microscopy.
    or
    Five air samples collected inside the containment by the air sampling professional having an average asbestos concentration of less than 70 structures per square millimeter of air will denote acceptable clearance sampling for Transmission Electron Microscopy.
14. Competent Person - As defined by 29 CFR 1926.1101, a representative of the Abatement Contractor who is capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure. Who has authority to take prompt corrective measures to eliminate such hazards during asbestos removal. Competent person shall be properly trained in accordance with EPA's Model Accreditation Plan.
15. Curtained Doorway - A device to allow ingress and egress from one area to another while permitting minimal air movement between the areas. Two curtained doorways spaced a minimum of six feet apart can form an airlock.
16. Damp Proofing - application of a water impervious material to surface such as wall to prevent penetration of moisture, typically at foundation or below grade surface.
17. Decontamination Enclosure System - A series of connected areas, with curtained doorways between any two adjacent areas, for the decontamination of workers and equipment. A decontamination enclosure system always contains at least one airlock and is adjacent and connected to the regulated area, where possible.
18. Encapsulant - A liquid material which can be applied to asbestos-containing materials which controls the possible release of asbestos fibers from the materials either by creating a membrane over the surface (bridging encapsulant) or penetrating the material and binding its components together (penetrating encapsulant).
19. Equipment Room - Any contaminated area or a room that is part of the worker decontamination enclosure with provisions for storage of contaminated clothing and equipment.
20. Fixed Object - Unit of equipment or furniture in the work areas that cannot be removed from the work area.
21. Friable Asbestos Materials - Any material that contains more than 1% asbestos by weight, that can be crumbled, pulverized or reduced to powder by hand pressure.
22. Glazing Compound - any compound used to hold window glass in place, also referred to as putty, or glazier's putty, is not field applied, usually installed during manufacture of windows.
23. HEPA Filter - High Efficiency Particulate Air (HEPA) filter in compliance with ANSI Z9.2-1979.
24. HEPA Vacuum Equipment - Vacuum equipment equipped with a HEPA filter system for filtering the effluent air from the unit.
25. Movable Object - Unit of equipment of furniture in the work area that can be removed from the work area.

26. Negative Air Pressure Equipment - A portable local exhaust system equipped with HEPA filtration used to create negative pressure in a regulated area (negative with respect to adjacent unregulated areas) and capable of maintaining a constant, low velocity air flow into regulated areas from adjacent unregulated areas.
27. NESHAPS - National Emissions Standard for Hazardous Air Pollutants regulations enforced by the EPA.
28. Permissible Exposure Level (PEL) - The maximum airborne concentration of asbestos fibers to which an employee is allowed to be exposed. The new level established by OSHA 29 CFR 1926.1101 is 0.1 fibers per cubic centimeter of air as an eight (8) hour time weighted average and 1.0 fibers /cc averaged over a sampling period of 30 minutes as an Excursion Limit. The Contractor is responsible for maintaining work areas in a manner that this standard is not exceeded.
29. Project Monitor - A professional capable of conducting air monitoring and analysis of schemes. This individual should be an industrial hygienist, an environmental scientist, or an engineer with experience in asbestos air monitoring and worker protection equipment and procedures. This individual should have demonstrated proficiency in conducting air sample collection in accordance with 29 CFR 1910.1001 and 29 CFR 1926.1101.
30. Regulated Area - An area established by the employer to demarcate where Class I, II, and III asbestos work is conducted and any adjoining area where debris and waste from such asbestos work accumulate, and a work area within which airborne concentrations of asbestos exceed or there is a reasonable possibility that they may exceed the PEL.
31. Shower Room - A room between the clean room and the equipment room in the work decontamination enclosure with hot and cold running water and suitably arranged for employee showering during decontamination. The shower room is located in an airlock between the contaminated area and the clean area.
32. Waterproofing - material, usually a membrane or applied compound (tar/mastic), used to make a surface impervious to water, includes concealed conditions (applications around doors, windows, and in wall cavities). Sometimes combined with felts.

1.11 SUBMITTALS

A. Pre-Work Submittals: Within 7 days prior to the pre-construction conference, the Contractor shall submit 3 copies of the documents listed below to the Owner and Engineer for review:
   1. Valid Contractor's Asbestos Removal license issued by the Connecticut Department of Public Health (CT DPH).
   2. Certificate of insurance covering work of this Contract.
   3. Name, experience of supervisors, and copies of valid Asbestos Supervisor permits issued by the CT DPH.
   4. Citations/Violations/Legal Proceedings: Submit a statement describing:
      a. Any citations, violations, criminal charges, or legal proceedings undertaken or issued within the past two years by any law enforcement, regulatory agency, or consultant concerning performance on previous abatement contracts. Briefly describe the circumstances citing the Project and involved persons and agencies as well as the outcome of any actions.
      b. Any litigation or arbitration proceedings arising out of performance on past Projects.
   5. Work Schedule:

a. Show the complete sequence of abatement activities and the sequencing of work within each building section.
b. Show the dates for the beginning and completion of each major element of work including substantial completion dates for each work area, building, or phase.
c. Show projected percentage of completion for each item, as of the first day of each month.
d. Show final inspection dates.

6. Project Notifications: As required by Federal, State, and local regulatory agencies together with proof of transmittal (i.e. certified mail return receipt). The contractor shall notify the Connecticut Department of Public Health and US EPA Region 1 at least ten (10) days prior to the start of asbestos abatement, as required by the Regulations of Connecticut State Agencies, Section 19a-332a-3 and EPA.
7. Abatement Work Plan: The Contractor shall design, prepare and submit to the Authority for review and approval, a detailed asbestos removal plan for the project in accordance with the applicable regulations and these specifications. The plan shall, at minimum, show limits of containment and work areas, methods of removal, location of decontamination units, number and location of negative air units, waste routes, waste storage location, entrance and exits, emergency exits, and any necessary details. Work shall not commence until the Authority has reviewed, commented and approved the contractor's asbestos removal plan. Provide plans which clearly indicate the following:
    a. All Work Areas/containment numbered sequentially.
    b. Locations and types of all decontamination enclosures.
    c. Entrances and exits to the Work Areas/containment.
    d. Type of abatement activity/technique for each Work Area/containment.
    e. Number and location of negative air units and exhaust. Also provide calculations for determining number of negative air pressure units.
    f. Proposed location and construction of storage facilities and field office.
    g. Location of water and electrical connections to building services.
    h. Waste transport routes through the building to the waste storage container.
8. Contingency plan.
9. Name, location, and applicable licenses for primary and secondary landfill for disposal of asbestos-containing material and asbestos contaminated waste.
10. Summary of proposed materials, and equipment to be used.
11. Certification that vacuums, temporary ventilation equipment, and other equipment to be used meet the ANSI 29.2-79 requirement for airborne fiber filtration.
12. If rental equipment is to be used in work area or to transport asbestos contaminated waste, provide notice to rental agency stating intended use of equipment, with copy to the Authority.
13. Summary of the Contractor's workforce by disciplines. Include a notarized statement signed by the Contractor documenting that all proposed workers, by name, have received all required medical examinations and have been properly trained and certified in asbestos removal work, respirator use, to appropriate EPA and OSHA standards for asbestos removal. Include on statement Contractor's compliance with OSHA medical surveillance requirements.
14. The Contractor shall submit his/her Health and Safety Plan and Standard Operating Procedures for this project for use in complying with the requirements of these

Specifications and applicable regulations. The Plan shall include, but shall not be limited to: distribution and use of amended water, the sequencing of asbestos work, detailed schedules and dates, shift times, and work activities during that shift, the interface of other trades involved in the performance of work, methods to be used to assure the safety of building occupants and visitors to the Site, security of the work areas, and a detailed description of the methods to be employed to control airborne fiber concentrations.

15. Written description of emergency procedures to be followed in case of injury or fire. This section must also include evacuation procedures, sources of medical assistance and procedures for access by medical personnel.
16. Level of respiratory protection intended for each operation for the project.

B. Project Closeout Submittals: Submit the following to Owner and Consultant at the close out of the Project (no later than 15 days subsequent to site demobilization):
   1. Originals of all waste disposal manifests, seals, and disposal logs.
   2. OSHA compliance air monitoring records conducted during the work.
   3. Daily progress log.
      a. A list of all workers used in the performance of the Project, including name, social security number, and CT DPH certification number.
      b. For each worker used in the performance of the project, submit required employee statements including Medical Examination Statement, Worker's Acknowledgment Statement, Respirator Fit Test, and Employee Training Statement.
      c. Certification for the laboratory that analyzed the OSHA personnel air samples.
      d. A notarized “Release of Liens” in a form acceptable to the owner. Such notarized release of liens shall certify that all sub-contractors, labor suppliers, etc. have been paid their pro rate share of all payments to date for the project, that the contractor has no basis for further claims, and will not make further claims for payment in any account after the first payment is made to him.

1.12 MEDICAL REQUIREMENTS

A. Prior to potential exposure to airborne asbestos fibers, provide workers with a comprehensive medical examination as required by 29 CFR 1910.1001, and 29 CFR 1926.1101.
   1. This examination is not required if adequate records show the employee has been examined as required by 29 CFR 1910.1001, and 29 CFR 1926.1101 within the past year.
   2. The same medical examination shall be given on an annual basis to employees engaged in an occupation involving asbestos fibers and within thirty (30) calendar days before or after the termination of employment in such occupations.

B. As required by 29 CFR 1910.1001, and 29 CFR 1926.1101 maintain complete and accurate records of employees' medical examinations for a period of thirty (30) years after termination of employment and make records of the required medical examinations available for inspection and copying to: The Assistant Secretary of Labor for Occupational Safety and Health, the Director of the National Institute for Occupational Safety and Health (NIOSH), authorized representatives of either of them, and an employee’s physician upon the request of the employee or former employee.

C. The Contractor shall furnish the Owner evidence of its firm's medical surveillance program required under 29 CFR 1910.1001, and 29 CFR 1926.1101.

1.13 REGULATIONS AND STANDARDS

Regulatory compliance includes but is not necessarily limited to applicable requirements set forth by:

A. Federal Regulations:
1. 29 CFR 1910 and 1926 – Construction and General Industry Standards
2. 29 CFR 1910.1001, "Asbestos" (OSHA)
3. 29 CFR 1910.1200, "Hazard Communication" (OSHA)
4. 29 CFR 1910.134, "Respiratory Protection" (OSHA)
5. 29 CFR 1910.145, "Specification for Accident Prevention Signs and Tags" (OSHA)
6. 29 CFR 1910.146, “Permit Required Confined Spaces” (OSHA)
7. 29 CFR 1926, "Construction Industry" (OSHA)
8. 29 CFR 1926.1101, "Asbestos, Tremolite, Anthophyllite, and Actinolite" (OSHA)
9. 29 CFR 1926.500 "Guardrails, Handrails and Covers" (OSHA)
10. 40 CFR 61, Subpart A, "General Provisions" (EPA)
11. 40 CFR 61, Subpart M, "National Emission Standards for Hazardous Air Pollutants (NESHAP)" (EPA)
12. 40 CFR 763 Subpart E, “Asbestos in Schools Regulations” (EPA)
13. 49 CFR 171-172, Transportation Standards (DOT)

B. Connecticut Regulations:
State requirements which govern asbestos abatement work and hauling and disposal of asbestos waste materials include but are not necessarily limited to the following:
1. Connecticut Department of Energy and Environmental Protection (Solid Waste Management Regulations).
2. Connecticut Department of Public Health (CT DPH) regulations outlined in Section 19a-332a-1 through 19a-332a-16 “Standards for Asbestos Abatement”
3. CT DPH regulations outlined in Section 20-440-1 through 20-440-9 “Licensure and Training Requirements for Persons Engaged in Asbestos Abatement and Consulting Services”
4. Connecticut Department of Labor (CT DOL)
5. Connecticut Department of Transportation (CT DOT)

C. Local Regulations:
Local agencies which may govern or have certain requirements regarding asbestos abatement work or hauling and disposal of asbestos waste materials include but are not necessarily limited to the following:
1. Building Department
2. Health Department
3. Fire Department

D. Standards and Guidance Documents:
   1. American National Standard Institute (ANSI) Z88.2-80, Practices for Respiratory Protection
   2. ANSI Z9.2-79, Fundamentals Governing the Design and Operation of Local Exhaust Systems
   3. EPA 560/585-024, Guidance for Controlling Asbestos Containing Materials in Buildings (Purple Book)
   4. EPA 530-SW-85-007, Asbestos Waste Management Guidance

1.14 EXEMPTIONS

A. Any deviations from these specifications require the written approval and authorization from the Owner and Consultant.

B. Any modifications from the standard work practices identified in the CT DPH Standards for Asbestos Abatement, Sections 19a-332a-1 to 19a-332a-16 must be requested in writing, and approved in writing from the CT DPH.

1.15 FINAL AIR CLEARANCE

A. Following the completion of the encapsulation phase of the work, the Consultant shall collect final air clearance samples inside the work area per AHERA regulation 40 CFR Part 763 and in compliance with CT DPH regulations. The Owner of the facility shall be responsible for payment of the sampling and analysis of the initial final air clearance samples only. The contractor shall be responsible for payment of all costs associated with the collection and analysis of additional final air clearance samples if the first set of samples fail to satisfy the clearance criteria.

1.16 NOTIFICATIONS, POSTINGS, SUBMITTALS, AND PERMITS

A. The contractor shall make the following notifications, and provide the submittals to the following agencies prior to the commencement of removal work. This notification is required ten (10) calendar days prior to the start of the abatement project:
   1. U.S. EPA, Region 1
      5 Post Office Square, Suite 100 (OES05-4)
      Boston, MA 02109-3912
   2. Connecticut Department of Public Health
      410 Capital Avenue MS #12 AIR
      P.O. Box 340308
      Hartford, CT 06134

B. The minimum information included in the notification to these agencies includes:
   1. Name and address of building Owner/Operator
   2. Building location
   3. Building size, age, and use
   4. Amount of friable asbestos
   5. Work schedule, including proposed start and completion date

6. Asbestos removal procedures to be used
7. Name and location of disposal site for generated asbestos waste, residue, and debris
8. If landfill opens in Connecticut to accept ACM waste, Consultant will notify CT DEEP prior to utilizing said landfill.

1.17 WORK SITE SAFETY PLAN

A. The contractor shall establish a set of emergency procedures and shall post them in a conspicuous place at the work site. The safety plan should include provisions for the following:
   1. Evacuation of injured workers.
   2. Emergency and fire exit routes from all work areas.
   3. Emergency first aid treatment
   4. Local telephone numbers for emergency services including ambulance, fire, and police.
   5. A method to notify occupants of the building in the event of a fire or other emergency requiring evacuation of the building.

B. The contractor is responsible for training all workers in these procedures.

1.18 INDEPENDENT AIR SAMPLING AND ASBESTOS ABATEMENT MONITORING

A. This section describes independent air sampling work being performed on behalf of the Owner. This work is not in the Contract Sum. This section describes air monitoring carried out by the Owner's Consultant to verify that the building beyond the work area and the outside environment remains uncontaminated. (Personal air monitoring required by OSHA is work to be performed by the Contractor and is within the Contract Sum.)

B. The purpose of the Owner's Consultant's air monitoring is to detect faults in the work are isolation such as:
   1. Contamination of the building outside of the work area by airborne asbestos fibers.
   2. Failure of filtration or rupture in the differential pressure system.
   3. Contamination of air outside the building envelope by airborne asbestos fibers.

   Should any of the above occur the Contractor shall immediately cease asbestos abatement activities until the fault is corrected. Do not recommence work until authorized by the Owner's Consultant.

C. The Owner's Consultant will monitor airborne fiber counts in the Work Area. The purpose of this air monitoring will be to detect airborne asbestos concentrations, which may challenge the ability of the Work Area isolation procedures to protect the balance of the building or outside of the building from contamination by airborne fibers.

D. To determine if the elevated airborne fiber counts encountered during abatement operations have been reduced to an acceptable level, the Consultant will sample and analyze air in accordance with clearance air sampling requirements.

E. The Owner's Consultant will perform on-site monitoring throughout the course of the project, as follows:
   1. All work procedures shall be continuously monitored by the Consultant to assure that areas outside the designated work locations in the buildings will not be contaminated.
   2. Prior to work on any given day, the Contractor's designated "competent person" shall discuss the day's work schedule with the Consultant to evaluate job tasks with respect to safety procedures and requirements specified to prevent contamination of the building or the employees. This includes a visual survey of the work area and the decontamination of the building or the employees. This includes a visual survey of the work area and the decontamination enclosure systems.

1.19 CONTRACTOR'S AIR SAMPLING RESPONSIBILITY

A. The contractor shall independently retain a CT licensed asbestos project monitor to monitor airborne asbestos concentrations in the workers' breathing zone and to establish conditions and work procedures for maintaining compliance with OSHA Regulations 29 CFR 1910.1001 and 1926.1101.

B. The Contractor's project monitor shall document all air sampling results and provide a report to the Consultant within 24 hours after sample collection.

C. All air sampling shall be conducted in accordance with methods described in OSHA Standards 29 CFR 1910.1001 and 1926.1101 and the OSHA Respiratory Protection Standard 29 CFR 1910.134.

D. A minimum of 20% of all workers in each working category (i.e., gross removal, final clearance, etc.) must be monitored each day of asbestos removal activities.

E. Phase Contrast Microscopy may be used to analyze personal air samples. The Contractor shall arrange and pay for all costs of the testing. Laboratories used shall be currently enrolled in the American Industrial Hygiene Association Proficiency Analytical Testing Program or an equivalent recognized program and approved by CT DPH.

1.20 PROPER WORKER PROTECTION

A. This section describes the equipment and procedures required for protecting workers against asbestos contamination and other workplace hazards except for respiratory protection.

B. All workers are to be accredited as abatement workers as required by the AHERA regulation 40 CFR 763 Appendix C to Subpart E, February 3, 1994.

C. The contractor is required to be certified and accredited as required by the State of Connecticut Department of Public Health Services.

D. In accordance with 29 CFR 1926 and 20-440-7 RCSA, all workers shall receive a training course covering the dangers inherent in handling asbestos, the dangers of breathing asbestos dust, proper work procedures, and proper worker protective measures. This course must include but is not limited to the following:
   1. Methods of recognizing asbestos
   2. Health effects associated with asbestos
   3. Relationship between smoking and asbestos in producing lung cancer
   4. Nature of operations that could result in exposure to asbestos
   5. Importance of and instruction in the use of necessary protective controls, practices and procedures to minimize exposure including:
      a. Engineering controls
      b. Work Practices
      c. Respirators
      d. Housekeeping procedures
      e. Hygiene facilities
      f. Protective clothing
      g. Decontamination procedures
      h. Emergency procedures
   6. Waste disposal procedures
   7. Purpose, proper use, fitting, instructions, and limitations of respirators as required by 29 CFR 1910.134
   8. Appropriate work practices for the work
   9. Requirements of medical surveillance program
   10. Review of 29 CFR 1926
   11. Pressure Differential Systems
   12. Work practices including hands on or on-job training
   13. Personal Decontamination procedures
   14. Air monitoring, personal and area

E. The Contractor shall provide medical examinations for all workers who may encounter an airborne fiber level of 0.1 f/cc or greater for an 8-hour Time Weighted Average and/or enter regulated areas. In the absence of specific airborne fiber data provide medical examinations for all workers who will enter the Work Area for any reason. Examination shall, at a minimum, meet OSHA requirements as set forth in 29 CFR 1926 In addition, provide an evaluation of the individual's ability to work in environments capable of producing heat stress in the worker.

F. Submit the following to the consultant for review. The contractor shall not start work until these submittals are returned with consultant action stamp indicating that they are approved.
   1. Submit copies of certificates from an EPA-approved AHERA abatement workers course for each worker as evidence that each asbestos abatement worker is accredited as required by the AHERA Regulation 40 CFR 763 Appendix C to Subpart E, February 3, 1994.
   2. Submit evidence that the contractor is certified to perform asbestos abatement work by the State of Connecticut Department of Public Health services.
   3. Submit documents verifying that each worker has had a medical examination within the last 12 months as part of compliance with OSHA medical surveillance requirements. Submit, at a minimum, for each worker the following:

a. Name and Social Security Number
b. Physicians Written Opinion from examining physician including at a minimum the following:

4. Whether worker has any detected medical conditions that would place the worker at an increased risk of material health impairment from exposure to asbestos.
5. Any recommended limitations on the worker or on the use of personal protective equipment such as respirators.
6. Statement that the worker has been informed by the physician of the results of the medical examination and of any medical conditions that may result from asbestos exposure.
7. Copy of information that was provided to physician in compliance with 29 CFR 1926
8. Statement that worker is able to wear and use the type of respiratory protection proposed for the project, and is able to work safely in an environment capable of producing heat stress in the worker.
9. Submit copies of certificates for the site supervisor and the workers issued by CT DPH.

G. Submit certification signed by an officer of the abatement-contracting firm and notarized that exposure measurements, medical surveillance, and worker training records are being kept in conformance with 29 CFR 1926.

H. The Contractor shall maintain control of and be responsible for access to all work areas to ensure the following requirements:
1. Non-essential personnel are prohibited from entering the area.
2. All authorized personnel entering the work area shall read the "Worker Protection Procedures" which are posted at the entry points to the enclosure system, and shall be equipped with properly fitted respirators and protective clothing.
3. All personnel who are exiting from the decontamination enclosure system shall be properly decontaminated.
4. Asbestos waste that is taken out of the work area must be properly bagged and labeled in accordance with these specifications. The surface of the bags shall be decontaminated. Asbestos leaving the enclosure system must be immediately transported off-site or immediately placed in locked, posted temporary storage on-site, and removed within 24 hours of the project conclusion.
5. Any material, equipment, or supplies that are brought out of the decontamination enclosure system shall be cleaned and decontaminated by wet cleaning and/or HEPA vacuuming of all surfaces.

1.21 ALTERNATE WORK PRACTICES

A. The contractor and/or consultant may obtain services of a CT DPH certified asbestos project designer and submit application for variances to the CT DPH, as applicable for any alterations, modifications or non-conforming methods intended of asbestos removal. Methods requiring variances include but are not necessarily limited to glove-bagging, use of tent procedures, remote decons, etc. The alternative procedures shall be submitted in writing and hand delivered or post marked at least ten (10) days before the project start date. CT DPH may approve an alternative procedure for an asbestos abatement project with certain conditions that would provide equivalent or a greater measure of asbestos emission control than the conventional work practices. The alternate work practice request form shall be signed and sealed by a Licensed Designer. Any fees associated with the application shall be paid by the Contractor. All alternative work practices must be approved and accepted by Langan's project designer regardless if they have been approved by CT DPH. The abatement contractor will be required to propose a credit to the building owner/client/consultant that must be reviewed and accepted prior to AWP submission to CT DPH.

1.22 POST-PROJECT CLOSEOUT

A. The contractor shall provide all required documentation as required by this specification once his/her work is complete, final clearances passed and asbestos waste disposed of. This should include but not be limited to: bound copy of the daily log containing log of daily work activities, all supervisor and worker certificates of training and Connecticut licenses, certificates of insurance, daily sign in sheets, containment entry/exit logs, copy of recording manometer charts, waste shipment records, personal air monitoring laboratory reports and chain-of-custody documentation, and project completion certificate. Final payment shall not be made to the contractor until all required documentation is submitted and verified.

PART 2 PRODUCTS

2.1 MATERIALS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with asbestos shall be decontaminated or disposed of as asbestos waste.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to the job site with factory label indicating 4 or 6 mil.

D. Polyethylene disposable bags shall be six (6) mil with pertinent pre-printed label. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.

E. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

F. Surfactant (wetting agent), shall consist of fifty (50) percent polyoxyethylene ether and fifty (50) percent polyoxyethylene ester, or equivalent, and shall be mixed with water to provide a concentration of one (1) ounce surfactant to five (5) gallons of water or as directed by manufacturer.

G. Removal encapsulant shall be non-flammable factory prepared penetrating chemical encapsulant found acceptable to Consultant. Usage shall be in accordance with manufacturer's printed technical data.

H. The contractor shall have available spray equipment capable of mixing wetting agent with water and capable of generating sufficient pressure and volume and having sufficient hose length to reach all areas with asbestos.

I. Impermeable containers are to be used to received and retain any asbestos-containing or contaminated materials until disposal at an acceptable disposal site. The containers shall be labeled in accordance with OSHA Standard 29 CFR 1926.1101. Containers must be both air and watertight.

J. Labels and signs, as required by OSHA Standard 29 CFR 1926.1101, will be used.

K. Encapsulant shall be bridging or penetrating type which has been found acceptable to the consultant. Usage shall be in accordance with manufacturer's printed technical data.

L. HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports where asbestos-containing materials may be disturbed.

2.2 TOOLS AND EQUIPMENT

A. The contractor shall provide all tools and equipment necessary for asbestos removal, encapsulation and enclosure.

B. The contractor's air monitoring professional shall have air-monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.

C. The contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape and air filters.

D. The contractor shall provide (as needed) temporary electrical power panels, electrical power cables, and electrical power sources (such as generators). Any electrical connection work affecting the building electrical power system shall be performed by a State of Connecticut licensed electrician and the contractor shall obtain all necessary local permits.

E. The contractor shall have available shower stalls and plumbing to support same to include sufficient hose length and drain system or an acceptable alternate.

F. Exhaust air filtration system units shall contain HEPA filter(s) capable of sufficient air exhaust to create negative pressure of -0.02 inches of water within enclosure with respect to outside area. Equipment shall be checked for proper operation by smoke tubes or differential pressure gauge before the start of each shift and at least twice during the shift. Adequate exhaust air shall be provided for a minimum of four (4) air changes per hour within the enclosure. No air movement system or air filtering equipment shall discharge unfiltered air outside.

G. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all monodispersed particles of 0.3 micrometers in diameter or larger.

H. The contractor will have reserve units so that systems will operate continuously.

2.3 RESPIRATORY PROTECTION

A. Select respirators from those approved by the Mine Safety and Health Administration (MSHA), and the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services.

B. Respirators shall be individually fit-tested to personnel under the direction of an Industrial Hygienist on a yearly basis. Fit-tested respirators shall be permanently marked to identify the individual fitted, and use shall be limited to that individual. Fit-test records shall be maintained on-site for each employee.

C. Where fiber levels permit, and in compliance with regulatory requirements, Powered Air Purifying Respirators (PAPR) are the minimum allowable respiratory protection permitted to be utilized during gross removal operations. The Contractor shall use supplied air respirator for confined space requirements. PAPR's are the minimal respiratory protection required for all thermal system insulation and surfacing asbestos abatement.

D. No respirators shall be issued to personnel without such personnel participating in a respirator training program.

E. High Efficiency Particulate Air (HEPA) respirator filters shall be approved by NIOSH and shall conform to the OSHA requirements in 29 CFR 1910.134 and 29 CFR 1926.1101.

F. A storage area for respirators shall be provided by the contractor in the clean room side of the personnel decontamination enclosure where they will be kept in a clean environment.

G. The contractor shall provide and make available a sufficient quantity of respirator filters so that filter changes can be made as necessary during the work day. Filters will be removed and discarded during the decontamination process. Filters cannot be reused. Filters must be changed if breathing becomes difficult.

H. Filters used with negative pressure air purifying respirators shall not be used any longer than one eight (8) hour work day.

I. Any authorized visitor, worker, or supervisor found in the work area not wearing the required respiratory protection shall be removed from the project site and not be permitted to return.

J. The contractor shall have at least two (2) Powered Air Purifying Respirators stored on-site designated for authorized visitors use. Appropriate respirator filters for authorized visitors shall be made available by the contractor.

K. Establish a respirator program as required by ANSI Z88.2 and 29 CFR 1910.134, and 29 CFR 1926.1101. Provide respirator training and fit-testing.

2.4 PROTECTIVE CLOTHING

A. Provide personnel utilized during the Project with disposable protective whole body clothing, head coverings, gloves and foot coverings. Provide disposable plastic or rubber gloves to protect hands. Cloth gloves may also be worn. Make sleeves secure at the wrists and make foot coverings secure at the ankles by the use of tape, or provide disposable coverings with elastic wrists or tops.

B. Provide sufficient quantities of protective clothing to assure a minimum of four (4) complete disposable outfits per day for each individual performing abatement Work.

C. Eye protection and hard hats shall be provided and made available for all personnel entering any work area.

D. Authorized visitors shall be provided with suitable protective clothing, headgear, eye protection, and footwear whenever they enter the work area.

PART 3 EXECUTION

3.1 PRE-ABATEMENT MEETING

A. At least one week prior to the start of work a Pre-Construction Meeting will be scheduled and must be attended by the contractor and any sub-contractors. The assigned contractor site supervisor is also required to attend this meeting.

B. The contractor shall present a detailed project schedule and project submittals at the Pre-Construction Meeting. Variations, amendments, and corrections to the presented schedule will be discussed, and the Owner and consultant will inform the contractor of any scheduling adjustments for this project.

C. Following the Pre-Construction Meeting, the contractor shall submit a revised schedule (if needed) no later than one week after the meeting.

3.2 WORK AREA PREPARATION

A. Where necessary, shut down electrical power, including receptacles and light fixtures. Under no circumstances during the decontamination procedures will lighting fixtures be permitted to be operating when the spraying of amended water may contact the fixture. Provide GFCI devices, temporary power, and temporary lighting installed in compliance with the applicable electrical codes. All installations are to be made by a State of Connecticut licensed electrician.

B. Shut down and/or isolate heating, cooling, and ventilation air systems or zones to prevent contamination and fiber dispersal to other areas of the structure. During the work, vents within the work area shall be "criticalled" with duct tape and polyethylene sheeting.

C. The contractor shall be responsible for removing furniture from the work areas. The contractor shall pre-clean moveable objects within the proposed work areas using HEPA vacuum equipment and/or wet cleaning methods as appropriate and remove such objects from work areas to a temporary location. For example, cabinets to gain access to floor tile and associated mastic.

D. Seal off all openings, including, but not limited to, windows, corridors, doorways, skylights, ducts, grills, diffusers, and any other penetration of the work areas, with polyethylene sheeting a minimum of six (6) mils thick, sealed with duct tape. This includes doorways and corridors that will not be used for passage during work areas and occupied areas.

E. Pre-clean fixed objects within the work areas, using HEPA vacuum equipment and/or wet cleaning methods as appropriate, and enclose with a minimum six (6) mil plastic sheeting sealed with duct tape.

F. Clean the proposed work areas using HEPA vacuum equipment or wet cleaning methods as appropriate. Do not use methods that raise dust, such as dry sweeping or vacuuming with equipment not equipped with HEPA filters.

G. After HEPA vacuum cleaning, cover fixed walls with two (2) layers of four (4) mil polyethylene sheeting to the floor level. Where fixed walls are not used, two layers of six (6) mil polyethylene sheeting will be applied to a rigid framework of wood, metal, or PVC. Where floor tile/mastic is not being abated, cover the floor with two (2) layers of six-mil polyethylene sheeting. All overlaps shall be sealed with tape or spray adhesive.

H. Maintain emergency and fire exits from the work areas, or establish alternate exits satisfactory to fire officials.

I. Clean and remove ceiling mounted objects, such as lights and other items not sealed off, which interfere with asbestos abatement. Use hand-held amended water spraying or HEPA vacuuming equipment during fixture removal to reduce settled fiber dispersal.

J. Create pressure differential between work areas and uncontaminated areas by the use of acceptable negative air pressure equipment sufficient to provide four (4) air changes per hour and create negative pressure of -0.02 inches of water within enclosure with respect to outside area as measured on a water gauge.

3.3 DECONTAMINATION SYSTEM

A. The following requirements shall be followed for the worker decontamination unit:
   1. At all asbestos abatement projects, work areas shall be equipped with decontamination facilities consisting of: a clean room, a shower room, and an equipment room attached to each containment.
   2. The decontamination enclosure system chambers shall be constructed to meet the criteria of the Specification. The decontamination enclosure shall be installed watertight to prevent water leaks. The interior shall be lined with two layers of 6-mil fire-retardant plastic sheeting, with a minimum overlap of 16 inches at seams and sealed (airtight) by tape and adhesive. The interior floor shall be sheathed with (2) layers of reinforced fire retardant plastic sheeting with a minimum overlap on the wall of sixteen (16) inches. The contractor shall ensure compliance with local building codes and other regulations governing temporary structures.
   3. Curtained Doorways: Three overlapping sheets of 6-mil polyethylene shall be placed over a framed doorway and secured along the top of the doorway. Secure the vertical edge of the outer sheets along one vertical side of the doorway and the vertical edge of the center sheet along the opposite vertical side of the doorway. The sheets shall be weighted so that they close quickly after being released.
   4. Air Locks: Air locks shall consist of two curtained doorways placed a minimum of three feet apart.
      a. Clean Room: In this room, persons remove and leave all street clothes and put on clean disposable coveralls. Approved respiratory protection equipment is stored in this area. The floor of the clean room must be kept dry at all times. At the end of each shift, the room must be cleaned using wet rags. Also, a lockable door may be installed. No asbestos-containing materials are allowed in this room. The clean room shall be equipped with suitable hooks, lockers, shelves, etc. for workers to store personal articles and clothing. THIS IS NOT A CONTAMINATED AREA.
      b. Shower Room: Provide a completely watertight operational shower to be used by cleanly dressed workers heading for the Work area from the clean room or for showering workers headed out of the Work Area after dressing in the Equipment Room. Shower must be constructed so that water leakage is minimized. The shower shall have one shower per six full shift abatement people, calculated on the basis of the largest shift. Any leaking water must be cleaned immediately. Showers must be equipped with hot and cold running water, soap and sufficient disposable towels for the number of workers at the job site. Arrange water shut off and drain pump operation controls, so that a single individual can shower without assistance from either inside or outside the work area. THIS IS A CONTAMINATED AREA.

         Pump wastewater into a polyethylene lined 55-gallon drum located in the work area to be added to the asbestos waste. If the water is allowed by the work treatment workers to be pumped into a drain, provide 20 micron and 5 micron waste water filters in line

to drain. Change filters at a minimum of once a day. Locate filters inside the shower unit, so that the shower pan catches the water lost during filter change.

c. Equipment Room: Work equipment, footwear, and all other contaminated work clothing are to be left here upon exiting work area. A walk-off pan filled with water shall be located in the work area just outside the equipment room for workers to clean foot coverings while exiting the work area. This is a change and transit area for workers. Provide a drop cloth layer of sheet plastic on the floor of the Equipment Room for every shift change. Roll drop cloth layer in upon itself at the end of each shift and dispose of as contaminated waste. THIS IS A CONTAMINATED AREA.

Each room shall be separated from the other and from the work area by airlocks such as will prevent the free passage of air or asbestos fibers and shall be accessible through doorways protected with three (3) overlapping 6 mil polyethylene sheets which shall be weighed, so as to fall into place when people pass through the area. The shower room shall be contiguous to the clean room and equipment room. All personnel entering or leaving the work area shall pass through the shower room. The number of showers provided shall satisfy the requirements of OSHA 29 CFR 1910.141. Hot and cold water shall be supplied to the showers. The equipment room (dirty room) shall be situated between the shower room and the work area and separated from both by means of suitable barriers or overlapping flaps such as will prevent the free passage of air or asbestos fibers.

Decontamination chamber doors shall be of sufficient height and width to enable replacement of equipment, which may fall, and to safely stretcher or carry an injured worker from the site without destruction of the chamber or unnecessary risk to the integrity of the work area. Such doors must be at least four (4) feet wide, and the distance between sets of doors must be at least four (4) feet.

5. No person or equipment shall leave the asbestos abatement project work area unless first decontaminated by showering, wet washing or HEPA vacuuming to remove all asbestos debris. No asbestos contaminated materials or persons shall enter the clean room.
6. Where feasible, decontamination systems shall abut the work area. In situations where it is not possible, due to unusual conditions, to establish decontamination systems contiguous to the work area, personnel shall be directed to remove visible asbestos debris from their persons by HEPA-filtered vacuuming prior to donning clean disposable coveralls while still in the work area, and proceeding directly to a remote decontamination system to shower and change clothes to follow work area exit procedures.
7. In specific situations where the asbestos contractor determines that it is not feasible to establish a contiguous decontamination system at a work site, the asbestos contractor shall utilize a remote decontamination system if approved by Langan. Such systems must be operated in conformance with 29 CFR 1926.1101, Appendix F.

B. Remote Decontamination Facility:

For exterior work on the roof, glove bag or tent procedures, when full containment enclosure is not feasible, the Contractor shall provide remote personnel decontamination enclosure system if approved by the Consultant - Langan.

C. Occupied areas and/or building space not within the work areas shall be separated from asbestos abatement work areas by means of airtight barriers.

D. Construct the decontamination system with wood or metal framing, 3/8" sheathing and cover both sides with a double layer of six (6) mil polyethylene sheeting, spray glued or taped at the joints. Caulk joints watertight at floor, walls, and ceiling.

E. The contractor and the consultant shall visually inspect barrier several times daily to assure effective seal and the contractor shall repair defects immediately

F. Waste/Equipment Decontamination Enclosure System:
This system is located adjacent to the work area. The equipment decontamination enclosure system, consisting of two totally enclosed spaces, shall be constructed as follows:

1. Equipment Washroom: An equipment washroom shall have two air locks: one adjacent to the work area and one common air lock which separate it from the holding area. The washroom shall have facilities for washing material containers and equipment. Gross removal of dust and debris from contaminated material containers and equipment shall be accomplished in the work area, prior to moving to the washroom.
2. Holding Area: A holding area shall share a common air lock with the equipment washroom and shall have a curtained doorway to outside areas. A hinged, lockable door shall be placed at the holding area entrance to prevent unauthorized access into the work area.
3. Remote Decontamination Facility: For exterior work on the roof, glove bag or tent procedures, when full containment enclosure is not required, the contractor shall provide remote Waste/Equipment decontamination enclosure system as specified.

3.4 ABATEMENT REMOVAL PROCEDURES

A. Regulatory compliance will include, but is not necessarily limited to, applicable requirements set forth by the Federal Environmental Protection Agency (EPA), Connecticut Departments of Public Health (CT DPH), Connecticut Department of Environmental Protection, and Local Health and Building Departments.

B. The following procedures shall be followed while performing the abatement activities:

1. No asbestos abatement work, including preparation, shall be performed or continued without having proper notification and a certified supervisor at the work area. The contractor shall have a designated "competent person" on the job at all times to ensure establishment of a proper enclosure system and proper work practices throughout the project.
2. Abatement work will not commence until authorized by the consultant.

3. Provide and display danger signs at every entrance to the work areas in clearly visible locations indicating that asbestos removal work is being conducted and unauthorized and not protected persons should not enter.
   Signs must use the following legend:
   DANGER
   ASBESTOS
   MAY CAUSE CANCER
   CAUSES DAMAGE TO LUNGS
   AUTHORIZED PERSONNEL ONLY
   WEAR RESPIRATORY PROTECTION AND
   PROTECTIVE CLOTHING IN THIS AREA

   Signs shall be posted which meet the specifications set forth in 29 CFR 1926.1101 at all approaches to the work area. Signs shall be posted a sufficient distance from the work area to permit a person to read the sign and take precautionary measures to avoid exposure to asbestos.
4. The worker decontamination enclosure system shall be installed or constructed prior to plasticizing the work area or before disturbing ACM. The waste decontamination enclosure system shall be installed or constructed prior to commencement of gross removal work.
5. All asbestos handlers shall wear disposable suits, including gloves, hood and footwear, and appropriate respiratory equipment, after removing street clothes in the clean room.
6. Abatement of asbestos-containing materials shall be done by wet methods only.
7. ACM shall be sprayed with amended water in sufficient frequency and quantity for enhanced penetration. Sufficient time shall be allowed for penetration to occur prior to removal action or other disturbance-taking place. Dry removal of asbestos materials is prohibited.
8. In order to maintain indoor asbestos concentrations to the minimum, the wet asbestos must be removed in manageable sections. Material drop shall not exceed eight (8) feet. For heights up to 15 feet, provide inclined chutes or scaffolding to intercept drop.
9. Remove asbestos containing materials as appropriate by standard methods. Fill disposal containers as removal proceeds; seal filled containers and clean containers before removal to equipment decontamination system. Wet clean each container thoroughly, double bag and apply caution label. Ensure that workers do not exit the work area thorough the equipment decontamination enclosure.
10. After completion of stripping work, all surfaces from which asbestos has been removed shall be wet brushed, using a nylon brush, wet wiped, and sponged or cleaned by an equivalent method to remove all visible material (wire brushes are not permitted). During this work, the surfaces being cleaned shall be kept wet.
11. Remove and containerize all visible accumulations of asbestos-containing and/or asbestos-contaminated debris. During cleanup, utilize brooms, rubber dustpan, and rubber squeegees to minimize damage to floor covering.
12. Retrieve all free water in contaminated areas and place in plastic lined leak-tight drums.
13. Sealed disposal containers, and all equipment used in the work area, shall be included in the cleanup and shall be removed from work areas via the equipment decontamination enclosure at an appropriate time in the cleaning sequence. All asbestos waste in 6-mil

polyethylene disposal bags shall be double bagged in the equipment decontamination enclosure before removal from the Site.

14. At any time during asbestos removal, should the consultant suspect contamination of areas outside the work area(s), he shall cause all abatement work to stop until the contractor takes steps to decontaminate these areas and eliminate the causes of such contamination. Unprotected individuals shall be prohibited from entering suspected contaminated areas until air sampling and visual inspections certify decontamination.
15. After completion of the initial final cleaning procedure including removal of the inner layers of polyethylene sheeting, but prior to encapsulation, a pre-sealant inspection shall be conducted by the consultant. The pre-sealant inspection shall verify that ACM and residual dust has been removed from the work area.
16. After the work area has been inspected by the Engineer and rendered free of visible debris, a thin coat of a pigmented (non-transparent) encapsulating agent shall be applied to all surfaces in the work area from which ACM was removed, to lockdown nonvisible fibers.
17. Removal of asbestos containing materials shall be done under negative pressure containment. All OSHA Class I, Class III, and interior Class II asbestos abatement projects shall employ HEPA negative air pressure equipment ventilation. The negative air pressure equipment shall operate continuously, twenty-four (24) hours a day, from startup of negative air pressure equipment, through the cleanup operations. A negative air pressure, relative to areas outside of the enclosure, shall be maintained at all times in the regulated abatement work area during the asbestos abatement project to ensure that contaminated air in the regulated abatement work area does not escape back to an uncontaminated area. A manometer shall be used to document the pressure differential for all OSHA Class I Large and Small size asbestos project regulated abatement work areas. A minimum of -0.02 column inches of water pressure differential, relative to pressure outside the regulated abatement work area, shall be maintained within the regulated abatement work area, as evidenced by manometric measurements.

3.5 CONSULTANT

A. The Owner has retained Langan Engineering (Langan) as the Hazardous Materials Consultant for the purpose of project design, construction administration, and project monitoring during Asbestos Abatement. Mr. Matthew Myers (License #000058) of Langan is the DPH-approved Asbestos Project Designer for this project. The Consultant will represent the Owner in all tasks of the abatement project at the discretion of the Owner. The Asbestos Abatement Contractor will regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the abatement, submission of data, and daily field punch list items.

3.6 CONSULTANT'S RESPONSIBILITIES

A. Air sampling shall be conducted by the consultant to ascertain the integrity of controls that protect the building from asbestos contamination. Independently, the contractor shall monitor air quality

within the work area to ascertain the protection of employees and to comply with OSHA regulations.

B. The consultant's CT DPH licensed asbestos project monitor shall collect and analyze air samples during two time periods:
   1. Abatement Period: If required, the consultant's project monitor shall collect samples on a daily basis during the work period. A sufficient number of area samples shall be taken outside of the work area, at the exhaust of the negative pressure system, and outside of the building to judge the degree of cleanliness or contamination of the building during removal. Additional samples may be taken inside the work area and decontamination enclosure system, at the discretion of the project monitor.
   2. Post-Abatement Period: The consultant's project monitor shall conduct air sampling following the final cleanup phase of the project, once the "no visible residue" criterion, as established by the project monitor, has been met. Five (5) samples shall be collected inside the work area utilizing aggressive methods to comply with the State of Connecticut Department of Public Health Standards for Asbestos Abatement, sections 19a-332a-12. Analysis of the samples to determine airborne concentrations of asbestos shall be conducted by Transmission Electron Microscopy (TEM) method with an average limit of 70.0 structures per square millimeter of filter surface or by Phase Contrast Microscopy (PCM) with a limit of 0.010 fibers per cubic centimeters of air in accordance with the above Connecticut regulation sections.

C. The consultant's project monitor shall provide continual evaluation of the air quality of the building during removal, using his/her best professional judgment in respect to the State of Connecticut Department of Public Health guideline of 0.010 fibers/cc and the background air quality established during the pre-abatement period.

D. If the project monitor determines that the building air quality has become contaminated from the project, he/she shall immediately inform the contractor to cease all removal operations and implement a work stoppage clean up procedure. The contractor shall conduct a thorough cleanup of the areas of the building designated by the consultant. No further removal work can take place until the project monitor has assessed that the building air has been decontaminated.

E. Pre-abatement and abatement air samples shall be collected as required to obtain a volume of 1,200 liters. Samples shall be analyzed by Phase Contrast Microscopy (PCM) methodology using the NIOSH 7400 protocol.

3.7 CONSULTANT'S INSPECTION RESPONSIBILITIES

A. The consultant shall conduct inspection throughout the progress of the abatement project. Inspections shall be conducted in order to document the progress of the abatement work as well as the procedures and practices employed by the abatement contractor.

B. The consultant shall perform the following inspections during the course of abatement activities:
   1. Pre-commencement Inspection: Pre-commencement inspections shall be performed at the time requested by the abatement contractor. The consultant shall be informed 12 hours prior

to the time the inspection is needed. If, during the course of the pre-commencement inspection, deficiencies are found, the contractor shall perform the necessary adjustments in order to obtain compliance.

2. Work Area Inspections: Work area inspections shall be conducted on a daily basis at the discretion of the consultant. During the course of the work inspections, the consultant shall observe the contractor's removal procedures, verify barrier integrity, monitor negative air filtration devices, assess project progress, and inform the abatement contractor of specific remedial activities if deficiencies are noted.
3. Pre-encapsulation/Final Visual Inspection: The consultant, upon the request of the abatement Contractor, shall conduct a pre-sealant inspection. The consultant shall be informed 24 hours prior the time that the inspection is needed. The pre-encapsulation inspection shall be conducted after completion of the all cleaning procedures, but prior to encapsulation. The pre-encapsulation inspection shall verify that all ACM and residual debris have been removed from the work area. If, during the course of the pre-encapsulation inspection, the consultant identifies residual dust or debris, the contractor shall comply with the request of the consultant in order to render the area "dust free."

3.8 CLEARANCE AIR TESTING

A. After the visual inspection is completed and all surfaces in the abatement area have dried, final air clearance sampling shall be performed by the consultant. Aggressive air monitoring will be used. Selection of location and samples shall be the responsibility of the consultant. Air monitoring volumes shall be sufficient to provide a detection limit of 0.010 f/cc using NIOSH-approved method for PCM analysis. For air clearance by Transmission Electron Microscopy, air-monitoring volumes shall be sufficient to provide a detection limit of 0.005 f/cc using the AHERA Level II Yamate Method.

B. Areas which do not comply with the Standard for Cleaning for Initial Clearance shall continue to be cleaned by and at the contractor's expense until the specified Standard of Cleaning is achieved as evidenced by results of air testing as previously specified.

3.9 ASBESTOS WASTE DISPOSAL

A. The contractor shall package, label, and remove all asbestos waste from the work area in accordance with Connecticut DEEP and DPH regulations, all other applicable regulations, and as specified below. Packaging shall be accomplished in a manner that minimizes waste volume, but insures waste containers shall not tear or break. All waste shall be transported in leak tight containers.

B. Asbestos wastes may include building materials, insulation, disposable clothing and protective equipment, plastic sheeting and tape, exhaust systems or vacuum filters, contractor equipment, or other materials designated by state or local authorities which have been potentially contaminated with asbestos and have not been fully cleaned.

C. Waste Labeling
1. Warning labels, having waterproof print and permanent adhesive in compliance with OSHA, EPA, CT DEEP/DOT and CT DPH requirements, shall be affixed to or printed on

the sides of all waste bags or transfer containers. Warning labels shall be conspicuous and legible, and contain the following words:

DANGER
CONTAINS ASBESTOS FIBERS
MAY CAUSE CANCER
CAUSES DAMAGE TO LUNGS
DO NOT BREATHE DUST
AVOID CREATING DUST

2. In compliance with NESHAP, 40 CFR, Part 61.150, all waste containers or bags shall be labeled with the following generator information:
   a. Name of waste generator
   b. Location of where waste was generated

D. Wetting of Waste: A fine water spray shall be used to keep the top layers of waste in containers thoroughly wet at all times. When a waste bag is full, air within the bags shall be evacuated with a HEPA equipped vacuum and be securely sealed with tape or other secure fastener.

E. Use and Decontamination of Fiber Drums: The Contractor's use and decontamination of fiber drums shall be in accordance with CT DPH, EPA and DOT requirements. The drums shall be lined with a minimum of two layers of 6-mil asbestos waste bags. The waste will be appropriately labeled and sealed. The drums shall be sealed with an airtight lid and shall be decontaminated and/or additionally bagged if the drums are filled inside the containment and visible debris/contamination is observed on the exterior of the drums. All waste shall be labeled as previously described. The drums and waste will be re-containerized should their integrity be compromised and/or liquid is visibly passing through or staining the container.

F. Waste Container Storage: The container used for the storage of bagged contaminated waste shall be an enclosed dumpster. The dumpster shall have a solid metal roof and a solid metal door with padlock. At a minimum, line the cargo area with two layers of a 6-mil polyethylene sheeting to prevent contamination from damaged or leaking containers. Floor sheeting shall be installed first and shall extend up the sidewalls 24 inches minimum. Wall sheeting shall be overlapped and taped securely into place. No un-bagged contaminated waste or non-asbestos waste shall be stored in these dumpsters. Ensure that bags placed in dumpsters are undamaged. Warning signs shall be posted on the dumpster in accordance with Sections 29 CFR 1926.1101 of the OSHA regulations.

G. Waste Removal Scheduling: All waste containers shall be decontaminated and removed from the Site before final cleanup is started and isolation barriers are taken down.

H. Waste Transportation and Disposal
   1. It is the responsibility of the contractor to determine and insure that the contractor and his/her subcontractor are complying with: 1) current waste handling regulations; and 2) the current regulations for transporting and disposing waste at the ultimate disposal landfill. The contractor must comply fully with these regulations, and with all U.S. Department of Transportation, State, local, and EPA requirements.

2. The contractor's waste hauler and disposal contractor shall maintain a valid hazardous waste transporter's permit and identification number; and obtain complete, and fully comply with any other local hazardous waste manifesting requirements.
3. Exercise care before and during transport to ensure that no unauthorized persons have access to the containerized ACW.
4. Do not transport ACW on open trucks. Treat and dispose of drums that have been contaminated as asbestos-containing waste.
5. A copy of ACW manifest forms shall be sent to the Owner after each disposal is completed and all required data and signatures have been inserted.

SECTION 02 8313 – LEAD-BASED PAINT AWARENESS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

B. Refer to all drawings and/or other Sections of these specifications to determine the type and extent of work therein affecting the work of this Section, whether or not such work is specifically mentioned herein.

C. Sections containing requirements related to this Section include, but are not limited to:
1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
2. Section 02 8213 – Asbestos Abatement
3. Section 02 8416 – Universal Waste Removal and Recycling
4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 SUMMARY OF WORK

A. Work of this Section includes, requirements for worker protection and waste disposal related to the demolition work involving components and surfaces containing lead at the Central Middle School Site. XRF screening found that some painted ceramic, metal and wood components/ materials have lead-based paint, lead as defined by the CT DPH or lead content. All materials should be considered to contain some amounts of lead per OSHA.

B. The procedures referenced herein shall be utilized during required demolition work specified elsewhere in the Architect's Specification that might impact lead.

C. The demolition may result in dust and debris exposing workers to levels of lead above the OSHA Action Level. Worker protection, training, and engineering controls referenced herein shall be strictly adhered to, until completion of exposure assessment with results indicating exposures below the "Action Level". This section does not involve lead abatement by CT DPH regulation, but identified worker protection requirements for trades involved in the demolition and disposal procedures if lead is involved in the waste stream.

1.3 DEFINITIONS

A. The following definitions relative to lead paint as used in this Section are offered:
1. Action Level (AL): The allowable employee exposure, without regard to use of respiratory protection, to an airborne concentration of lead over an eight (8) hour time weighted average (TWA), as defined by OSHA. The current action level is thirty micrograms per cubic meter of air (30 $\mu g/m^3$).

2. Area Monitoring: The sampling of lead concentrations, which is representative of the airborne lead concentrations that may reach the breathing zone of personnel potentially exposed to lead.
3. Biological Monitoring: The analysis of a person's blood and/or urine, to determine the level of lead concentration in the body.
4. Change Room: An area provided with separate facilities for clean protective work clothing and equipment and for street clothes, which prevents cross-contamination.
5. Competent Person: A person employed by the Contractor who is capable of identifying existing and predictable lead hazards in the surroundings or working conditions, and who has authorization to take prompt corrective measures to eliminate them as defined by OSHA.
6. Exposure Assessment: An assessment conducted by an employer to determine if any employee may be exposed to lead at or above the action level.
7. "High Efficiency Particulate Air" (HEPA): A type of filtering system capable of filtering out particles of 0.3 microns diameter from a body of air at 99.97% efficiency or greater.
8. Lead: Refers to metallic lead, inorganic lead compounds and organic lead soaps. Excluded from this definition are other organic lead compounds.
9. Lead Work Area: An area enclosed in a manner to prevent the spread of lead dust, paint chips, or debris resulting from lead-containing paint disturbance.
10. Lead Paint: Refers to paints, glazes and other surface coverings containing a toxic level of lead.
11. Permissible Exposure Limit (PEL): The maximum allowable limit of exposure to an airborne concentration of lead over an eight (8) hour time weighted average (TWA), as defined by OSHA. The current PEL is fifty micrograms per cubic meter of air (50 $\mu g/m^3$). Extended workdays lower the PEL by the formula: PEL equals 400 divided by the number of hours of work.
12. Personal Monitoring: Sampling of lead concentrations within the breathing zone of an employee to determine the 8-hour time weighted average concentration in accordance with 29 CFR 1926.62 and 29 CFR 1910.1025. Samples shall be representative of the employee's work tasks. Breathing zone shall be considered an area within a sphere with a radius of 18 inches and centered at the nose or mouth of an employee.
13. Resource Conservation Recovery Act (RCRA): RCRA establishes regulatory levels of hazardous chemicals. There are eight (8) heavy metals of concern for disposal: arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver. Six (6) of the metals are typically found in paints, excluding selenium and silver.
14. Toxic Level Of Lead: A level of lead, when present in dried paint or plaster, contains more than 0.50% lead by dry weight as measured by atomic absorption spectrophotometry (AAS) or 1.0 mg/cm^2 as measured by on-site testing utilizing an x-ray fluorescence analyzer. (Term is specific to State of CT regulations and HUD guidelines only)
15. Toxicity Characteristic Leachate Procedure (TCLP): The U.S. Environmental Protection Agency (US EPA) required sample preparation and analysis for determining the hazard characteristics of a waste material.

1.4 REGULATIONS AND STANDARDS

A. The following regulations, standards, and ordinances of federal, state, and local agencies are applicable and made a part of this specification by reference:
   1. American National Standards Institute (ANSI) ANSI 288.2 - 1980 Respiratory Protection
   2. Code of Federal Regulation (CFR)
      a. 29 CFR 1910.134 - Respiratory Protection

b. 29 CFR 1910.1025 - Lead
c. 29 CFR 1926.62 - Lead in Construction Interim Final Rule
d. 29 CFR 1910.1200 - Hazard Communication
e. 29 CFR 1926.59 - Hazard Communication in Construction
f. 29 CFR 1926.55 - Gases, Vapors, Fumes, Dusts, and Mists
g. 29 CFR 1926.57 - Ventilation
h. 40 CFR 260 - Hazardous Waste Management Systems: General

3. 40 CFR 261 - Identification and Listing of Hazardous Waste
4. 40 CFR 262 - Generators of Hazardous Waste
5. 40 CFR 263 - Transporters of Hazardous Waste
6 40 CFR 264 - Owner and Operators of Hazardous Waste Treatment, Storage, and
7. Disposal Facilities
   a. 40 CFR 265 - Interim Statutes for Owner and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities
   b. 40 CFR 268 - Lead Disposal Restrictions
   c. 40 CFR 172 - Hazardous Materials Tables and Communication Regulations
   d. 40 CFR 178 - Shipping Container Specifications
   e. 40 CFR 270 and 124 - Hazardous Waste Permits
8. Underwriters Laboratories, Inc. (UL) UL586 - 1990 High Efficiency Particulate Air Filter Units

1.5 QUALITY ASSURANCE

A. Hazard Communication Program
The Contractor shall establish and implement a Hazard Communication Program as required by 29 CFR 1926.59.

B. Compliance Plan (Site Specific)
The contractor shall establish a written compliance plan, which is specific to the project site, to include the following:
1. A description of work activity involving lead including equipment used, material included, controls in place, crew size, employee job responsibilities, operating procedures, and maintenance practices.
2. Methods of engineering controls to be used to control lead exposure.
3. The proposed technology the Contractor will implement in meeting the PEL.
4. Air monitoring data documenting the source of lead emissions.
5. A detailed schedule for implementing the program, including documentation of appropriate supply of equipment, etc.
6. Proposed work practice which establishes proper protective work clothing, housekeeping methods, hygiene facilities, and practices.
7. Worker rotation schedule, if proposed, to reduce TWA.
8 A description of methods for informing workers of potential lead exposure.

C. Hazardous Waste Management
The Contractor shall establish a Hazardous Waste Management Plan, which shall comply with applicable regulations and address the following:
1. Identification of hazardous wastes
2. Estimated quantity of waste to be disposed of

3. Names and qualifications of each sub-contractor that will be transporting, storing, treating, and disposing of wastes
4. Disposal facility location and 24 hour point of contact
5. Establish EPA state hazardous waste and identification numbers if applicable
6. Names and qualifications (experience and training) of personnel who will be working on-site with hazardous wastes
7. List of waste handling equipment to be used in performing the work to include cleaning, volume reduction, if applicable, and transport equipment
8. Qualifications of laboratory to be utilized for TCLP sampling and analysis
9. Spill prevention, containment, and cleanup contingency measures
10. Work plan and schedule for waste containment, removal, treatment, and disposal

D. Medical Examinations
1. Before exposure to lead contaminated dust, provide workers with a comprehensive medical examination as required by 29 CFR 1910.1025 and 29 CFR 1926.62.
2. The examination shall not be required if adequate records show that employees have been examined as required by 29 CFR 1926.62 within the last year.
3. Medical examination shall include, at a minimum, approval to wear respiratory protection and biological monitoring.

E. Training
1. The Contractor shall ensure that workers are trained to perform lead paint disturbing activities and disposal operations prior to the start of work in accordance with 29 CFR 1926.62.

F. Respiratory Protection Program
1. The Contractor shall furnish each employee required to wear a negative pressure respirator with a respirator fit test at the time of initial fitting and at least once every six (6) months thereafter as required by 29 CFR 1926.62.
2. The Contractor shall establish a Respiratory Protection Program in accordance with ANSI Z88.2, 29 CFR 1910.134, and 29 CFR 1926.62.

1.6 SUBMITTALS

A. The Contractor shall submit to the Owner the following submittals prior to start of work:
1. Copies of medical records for each employee to be used on the project, including results of biological monitoring and a notarized statement by the examining physician that such an examination took place.
2. Copies of workers' training certificates.
3. Submit record of successful respirator fit testing performed by a qualified individual within the previous six (6) months, for each employee to be used on this project with the employee's name and social security number with each record.
4. The name and address of Contractor's blood lead testing lab, OSHA-CDC listing, and Certification in the State of Connecticut.
5. The name and address of Contractor's personal air monitoring and waste disposal lead testing laboratory/ies.
6. Name, address, and ID number of the hazardous waste hauler, waste transfer route, and proposed disposal site.

B. The Contractor shall submit to the Owner the following submittals during the job:
   1. Results from personal air samples.
   2. Medicals, certificates, and fit test 24 hours in advance of any new employee starting on the project.

C. The Contractor shall submit to the Owner the following submittals upon completion of the work:
   1. Copies of manifests and receipts acknowledging disposal of all hazardous waste material from the project showing delivery date, quantity, and appropriate signature of landfill's authorized representative.

1.7 PERSONAL PROTECTION

A. Exposure Assessment
   1. The Contractor shall determine if any worker will be exposed to lead at or above the action level.
   2. The exposure assessment shall identify the level of exposure a worker would be subjected to without respiratory protection.
   3. The exposure assessment shall be achieved by obtaining personal monitoring samples representative of a full shift at least (8-hour TWA).
   4. During the period of the exposure assessment, the Contractor shall institute the following procedures for protection of workers.
      a. Protective clothing shall be utilized
      b. Respiratory protection
      c. Change areas shall be provided
      d. Hand washing facilities and shower
      e. Biological monitoring
      f. Training of workers

B. Respiratory Protection
   1. The Contractor shall furnish appropriate respirators approved by NIOSH/MSHA for use in atmospheres containing lead dust.
   2. Respirators shall comply with the requirements of 29 CFR 1926.62.
   3. Workers shall be instructed in all aspects of respiratory protection.
   4. The Contractor shall have an adequate supply of HEPA filter elements and spare parts on site for all types of respirators in use.
   5. The following minimum respirator protection for use during paint removal or demolition of components and surfaces with lead paint shall be the 1/2 mask air purifying respirator with high efficiency filters for exposures (not in excess of 500 ug/m^3 or 10 x PEL).

C. Protective Clothing
   1. Personal protective clothing shall be provided for all workers, supervisors, and authorized visitors entering the work area.
   2. Each worker shall be provided with a minimum of two (2) complete disposable coverall suits.
   3. Removal workers shall not be limited to two (2) suits, and the Contractor shall supply additional suits as necessary.
   4. Under no circumstances shall anyone entering the abatement area be allowed to re-use a contaminated disposable suit.

5. Disposable suits, such as TYVEK suits, and other personal protective equipment (PPE) shall be donned prior to entering the lead control area. A change room shall be provided for workers to put on suits and other personal protective equipment with separate areas to store their street clothes.
6. Eye protection for personnel engaged in lead operations shall be furnished when the use of a full-face respirator is not required.
7. Goggles with side shields shall be worn when working with power tools or a material that may splash or fragment, or if protective eye wear is specified on the Safety Data Sheet (SDS) for a particular product to be used on the project.

1.8 PERSONAL MONITORING

A. General: The Contractor is required to perform the personal air sampling activities during lead paint disturbing work. The results of such sampling shall be posted, provided to individual workers and submitted to the Owner as described herein.

B. Sampling: Samples shall be taken for the duration of the work shift or for eight hours, whichever is less. Personal samples need not be taken every day after the first day if working conditions remain unchanged, but must be taken every time there is a change in removal operations, either in terms of the location or the type of work. Sampling will be used to determine eight-hour Time-weighted averages (TWA). The Contractor is responsible for personal sampling as outlined in OSHA Standard 29 CFR 1926.62 and 29 CFR 1910.1025.

C. Sampling Results: Air sampling results shall be reported to individual workers in written form no more than forty-eight (48) hours after the completion of a sampling cycle. The reporting document shall list each sample's result, sampling time and date, personnel monitored and their social security numbers, flow rate, sample duration, sample yield, cassette size, and analysts' name and company, and shall include an interpretation of the results. Air sample analysis results will be reported in micrograms/cubic meter ($\mu g/m^3$).

D. Testing Laboratory: The Contractor's testing lab shall be participating in AIHA's Environmental Lead Laboratory Accreditation Program (ELLAP). The Contractor shall submit to the Consultant for review and acceptance, the name and address of the laboratory, certification(s) of AIHA participation, a listing of relevant experience in air_lead analysis, and presentation of a documented Quality Assurance and Quality Control Program.

PART 2 PRODUCTS

2.1 GENERAL

A. Any substitution in materials, equipment, or methods to those specified shall be approved by the Owner prior to use. Any requests for substitution shall be provided in writing to the Owner. The request shall clearly state the rationale for the substitution.

B. Submit to the Owner product data of all materials and equipment and samples of all materials to be considered as an alternate.

C. Product data shall consist of manufacturer; catalog sheets, brochures, diagrams, schedules, performance charts, illustrations, safety data sheets (SDS), and other standard descriptive data.

Submittal data shall be clearly marked to identify pertinent materials, products or equipment and show performance characteristics and capacities.

D. Samples shall be of sufficient size and quantity to clearly illustrate the functional characteristics of the product or material with integrally related parts and attachment devices.

2.2 MATERIALS AND PRODUCTS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises.

C. The Contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape, and air filters.

D. Materials:
1. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to job site with factory label indicating 6 mil.
2. Polyethylene disposable bags shall be six (6) mil. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.
3. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.
4. Impermeable containers are to be used to receive and retain any lead containing or contaminated materials until disposal at an acceptable disposal site. (The containers shall be labeled in accordance with EPA and DOT standards.)
5. HEPA filtered exhaust systems shall be used during powered dust generating abatement operations. The use of powered equipment without HEPA exhausts is prohibited.

2.3 TOOLS AND EQUIPMENT

A. Provide suitable tools for all lead disturbing operations.

B. The Contractor shall have available power cables or sources such as generators (where required).

C. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining 99.97% of all mono-dispersed particles of 0.3 micrometers in diameter.

PART 3 EXECUTION

3.1 WORKER PROTECTION/TRAINING

A. The Contractor shall provide appropriate training, respiratory and other personal protection, and biological monitoring for each worker and ensure proper usage during potential lead exposure and the initial exposure assessment.

B. Workers who will perform procedures must have completed one of the following training courses:
   1. EPA Lead Abatement Supervisor (40 hours)
   2. EPA Lead Abatement Worker (32 hours)
   3. HUD/EPA course "Work Smart, Work Wet, and Work Clean to Work Lead Safe" (8 hours)
   4. HUD/NARI course "The Remodeler's and Renovator's Lead Based Paint Training Program" (8 hours).
   5. HUD "Lead Safe Work Practices" (8 hours)

3.2 CONTRACTOR'S RESPONSIBILITIES

A. The Contractor is responsible for establishing and maintaining controls referenced herein to prevent dispersal of lead contamination from the lead work area.

B. The Contractor is also responsible for conducting work with applicable federal, state, and local regulations as referenced herein.

3.3 WORKER HYGIENE PRACTICES (REQUIRED DURING INITIAL EXPOSURE ASSESSMENT AND IF RESULTS OF AIR SAMPLING ARE ABOVE OSHA ACTION LEVEL)

A. Work Area Entry: Workers shall don personal protective equipment prior to entering work area, including respiratory protection, disposable coveralls, gloves, headgear, and footwear.

B. Work Area Departure: While leaving respirators on, workers shall remove all gross contamination, debris, and dust from disposable coveralls and proceed to change room and remove coveralls and footwear and place in hazardous waste disposal container.

C. Hand washing Facilities: All workers must wash their hands and faces upon leaving the work area.

D. Equipment: All equipment used by workers inside the work area shall be wet wiped or bagged for later decontamination before removal from the work area.

E. Prohibited Activities: Under no circumstances shall workers eat, drink, smoke, chew gum, or tobacco, or remove their respirators in the work area.

F. Shock Hazards: The Contractor is responsible for using safe procedures to avoid electrical hazards. All temporary electrical wiring will be protected by ground fault circuit interrupters (GFI).

3.4 LEAD WORK AREA (REQUIRED DURING INITIAL EXPOSURE ASSESSMENT AND IF RESULTS OF AIR SAMPLING ARE ABOVE OSHA ACTION LEVEL)

A. The Contractor shall place warning signs at all entrances and exits from the work area. Signage shall be a minimum of 20" x 14" and shall state the following:

DANGER
LEAD WORK AREA
MAY DAMAGE FERTILITY OR THE UNBORN CHILD

CAUSES DAMAGE TO THE CENTRAL NERVOUS SYSTEM
DO NOT EAT, DRINK OR SMOKE IN THIS AREA

B. The Contractor shall designate a change room as specified in this Section. The change room shall consist of two (2) layers of sheeting on the floor surface adjacent to the lead work area. The change room shall have separate storage facilities for street clothes to avoid cross contamination.

C. The Contractor shall provide potable water for hand and face washing and provide a portable shower unit.

D. The Contractor shall place six-mil polyethylene drop cloths on floor/ ground surfaces prior to beginning removal work to facilitate clean-up.

3.5 WORK AREA CLEAN UP

A. The Contractor shall remove all loose chips and debris from floor surfaces and place in hazardous waste disposal bags.

B. The Contractor shall HEPA vacuum adjacent surfaces to remove dust and debris.

C. Polyethylene drop cloths shall be properly disposed of.

3.6 WASTE DISPOSAL

A. The Contractor's contractual liability shall be the proper disposal of all non-hazardous and hazardous wastes generated at the site in accordance with all applicable federal, state, and local regulations as referenced herein. Metal lead based paint components may be segregated for recycling at an approved facility. Lead TCLP sampling will be performed by the owner's representative Langan. The contractor will be responsible for all costs associated with lead/hazardous waste disposal should they, their haulers and/or the landfill of their choosing take samples and declare the waste as regulated hazardous waste.

END OF SECTION 02 8313

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 02 8416 – UNIVERSAL WASTE REMOVAL AND RECYCLING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. General Provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

B. Refer to all drawings and/or other Sections of these specifications to determine the type and extent of work therein affecting the work of this Section, whether or not such work is specifically mentioned herein.

C. Sections containing requirements related to this Section include, but are not limited to:
1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
2. Section 02 8213 – Asbestos Abatement
3. Section 02 8313 – Lead-Based Paint Awareness
4. Section 02 8432 – PCBs Greater than 50 PPM Remediation
5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 SUMMARY OF WORK

A. Work of this Section includes, but is not necessarily limited to, all which is necessary for complete removal and recycling/disposal of all PCB-containing ballasts, newer ballasts, mercury containing devices, electronics, alarms, emergency lighting, signage, paints, chemicals/ contaminated piping/waste traps, batteries, window air conditioning units, CFC's, boiler and HVAC controls, other hazardous materials, wastes and special wastes that exist in the interior/exterior of the building structure(s) that might be impacted by proposed demolition of the original building and building addition. The hazardous materials contractor will supply the packaging materials and pay for the proper disposal of these materials. The hazardous materials contractor will provide the labor to put the materials into the proper packaging for disposal.
1. All work including the removal, characterization (any testing that may be required by disposal facility) and disposal of hazardous materials and chemicals.
2. Removal, characterization (any testing that may be required by disposal facility) and disposal of fluorescent light ballasts and capacitors throughout all site structures.
3. Removal, characterization (any testing that may be required by disposal facility) and disposal of all containers, drums and unknown materials as well as fire extinguishers.
4. Removal, characterization (any testing that may be required by disposal facility) and disposal of contained gear oils, hydraulic oils and refrigeration liquids, etc. from various pieces of equipment.
5. Removal, characterization (any testing that may be required by disposal facility) and recycling/disposal of batteries, electronic devices, lighting signage, etc.
6. Removal, characterization (any testing that may be required by disposal facility) and recycling/disposal of science equipment, contaminated piping, chemicals, waste traps, etc.
7. File all necessary notices, obtain all permits and licenses, and pay all governmental taxes, fees, and other costs in connection with the work. Obtain all necessary approvals of all governmental departments having jurisdiction.

8. Comply with Health and Safety Plans.

B. The Contractor, under this Section, shall provide all materials, labor, equipment and appliances as necessary to properly remove and recycle/dispose of materials.

1.3 DESCRIPTION OF WORK

A. This specification covers the proper and legal removal and disposal of all Hazardous/Universal Waste from the Central Middle School Site located in Greenwich, Connecticut. The removal and disposal activities shall comply with all aspects of the contract documents and federal, state and local requirements.

B. Universal Wastes shall include, but not be limited to, fluorescent bulbs, light fixture ballasts containing polychlorinated bi-phenyls (PCBs) or DEHP, mercury lamps, mercury containing devices, thermostats and switches, batteries, fire extinguishers, Halon fire suppression systems, alarms, emergency lighting, paint, chemicals, window air conditioning units, CFC's, boiler and HVAC controls, science equipment/chemicals/contaminated piping/waste traps, refrigerants, electronic devices (computers, monitors and signage), and other compressed gases, mechanical fluids, oils, and lubricants. Whenever there is a conflict or overlap within these specifications and between applicable codes and regulations, the most stringent provision specified shall apply.

C. Central Middle School was constructed in 1957 with an addition in 2000. The school has two stories with basement mechanical areas and tunnels and crawl spaces with approximately 112,000 square feet of gross area. Interior areas consist of classrooms, offices, auditorium, gymnasium, media center, kitchen, cafeterias, toilet rooms, storage rooms, boiler/mechanical rooms, and tunnel/crawlspace/mechanical duct areas.

D. The proposed redevelopment consists of demolition of the original building and addition.

E. The Contractor shall independently identify and quantify all Universal Waste Items.

1.4 SUBMITTALS

A. Before Start of Work: Submit the following to the Owner's Representative for review. Do not start work until these submittals are returned with Owner's Representative's approval.
   1. Copy of State or local license for hazardous waste hauler;
   2. Certification of at least one on-site supervisor which has satisfactorily completed the OSHA 40 Hour Health and Safety Course for Handling Hazardous Materials;
   3. Certificates of workers which have successfully completed at least the OSHA 40-Hour Health and Safety Course for Hazardous Materials;
   4. Certificates of workers which have successfully completed the required employee training for universal/hazardous waste or appropriate type of training to the type of wastes being managed;
   5. Name and address of the universal waste handler and/or a destination facility where the waste materials is to be treated, deposited or recycled in accordance with all regulatory requirements (include contact person and telephone numbers), if the universal waste meets the definition of hazardous waste, the name and address of the hazardous waste treatment, storage and disposal (TSD) facility;

6. Work Plan: Provide a detailed written work plan that describes the procedures for the removal,
   a. Proposed level of worker training for each type of regulated and/or hazardous material to be removed.
   b. Names and applicable licenses of key personnel.
   c. Proof of appropriate training for workers.
   d. Proof of a current medical surveillance program for all personnel.
   e. Safety Data Sheets (SDS) for any chemicals to be used on the project. All products to be used on this project must have SDS approved by the Owner's Environmental Consultant.
   f. Proposed detailed work schedule.
7. Following final removal, and disposal or destruction, provide Owner with waste transport and disposal documents (e.g., manifests), as well as certificates of destruction and recycling as appropriate.

1.5 CODES AND REGULATIONS

A. Regulatory compliance includes but is not necessarily limited to applicable requirements set forth by :
   1. Federal Regulations:
      a. 29 CFR 1910, "Occupational Safety and Health Standards"(General Industry Standards)
      b. 29 CFR 1910.134 "Respiratory Protection"
      c. 29 CFR 1910.1200 "Hazard Communication"
      d. 29 CFR 1926, "Safety and Health Regulations for Construction" (Construction Industry Standards)
      e. 40 CFR 50, "National Primary and Secondary Ambient Air Quality Standards"
      f. 40 CFR 60, "Standards of Performance for New Stationary Sources," Appendix B, "Test Methods"
      g. 40 CFR 117, "Determination of Reportable Quantities for Hazardous Substances"
      h. 40 CFR 122, "USEPA Administered Permit Program: The National Pollutant Discharge Elimination System"
      i. 40 CFR 172, "Hazardous Waste Transportation"
      j. 40 CFR 261, "Identification and Listing of Hazardous Waste"
      k. 40 CFR 262, "Standards Applicable to Generators of Hazardous Waste"
      l. 40 CFR 263, "Standards Applicable to Transporters of Hazardous Waste"
      m. 40 CFR 268, "Land Disposal Restrictions"
      n. 40 CFR 273, "Universal Waste Rule"
      o. 40 CFR 300, "National Oil and Hazardous Substances Pollution Contingency Plan"
      p. 40 CFR 302, "Designation, Reportable Quantities, and Notification"
      q. 40 CFR 112 (oil pollution prevention)
      r. 40 CFR 279 (used oil)
      s. 40 CFR 273 (Universal Wastes)
      t. 40 CFR 761 (PCBs)
   2. Toxic Substances Control Act (TSCA), US-EPA
   3. Resource Conservation and Recovery Act (RCRA)
      a. Comprehensive Environmental Response, Compensation & Liability Act (CERCLA) (Superfund Law)

4. Connecticut Regulations:
   State requirements which govern universal waste removal and disposal include but are not necessarily limited to the following:

   a. Connecticut Department of Energy and Environmental Protection (CT DEEP) (Hazardous and Universal Waste Management Regulations); Section 22a-454, 456 Waste Facility and Section 22a-449(c)-113 of the Regulations of Connecticut State Agencies (RCSA), respectively.
   b. Connecticut DEEP; 310 CMR 40 Connecticut Contingency Plan, 310 CMR 30 Hazardous Waste Regulations, 310 CMR 1-7 Clean Water Act, 310 CMR 16, 19 Solid Waste Regulations, 314 CMR 1-8 Clean Air Act
   c. Local Town, City or County Bylaws, rules and regulations.

B. Under TSCA, items that contain more than 500 parts per million (PPM) of PCBs are classified as PCB material, items that contain between 50 ppm and 500 ppm of PCB are classified as PCB-contaminated and items that contain less than 50 ppm of PCBs are classified as non-PCB items.

Under the Small Capacitor Exemption, TSCA has allowed the disposal of non-leaking, intact "small capacitors", defined as containing less than three pounds of PCB dielectric fluid, in a municipal solid waste landfill. Light ballasts containing a small PCB capacitor are covered under this category. The intent of the "small capacitor" disposal rule is for "random disposal" in a landfill by "householders and other infrequent disposers". When commercial and industrial entities dispose of large quantities of small PCB capacitors, the EPA strongly encourages voluntary collection and disposal of PCB capacitors in chemical waste landfills or high-temperature incinerators.

C. Under the "Superfund" laws, PCBs are specifically listed as a hazardous substance. The "release" of more than one pound of PCBs into the environment triggers a "Superfund" notification and cleanup requirement.

Since twenty-five ballasts collectively contain approximately one pound of PCBs, the disposal of twenty five or more PCB-containing ballast in a landfill would trigger a "Superfund" action.

D. The State of Connecticut General Hazardous Waste Statue 22A 454, 456 requires that PCB ballast must be incinerated or sent to a chemical waste landfill. The statue defines PCB waste, including PCB ballast, as Connecticut Regulated Wastes.

E. Other Regulations: The other relevant regulations affecting disposal of PCBs include the following:
   1. Department of Transportation (DOT) regulations – DOT regulation HM-181 regulates transportation of hazardous materials, including PCBs.
   2. Occupational Safety and Health Administration (OSHA) – OSHA regulates worker's safety and exposure to a variety of chemicals including PCB's.
   3. Resource Conservation and Recovery Act (RCRA) – RCRA regulates wastes, which fail Toxic Characteristic Leachate Procedure (TCLP) and which contain more than 50 ppm of PCBs.

PART 2 PRODUCTS

2.1 GENERAL

A. 35 or 55-gallon metal, fiber drums or containers with lids that can be secured and sealed, DOT approved.

B. Appropriate waste labels identifying contents as regulated and hazardous wastes as defined by 49 CFR 172.

C. Fluorescent Lamp Disposal (Crusher) units, such as DexTrite Fluorescent® Lamp Disposal equipment, or equivalent. Such equipment must be capable of capturing fugitive mercury vapors during the bulb crushing process, as well as the fractured and broken waste products.

D. HEPA and charcoal filter equipped mercury capture vacuum.

E. Cardboard boxes and sleeves for packaging lamps that will be removed from the site intact or unbroken.

F. Recovery tanks to temporarily hold compressed gasses.

G. Health & Safety equipment complying with health and safety plan.

PART 3 EXECUTION

3.1 GENERAL

A. Procedures and methods contained herein are to provide guidance to protect from the contamination of the environment, and exposure to workers, while handling hazardous waste and regulated waste-streams for disposal/recycling/destruction.

B. Owner to Stop Work: The Owner's representative and the Owner's Environmental Consultant shall have the authority to stop the work at any time that conditions are not within Specification and/or applicable regulations. The stoppage of work shall continue until conditions have been corrected to the satisfaction of the Owner's representative or Owner's Environmental Consultant. Standby time to resolve the problems shall be at the Contractor's expense.

C. Personal Protective Equipment:
   1. Personal protective equipment shall consist of (at a minimum) safety goggles or other protective eye-ware, work shoes with non-slip soles (e.g., neoprene), chemical resistant gloves that cover the hand and an apron that covers the front of the worker's body from shoulder to toes (e.g., neoprene or nitrile gloves).
   2. Personal protective equipment contaminated by handling operations should be disposed of as contaminated waste.
   3. Hammering or sudden impact methods for removing ballast's from the light fixture shall not be employed, as such methods may cause leakage in an otherwise non-leaking ballast.
   4. Throwing and tossing of ballast's into disposal drums shall not be conducted, as such activities may cause leakage in an otherwise non-leaking ballast.

D. Work Procedures
   1. Contractor shall obtain a hazardous waste generator number from Region I, US EPA for the Owner.
   2. During the light fixture removal stage during demolition, the following procedures (or equivalent alternate but protective measures) shall be followed:
      a. Carefully remove fixtures, and stack them in a designated portion of the work area.
      b. Designate an area where the fixtures can be disassembled, and components removed and segregated (e.g., lamps, ballasts). The area should be remote from other demolition activities, and have adequate ventilation and lighting.
      c. The work area for fixture disassembly shall (at a minimum) have the floor lined with one layer of 6-mil fire-retardant polyethylene plastic to control accidental spills or breakage. The work area should have a table or other solid work platform to facilitate disassembly of the fixtures, and the protective plastic sheeting should cover the work table area and waste drums/lamp crushing/lamp repackaging equipment.
      d. Carefully remove lamps from fixtures, and either crush them or repackage them for disposal.
      e. In the event a lamp breaks, utilize the mercury capture vacuum to remove all debris generated.
   3. Carefully remove ballasts, and segregate for disposal in the following manner:
      a. Ballasts labeled as "No-PCBs" shall NOT be segregated and shall be treated as PCB waste as potting material may contain PCBs and DEHP. Handle and dispose of in the same manner as ballasts containing PCBs and/or DEHP.
      b. Non-leaking ballasts shall be segregated and drummed for disposal as hazardous wastes. These ballasts may be destroyed by high temperature incineration, or land filled at a properly permitted facility.
      c. Leaking ballasts shall be segregated and drummed. Punctures or damage to these ballasts exposes an oily or tar-like substance. These ballasts, and all materials it contacts, MUST be incinerated under TSCA; they cannot be landfilled.

E. Miscellaneous Stored Materials In Containers
   1. Miscellaneous materials may include antifreeze, cleaning solutions, paints, and other miscellaneous materials.
   2. During removing/recycling of materials enclosed in their original container, the Contractor shall package, and label (lab packed) by waste classification in accordance with appropriate RCRA and Connecticut Department of Transportation (ConnDOT). In turn these containers shall be transported, under proper manifesting procedures, to a recycling facility. The facility shall forward a certificate of recycling or disposal to the Contractor, who shall submit this information to the Owner.

F. Universal Waste
   1. Universal waste includes, but is not limited to, fluorescent bulbs, light fixture ballasts containing polychlorinated bi-phenyls (PCBs) or DEHP, mercury lamps and switches, batteries, fire extinguishers, Halon fire suppression systems, paint, refrigerants, electronic devices (computers and monitors), and other compressed gases, mechanical fluids, oils, and lubricants, as defined in 40 CFR 273 and Section 22a-449(c)-113 of the Regulations of Connecticut State Agencies (RCSA). Follow procedures for handling, storage, labeling, shipping, recording keeping and other procedures as required in 40 CFR 273 and Section 22a-449(c)-113.

G. Regulated Waste
   1. Non-thermostat mercury switches: Handle and dispose of in accordance with State regulation and applicable Federal regulations.
   2. Used oil: Handle and dispose of in accordance with State regulations.
   3. Refrigerants: Prior to disposal of refrigerant containing equipment, verify that refrigerant has been removed per the requirements of 40 CFR Part 82 (Protection of Stratospheric Ozone).
   4. Diesel fuel: If possible, use on site to run equipment. Dispose of or recycle any remaining fuel as per applicable regulations.
   5. Fire extinguishers: Contact manufacturer for recycling or donate to local fire department.
   6. Halon Fire Suppression System: For recovery and management of Halon, utilize a technician EPA certified in appropriate level for the system. Technician is to use an EPA-certified reclaimer for disposal.

H. Transportation
   1. Transport waste materials using properly permitted vehicles operated by drivers with Commercial Drivers Licenses (CDLs) and Hazardous Materials endorsements. Coordinate transportation routes with Connecticut Department of Transportation (ConnDOT). Provide Owner with copies of transporter certifications and EPA ID number a minimum of seven (7) days prior to first use. Chain of custody records shall be maintained which include the date of pickup, number of drums, name of transporter and destination.

I. Waste Disposal Documentation
   1. Waste shipment records and manifests for all materials transported from the site as required by regulations and disposal facility are to be provided to the Owner every five (5) business days. Incorporate this information into the close out package to be provided to the Owner. Within thirty (30) days of generation, Contractor shall provide waste manifests/shipment records and Certificates of Recycling and Disposal (CRD) to Owner.
   2. Certificates of Discontinuance for all equipment and fixtures.

J. Disposal Facilities
   1. Contractor shall use only disposal facilities which have been pre-approved by the Owner and its insurers and with valid regulatory permits for type of waste being handled. Provide Owner with copies of disposal facility regulatory permits and EPA identification number a minimum of seven (7) days prior to shipping to that facility. Provide disposal facility required documentation including additional waste sampling.

END OF SECTION 02 8416

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 028432 – PCBS GREATER THAN 50 PPM REMEDIATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General Supplementary Conditions apply to this Section.

B. Sections containing requirements related to this Section include, but are not limited to:
   1. Section 02 8200 – Selective Hazardous Building Materials Abatement Demolition
   2. Section 02 8213 – Asbestos Abatement
   3. Section 02 8313 – Lead-Based Paint Awareness
   4. Section 02 8416 – Universal Waste Removal and Recycling
   5. HBM – 01, 02 & 03 – Hazardous Building Materials Abatement Drawings

1.2 CONSULTANT

A. Langan CT, Inc. (Langan) has been retained as the Consultant for the purposes of construction administration and project monitoring during PCB Remediation. The Consultant will represent the Owner in all phases of the remediation project at the discretion of the Owner. The PCB Remediation Contractor shall regard the Consultant's direction as authoritative and binding as provided herein, in matters particularly but not limited to approval of work areas, review of monitoring results, completion of the various segments of work, final completion of the remediation, submission of data, and daily field punch list items.

1.3 USE OF THE CONTRACT DOCUMENTS

A. It shall be incumbent upon the PCB Remediation Contractor to visit the Site and determine what exists, its condition, and what will be required to accomplish the Work intended by the Contract Documents. No increase in the Contract Sum will be permitted as a result of the PCB Remediation Contractor's failure to visit the Site and understand the existing conditions.

B. All work shall comply with applicable Codes, laws, regulations, and ordinances wherever applicable. The most stringent of all the foregoing shall govern.

C. It is not intended that the Specifications show every detail of the Work, but the PCB Remediation Contractor shall be required to furnish within the Contract Sum all material and labor necessary for the completion of the Work in accordance with the intent of the Specifications.

D. In case of ambiguity among the Contract Documents, the more stringent requirement as determined by the Consultant shall prevail.

E. The Work of this Contract includes making modifications as necessary, subject to approval by Owner in consultation with the Consultant, to correct any conflicts.

F. All items, not specifically mentioned in the Specifications but implied by trade practices to complete the work, shall be included.

1.4 EXAMINATION OF THE SITE

A. It is understood that the PCB Remediation Contractor has examined the Site and made his/her own estimates of the facilities and difficulties attending the execution of the Work, and has based his price thereon.

B. Except for unforeseeable concealed conditions as determined by the Consultant, the PCB Remediation Contractor shall make no claim for additional cost due to the existing conditions at the Site.

1.5 CONTRACTOR QUALIFICATIONS

A. All bidders shall submit a record of prior experience in PCB remediation projects, specifically including removal of PCB-containing materials listing no less than three (3) completed jobs in the past year, with all projects being of similar size and scope. The PCB Remediation Contractor shall list the experience and training of the project foremen and all on-site personnel. The information that should be included is as follows:
   1. Project Name and Address
   2. Owner's Name and Address
   3. Architect/Consultant
   4. Contract Amount
   5. Date of Completion
   6. Extras and Changes

B. Submit a written statement regarding whether the PCB Remediation Contractor has ever been found out-of-compliance with federal or state regulations pertaining to worker protection, removal, transport, or disposal.

1.6 TESTING LABORATORY SERVICES

A. The PCB Remediation Contractor shall submit to the Consultant the name; address and qualifications of proposed laboratories intended to be utilized for sample analysis as required by this section.

1.7 GENERAL REQUIREMENTS

A. The PCB Remediation Contractor shall furnish all labor, materials, facilities, equipment, installation services, employee training, notifications, permits, licenses, certifications, agreements and incidentals necessary to perform the specified work. Work shall be performed in accordance with the contract documents, the latest regulations from the Occupational Safety and Health Administration (OSHA), the United States Environmental Protection Agency (US EPA), Connecticut Department of Energy and Environmental Protection (CT DEEP) and all other applicable federal, state and local agencies. Whenever the requirements of the above references conflict or overlap, the more stringent provision shall apply.

B. All project personnel engaged in the work covered under this section shall be trained in accordance with OSHA Regulations 29 CFR 1910.1000 and 29 CFR 1910.1200. It should also be noted that work associated with PCB removal may also involve exposure to PCBs during demolition and removal activities specified herein and the PCB Remediation Contractor shall perform required exposure assessment for PCBs.

C. The PCB Remediation Contractor shall provide a Project Health and Safety Officer having a minimum of eight (8) hours of supervisor training in hazardous waste site operations in accordance with the requirements of 29 CFR 1910.1200. The supervisor must be on site at all times during remediation work. This supervisor and other contractor representatives must attend a pre-remediation meeting to be scheduled by the building owner/owners representative.

D. This section specifies the procedures for removal of the 1957 original building existing materials assumed to contain polychlorinated biphenyls (PCB), equal to or greater than (>)50 parts per million (ppm) bulk product waste (caulking/glazing/sealant compounds also contain asbestos), in the form of:

Base Bid – 1957 Original Building

- Ceiling/Deck Caulking Compound and Contaminated Substrates (Located at Ceilings/Deck Panels and Metal Beams/Columns) – ALL – Throughout All Areas of Second Floor (asbestos-containing also);

- Interior Window Glazing Compounds and Contaminated Substrates - ALL - Main Office L Shaped Window Wall, Classrooms 201/201A and Gymnasium Offices (asbestos-containing also);

- Interior Wall/Wall and Wall/Column Caulking Compounds and Contaminated Substrates – ALL - Classrooms 201, 201 Spray Booth, 201A, 202-207, Throughout Main Office Areas, Teachers Break/Faculty Room and Nurse Areas, Throughout Building Corridors and Stairwells, Throughout Gymnasium Areas, Corridor Custodial Closets and Throughout Building (asbestos-containing also);

- Interior/Exterior Door Window Glazing Compounds and Contaminated Substrates – ALL - Throughout Building;

- Interior/Exterior Door/Window/Door Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – Ten Openings (Multiple Sizes and Multiple Door/Window Walls) - Entry/Exit Areas to Building Adjacent Custodial Office, Main Office, Cafeteria, Room 208 and Gymnasium (Multiple Sizes and Multiple Door/Window Walls) (asbestos-containing also);

- Interior/Exterior Vent Caulking Compounds and Contaminated Substrates – ALL – Eight Openings – Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Door/Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – 17 Door/Window Openings (Multiple Sizes) - Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Window/Wall/Column/Window Walls/Door Caulking and Glazing Compounds and Contaminated Substrates – ALL (Multiple Sizes) – Throughout Building Perimeter Walls/Window Walls (asbestos-containing also); and

- Exterior Wall/Wall Expansion and Column Caulking Compounds and Contaminated Substrates – ALL - Throughout Exterior (asbestos-containing also).

Add Alternates – 1957 Original Building

Add Alternate HBM #10 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as > 50 ppm PCB Bulk Product Waste.

Add Alternate HBM #11 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as < 50 ppm PCB CTDEEP Regulated Waste.

The materials throughout the building are assumed PCB Bulk Product Waste (EPA Bulk Product Waste Reinterpretation dated October 24, 2012). Remediated surfaces may have to pass EPA post remediation verification sampling and areas that fail will require additional remediation at no additional cost to the owner, until verification sampling passes and/or visual inspection deems all the materials have been removed (contractor owns additional remediation for verification sampling failures up to 20% however if the contractor is deemed by Langan to have contaminated the wall surfaces, all additional remediation is to be performed by the contractor at no additional cost to the owner). Abatement and Remediation in all areas will start with removing materials at the ceiling level and end with the materials at the flooring level. The contractor shall assume they will be setting up full containments throughout all areas of the original school. The contractor will coordinate and perform enough selective demolition/demolition to access all materials to be removed/abated/remediated. Exterior abatement/remediation will be either removed in containment (interior) or the abatement/remediation contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (or farther - enough to prevent building materials from touching unprotected ground and floor surfaces). The contractor will pay for all contamination/remediation/ abatement of interior and exterior surfaces, including ground surfaces if Langan deems they have contaminated these surfaces.

The contractor must dispose of Remediation Waste (segregated adjacent materials, materials that fail verification sampling, sandblasted paint/debris and waste from remediation - suits, polyethylene sheeting, towels/rags, respirator cartridges, etc.) in addition to the Bulk Product Waste.

E. Disturbance or removal of polychlorinated biphenyls (PCB) containing materials may cause a health hazard to workers and building occupants. The PCB Remediation Contractor shall disclose to all of his workers, supervisory personnel, subcontractors and consultants who will be at job site of the seriousness of the hazard and of proper work procedures which must be followed.

F. Where in the performance of the work, workers, supervisory personnel, subcontractors, or consultants may encounter, disturb or otherwise function in the immediate vicinity of polychlorinated biphenyls (PCB) containing materials, appropriate, continuous measures as necessary to protect all workers from the hazard of exposure shall be taken. Such measures shall include the procedures and methods described herein, regulations of the OSHA, US EPA, and local requirements as applicable.

G. The PCB Remediation Contractor shall employ a Competent Person (Supervisor) with at least three (3) years' experience on projects of similar scope and magnitude who shall be responsible for all work involving PCB remediation as described in the specifications and defined in applicable regulations, and have full time daily supervision of the same. The Supervisor shall be the Competent Person as defined by OSHA regulations and have experience in the proper removal and disposal of PCB-Containing Materials.

H. The PCB Remediation Contractor shall allow the work of this contract to be inspected, if required, by local, state, federal, and any other authorities having jurisdiction over such work. The PCB Remediation Contractor shall immediately notify the Owner and Consultant and shall maintain written evidence of such inspection for review by the Owner and Consultant.

I. The PCB Remediation Contractor shall incur the cost of all fines resulting from regulatory non-compliance as issued by federal, state, and local agencies. The PCB Remediation Contractor shall incur the cost of all work requirements mandated by federal, state, and local agencies as a result of regulatory non-compliance or negligence. The PCB Remediation Contractor shall incur all costs associated with contaminating the school property and adjacent properties, including but not limited to all possible litigation costs of the owners, consultants and other involved parties.

J. The PCB Remediation Contractor shall immediately notify the Owner and Consultant of the delivery of all permits, licenses, certificates of inspection, of approval, or occupancy, etc., and any other such instruments required under codes by authorities having jurisdiction, regardless of who issued, and shall cause them to be displayed to the Owner and Consultant for verification and recording.

K. The PCB Remediation Contractor shall provide enough labor to guarantee completion of the work within the time frame given and within the normal operating hours of the buildings.

L. The remediation/asbestos abatement contractor, their subcontractors, waste transporters and/or landfill(s) do not have permission to take/analyze building materials for PCB content/ concentrations without written permission from the building owner prior to such sampling. Should the contractor or other parties listed above take/analyze PCB samples without the owner's permission and PCB's are found to be >1 ppm, the hazardous materials/remediation contractor will be responsible for all costs associated with the abatement/ remediation/replacement of all the interior/exterior building materials and adjacent surfaces, including soil/asphalt/concrete/etc. as

well as all costs associated with project delays, attorney fees for all parties affected and all costs resulting from CT DEEP/EPA requirements that may occur as a result.

1.8 SCOPE OF WORK

A. This specification covers the proper and legal removal and disposal of removal of the existing materials within the original building assumed to contain polychlorinated biphenyls (PCB), equal to or greater than (>)50 parts per million (ppm) throughout the Central Middle School Site located in Greenwich, Connecticut. The remediation activities shall comply with all aspects of the contract documents and federal, state and local requirements.

B. Whenever there is a conflict or overlap within these specifications and between applicable codes and regulations, the most stringent provision specified shall apply.

C. The General Contractor or Remediation Subcontractor shall be aware of all conditions of the Project and is responsible for verifying quantities and locations of all Work to be performed. Failure to do so shall not relieve the General Contractor or Remediation Subcontractor of its obligation to furnish all labor and materials necessary to perform the Work.

D. Work outlined in this Section includes all work necessary for the complete removal and disposal of all PCB-Containing Materials impacted by the proposed work associated with the demolition project for the Central Middle School Site located in Greenwich, Connecticut.

E. Note the work in this section is subject to TSCA regulation 40 CFR 761 and Connecticut General Statutes in accordance with CT DEEP requirements for materials containing >50/1 ppm (PCB-Containing Materials). The Owner or the Owner's Authorized Representative is responsible for notifying the CT DEEP.

F. The quantities, if given below, are provided to establish the order of magnitude of the remediation project. Actual quantities may vary. The PCB Remediation Contractor is responsible for verification of all quantities scheduled for removal. This verification shall include an on-site walk-through inspection of the building. The materials/quantities listed are estimates and no extra will be accepted. All of the listed materials are included in the base bid work (no extra cost accepted) until <1 ppm PCB is obtained by verification sampling and/or visual inspection deems all the materials have been removed (contractor owns additional remediation for verification sampling failures up to 20% however if the contractor is deemed by Langan to have contaminated the wall surfaces, all additional remediation is to be performed by the contractor at no additional cost to the owner). Location, materials, and estimated quantities included in the base bid are noted below:

G. The remediation/asbestos abatement contractor, their subcontractors, waste transporters must submit landfill information to Langan and the owner prior to the shipment of any waste. The contractor(s)/hauler(s) cannot ship waste until Langan and the owner have approved the landfill the contractor/hauler is/are proposing to ship the waste to. PCB TCLP sampling of the waste may be required by the landfills permits and this testing must be performed by the contractor (if testing is approved by Langan and the owner), with Langan present during sampling, and the results made available to Langan and the owner prior to waste shipment. If Langan is not present during

the sampling, Langan may perform additional PCB TCLP sampling to confirm the contractor's results and these results will supersede the contractors sample results.

H. The scope of work is summarized as the following:

1. PCB Summary

The following materials are assumed to contain PCBs above the EPA threshold of >50 ppm source material bulk product waste (caulking/glazing/sealant compounds also contain asbestos):

Base Bid – 1957 Original Building

- Ceiling/Deck Caulking Compound and Contaminated Substrates (Located at Ceilings/Deck Panels and Metal Beams/Columns) – ALL – Throughout All Areas of Second Floor (asbestos-containing also);

- Interior Window Glazing Compounds and Contaminated Substrates - ALL - Main Office L Shaped Window Wall, Classrooms 201/201A and Gymnasium Offices (asbestos-containing also);

- Interior Wall/Wall and Wall/Column Caulking Compounds and Contaminated Substrates – ALL - Classrooms 201, 201 Spray Booth, 201A, 202-207, Throughout Main Office Areas, Teachers Break/Faculty Room and Nurse Areas, Throughout Building Corridors and Stairwells, Throughout Gymnasium Areas, Corridor Custodial Closets and Throughout Building (asbestos-containing also);

- Interior/Exterior Door Window Glazing Compounds and Contaminated Substrates – ALL - Throughout Building;

- Interior/Exterior Door/Window/Door Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – Ten Openings (Multiple Sizes and Multiple Door/Window Walls) - Entry/Exit Areas to Building Adjacent Custodial Office, Main Office, Cafeteria, Room 208 and Gymnasium (Multiple Sizes and Multiple Door/Window Walls) (asbestos-containing also);

- Interior/Exterior Vent Caulking Compounds and Contaminated Substrates – ALL – Eight Openings – Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Door/Window/Wall/Column Caulking and Glazing Compounds and Contaminated Substrates – ALL – 17 Door/Window Openings (Multiple Sizes) - Throughout Building Perimeter Walls (asbestos-containing also);

- Interior/Exterior Window/Wall/Column/Window Walls/Door Caulking and Glazing Compounds and Contaminated Substrates – ALL (Multiple Sizes) – Throughout Building Perimeter Walls/Window Walls (asbestos-containing also); and

- Exterior Wall/Wall Expansion and Column Caulking Compounds and Contaminated Substrates – ALL - Throughout Exterior (asbestos-containing also).

Add Alternates – 1957 Original Building

Add Alternate HBM #10 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as > 50 ppm PCB Bulk Product Waste.

Add Alternate HBM #11 – Disposal of Painted Concrete, Concrete Block, Brick, Glazed Block, Other Materials, Ceilings, Walls and Floors, Other Painted Materials – Throughout – as < 50 ppm PCB CTDEEP Regulated Waste.

I. Project Scope Locations and Work Statement: The remediation site is located at 9 Indian Rock Lane, Greenwich, Connecticut. The proposed removal and disposal activities to be performed by PCB Remediation Contractor shall include the following:
   1. Site preparation and controls to facilitate remediation of PCBs. Containment procedures referenced for the remediation zone must be utilized for PCB Bulk Product Waste removal.
   2. Health and Safety in accordance with Occupation Safety and Health Administration (OSHA) requirements.
   3. Remove and dispose of entire/all materials assumed to contain PCBs > 50 ppm listed above throughout the original building. All exterior protection shall include the use of water impervious membrane covering which shall be secured to the ground surface. Edges shall be raised to prevent water run-off used for dust control during cutting and demolition of structures. Plywood will be installed on all exterior ground surfaces first. The exterior membrane shall be covered with a minimum of 2 layers of 10-mil reinforced polyethylene sheeting securely fastened to foundation. This ground protection must extend at least 20 feet away from the building foundation.
   4. Cleaning of each work area following complete removal of PCB containing materials to ensure adherence for post cleaning verification levels and/or visual inspection.
   5. Recordkeeping and distribution as required in accordance with 40 CFR part 761.125 (c)(5).

J. Abatement and Remediation in all areas will start with removing materials at the ceiling level and end with the materials at the flooring level. The contractor shall assume they will be setting up full containments throughout all areas of the original school. The contractor will coordinate and perform enough selective demolition/demolition to access all materials to be removed/abated/remediated. Exterior abatement/remediation will be either removed in containment (interior) or the abatement/remediation contractor will install polyethylene sheeting on the interior of the building and remove materials from the exterior. All ground surfaces must also be protected with plywood and two layers 10-mil reinforced polyethylene sheeting. This ground protection must extend at least 20 feet away from the building foundation (far enough to prevent building materials from touching unprotected ground and floor surfaces). The contractor will pay for all contamination/remediation/ abatement of interior and exterior surfaces, including ground surfaces if Langan deems they have contaminated these surfaces. The contractor will supply lifts, scaffolding, staging, etc. to Langan in areas of remediation/abatement until all PCB verification sampling has passed. The contractor will supply labor to assist in PCB verification sampling (including cleaning/re-cleaning) throughout as well as removing and disposing of all

waste created by PCB verification sampling. The contractor will provide temporary shoring in areas that require it. Roofing abatement must occur prior to performing demolition activities.

K. Additional materials as discovered outside of those listed will be covered by unit prices if all is not listed as the quantity. Quantities are estimates only and should be verified by the Contractor. Safety data sheets for chemicals to be used during the project must be submitted to the Owner's Representative prior to site delivery. The contractor is responsible for providing temporary water, power, and heat as needed at the site. Temporary lighting/Blast Trac machines/Negative air units within the work areas must be connected to Ground Fault Circuit Interrupter (GFCI) Power Panels installed by a State of Connecticut licensed electrician and located outside of the work areas. The contractor shall be responsible for paying for the use of power and water unless the owner agrees to supply free of charge. It shall also be the contractor's responsibility to provide all fixed and temporary connections and hook-ups as well as obtaining permits and paying all fees for making such services available for his work as is necessary. The Contractor shall provide services as specified herein, and as required or as necessary to carry out the work. This will include such items as temporary hard line installation, portable generators for short term work, water tank trucks, pumps and necessary accessories or the means and equipment and services necessary to temporarily connect to and maintain such services from adjacent utility systems. The contractor is responsible for contacting all utility services and getting power connections from the electrical lines located on or adjacent to the properties. All power and water must be supplied 24 hours a day throughout the abatement project. CT DPH will be notified immediately if active containments do not have sufficient negative pressure throughout the abatement process until acceptable reoccupancy air results are received. The use of portable generators will require 24 hour a day, 7 day a week continuous operation if negative air machines in containments are powered by them. This continuous operation must remain in place from the time the pre-abatement visual is completed up until clearance re-occupancy sampling results have passed. The contractor will pay the owner a $2,500 penalty should the power found to not be running the negative air machines in active abatement containments. This penalty will apply daily and the contractor is also responsible for paying all CT DPH fines that may be imposed on the contractor and owner.

L. The contractor(s) will be responsible for hiring an engineer and other appropriate personnel to ensure that all required selective demolition and demolition activities are safe to perform for all personnel on site. The contractor(s) will be financially responsible for any damage that may occur to the site, on-site personnel, fines, penalties, etc. They will also be responsible for paying/reimbursing all legal fees/costs for all parties involved with the project should selective demolition or demolition activities cause injury or death to any persons on site.

M. The general/remediation contractors shall only use heavy equipment operators that have proper asbestos and/or HAZWOPER training when disturbing/removing/moving and packing asbestos, lead and PCB containing materials. Acceptable training for asbestos can be 32/40 hour asbestos worker/supervisor training with annual refresher training. 40 hour HAZWOPER training and annual refresher training is required for operators handling lead and/or PCB containing/contaminated materials. All operators must also have current medicals, fit test data and wear respirators during work. Respirator usage can be suspended if personal air sampling shows appropriate air concentrations complying with OSHA.

N. The General Contractor, or Remediation Subcontractor, is responsible for conducting all work involving the removal, management, storage, and disposal of PCB waste materials in accordance with this specification, with all referenced documents included as part of this specification, with the standards and guidance documents listed below, and with all Federal, state and local regulations. The General Contractor or Remediation Subcontractor shall provide all labor, materials, and equipment necessary to complete the work of this Section.

   b. 40 CFR Part 761.50 - Applicability (b) (1-8)
   c. 40 CFR Part 761.61 - PCB Remediation Waste
   d. 40 CFR Part 761.62 - PCB Bulk Product Waste
   e. 40 CFR Part 761.79 – Decontamination
5. Center for Disease Control (CDC): Air Pollution and Respiratory Health.

1.10 DEFINITIONS

A. The following definitions as used within this technical specification as well as references to specific sections of the Code of Federal Regulation section 40 CRF Part 761 are provided. Definitions are extracted in part from 40 CFR Part 761.3, for full definitions refer to the specified section of regulations.
   1. CERCLA means the Comprehensive Environmental Response, Compensation, and Liability Act (42 U.S.C. 9601-9657).
   2. Chemical waste landfill means a landfill at which protection against risk of injury to health or the environment from migration of PCBs to land, water, or the atmosphere is provided from PCBs and PCB Items deposited therein by locating, engineering, and operating the landfill as specified in §761.75.
   3. Cleanup Site means the areal extent of contamination and all suitable areas in very close proximity to the contamination necessary for implementation of a cleanup of PCB remediation waste, regardless of whether the site was intended for management of waste.
   4. Containment means the enclosure within the building which establishes a contaminated area and surrounds the location where PCB and/or other toxic or hazardous substance removal is taking place and establishes a Control Work Area.
   5. Designated Facility means the off-site disposer or commercial storer of PCB waste designated on the manifest as the facility that will receive a manifested shipment of PCB waste.
   6. Disposal means intentionally or accidentally to discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items. Disposal includes spills, leaks, and

other uncontrolled discharges of PCBs as well as actions related to containing, transporting, destroying, degrading, decontaminating, or confining PCBs and PCB Items.

7. DOT means the United States Department of Transportation.
8. EPA identification number means the 12-digit number assigned to a facility by EPA upon notification of PCB waste activity under §761.205.
9. Excluded PCB products means PCB materials which appear at concentrations less than 50 ppm as defined in 40 CFR §761.3.
10. Fixed Object means mechanical equipment, electrical equipment, fire detection systems, alarms, and all other fixed equipment, fixtures or other items which cannot be removed from the work area.
11. Generator of PCB waste means any person whose act or process produces PCBs that are regulated for disposal under subpart D of 40 CFR Part 761, or whose act first causes PCBs or PCB Items to become subject to the disposal requirements of subpart D, or who has physical control over the PCBs when a decision is made that the use of the PCBs has been terminated and therefore is subject to the disposal requirements of subpart D. Unless another provision of 40 CFR Part 761 specifically requires a site-specific meaning, "generator of PCB waste" includes all of the sites of PCB waste generation owned or operated by the person who generates PCB waste.
12. HEPA means High Efficiency Particulate Air filtration efficiency of 99.97 percent down to 0.3 microns. Filtration provided on specialized vacuums and air filtration devices to trap particles.
13. High occupancy area means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: 840 hours or more (an average of 16.8 hours or more per week) for non-porous surfaces and 335 hours or more (an average of 6.7 hours or more per week) for bulk PCB remediation waste. Examples could include a residence, school, day care center, sleeping quarters, a single or multiple occupancy 40 hours per week work station, a school class room, a cafeteria in an industrial facility, a control room, and a work station at an assembly line.
14. Incinerator means an engineered device using controlled flame combustion to thermally degrade PCBs and PCB Items. Examples of devices used for incineration include rotary kilns, liquid injection incinerators, cement kilns, and high temperature boilers.
15. Laboratory means a facility that analyzes samples for PCBs and is unaffiliated with any entity whose activities involve PCBs.
16. Liquid PCBs means a homogenous flowable material containing PCBs and no more than 0.5 percent by weight non-dissolved material.
17. Low occupancy area means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 hours (an average of 16.8 hours per week) for non-porous surfaces and less than 335 hours (an average of 6.7 hours per week) for bulk PCB remediation waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory).
18. Manifest means the shipping document EPA form 8700-22 and any continuation sheet attached to EPA form 8700-22, originated and signed by the generator of PCB waste in accordance with the instructions included with the form and subpart K of this part.

19. Mark means the descriptive name, instructions, cautions, or other information applied to PCBs and PCB Items, or other objects subject to these regulations.
20. Marked means the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations.
21. Municipal solid wastes means garbage, refuse, sludges, wastes, and other discarded materials resulting from residential and non-industrial operations and activities, such as household activities, office functions, and commercial housekeeping wastes.
22. Non-liquid PCBs means materials containing PCBs that by visual inspection do not flow at room temperature (25°C or 77°F) or from which no liquid passes when a 100 g or 100 ml representative sample is placed in a mesh number 60 ±5 percent paint filter and allowed to drain at room temperature for 5 minutes.
23. Non-porous surface means a smooth, unpainted solid surface that limits penetration of liquid containing PCBs beyond the immediate surface. Examples are: smooth un-corroded metal; natural gas pipe with a thin porous coating originally applied to inhibit corrosion; smooth glass; smooth glazed ceramics; impermeable polished building stone such as marble or granite; and high density plastics, such as polycarbonates and melamines, that do not absorb organic solvents.
24. On site means within the boundaries of a contiguous property unit.
25. PCB and PCBs means any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such substance. Refer to §761.1(b) for applicable concentrations of PCBs. PCB and PCBs as contained in PCB items are defined in §761.3. For any purposes under this part, inadvertently generated non-Aroclor PCBs are defined as the total PCBs calculated following division of the quantity of mono-chlorinated biphenyls by 50 and di-chlorinated biphenyls by 5.
26. PCB Article means any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. "PCB Article" includes capacitors, transformers, electric motors, pumps, pipes and any other manufactured item (1) which is formed to a specific shape or design during manufacture, (2) which has end use function(s) dependent in whole or in part upon its shape or design during end use, and (3) which has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the PCB Article.
27. PCB Article Container means any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB Articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs.
28. PCB Bulk Product Waste means waste derived from manufactured products containing PCBs in a non-liquid state, at any concentration where the concentration at the time of designation for disposal is >50 ppm PCBs. PCB bulk product waste does not include PCBs or PCB Items regulated for disposal under §761.60(a) through (c), §761.61, §761.63, or §761.64. PCB bulk product waste is further defined in 40 CFR §761.3. Note in accordance with October 2012 re-interpretation from the U.S. Environmental Protection Agency (EPA), adjacent porous materials in contact with PCB Bulk Products shall be considered PCB Bulk Product Material for disposal purposes.
29. PCB Capacitor means any capacitor that contains >500 ppm PCB. Concentration assumptions applicable to capacitors appear under §761.2.

30. PCB Container means any package, can, bottle, bag, barrel, drum, tank, or other device that contains PCBs or PCB Articles and whose surface(s) has been in direct contact with PCBs.
31. PCB-Contaminated means a non-liquid material containing PCBs at concentrations >50 ppm but < 500 ppm; a liquid material containing PCBs at concentrations >50 ppm but < 500 ppm or where insufficient liquid material is available for analysis, a non-porous surface having a surface concentration >10 pg/100 cm2 but < 100 pg/100 cm2 , measured by a standard wipe test as defined in §761.123.
32. PCB Equipment means any manufactured item, other than a PCB Container or a PCB Article Container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures.
33. PCB Item means any PCB Article, PCB Article Container, PCB Container, PCB Equipment, or anything that deliberately or unintentionally contains or has as a part of it any PCB or PCBs.
34. PCB Remediation Waste means waste containing PCBs as a result of a spill, release, or other unauthorized disposal, at the following concentrations: Materials disposed of prior to April 18, 1978, that are currently at concentrations >50 ppm PCBs, regardless of the concentration of the original spill; materials which are currently at any volume or concentration where the original source was >500 ppm PCBs beginning on April 18, 1978, or >50 ppm PCBs beginning on July 2, 1979; and materials which are currently at any concentration if the PCBs are spilled or released from a source not authorized for use under this part. PCB remediation waste means soil, rags, and other debris generated as a result of any PCB spill cleanup, as further defined in 40 CFR §761.3.
35. PCB waste(s) means those PCBs and PCB Items that are subject to the disposal requirements of subpart D in 40 CFR Part 761.
36. Porous surface means any surface that allows PCBs to penetrate or pass into itself including, but not limited to, paint or coating on metal; corroded metal; fibrous glass or glass wool; unglazed ceramics; ceramics with a porous glaze; porous building stone such as sandstone, travertine, limestone, or coral rock; low-density plastics such as Styrofoam and low-density polyethylene; coated (varnished or painted) or uncoated wood; concrete or cement; plaster; plasterboard; wallboard; rubber; fiberboard; chipboard; asphalt; or tar paper. For purposes of cleaning and disposing of PCB remediation waste, porous surfaces have different requirements than nonporous surfaces.
37. RCRA means the Resource Conservation and Recovery Act (40 U.S.C. 6901 et seq.).
38. Standard wipe sample means a sample collected for chemical extraction and analysis using the standard wipe test as defined in §761.123. Except as designated elsewhere in part 761, the minimum surface area to be sampled shall be 100 cm2.
39. Storage for disposal means temporary storage of PCBs that have been designated for disposal.
40. SW-846 means the document having the title "SW-846, Test Methods for Evaluating Solid Waste,"
41. Totally enclosed manner means any manner that will ensure no exposure of human beings or the environment to any concentration of PCBs.
42. Transfer facility means any transportation-related facility including loading docks, parking areas, and other similar areas where shipments of PCB waste are held during the normal course of transportation. Transport vehicles are not transfer facilities under this definition, unless they are used for the storage of PCB waste, rather than for actual transport activities. Storage areas for PCB waste at transfer facilities are subject to the storage facility standards

of §761.65, but such storage areas are exempt from the approval requirements of §761.65(d) and the recordkeeping requirements of §761.180, unless the same PCB waste is stored there for a period of more than 10 consecutive days between destinations.

43. Transporter of PCB waste means, for the purposes of subpart K of 40 CFR Part 761, any person engaged in the transportation of regulated PCB waste by air, rail, highway, or water for purposes other than consolidation by a generator.
44. Transport vehicle means a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (e.g., trailer, railroad freight car) is a separate transport vehicle.
45. TSCA means the Toxic Substances Control Act (15 U.S.C. 2601 et seq.).

1.11 SUBMITTALS

A. A pre-remediation meeting shall occur with the PCB Remediation Contractor, Owner or the Owner's Authorized Representative, and environmental consultant two weeks prior to commencement of work. The following documents shall be submitted immediately upon project award to the Owner prior to commencement of PCB Removal work:

1. Site Specific Health and Safety Plan (HASP): The PCB Remediation Contractor shall prepare a site specific HASP plan for protection of workers and control of the work site in accordance with OSHA regulatory requirements. The HASP shall govern all work conducted at the site during the remediation of PCB materials and related debris; waste handling, sampling, waste management; and waste transportation. At a minimum, the HASP shall address the requirements set forth in 29 CFR 1910.120, as further outlined below:
    a. Health and Safety Organization
    b. Site Description and Hazard Assessment
    c. Training
    d. Medical Surveillance
    e. Work Areas
    f. Personal Protective Equipment
    g. Personal Hygiene and Decontamination
    h. Standard Operating Procedures and Engineering Controls
2. Emergency Equipment and First Aid Provisions
    a. Equipment Decontamination
    b. Air Monitoring
3. Telephone List
    a. Emergency Response and Evacuation Procedures and Routes
    b. Site Control
    c. Permit-Required Confined Space Procedures
    d. Spill prevention and Containment Plan
    e. Heat and Cold Stress
    f. Record Keeping
    g. Community Protection Plan
4. Training Documentation: Documentation of OSHA 40-Hour HAZWOPER Training for all employees and subcontractors to be used for the remediation work, and 8-Hour HAZWOPER Supervisor Training for the designated on-site Health and Safety Officer for the remediation work.

5. PCB and or other Toxic or Hazardous Substances Disposal Plan: A written plan that details the PCB Remediation Contractor's plan for transportation and disposal of PCB-containing or other Toxic or Hazardous Substance wastes generated during the project. The Disposal Plan shall identify:
   a. Waste packaging, labeling, placarding and manifesting procedures.
   b. The name, address and 24-hour contact number for the proposed treatment or disposal facility or facilities to which waste generated during the project will be transported.
   c. The name, address, contact person(s) and state-specific permit numbers for proposed waste transporters, and EPA identification number for firms that will transport waste.
   d. The license plate numbers of vehicles to be used in transporting of the waste from the site to the disposal facility.
   e. The route(s) by which the waste will be transported to the designated disposal facility, and states or territories through which the waste will pass.
   f. disposal facility, and states or territories through which the waste will pass.
6. Safely Data Sheets: Safety Data Sheets (OSHA Form 174 or equivalent) and manufacturer's information shall be provided for all chemicals and materials to be used during the project including but not limited to specialty cleaners and chemical stripping products.

B. The following documents shall be submitted to the Owner within fifteen (15) work days following removal of waste from the site:
   1. Waste Profile Sheets
   2. Pre-Disposal Analysis Test Results (If required by disposal facility)
   3. Manifests signed by the disposal facility
   4. Tipping Receipts provided by the disposal facility
   5. Certification of Final Treatment/Disposal signed by the responsible disposal facility official.

C. PCB Work Closeout Submittals:
   1. Disposal Site Receipts: Copy of waste shipment record and disposal site receipt showing the PCB-containing or other Toxic or Hazardous Substances materials have been properly disposed.

D. Product Data: Catalog sheets, specifications, and application instructions for any removal products, if used.

1.12 REGULATIONS AND STANDARDS

A. The PCB Remediation Contractor shall be solely responsible for conducting this project and supervising all work in a manner that will be in conformance with all federal, state, and local regulations and guidelines pertaining to PCB Containing Material removal. Specifically, The PCB Remediation Contractor shall comply with the requirements of the following as applicable to the work to be performed:
   1. Toxic Substance Control Act (TSCA) (40 CFR Part 761).
   2. Comprehensive Environmental Response, Compensation, and Liability Act (Superfund Law).
   3. Department of Transportation (DOT) regulations - DOT regulation HM-181 regulates transportation of hazardous materials, including PCBs.

4. Occupational Safety and Health Administration (OSHA) - OSHA regulates workers' safety and exposure to a variety of chemicals including PCBs.
5. Connecticut Basic Building Code (BOCA) (including Connecticut Supplements);
6. Life Safety Code (NFPA); and
7. Local health and safety codes, ordinances or regulations pertaining to hazardous materials remediation and all national codes and standards including ASTM, ANSI, and Underwriter's Laboratories.

1.13 FINAL VISUAL CLEARANCE

A. Following the completion of the work, the Consultant shall perform a final visual inspection of the work area per guidelines EPA and State of Connecticut CT DEEP regulations and to assess that the above-indicated PCB-containing materials were removed.

1.14 POSTING AND RECORD MAINTENANCE REQUIREMENTS

A. The following items shall be conspicuously displayed proximate but outside of remediation work areas.
   1. Exit Routes -Emergency exit procedures and routes
   2. Emergency Phone Numbers - A list indicating the telephone numbers and locations of the local hospital(s); the local emergency squad; the local fire department; the local police department; the Poison Control Center; Chemical Emergency Advise (CHEMTREC); the local Department of Health's local office; the PCB Remediation Contractor (on-site and after hours numbers); and the environmental consultant (on-site and after hours numbers).
   3. Warning Signs - Warning signs shall be in English and the language of any workers onsite who do not speak English, and be of sufficient size to be clearly legible and display the following or similar language in accordance with 29 CFR 1910.1200:

      WARNING
      HAZARDOUS WASTE WORK AREA
      PCBs-POISON
      NO SMOKING, EATING OR DRINKING
      AUTHORIZED PERSONNEL ONLY
      PROTECTIVE CLOTHING IS REQUIRED IN THIS AREA

      In addition, all entrances to work areas shall be posted with a PCB M_L marker.

B. The PCB Remediation Contractor shall maintain the following items on-site and available for review by all employees and authorized visitors:
   1. PCB Remediation Contractor's Project Specific Health and Safety Plan
   2. Certificates of Training for all employees and the project Supervisor
   3. Codes, Standards and Publications
   4. Safety Data Sheets (SDS) for all chemicals used during the project.
   5. Copies of the PCB Remediation Contractor's written hazard communication, respiratory protection, and confined space entry programs.

C. Fees, Permits and Licenses. The PCB Remediation Contractor shall pay all licensing fees, royalties, and other costs necessary for the use of any copyrighted or patented product, design, invention, or processing in the performance of the work specified in this Section.
   1. The PCB Remediation Contractor shall be solely responsible for costs, damages, or losses resulting from any infringement of these patent rights or copyrights. The PCB Remediation Contractor shall hold the Owner and the Owner's Authorized Representative harmless from any costs, damages, and losses resulting from any infringement of these patent rights or copyrights.
   2. The PCB Remediation Contractor shall be responsible for securing all necessary permits for work under this Section, including hauling, removal, and disposal, fire, and materials usage, or any other permits required to perform the specified work.

1.15 QUALITY ASSURANCE

A. The PCB Remediation Contractor shall provide and assure that the quality of work practices and procedures to be utilized are consistent with the above listed agencies and regulations. PCB Remediation Contractor shall utilize the latest edition, including all addenda, revisions and supplements for all regulatory agencies codes, etc.

B. Worker's Qualifications: The persons performing PCB remediation and their supervisors shall be personally experienced in PCB remediation work and shall have been regularly employed by a company performing PCB remediation for a minimum of 3 years.

C. Pre-Work Conference: Before the Work of this Section is scheduled to commence, a conference will be held by the Owner at the Site for the purpose of reviewing the Contract Documents, discussing requirements for the Work, and reviewing the Work procedures.
   1. The conference shall be attended by the PCB Remediation Contractor, and the Owner's Authorized Representative employed by the Owner. This pre-remediation meeting may consist of multiple meetings.

1.16 MINIMUM REQUIREMENTS FOR WORKER HEALTH AND SAFETY

A. The PCB Remediation Contractor is responsible and liable for the health and safety of all onsite personnel and the offsite community affected by the project. All onsite workers or other persons entering the remediation work areas, decontamination areas or waste handling and staging areas shall be knowledgeable of and comply with the requirements of the site specific Health and Safety Plan at all times. The PCB Remediation Contractor's HASP shall comply with all applicable federal, state, and local regulations protecting human health and the environment from the hazards posed by the work to be performed under this project.

B. Consistent disregard for the provisions of the HASP shall be deemed as sufficient cause for immediate stoppage of work and termination of the Contract or any Sub Contracts without compromise or prejudice to the rights of the Owner or the Owner's Authorized Representative.

C. Any discrepancies between the PCB Remediation Contractor's HASP and these specifications or federal and state regulations shall be resolved in favor of the more stringent requirements that

provide the highest degree of protection to the project personnel and the surrounding community and environment

D. In addition to exposure concerns relating to the presence of PCBs, other health and safety considerations will apply to the work. The PCB Remediation Contractor shall be responsible for recognizing such hazards and shall be responsible for the health and safety of PCB Remediation Contractor employees at all times. It is the PCB Remediation Contractor's responsibility to comply with all applicable health and safety regulations.

E. The HASP shall be reviewed by all persons prior to entry into the remediation, decontamination, or waste staging areas, whether a representative of the PCB Remediation Contractor, owner, architect/engineer, environmental consultant, subcontractor(s), waste transporter or federal, state or local regulatory agency. Such review shall be acknowledged and documented by the PCB Remediation Contractor's Health and Safety Officer by obtaining the name, signature and affiliation of all persons reviewing the HASP.

F. The HASP shall be maintained so as to be readily accessible and reviewable by all site personnel throughout the duration of the remediation project and until all waste materials are removed from the site and disposed of at the appropriate disposal facility.

G. The PCB Remediation Contractor's on-site Health and Safety Officer shall be responsible for ensuring that project personnel and site visitors are informed of and comply with the provisions of the HASP at all times during the project.

1.17 WORK AREAS AND ZONES

A. The PCB Remediation Contractor shall lay-out and clearly identify work areas in the field. Access by equipment, site personnel, and the public to the work areas shall be limited as follows:
   1. Remediation Zone: The Remediation Zone(s) shall consist of all interior and exterior areas where removal of PCBs and other Toxic or Hazardous Substances and waste handling and staging activities are on-going and the immediately surrounding locale or other areas where contamination could occur. The Remediation Zone for purposes of interior and exterior removal of PCB materials or other Toxic or Hazardous Substances for disposal shall be performed within a containment to isolate work areas from non-work areas. The containment shall be visibly delineated with appropriate warning signs at all approaches to Remediation (including a PCB ML marker), and be restricted from access by all persons except those directly necessary for the completion of the respective remediation tasks. The Remediation Zone shall be located and delineated as necessary to limit access to the remediation area and to minimize risk of exposure to site workers and the general public. Access shall be controlled at the periphery of the Remediation Zone to regulate the flow of personnel and equipment into and out of the zone and to help verify that proper procedures for entering and exiting are followed. All persons within the Remediation Zone shall wear the appropriate level of protection established in the HASP.
   2. Decontamination Zone: The Decontamination Zone is the transition zone between the remediation area and the clean support zone of the project site, and is intended to reduce the potential for contaminants from being dispersed from the Remediation Zone to clean areas of the site. The Decontamination Zone shall consist of a buffer area surrounding the

Remediation Zone through which the transfer of equipment, materials, personnel and containerized waste products will occur and in which decontamination of equipment, personnel, and clothing will occur. The Decontamination Zones shall be constructed as a three chamber decontamination unit for workers and a two chamber equipment room for waste load out as detailed in Section 3.4. All emergency response and first aid equipment shall be readily maintained in this Zone. All protective equipment and clothing shall be removed or decontaminated in the Decontamination Zone prior to exiting to the Support Zone.

3. Support Zone: The Support Zone will consist of the area outside the Decontamination Zone and the remainder of the project site. Administrative and other support functions and any activities that by nature need not be conducted in the Remediation or Decontamination Zone related to the project shall occur in the Support Zone, Access to the Remediation and Decontamination Zones shall be controlled by the Health and Safety Officer and limited to those persons necessary to complete the remediation work and which have reviewed and signed the HASP.
4. The remediation contractor is responsible for supplying the direct-reading particulate meter, performing testing and documenting the daily readings. The consultant may choose to perform independent sampling as well.

1.18 PERSONNEL PROTECTIVE EQUIPMENT

A. The PCB Remediation Contractor shall be responsible to determine and provide the appropriate level of personal protective equipment in accordance with applicable regulations and standards necessary to protect the PCB Remediation Contractor's employees from all hazards present.

B. The PCB Remediation Contractor shall provide all employees with the appropriate safety equipment and protective clothing to ensure an appropriate level of protection for each task, taking into consideration the chemical, physical, ergonomic and biological hazards posed by the site and work activities.

C. The PCB Remediation Contractor shall establish in the HASP criteria for the selection and use of personal protective equipment (PPE).

D. The PPE to be utilized for the project shall be selected based upon the potential hazards associated with the project site and the work to be performed. Appropriate protective clothing shall be worn at all times within the Remediation Zone.

E. The PCB Remediation Contractor shall provide the appropriate level of respiratory protection to all field personnel engaged in activities where respiratory hazards exist or there is a potential for such hazard to exit.

F. The PCB Remediation Contractor shall provide, as necessary, protective coveralls, disposable gloves and other protective clothing for all personnel that will be actively involved in remediation activities or waste handling activities or otherwise present in the Remediation Zones. Coveralls shall be of Tyvek or equivalent material. Should the potential for exposure to liquids exist, splash

resistant disposable suits shall be provided and utilized.

G. Protective coveralls, and other protective clothing shall be donned and removed within the Decontamination Zone and shall be disposed of at the end of each day. Ripped coveralls shall be immediately replaced after appropriate decontamination has been completed to the satisfaction of the Health and Safety Officer. Protective clothing shall not be worn outside of the Decontamination Zone.

H. Hard Hats, protective eyewear, rubber boots and or other non-skid footwear shall be provided by the PCB Remediation Contractor as required for workers and authorized visitors.

I. All contaminated protective clothing, respirator cartridges and disposable protective items shall be placed into proper containers to be provided by the PCB Remediation Contractor for transport and proper disposal in accordance with 40 CFR 262.

1.19 EMERGENCY EQUIPMENT AND FIRST AID REQUIREMENTS

A. The PCB Remediation Contractor shall provide and maintain at the site, at a minimum, the following Emergency and First Aid Equipment:
   1. Fire Extinguishers: A minimum one (1) fire extinguisher shall be supplied and maintained at the site by the PCB Remediation Contractor throughout the duration of the project. Each extinguisher shall be a minimum of a 20 pound Class ABC dry fire extinguisher with Underwriters Laboratory approval per 29 CFR 1910.157.
   2. First Aid Kit: A minimum of one (1) first aid kit meeting the requirements of 29 CFR 1910,151 shall be supplied and maintained at the site by the PCB Remediation Contractor throughout the duration of the project.
   3. Communications: Telephone communications (either cellular or land line) shall be provided by the PCB Remediation Contractor for use by site personnel at all times during the project.

B. The Health and Safely Officer shall be notified immediately in the event of personal injury, potential exposure to contaminants, or other emergency. The Health and Safety Officer shall then immediately notify the Owner's Authorized Representative.

1.20 STANDARD SAFETY AND HEALTH PROCEDURES AND ENGINEERING CONTROLS

A. The following provisions shall be employed to promote overall safety, personnel hygiene and personnel decontamination:
   1. Each PCB Remediation Contractor or Subcontractor shall ensure that all safety equipment and protective clothing to be utilized by its personnel is maintained in a clean and readily accessible manner at the site.
   2. All prescription eyeglasses in use on this project shall be safety glasses conforming to ANSI Standard Z87.1. No contact lenses shall be allowed on the site.
   3. Prior to exiting the delineated Decontamination Zone(s), all personnel shall remove protective clothing, and place disposable items in appropriate disposal containers to be dedicated to that purpose. Following removal of PPE, personnel shall thoroughly wash and rinse their face, hands, arms and other exposed areas with soap and tap water wash and

subsequent tap water rinse. A fresh supply of tap water shall be provided at the site on each work day by the PCB Remediation Contractor for this purpose.

4. All PPE used on site shall be decontaminated or disposed of at the end of each work day. Discarded PPE shall be placed in sealed DOT approved 55-gallon barrels for off-site disposal.
5. Respirators, if necessary due to an upgrade to Level C PPE, shall be dedicated to each employee, and not interchanged between workers without cleaning and sanitizing.
6. Eating, drinking, chewing gum or tobacco, smoking, and any other practice that increases the likelihood of hand to mouth contact shall be prohibited within the delineated remediation and decontamination work zones. Prior to performing these activities, each employee shall thoroughly cleanse their face, hands, arms and other exposed areas.
7. All personnel shall thoroughly cleanse their face hands, arms and other exposed areas prior to using toilet facilities.
8. No alcohol, tobacco, illicit drugs or firearms will be allowed on the site at any time.
9. Contact with potentially contaminated surfaces should be avoided, if possible. Field personnel should minimize walking through standing water/puddles, mud or other wet or discolored surfaces; kneeling on ground; and placing equipment, materials or food on ground or other potentially contaminated surface.
10. The use of the "Buddy System" shall be employed at all times while conducting work at the site. Each employee shall frequently monitor other workers for signs of heat stress or chemical exposure or fatigue: periodically examine others PPE for signs of wear or damage; routinely communicate with others; and notify the Health and Safety Officer in the case of an emergency.

B. Workers must wear protective suits, protective gloves, eye protection and a minimum of half-face respirator with HEPA filter cartridge for all projects. Respiratory protection shall be in accordance with OSHA regulation 1910.134 and ANSI Z88.2.

C. Workers must be trained as per OSHA and US EPA requirements, have medical clearance and must have recently received pulmonary function test (PFT) and respirator fit tested by a trained professional.
   1. A personal air sampling program shall be in place as required by OSHA.
   2. The use of respirators must also follow a complete respiratory protection program as specified by OSHA.

1.21 INDEPENDENT INSPECTION AND MONITORING

A. This section describes independent visual inspection and monitoring work being performed on behalf of the Owner. This work is not in the Contract Sum. This section describes monitoring carried out by the Owner's Consultant (Langan) to verify that the building beyond the work area and the outside environment remains uncontaminated.

B. The purpose of the Owner's Consultant's monitoring is to detect faults in the work area isolation such as:
   1. Contamination of the building outside of the work area by PCB dust.
   2. Failure of filtration or rupture in the differential pressure system as applicable.
   3. Contamination of the outside of the containment.

C. Should any of the above occur, the PCB Remediation Contractor shall immediately cease removal activities until the fault is corrected. Do not recommence work until authorized by the Owner's Consultant.

D. The Owner's Consultant may monitor the Work Area. The purpose of this monitoring will be to detect dust outside containment, which may challenge the ability of the Work Area isolation procedures to protect the balance of the building or outside of the building from contamination.

E. The Owner's Consultant will perform on-site monitoring throughout the course of the project, as follows:
   1. All work procedures shall be continuously monitored by the Consultant to assure that areas outside the designated work locations in the buildings will not be contaminated.
   2. Prior to work on any given day, The PCB Remediation Contractor's designated "competent person" shall discuss the day's work schedule with the Consultant to evaluate job tasks with respect to safety procedures and requirements specified to prevent contamination of the building or the employees. This includes a visual survey of the work area and the decontamination of the building or the employees.

PART 2 PRODUCTS

2.1 REMEDIATION PRODUCTS

A. Deliver all materials in the original packages, containers, or bundles bearing the name of the manufacturer and the brand name and product technical description.

B. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Material that becomes contaminated with PCBs shall be decontaminated or disposed of as PCB waste.

C. Polyethylene sheet in a roll size to minimize the frequency of joints shall be delivered to the job site with factory label indicating:
   1. Type: Minimum 6 mil., opaque, fire retardant polyethylene sheets.
   2. Floor/Ground Protective Layer: Minimum of multiple layers of 10 mil., reinforced polyethylene sheets (minimum of 20 feet out/away from building footprint).

D. Respirators:
   1. Type: Approved by the Mine Safety and Health Administration (MSHA), Department of Labor, or the National Institute for Occupational Safety and Health (NIOSH), Department of Health and Human Services.

E. Polyethylene disposable bags shall be six (6) mil with pertinent pre-printed label. Tie wraps for bags shall be plastic, five (5) inches long (minimum), pointed and looped to secure filled plastic bags.

F. Tape or adhesive spray will be capable of sealing joints in adjacent polyethylene sheets and for attachment of polyethylene sheet to finished or unfinished surfaces of dissimilar materials and capable of adhering under both dry and wet conditions, including use of amended water.

G. Cleaning Products: Contractor shall at their discretion utilize specialty cleaning products such as Capsur, TechXtract or other cleaners for use in decontaminating porous and nonporous surfaces to remain. All such products shall be utilized in accordance with manufacturer's specifications as intended. PCB Remediation Contractor shall ensure appropriate use and disposal associated with use in accordance with the SDS sheets for each product utilized. It shall be incumbent upon the PCB Remediation Contractor to determine the need for use of specialty products to meet required cleaning verification levels established herein and in accordance with the SIP or Performance Based Plan.

H. The PCB Remediation Contractor shall have available spray equipment capable of mixing wetting agent with water and capable of generating sufficient pressure and volume and having sufficient hose length to reach all areas with PCBs.

I. HEPA filtered local exhaust ventilation shall be utilized during the installation of enclosures and supports where PCB-containing materials may be disturbed.

2.2 TOOLS AND EQUIPMENT

A. The PCB Remediation Contractor shall provide a sufficient supply of disposable mops, rags, and sponges for work area cleaning and decontamination shall be available.

B. The PCB Remediation Contractor shall provide a sufficient supply of scaffolding, ladders, lifts, and hand tools (e.g., scrapers, wire cutters, brushes, utility knives, wire saws, etc.) shall be provided as needed.

C. The PCB Remediation Contractor shall provide all tools and equipment necessary for PCB removal.

D. The PCB Remediation Contractor's air monitoring professional shall have air-monitoring equipment of type and quantity to monitor operations and conduct personnel exposure surveillance per OSHA requirements.

E. The Remediation Contractor is responsible for supplying direct-reading particulate meters, performing testing and documenting the daily readings for exterior, and if requested, interior areas. The consultant may choose to perform independent sampling as well.

F. The PCB Remediation Contractor shall have available sufficient inventory or dated purchase orders for materials necessary for the job including protective clothing, respirators, filter cartridges, polyethylene sheeting of proper size and thickness, tape and air filters.

G. The PCB Remediation Contractor shall provide (as needed) temporary electrical power panels, electrical power cables, and electrical power sources (such as generators). Any electrical

connection work affecting the building electrical power system shall be performed by a State of Connecticut licensed electrician.

H. The PCB Remediation Contractor shall have available shower stalls and plumbing to support same to include sufficient hose length and drain system or an acceptable alternate.

I. Exhaust air filtration system units shall contain HEPA filter(s) capable of sufficient air exhaust to create negative pressure of -0.02 inches of water within enclosure with respect to outside area. Equipment shall be checked for proper operation by smoke tubes or differential pressure gauge before the start of each shift and at least twice during the shift. Adequate exhaust air shall be provided for a minimum of four (4) air changes per hour within the enclosure. No air movement system or air filtering equipment shall discharge unfiltered air outside.

J. Vacuum units, of suitable size and capacities for the project, shall have HEPA filter(s) capable of trapping and retaining at least 99.97 percent of all mono-dispersed particles of 0.3 micrometers in diameter or larger.

2.3 PERSONNEL PROTECTION

A. Safety equipment (e.g., hard hats meeting the requirements of ANSI Standard 289.11981, eye protection meeting the requirements of ANSI Standard Z87.1-1979, safety shoes meeting the requirements of ANSI Standard Z41.1-1967, disposable PVC gloves or other work gloves), shall be provided to all workers and authorized visitors.

B. Non-skid footwear shall be provided to all remediation workers. Disposable clothing shall be adequately sealed to the footwear to prevent body contamination.

PART 3 EXECUTION

3.1 WORK AREA PROTECTION — REMEDIATION ZONE GENERAL

A. Protection of Existing Construction: Perform PCB Bulk Product Waste and PCB Remediation Waste removal work without damage or contamination of adjacent areas, asphalt and/or concrete paving, soils, and existing construction.

B. Prior to commencement of PCB remediation activities at each work area, a containment system shall be constructed by the PCB Remediation Contractor to capture and contain all materials removed during the remediation. Containment procedures referenced for the remediation zone must be utilized for PCB Bulk Product Waste removal.

C. During all remediation activities, PCB Remediation Contractor shall maintain control of all entrances and exits to the work areas to ensure only authorized personnel enter the work areas and are afforded proper personal protective equipment and as required respiratory protection. All approaches to work areas shall be demarcated with appropriately worded warning signs.

D. Work zones shall be established in accordance with this section to include remediation zone, decontamination zone, and support zone.

E. Negative pressure containments shall be constructed consisting of two layers of 6-mil polyethylene sheeting on wall surfaces and two layers of 10-mil polyethylene sheeting on floor surfaces if required.

3.2 WORK AREA PROTECTION — REMEDIATION ZONE FOR PCB BULK PRODUCT

A. Ground protection to prevent debris from escaping the remediation zone and to protect areas outside of remediation zone from PCB contamination shall be utilized. Protection shall include the use of water impervious membrane covering which shall be secured to the ground surface. Edges shall be raised to prevent water run-off used for dust control during cutting and demolition of structures. The membrane shall be covered with plywood and multiple layers of 10-mil reinforced polyethylene sheeting securely fastened to foundation (extending a minimum of 20 feet away from the building foundation). All interior removal will occur with full containments – negative pressure enclosures including hard solid barriers (wood or similar material), 6 and 10-mil fire retardant polyethylene sheeting on the interior/exterior to maintain containment integrity and abutting decontamination units.

B. Isolation barriers shall be installed on the interior of the building to isolate the building exterior where work shall be performed. Protection shall be affixed to the inside finish surfaces to isolate window. One layer of 6-mil polyethylene sheeting shall create the exterior critical barrier between the Remediation Zone and Interior of the Building.

C. All other openings to the building interior such as ducts, grilles, etc. shall be securely sealed with a single layer of 6-mil polyethylene sheeting from the building exterior.

D. Ground protection and isolation barriers shall remain in place throughout work to collect dust and debris resulting from PCB Bulk Product Waste removal.

E. All debris and dust generated during operations shall be HEPA vacuumed continuously throughout the work shift and at the end of a work shift to avoid accumulation. Any tears or rips that occur in protections shall be repaired or removed and replaced with new protections.

F. All surfaces adjacent to materials removed shall be properly decontaminated upon completing the removal of PCB Bulk Product Waste.

G. Warning Signage: Post warning signs in accordance with 29 CFR 1910.1200 at all approaches to the work area. Signs shall be conspicuously posted to permit a person to read signs and take precautionary measures to avoid exposure to PCBs or other Toxic or Hazardous Substances. These signs should include the PCB ML markers at each entrance to the work area.

H. Waste Containers for PCB Bulk Product Waste: Appropriate PCB waste containers shall be placed adjacent to remediation zones. Containers shall be lined covered and secured. The PCB waste containers shall be properly marked as described in 40 CFR part §761.40. Marking shall

include a PCB ML marker formatted in accordance with 40 CFR part §761.45.

3.3 DECONTAMINATION ZONE

A. The PCB Remediation Contractor shall establish contiguous to the work area, a decontamination enclosure consisting of equipment room, shower room, and clean room in series. The only access between contaminated and uncontaminated areas shall be through this decontamination enclosure. The PCB Remediation Contractor shall ensure that employees enter and exit the Remediation Zone through the decontamination area.

B. Access between rooms in the decontamination system shall be through double flap curtain opening airlocks. The clean room, shower and equipment room within the decontamination enclosure, shall be completely sealed ensuring that the sole source of airflow through this area originates from uncontaminated areas outside the work area.

C. Construct the decontamination systems with wood or metal framing, 3/8" sheathing and cover both sides with a double layer of six (6) mil polyethylene sheeting, spray glued or taped at the joints. Caulk joints watertight at floor, walls, and ceiling.

D. The PCB Remediation Contractor shall visually inspect interior and exterior critical barriers that separate the Remediation Zone and the Interior of the Building, respectively, several times daily to assure effective seal and the PCB Remediation Contractor shall repair defects immediately.

E. Equipment room. The equipment room shall be supplied with impermeable, labeled bags and containers for the containment and disposal of contaminated protective equipment.

F. Shower area. Shower facilities shall be provided which comply with 29 CFR 1910.141(d)(3). The showers shall be adjacent both to the equipment room and the clean room.

G. Clean change room. The clean room shall be equipped with a locker or appropriate storage container for each worker's use. Following showering, each worker must then change into street clothing in clean change areas.

H. Decontamination area entry procedures. The PCB Remediation Contractor shall ensure that all workers follow proper decontamination procedures for entry into a Regulated Work area including but not limited to the following:
   1. Enter the decontamination area through the clean room;
   2. Remove and deposit street clothing within a locker provided for their use;
   3. Put on protective clothing and respiratory protection before leaving the clean room.
   4. Before entering the Remediation Zone, the PCB Remediation Contractor shall ensure that workers pass through the equipment room.

I. Decontamination area exit procedures. The PCB Remediation Contractor shall ensure that all workers follow proper decontamination procedures for exit from a Regulated Work area including but not limited to the following:
   1. Before leaving the regulated area, workers shall remove all gross contamination and debris from their protective clothing.

2. Workers shall remove their protective clothing in the equipment room and deposit the clothing in labeled impermeable bags or containers.
3. Workers shall not remove their respirators in the equipment room.
4. Workers shall shower prior to entering the clean room.
5. After showering, workers shall enter the clean room before changing into street clothes.

J. Equipment Room for Waste Removal: The PCB Remediation Contractor shall establish a two chamber equipment room or area that is adjacent to the Remediation Zone for the decontamination of waste containers and equipment as noted above.
1. The area must be of sufficient size as to accommodate cleaning of equipment and removing waste without spreading contamination beyond the area (as determined by visible accumulations).
2. All equipment and surfaces of containers filled with PCB waste must be cleaned prior to removing them from the equipment room or area.

3.4 PCB BULK PRODUCT MATERIAL REMOVAL

A. PCB Bulk Product Waste Materials – Interior and exterior materials listed in 1.08 Scope of Work per the EPA PCB Bulk Waste Reinterpretation Memorandum dated October 24, 2012. The PCB Bulk Product Waste will also include asbestos containing materials (see asbestos specifications).

B. Materials shall be removed in a manner which does not breakdown the materials into fine dust or powder to the extent feasible. Equipment and tools to be utilized shall include hand tools and mechanical equipment such as demolition hammers to remove materials from adjacent substrates. Mechanical removal equipment shall as appropriate be fitted with dust collection systems.

C. Any dry or brittle sealant/caulking/glazing materials shall be removed with additional engineering controls such as use of a HEPA vacuum to remove accumulated dust or debris during removal.

D. Sequence of removal shall follow the following general requirements:
1. Site preparation and controls shall be completed. Work shall not proceed until authorized by owner's representative.
2. The materials listed in 1.08 shall be removed in their entirety for disposal as PCB Bulk Product Waste. The removal of the systems shall be performed so that the sealant/caulking/glazing compounds and other source/adjacent materials are not disturbed.
3. The adjacent surfaces shall be cleaned of all residue using EPA recommended methods.

E. Waste shall be immediately containerized in temporary 6-mil polyethylene disposal bags for disposal. These containers shall be sealed in remediation zone when full during collection and then placed in disposal containers/storage trailers. The containers shall not be emptied into other containers to avoid dispersal of dust or fugitive emissions.

F. The use of minimal quantities of water to moisten the generated dust prior to collection shall be utilized. Under no circumstances shall the PCB waste show evidence of free liquid water, pooling or ponding within the waste stream. Any liquid used to wet the dust and debris to control fugitive

emissions shall be properly containerized and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with40 CFR Part §761.60 (a).

G. PCB Bulk Product Waste shall be stored for disposal in accordance with 40 CFR Part §761.65 and marked in accordance with 40 CFR Part §761.40 and §761.45.

H. All waste containers shall be appropriately labeled in accordance with 40 CFR Part §761.40 and §761.45. Labeling shall include the PCB ML marker.

3.5 PCB REMEDIATION WASTE — IF VERFIFICATON SAMPLING FINDS >1 PPM PCB

A. All adjacent components (if failing verification sampling – if required) shall be removed, in containments and transported off-site for disposal as PCB Remediation Waste. This includes adjacent building materials/asphalt/soil failing verification sampling (if contractor contaminates these surfaces/materials) and will be performed at no extra cost to the owner. The contractor owns additional remediation for verification sampling failures up to 20% however if the contractor is deemed by Langan to have contaminated the wall surfaces, all additional remediation is to be performed by the contractor at no additional cost to the owner.

B. All PCB Remediation Waste shall be stored for disposal in accordance with 40 CFR Part §761.65.

C. All waste containers shall be appropriately labeled in accordance with 40 CFR Part §761.40 and §761.45. Marking shall include the PCB M_L marker.

D. Soil excavations will be backfilled with certified clean soil meeting the CT DEEP Remediation Standards Regulations (RSRs) for the Residential Direct Exposure Criteria (RDEC) and Groundwater Classification A (GB) Pollutant Mobility Criteria (PMC). Asphalt excavations shall be replaced in kind. Additionally brushes removed during soil excavation shall be replaced in kind.
   1. Scope for soil sample collection:
      a. Owner's Representative will review the characterization data of soil being brought on-site
      b. Collect one composite soil sample (made up of three sample locations) for every 500 cubic yards (CY) of material planned to be brought to the site for use as clean fill.
   2. Laboratory analysis of soil characterization shall include the following:
      a. Volatile Organic Compounds (VOCs by method 8260)
      b. Polynuclear Aromatic Hydrocarbons (PAHs by method 8270)
      c. Extractable Total Petroleum Hydrocarbons (ETPH)
      d. Polychlorinated Biphenyls (PCBs by method 8082)
      e. Pesticides and Herbicides (by method 8081)
      f. RSR metals (Mass and SPLP)

3.6 CLEANING AND DECONTAMINATION

A. The PCB Remediation Contractor shall be responsible for complete cleaning and decontamination of the Remediation Zone upon completion of work. The Remediation Zone will be required to meet proposed Verification Sampling limits prior to containment tear down.

B. The PCB Remediation Contractor shall utilize HEPA vacuum and wet cleaning products to remove all visible dust and debris from all surfaces within the work area. If specialty products are utilized the PCB Remediation Contractor shall utilize in accordance with manufacturer's specifications including any additional safety and disposal requirements for such use.

C. Cleaning of containment barriers shall be performed prior to removal leaving critical barriers at openings, decontamination units and negative air filtration devices in place until results of post verification sampling indicate acceptable limits. Cleaning shall be performed from ceiling to floors.

D. Any liquid used to wet the dust and debris to control fugitive emissions shall be collected and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with §761.60 (a).

E. All rags and other cleaning materials used to clean shall also be properly disposed as PCB Remediation Waste. All PCB Remediation Waste shall be stored for disposal in accordance with 40 CFR Part §761.65. All waste containers shall be appropriately marked in accordance with 40 CFR Part §761.40 and §761.45.

F. Equipment to be utilized in connection with the removal of PCB Bulk Product Waste and PCB Remediation Waste including waste collection or that will or may come in direct contact with the site contaminants shall be decontaminated prior to leaving the site to prevent migration of the contaminated residues from the project site. Decontamination shall be in accordance with 40 CFR Part §761.79 and Subpart S procedures.

G. All non-disposable equipment and tools employed in the course of the project will be decontaminated at the conclusion of each work day through the following sequence:

Initial tap water rinse, to remove gross contaminants

1. Tap water and hexane or equivalent wash
2. Tap water rinse
3. Second tap water and hexane or equivalent wash
4. Second tap water rinse

H. The wash water and decontamination liquids shall be captured and containerized in DOT approved 55-gallon barrels for off-site disposal.

3.7 CONSULTANTS INSPECTION RESPONSIBILITIES

A. The Owner shall retain an industrial hygiene firm (Owner's Authorized Representative) to perform periodic inspections and sampling during the work. Site visits shall be scheduled based on the progress of the work and at critical time periods.

B. Consultant shall conduct inspections throughout the progress of the removal project. Inspections shall be conducted in order to document the progress of the removal work as well as the procedures and practices employed by the PCB Remediation Contractor.

C. The Consultant shall perform the following inspections during the course of remediation activities:
   1. Pre-commencement Inspection. Pre-commencement inspections shall be performed at the time requested by the remediation Contractor. The Consultant shall be informed 12 hours prior to the time the inspection is needed. If, during the course of the pre-commencement inspection, deficiencies are found, the PCB Remediation Contractor shall perform the necessary adjustments in order to obtain compliance.
   2. Work Area Inspections. Work area inspections shall be conducted on a daily basis at the discretion of the Consultant. During the course of the work inspections, the Consultant shall observe the PCB Remediation Contractor's removal procedures, verify barrier integrity, assess project progress, and inform the remediation Contractor of specific remedial activities if deficiencies are noted.

D. The Owner's Authorized Representative may perform real time monitoring for dust particulate using Dust Trak or equivalent monitoring devices for total dust. Sampling may be performed prior to remediation for background comparison to during remediation sampling. In addition, air sampling outside of the Remediation Zone, may be performed periodically during active removal activities at the Owner's Authorized Representative's discretion for laboratory confirmation. **The remediation contractor is responsible for supplying the direct-reading particulate meters (minimum of 2), performing testing and documenting the daily readings. The consultant may choose to perform independent sampling as well.**

E. It should be noted that if the results of air samples exceed established action levels or ambient background conditions for real time monitoring whichever is less the PCB Remediation Contractor will be required to implement work stoppage to determine causes of exceeding results and as necessary utilize additional containment measures or engineering controls. Any resulting decontamination of areas beyond the Remediation Zone shall be responsibility of the PCB Remediation Contractor.

F. The Owner's Authorized Representative shall perform post removal and decontamination visual clearance inspection as necessary to determine complete removal of PCB's. Verification sampling may be performed on adjacent building materials.

G. Once verification sampling and/or visual inspection has documented the Remediation Zone meets required criteria, the PCB Remediation Contractor shall be permitted to remove decontamination unit, critical barriers, etc. These areas shall be subjected to a visual inspection to ensure no visible dust is present.

3.8 MARKING OF WASTE CONTAINERS

A. All waste containers must be marked with the name of the waste contained; the date in which the first material was placed in the vessel; and the last date at which addition of waste occurred. All waste containers must be marked with a PCB M_L marker.

B. All waste containers containing PCB Bulk Product Waste, Bulk PCB Remediation Waste and PCB contaminated debris, containment system components, used personnel protective equipment, personal and equipment wash water and decontamination fluids, or other wastes generated during the remediation work shall be labeled as follows:

DOT Class 9 UN3432 (solid)
Or UN2315 (liquid) PCB Waste
RQ
Waste for Disposal
Federal law prohibits improper disposal.
If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.
Generator's Information: NOa-g
Manifest Tracking No.:
Accumulation Start Date:
EPA ID No.:
EPA Waste No.:
Total Weight:
Container No.:
HANDLE WITH CARE!

In addition, these containers must be marked with a PCB M_L marker.

C. Such marking must be durable, in English and printed on or affixed to the surface of the package or on a label, tag or sign; displayed on a background of sharply contrasting color; un-obscured by labels or attachments and located away from any other marking (such as advertising) that could substantially reduce its effectiveness.

3.9 ON-SITE WASTE MANAGEMENT AND DISPOSAL OF SOLID HAZARDOUS WASTES

A. All solid waste material, containment system components, used personnel protective equipment, and other solid wastes generated during the work, shall be placed directly in appropriate waste receptacles immediately upon removal from its in-situ position. Suitable waste receptacles may consist of roll-off containers or DOT-approved 55-gallon barrels.

B. The PCB Remediation Contractor shall be responsible for all packaging, labeling, transport, disposal and record-keeping associated with PCB or PCB contaminated waste in accordance with all federal, state and local regulations.

C. The PCB Remediation Contractor shall ensure that the person transporting the waste holds a valid permit issued in accordance with appropriate federal, state, and local regulations.

D. The PCB Remediation Contractor shall provide to the transporter at the time of transfer appropriate shipping records or uniform waste manifests as required by the federal, state and local regulations with a copy to the Owner and Owner's Authorized Representative.

E. PCB Remediation Contractor shall maintain proper follow up procedures to assure that waste materials have been received by the designated waste site in a timely manner and in accordance with all federal, state and local regulations.

F. The PCB Remediation Contractor shall assure that disposal of polychlorinated biphenyls (PCB) containing waste material is at a facility approved to accept such waste and shall provide a tracking/manifest form signed by the landfill's authorized representative.

G. If roll-off containers are to be utilized for containerization of the remediation wastes the following shall apply:
   1. All roll-off containers or other similar vessels utilized shall be watertight and lined with 6-mil polyethylene sheeting or equivalent impermeable lining, and equipped with a secured and impermeable cover.
   2. The impermeable cover shall remain securely in place at all times when material is not being actively placed in the vessels. The PCB Remediation Contractor shall be responsible for ensuring that the cover remains securely intact until the container is removed from the site.

H. If 55-Gallon barrels are to be utilized for waste containerization, the barrels shall consists of suitable DOT-approved 55-gallon barrels that are watertight and free of corrosion, perforations, punctures, or other damage. All barrels shall be securely covered and sealed at the conclusion of each work day.

I. The waste containers shall remain staged at the site with a secure impermeable cover in place until the materials are transported from the site to be delivered to the designated disposal facility.

J. A waste roll-off and barrel staging area shall be designated prior to initiation of the remediation work, and approved by the Owner's Authorized Representative. If this area is located outside of the building, the area (or areas) shall be surrounded by a chain-link fence with a minimum height of six feet. The fence shall be labeled with a PCB ML marker.

K. Properly containerized waste must be transported by a licensed hauler and shipped as PCB Bulk Product Waste for disposal at a permitted waste facility in accordance with 761.62.

L. PCB Remediation Waste must be transported by a licensed hauler and shipped as PCB Remediation Waste for disposal in accordance with 40 CFR 761.61(b) to a EPA TSCA permitted hazardous waste landfill (EQ's Wayne Disposal Landfill in Belleville, Michigan, CWM Model City Disposal Landfill in Youngstown, NY or equivalent); and dispose of non-liquid PCB remediation waste in a high temperature incinerator approved under 761.70, alternate disposal method approved under 761.60(e), and/or a chemical waste landfill approved under 40 CFR 761.75 which is an EPA, TSCA approved facility for PCB Remediation Waste. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.

M. Bulk Product Waste will be transported under manifest for off-site disposal to a hazardous waste landfill (EQ's Wayne Disposal Landfill in Belleville, Michigan or equivalent); and/or other appropriate waste will be transported under manifest for off-site disposal at a non-hazardous waste landfill permitted to accept such materials (Waste Management's Turnkey Landfill in Rochester, New Hampshire, Minerva, Ohio or GROWS Landfill in Morrisville, Pennsylvania or equivalent).

N. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.

O. Any PCB Liquid Water Waste shall be properly containerized and decontaminated in accordance with 40 CFR Part §761.79 (b)(1) or disposed of in accordance with 40 CFR Part §761.60 (a).

P. Any chemicals, solvents or other products used during decontamination shall be properly containerized as PCB Liquid Waste. Waste must be properly decontaminated or disposed in accordance with 40 CFR Part §761.60 (a) or 40 CFR Part §761.79 (g). PCB Liquid Waste shall be transported by a licensed hauler and shipped for treatment or disposal. Provide required copies of the uniform waste manifests for hazardous wastes to the Owner, waste generation State and waste destination State as required.

Q. All contaminated waste shall be carefully loaded on trucks or other appropriate vehicles for transport. Before and during transport, care shall be exercised to insure that no unauthorized persons have access to the material.

R. Transporters of the waste are prohibited from "back hauling" any freight after the disposition of the Owner's waste stream until decontamination of the vehicle and/or trailer is assured.

PCB Caulk Letter
FORM SCG-9008

Subject: PCB in Caulk Products: specific to this Project Phase submission to the OSCG&R

Facility Name: Central Middle School

State Project No.: 057-0114 N

Phase: *2 of 3*

I/We, the undersigned, certify that I/We have read the Division of Construction Services (DCS) PCBs in Caulk Policy (Form 1170). I/We further understand that:

- According to EPA, caulk products containing PCBs at concentrations greater than or equal to 50 parts per million (ppm) are not authorized for use and must be removed and properly disposed of as PCB Bulk Product Waste as defined in 40 CFR 761.3.

- If PCBs are detected in caulk products at concentrations between 1 ppm and 50 ppm and the caulk products meet the definition of a PCB Excluded Product as defined in 40 CFR 761.3, then the Connecticut Department of Energy and Environmental Protection (CT DEEP) recommends that the caulk products be removed.

- Adjacent porous building materials (e.g., concrete, brick, CMU, wood, etc.) that were coated with ≥ 50 ppm PCB-containing caulk may contain PCBs. According to the EPA, if PCBs are present in these materials as a result of the subject caulk and at concentrations greater than or equal to 1 ppm, then EPA considers the materials as PCB Bulk Product Waste per the EPA October 24, 2012 PCB Bulk Product Reinterpretation decision, provided it is removed at the same time as the caulk. In addition, soils beneath ≥ 50 ppm PCB-containing caulk may contain PCBs.

Based on the latest project plans, the following information is provided to the OSCG&R (*check the box, or boxes, adjacent to the applicable statement[s]*):

1. The project ☒ **WILL** ☐ **WILL NOT** disturb existing caulk products as part of the project

2. The original building ☒ **WAS** ☐ **WAS NOT** constructed/renovated/repaired between 1950 and 1979

3. This building has had one or more extensions which has modified the original building footprint. The portion of the building specific to the Project Phase submission noted above ☐ **WAS** ☒ **WAS NOT** constructed/renovated/repaired between 1950 and 1979

4. ☒ The District has decided **NOT TO TEST** caulk products for PCBs

5. ☐ The District has decided **TO TEST** caulk products for PCBs

6. The District **HAS TESTED** caulk products for PCBs and the test results indicate the following:

   a. ☐ PCBs concentrations are **LESS** than 1 ppm

   b. ☐ PCBs concentrations are **BETWEEN** 1 ppm and 50 ppm

   c. ☐ PCBs concentrations are **GREATER** than or **EQUAL** to 50 ppm

For caulk products containing PCB, the District will address the material in the following manner:

7. ☐ The District has developed a PCB Abatement and Management Plan and will be utilizing the "Performance Based" option for material with PCB test results greater than 50 ppm.

8. ☐ The District has developed a PCB Abatement and Management Plan and will be utilizing the "Self-Implementing Plan (SIP)" option for material with PCB test results greater than 50 ppm and has received EPA approval of the SIP (attach a copy of the approval).

9. ☐ The District has developed a PCB Abatement and Management Plan and has submitted a copy to the CT DEEP PCB Unit for material with PCB test results between 1 ppm and 50 ppm (attach a copy of such notice to the CT DEEP).

10. ☒ Other: The sealant compounds throughout the original 1957 building are presumed to contain PCBs > 50 ppm and will be removed and properly disposed of accordingly. A specification section has been created for PCBs assumed > 50 ppm.

If a PCB Abatement and Management Plan has been prepared, attach **FORM SCG-3012** PCB Plan Checklist.

SECTION 03 0516 - UNDER-SLAB VAPOR RETARDER

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sheet vapor retarder, seam tape, mastic, pipe boots, detail strip for installation under concrete slabs on grade.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: Preparation of subgrade, granular fill, placement of concrete.

1.3 REFERENCE STANDARDS

A. ASTM D1709 - Standard Test Methods for Impact Resistance of Plastic Film by the Free-Falling Dart Method; 2016.

B. ASTM D882 - Standard Test Method for Tensile Properties of Thin Plastic Sheeting; 2018.

C. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover; 2008a (Reapproved 2019).

D. ASTM E1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs; 2018a.

E. ASTM E1745 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs; 2017 (Reapproved 2023).

F. ASTM E96/E96M - Standard Test Methods for Gravimetric Determination of Water Vapor Transmission Rate of Materials; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Submit manufacturers' data on manufactured products.

C. Samples: Submit samples of underslab vapor barrier to be used.
   1. 4 inch-by-4-inch (minimum) square of vapor retarder sheet.
   2. 12-inch (300 mm) long piece of seam tape.

D. Manufacturer's Installation Instructions: Indicate installation procedures and interface required with adjacent construction.

E. Field quality-control reports. Reports shall be submitted to Architect.

PART 2 PRODUCTS

2.1 MATERIALS

A. Underslab Vapor Retarder:
   1. Water Vapor Permeance: Not more than 0.010 perms, maximum.
   2. Thickness: 15 mils.
   3. Puncture Resistance: 2200 grams minimum; ASTM D1709.
   4. Tensile Strength: 57 lbf/in. minimum when tested in accordance with ASTM E154/E154M or ASTM D882.
   5. Material: Manufactured using prime virgin (non-recycled) polyolefin resin and constructed in a multi-layer plastic extrusion process.
   6. Basis of Design:
      a) Stego Industries LLC; Stego Wrap Vapor Barrier (15-mil): www.stegoindustries.com.
      b) Perminator 15 mil by W.R. Meadows, Inc tel (847) 214-2100; (800) 342-5976, www.wrmeadows.com
      c) Viper Vaporcheck II 15 Mil manufactured by Insulation Solutions Inc., tel. (866) 698-6562, www.viper2.com

B. Accessory Products: Vapor barrier manufacturer's recommended tape, adhesive, mastic, pipe boots, etc., for sealing seams and penetrations in vapor barrier.
   1. Seam Tape:
      a) Water Vapor Transmission Rate: 0.3 perms maximum, ASTM E96/E96M.
      b) Roll Width: 4” minimum
      c) Subject to requirements, available products include:
         1) Stego Tape manufactured by Stego Industries, LLC, tel. (877) 464-7834, www.stegoindustries.com
         2) Viper Double Bond Tape manufactured by Insulation Solutions Inc., tel. (866) 698-6562, www.viper2.com
         3) Perminator Tape by W.R. Medows, Inc tel (847) 214-2100; (800) 342-5976, www.wrmeadows.com
   2. Vapor Proofing Mastic:
      a) Water Vapor Transmission Rate: 0.3 perms maximum, ASTM E96/E96M.
      b) Subject to requirements, available products include:
         1) Stego Mastic manufactured by Stego Industries, LLC, tel. (877) 464-7834, www.stegoindustries.com
         2) Vapercheck Mastic manufactured by Insulation Solutions Inc., tel. (866) 698-6562, www.viper2.com
         3) Pointing Mastic or MEL-ROL® LM by W.R. Medows, Inc tel (847) 214-2100; (800) 342-5976, www.wrmeadows.com
   3. Pipe Boots:
      a) Pre-fabricated or construct pipe boots from vapor retarder material, pressure sensitive tape and/or mastic per manufacturer’s instructions.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that surface over which vapor barrier is to be installed is complete and ready before proceeding with installation of vapor barrier.

B. Ensure that subsoil is approved by Architect or Geotechnical firm.

3.2 INSTALLATION

A. Install vapor barrier in accordance with manufacturer's instructions and ASTM E1643. Where inconsistencies occur between this practice and the manufacturer's instructions, conform to the manufacturer's instructions. Unroll vapor retarder with the longest dimension parallel with the direction of the pour.

B. Install vapor barrier under interior slabs on grade; lap sheet over footings and seal to foundation walls.

C. Lap joints minimum 6 inches and seal with approved seam tape.

D. Seal joints, seams and penetrations watertight with manufacturer's recommended products and follow manufacturer's written instructions.

E. No penetration of vapor barrier is allowed except for reinforcing steel and permanent utilities that have been sealed with seam tape and/or mastic in accordance with manufacturer's instructions.

F. Repair damaged vapor retarder before covering with other materials by cutting patches of vapor retarder, overlapping damaged area 6 inches, and taping all four sides with tape.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Inspect and repair sheet vapor retarder in accordance with ASTM E1643, items below and manufacturer's written instructions prior to placement of the slab.
   1. Inspect and mark all areas of damage and insufficient installation of the vapor retarder sufficiently in advance of concrete placement such that deficiencies may be corrected before concrete is placed.
   2. Repair vapor retarder damaged during placement of reinforcing or concrete with vapor barrier material or as instructed by manufacturer.
   3. Lap beyond damaged areas a minimum of 6 in. (50 mm) and seal as prescribed for sheet joints.
   4. Avoid the use of non-permanent stakes driven through vapor retarder.
   5. If non-permanent stakes are driven through vapor retarder, repair as recommended by vapor retarder manufacturer.
   6. Seal permanent penetrations as recommended by vapor retarder manufacturer.

C. Review of representative portions of the vapor barrier membrane installation (digitally or in-person, when possible) prior to concrete placement to help ensure compliance with governing installation standard, ASTM E1643, and Contract Documents.

D. Provide letter from manufacturer to document installation review (in the manner described above) and consistent with governing installation standard, ASTM E1643.

3.4 PROTECTION

A. Take precaution to protect installed Vapor Retarder. Replace or repair any areas where Vapor Retarder has been punctured, regardless of the size of the puncture.

B. Avoid driving stakes through Vapor Retarder. Where this cannot be avoided, each individual penetration must be sealed.

END OF SECTION 03 0516

SECTION 03 1000 - CONCRETE FORMING AND ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.

B. Form accessories.

C. Form stripping.

1.2 RELATED REQUIREMENTS

A. Section 03 2000 - Concrete Reinforcing.

B. Section 05 1200 - Structural Steel Framing: Placement of embedded steel anchors and plates in cast-in-place concrete.

1.3 REFERENCE STANDARDS

A. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

B. ACI PRC-347 - Guide to Formwork for Concrete; 2014 (Reapproved 2021).

C. ACI SPEC-117 - Specification for Tolerances for Concrete Construction and Materials; 2010 (Reapproved 2015).

D. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

E. ASME A17.1 - Safety Code for Elevators and Escalators Includes Requirements for Elevators, Escalators, Dumbwaiters, Moving Walks, Material Lifts, and Dumbwaiters with Automatic Transfer Devices; 2022.

F. COE CRD-C 513 - Handbook for Concrete and Cement Corps of Engineers Specifications for Rubber Waterstops; 1974.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect plastic foam products from damage and exposure to sunlight.

B. Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 PRODUCTS

2.1 FORMWORK - GENERAL

A. Provide concrete forms, accessories, shoring, and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct concrete that complies with design with respect to shape, lines, and dimensions.

C. Comply with applicable state and local codes with respect to design, fabrication, erection, and removal of formwork.

D. Comply with relevant portions of ACI CODE-318, ACI PRC-347, and ACI SPEC-301.

2.2 WOOD FORM MATERIALS

A. Form Materials: At the discretion of the Contractor.

2.3 FORMWORK ACCESSORIES

A. Form Ties: Snap-off type, galvanized metal, fixed length, cone type, with waterproofing washer, 1 inch back break dimension, free of defects that could leave holes larger than 1 inch in concrete surface.

B. Form Release Agent: Capable of releasing forms from hardened concrete without staining or discoloring concrete or forming bugholes and other surface defects, compatible with concrete and form materials, and not requiring removal for satisfactory bonding of coatings to be applied.
   1. Do not use materials containing diesel oil or petroleum-based compounds.

C. Dowel Sleeves: Plastic sleeve and nailable plastic base for smooth, round, steel load-transfer dowels.

D. Plate Dowel System: Steel plate dowel and plastic dowel sleeve; with integral fasteners for attachment to formwork.

E. Filler Strips for Chamfered Corners: Wood strip type; 3/4" by 3/4" inch size; maximum possible lengths.

F. Embedded Anchor Shapes, Plates, Angles and Bars: As specified in Section 05 1200.

G. Reinforcing bar and mesh supports: Supports to hold rebar or wire mesh in place to allow the correct depth and placement, prior to the rebar or wire mesh being encased in concrete.
   1. Metal supports:
      a) Slab bolster with continuous bottom plate or continuous bottom rails.
   2. Precast/concrete blocks:

a)

2.4 WATERSTOPS

A. Flexible Rubber Waterstops: U.S. Army COE CRD-C 513, for embedding in concrete to prevent passage of fluids through joints, with factory fabricated corners, intersections, and directional changes.
   1. Profile: Ribbed with center bulb

B. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch (19 by 25 mm). Apply adhesive primer to the joint surface (especially vertical joints) before applying waterstop as recommended by Manufacturer.
   1. Manufacturers:
      a) Cetco; Waterstop-RX: www.cetco.com
      b) Sika; Swellstop: www.usa.sika.com/
      c) Henry; HYDRO-FLEX® WATERSTOP: www.henry.com/
      d) GCP Applied Technologies; ADCOR 500S Waterstop: www.gcpat.com

PART 3 EXECUTION

3.1 EARTH FORMS

A. Earth forms are not permitted.

3.2 ERECTION - FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI SPEC-301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Align joints and make watertight. Keep form joints to a minimum.

D. Coordinate this section with other sections of work that require attachment of components to formwork.

E. If formwork is placed after reinforcement, resulting in insufficient concrete cover over reinforcement, request instructions from Architect before proceeding.

3.3 APPLICATION - FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer's recommendations.

3.4 INSERTS, EMBEDDED PARTS, AND OPENINGS

A. Locate and set in place items that will be cast directly into concrete.

B. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

C. Chamfer where shown on drawings, exterior corners, top of foundation walls, housekeeping pads, and edges of permanently exposed concrete.

D. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

E. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.5 WATERSTOPS

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm.
   1. Install in longest lengths practicable.
   2. Locate waterstops in center of joint unless otherwise indicated on Drawings.
   3. Allow clearance between waterstop and reinforcing steel of not less than 2 times the largest concrete aggregate size specified in 03 3000 - Cast-in-Place Concrete.
   4. Secure waterstops in correct position at 12 inches on center.
   5. Clean waterstops immediately prior to placement of concrete.
   6. Support and protect exposed waterstops during progress of the Work.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated on Drawings, according to manufacturer's written instructions, by adhesive bonding, mechanically fastening, and firmly pressing into place.
   1. Install in longest lengths practicable.
   2. Locate waterstops in center of joint unless otherwise indicated on Drawings.
   3. Protect exposed waterstops during progress of the Work.

3.6 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean formed cavities of debris prior to placing concrete.
   1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.
   2. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.7 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI SPEC-117, unless otherwise indicated.

B. Construct and align formwork for elevator hoistway in accordance with ASME A17.1.

3.8 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

3.9 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION 03 1000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 2000 - CONCRETE REINFORCING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete.

B. Supports and accessories for steel reinforcement.

C. Welded-wire reinforcement.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

1.3 REFERENCE STANDARDS

A. ACI MNL-66 - ACI Detailing Manual; 2020.

B. ACI SPEC-301 - Specifications for Concrete Construction; 2020.

C. ACI 117 - Specification for Tolerances for Concrete Construction and Materials; 2010 (Reapproved 2015).

D. ACI 302.1R - Guide to Concrete Floor and Slab Construction; 2015.

E. ACI 315R - Guide to Presenting Reinforcing Steel Design Details; 2018.

F. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement; 2022.

G. ASTM A1064/A1064M - Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete; 2022.

H. CRSI (DA4) - Manual of Standard Practice; 2023.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings: Comply with requirements of ACI MNL-66 Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.

C. Shop Drawings: Placing drawings that detail fabrication, bending, and placement, prepared according to ACI 315R. Include wall elevations, material, grade, bar schedules, stirrup spacing, bent bar diagrams, splices and laps, mechanical connections, tie spacing, hoop spacing, arrangement, and supports of concrete reinforcement. Include special reinforcement required for openings through concrete structures.

D. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

E. Resubmitted drawings shall have all revisions clouded or clearly identified on the drawings.

F. CTHPB Documentation Submittals: Comply with Division 01 Section "Sustainable Design Requirements" and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

G. Manufacturer's Certificate: Certify that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.

H. Field quality-control and special inspection reports.

I. Minutes of preinstallation conference.

1.5 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI SPEC-301.
   1. Maintain one copy of each document on project site.

B. Preinstallation Conference: Conduct conference at Project site to comply with requirements in 01 3000 - Administrative Requirements.
   1. Review the following:
      a) Special inspection and testing and inspecting agency procedures for field quality control.
      b) Construction, contraction and isolation joints.
      c) Steel-reinforcement installation.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage and to avoid damaging coatings on steel reinforcement.

PART 2 PRODUCTS

2.1 REINFORCEMENT

A. Reinforcing Steel: ASTM A615/A615M, Grade 60 (60,000 psi).
   1. Deformed billet-steel bars.
   2. Unfinished.

B. Steel Welded Wire Reinforcement (WWR): Plain type; ASTM A1064/A1064M.
   1. Form: Flat Sheets.
   2. WWR Style: As indicated on drawings.

C. Reinforcement Accessories:
   1. Tie Wire: Annealed, minimum 16 gauge, 0.0508 inch.
   2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.
      a) Manufacture bar supports from steel wire, plastic, or precast concrete in accordance with CRSI's "Manual of Standard Practice," of greater compressive strength than concrete.
   3. Provide plastic coated steel components for placement within 1-1/2 inches of weathering surfaces.
   4. Joint Dowel Bars: ASTM A615/A615M, Grade 60 (Grade 420), plain-steel bars, cut true to length with ends square and free of burrs.

2.2 FABRICATION

A. Fabricate concrete reinforcing in accordance with CRSI (DA4) - Manual of Standard Practice.

B. Welding of reinforcement is not permitted.

C. Locate reinforcing splices not indicated on drawings at point of minimum stress.

PART 3 EXECUTION

3.1 PREPARATION

A. Protection of In-Place Conditions:
   1. Do not cut or puncture vapor retarder.
   2. Repair damage and reseal vapor retarder before placing concrete.

3.2 PLACEMENT

A. Place, support and secure reinforcement against displacement. Do not deviate from required position.

B. Installation tolerances: Comply with ACI 117.

C. Do not displace or damage vapor retarder.

D. Accommodate placement of formed openings.

E. Comply with applicable code for concrete cover over reinforcement.

F. Bond and ground all reinforcement to requirements of Section 26 0526.

G. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that reduce bond to concrete.

H. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

I. Lap splices as indicated on Drawings.
   1. Bars indicated to be continuous, and all vertical bars shall be lapped per "Reinforcing Splice Length Schedule.
   2. Stagger splices in accordance with ACI 318.
   3. Mechanical Splice Couplers: Install in accordance with manufacturer's instructions.

J. Install welded-wire reinforcement in longest practicable lengths.
   1. Support welded-wire reinforcement in accordance with CRSI "Manual of Standard Practice."
      a) For reinforcement less than W4.0 or D4.0, continuous support spacing shall not exceed 24 inches.
   2. Support: Provide support adequate to maintain WWR 1 1/2 inches from the surface of the slab on grade. Supports should be close enough that the welded wire reinforcement cannot be forced out of location by construction foot traffic.
   3. Welded wire reinforcement should not be placed on the ground and pulled up after placement of the concrete, nor should the mats be walked in after placing the concrete per ACI 302.1R .
   4. Lap edges and ends of adjoining sheets at least one wire spacing plus 2 inches (50 mm) for plain wire and 8 inches (200 mm) for deformed wire.
   5. Offset laps of adjoining sheet widths to prevent continuous laps in either direction.
   6. Lace overlaps with wire.

3.3 FIELD QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

END OF SECTION 03 2000

SECTION 03 3000 - CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Joint devices associated with concrete work.

B. Miscellaneous concrete elements, including equipment pads and steel pan stairs.

C. Concrete curing.

1.2 RELATED REQUIREMENTS

A. Section 03 1000 - Concrete Forming and Accessories: Forms and accessories for formwork.

B. Section 03 2000 - Concrete Reinforcing.

C. Section 03 6213 - Non-Metallic Non-Shrink Grouting: For grout beneath base and bearing plates.

D. Section 03 0516 - Under-Slab Vapor Retarder: For vapor barrier placed directly under slabs on grade.

E. Section 07 9200 - Joint Sealants: Products and installation for sealants for saw cut joints and isolation joints in slabs.

1.3 REFERENCE STANDARDS

A. ACI 211.2 - Standard Practice for Selecting Proportions for Structural Lightweight Concrete; 1998 (Reapproved 2004).

B. ACI CODE-318 - Building Code Requirements for Structural Concrete and Commentary; 2019 (Reapproved 2022).

KK. ASTM C1116/C1116M - Standard Specification for Fiber-Reinforced Concrete; 2023.

LL. ASTM C1602/C1602M - Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete; 2022.

MM. ASTM C1866/C1866M - Standard Specification for Ground-Glass Pozzolan for Use in Concrete; 2020.

NN. ASTM C989/C989M - Standard Specification for Slag Cement for Use in Concrete and Mortars; 2024.

OO. ASTM D8139 - Standard Specification for Semi-Rigid, Closed-Cell Polypropylene Foam, Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction; 2023.

PP. ASTM D6817/D6817M - Standard Specification for Rigid Cellular Polystyrene Geofoam; 2017.

QQ. ASTM E1155 - Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers; 2020.

RR. ASTM E1155M - Standard Test Method for Determining FF Floor Flatness and FL Floor Levelness Numbers (Metric); 2014.

SS. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products; 2014.

TT. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures; 2006.

UU. ISO 14040 - Environmental management - Life cycle assessment - Principles and framework; 2006 (Amended 2020).

VV. ISO 14044 - Environmental management - Life cycle assessment - Requirements and guidelines; 2006 (Amended 2020).

WW. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services; 2017.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Shop Drawings:
   1. Construction/Control Joint Layout Plan: Indicate proposed construction/control joints required to construct the structure.
      a) Layout of construction/control joints is subject to approval of the Architect.
      b) For slab on grade construction/control joint layout, include size and shape of boxouts for column/pier conditions.

C. Product Data: Submit manufacturers' data on manufactured products showing compliance with specified requirements and installation instructions.

D. Mix Design: Submit proposed concrete mix design.
   1. Indicate proposed mix design complies with requirements of ACI SPEC-301, Section 4 - Concrete Mixtures.
   2. Indicate proposed mix design complies with requirements of ACI CODE-318, Chapter 5 - Concrete Quality, Mixing and Placing.
   3. Indicate proposed mix design complies with fiber reinforcing manufacturer's written recommendations.
   4. For structural lightweight concrete, submit test results and correlation between equilibrium density and the fresh bulk density of concrete for review. The fresh bulk density shall be used as the basis for acceptance during construction.
   5. Design Mixtures: For each concrete mixture, include the following: mixture identification, minimum 28-day compressive strength, durability exposure class, maximum w/cm, calculated equilibrium unit weight for lightweight concrete, slump limit, air content, nominal maximum aggregate size, fiber reinforcement dosage, intended placement method, indicate amounts of mixing water to be withheld for later addition at Project site if any, and submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

E. Test Reports: Submit report for each test or series of tests specified.

F. Field quality-control and special inspection reports.

G. Cold and hot weather concreting procedures.
   1. Contractor shall indicate how they intend to implement cold and hot weather concreting, as indicated in "PLACING CONCRETE" section below, including materials used and specific examples for this Project.

H. Sustainable Design Submittal: If any fly ash, ground granulated blast furnace slag, silica fume, rice hull ash, or other waste material is used in mix designs to replace Portland cement, submit the total volume of concrete cast in place, mix design(s) used showing the quantity of portland cement replaced, reports showing successful cylinder testing, and temperature on day of pour if cold weather mix is used.

I. CTHPB Documentation Submittals: Comply with Division 01 Section "Sustainable Design Requirements" and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

J. Environmental Product Declaration (EPD): Submit in accordance with the following.
   1. Publicly available, critically reviewed life cycle analysis having at least a cradle-to-gate scope conforming to one of the below criteria.
      a) Good: Product-specific; compliant with ISO 14044.
      b) Better: Industry-wide, generic; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      c) Best: Commercial-product-specific; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      d) Where demonstration of impact reduction below industry average is required, submit both industry-wide and commercial-product-specific declarations; or submit at least 5 declarations for products of the same type by other manufacturers in the same industry.
   2. Submit EPD for 90% by volume for all concrete mixes used in the project.
   3. For products delivered in multiple shipments to the jobsite, an EPD must be provided for each separate shipment from a different point of production, or from a a different supplier.
   4. Impact Categories:
      a) Global Warming Potential (GWP): All GWP information submitted shall be in the form of $kgCO_2eq/kg$.

K. Bill of Materials: Material supplier(s) shall provide a report, when the material sources are known, and at the completion of the primary structural frame, summarizing all concrete quantities and the location where each material was obtained. Each unique mix design used on the project shall be itemized.
   1. In addition to the requirements above, report the following in cubic yards for concrete and itemize as required for each unique mix design:
      a) Total Concrete Volume

L. Minutes of preinstallation conference.

1.5 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI SPEC-301 and ACI CODE-318.
   1. Maintain one copy of each document on site.

B. Follow recommendations of ACI PRC-305 when concreting during hot weather.

C. Follow recommendations of ACI PRC-306 when concreting during cold weather.

D. For slabs required to include moisture vapor reducing admixture (MVRA), do not proceed with placement unless manufacturer's representative is present for every day of placement.

E. Preinstallation Conference: Conduct conference at Project site to comply with requirements in 01 3000 - Administrative Requirements.
   1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
      a) Contractor's superintendent.
      b) Independent testing agency responsible for concrete design mixtures.
      c) Ready-mix concrete manufacturer.
      d) Concrete subcontractor.
      e) Special Inspector.
      f) Architect
      g) Structural Engineer of Record
   2. Review the following:
      a) Special inspection and testing and inspecting agency procedures for field quality control.
      b) Construction, control and isolation joints, joint-filler strips and keyway forming.
      c) Semirigid joint fillers.
      d) Vapor-retarder installation and inspection.
      e) Anchor rod and anchorage device installation tolerances.
      f) Cold and hot weather concreting procedures.
      g) Concrete finishes and finishing. Mockups if required.
      h) Curing procedures.
      i) Methods for achieving specified floor and slab flatness and levelness.
      j) Floor and slab flatness and levelness measurements.
      k) Concrete repair procedures.
      l) Concrete protection.
      m) Initial curing and field curing of field test cylinders (ASTM C31/C31M.)
      n) Protection of field cured field test cylinders.
      o) Determine point at which samples are taken.
      p) Distribution list for Test Reports.

F. Installer Qualifications: A qualified installer who employs Project personnel qualified as an ACI-certified Flatwork Technician and Finisher and a supervisor who is a certified ACI Flatwork Concrete Finisher/Technician or an ACI Concrete Flatwork Technician .
   1. Post-Installed Concrete Anchors Installers: ACI-certified Adhesive Anchor Installer.

G. Ready-Mixed Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.
   1. Manufacturer certified in accordance with NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

PART 2 PRODUCTS

2.1 FORMWORK

A. Comply with requirements of Section 03 1000.

2.2 REINFORCEMENT MATERIALS

A. Comply with requirements of Section 03 2000.

2.3 CONCRETE MATERIALS

A. Cement: ASTM C150/C150M, Type I/II Portland type or ASTM C595/C595M, Portland-limestone cement (PLC) Type IL.
   1. Acquire cement for entire project from same source.

B. Fine and Coarse Aggregates: ASTM C 33. Class 3S coarse aggregate or better, graded.
   1. Acquire aggregates for entire project from same source.

C. Lightweight Aggregate: ASTM C330/C330M.

D. Fly Ash: ASTM C618, Class C or F. LOI shall not exceed 3%, specific gravity shall not be less than 2.2.

E. Ground Granulated Blast-Furnace Slag: ASTM C989/C989M, Grade 120.

F. Ground Glass Pozzolan: ASTM C1866/C1866M.

G. Water and Water Used to Make Ice: ASTM C94/C94M , potable or complying with ASTM C1602/C1602M, including all limits listed in Table 2 and the requirements of paragraph 5.4.

H. Structural Fiber Reinforcement: ASTM C1116/C1116M.
   1. Fiber Length: 2.0 inch , nominal.
   2. Products:
      a) Euclid Chemical Company; TUF-STRAND SF: www.euclidchemical.com/#sle.
      b) Fibermesh; Fibermesh 650: www.fibermesh.com/#sle.
      c) GCP Applied Technologies; STRUX 90/40: www.gcpat.com/#sle.
      d) GCP Applied Technologies; STRUX BT50: www.gcpat.com/#sle.
      e) ABC Polymer Industries, LLC; FiberForce 650TM; www.abcpolymerindustries.com

2.4 ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Air Entrainment Admixture: ASTM C260/C260M.

C. High Range Water Reducing and Retarding Admixture: ASTM C494/C494M Type G.

D. High Range Water Reducing Admixture: ASTM C494/C494M Type F.

E. Water Reducing and Accelerating Admixture: ASTM C494/C494M Type E.

F. Water Reducing and Retarding Admixture: ASTM C494/C494M Type D.

G. Accelerating Admixture: ASTM C494/C494M Type C.

H. Retarding Admixture: ASTM C494/C494M Type B.

I. Water Reducing Admixture: ASTM C494/C494M Type A.

2.5 ACCESSORY MATERIALS

A. Underslab Vapor Retarder: Comply with requirements of Section 03 0516 - Under-Slab Vapor Retarder.

B. Non-Shrink Cementitious Grout: Comply with requirements of Section 03 6213 - Non-Metallic Non-Shrink Grouting

C. Structural Grade Rigid Filler Material: Complies with ASTM C578 or ASTM D6817/D6817M.
   1. Expanded Polystyrene (EPS)
   2. Type and Compressive Resistance: Type XIV, 40 psi (276 kPa) compressive resistance at 10% strain, minimum.
   3. Type and Thermal Resistance, R-value: Type XIV, 4.2 (0.74), minimum, per 1 inch thickness at 75 degrees F mean temperature, when tested in accordance with ASTM C518 .
   4. Board Size: 48 inch by 96 inch.
   5. Board Thickness: As Indicated on Drawings.
   6. Board Edges: Square, at long edges.
   7. Recycled Content: Minimum 20%, certified by independent third party such as Scientific Certification Systems.
   8. Manufacturers:
      a) DiversiFoam Products; RayLite® EPS Insulation, Type XIV: www.diversifoam.com
      b) Atlas Molded Products; ThermalStar Insulation Board 40 or Atlas Geofoam 39 www.atlasmoldedproducts.com.
      c) Insulfoam, a Carlisle Company; InsulFoam XIV 40psi: www.Insulfoam.com
      d) ISOLOFOAM Group; ISOLOFOAM XHD 400/600: www.isolofoam.com
      e) Plymouth Foam Incorporated; Durafill 39: www.goplymouthfoam.com
      f) ____.
      g) Substitutions: See Section 01 6000 - Product Requirements.

2.6 BONDING AND JOINTING PRODUCTS

A. Latex Bonding Agent: Non-redispersable acrylic latex, complying with ASTM C1059/C1059M, Type II. For use in non-structural applications i.e. bonding new concrete to old concrete per typical detail "Typical Wall Joints".

B. Epoxy Bonding System:
   1. Complying with ASTM C881/C881M and of Type required for specific application. For use in structural bearing applications.

C. Slab Isolation Joint Filler: 1/2-inch thick, height equal to slab thickness, with removable top section forming 1/2-inch deep sealant pocket after removal.
   1. Material: ASTM D8139, semi-rigid, closed-cell polypropylene foam.
   2. Products:
      a) Nomaco, Inc; Fastflex Slab Isolation Joint Filler with Tear-Off Strip: www.nomaco.com/#sle.
      b) W. R. Meadows, Inc; Deck-O-Foam Joint Filler with pre-scored top strip: www.wrmeadows.com/#sle.
      c) Right / Pointe, LLC; Flex Foam Expansion Joint
      d) Substitutions: See Section 01 6000 - Product Requirements.

D. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with rectangular or round knockout holes for conduit or rebar to pass through joint form at 6 inches on center; ribbed steel stakes for setting.

2.7 CURING MATERIALS

A. Moisture-Retaining Sheet: ASTM C171.
   1. White-burlap-polyethylene sheet, weighing not less than 3.8 ounces per square yard.
      a) 10 oz. burlap laminated onto 5 mil white coated polyethylene

B. Water and Water Used to Make Ice: Potable, not detrimental to concrete.

2.8 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with ACI PRC-211.1 recommendations.
   1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

B. Proportioning Structural Lightweight Concrete: Comply with ACI 211.2 recommendations.
   1. Replace as much Portland cement as possible with fly ash, ground granulated blast furnace slag, silica fume, or rice hull ash as is consistent with ACI recommendations.

C. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI SPEC-301.
   1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.

D. Admixtures: Add acceptable admixtures as recommended in ACI PRC-211.1 and at rates recommended or required by manufacturer.

E. Fiber Reinforcement: Add to mix at rate of 3.0 pounds per cubic yard minimum, or as recommended by manufacturer for specific project conditions.

F. Normal Weight Concrete: Footings and Foundation Walls
   1. Exposure Category: Freezing and Thawing (F)
   2. Exposure Class: ACI 318 F1
   3. Compressive Strength, when tested in accordance with ASTM C39/C39M at 56 days: 4,000 pounds per square inch.
   4. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
      a) Fly Ash or Ground Glass Pozzolan Content: Between 15 and 25 percent of cementitious materials by weight.
      b) Ground Granulated Blast-Furnace Slag: Between 30 and 50 percent.
      c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 30 and 50 percent by mass, with fly ash or pozzolan not exceeding 25 percent.
   5. Total Air Content: 6 percent plus or minus 1.5 percent at point of placement, determined in accordance with ASTM C173/C173M.
   6. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

G. Normal Weight Concrete: Exterior Building Slabs on Grade
   1. Exposure Category: Freezing and Thawing (F)
   2. Exposure Class: ACI 318 F3
   3. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,500 pounds per square inch.
   4. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
      a) Fly Ash or Ground Glass Pozzolan Content: Between 10 and 15 percent of cementitious materials by weight.
      b) Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent.
      c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent by mass, with fly ash or pozzolan not exceeding 15 percent.
   5. Total Air Content: 6 percent plus or minus 1.5 percent at point of placement, determined in accordance with ASTM C173/C173M.
   6. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

H. Normal Weight Concrete: Interior Slabs on Grade and Haunched Slabs
   1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,000 pounds per square inch.
   2. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
      a) Fly Ash or Ground Glass Pozzolan Content: Between 10 and 15 percent of cementitious materials by weight.
      b) Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent.

c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent by mass, with fly ash or pozzolan not exceeding 15 percent.

3. Total Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
4. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

I. Structural Lightweight Concrete: Suspended Slabs and Housekeeping Pads
1. Compressive Strength, when tested in accordance with ASTM C39/C39M at 28 days: 4,000 pounds per square inch.
2. Supplementary Cementitious Materials (SCMs): Mix design must meet a minimum of one of the criteria below.
a) Fly Ash or Ground Glass Pozzolan Content: Between 10 and 15 percent of cementitious materials by weight.
b) Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent.
c) Combined Fly Ash or Ground Glass Pozzolan and Ground Granulated Blast-Furnace Slag: Between 10 and 15 percent by mass, with fly ash or pozzolan not exceeding 15 percent.
3. Total Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
4. Maximum dry unit weight: 115 pounds per cubic foot plus or minus 3 lb/cu. ft. (48.1 kg/cu. m). The calculated value per ASTM C567/C567M shall be included in the submittal.
5. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

J. Steel Pan Stairs: Provide 3000 psi normal weight concrete fill with 3/8” maximum aggregate reinforced with WWR 6 x 6-W1.4 x W1.4 for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.

2.9 MIXING

A. Transit Mixers: Comply with ASTM C94/C94M.
1. Furnish batch ticket information.
2. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above **90 deg F reduce mixing and delivery time to 60 minutes.**

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

B. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.

C. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas and that required inspections are completed.

D. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Where new concrete is to be bonded to previously placed concrete, prepare existing surface by cleaning and applying bonding agent in according to bonding agent manufacturer's instructions.
   1. Use epoxy bonding system for bonding to damp surfaces, for structural load-bearing applications, and where curing under humid conditions is required.
   2. Use latex bonding agent only for non-load-bearing applications.

3.3 PLACING CONCRETE

A. Before placing concrete, verify that installation of formwork, reinforcement, embedded items, and vapor retarder is complete and that required inspections are completed.
   1. Immediately prior to concrete placement, inspect vapor retarder for damage and deficient installation, and repair defective areas.
   2. Provide continuous inspection of vapor retarder during concrete placement and make necessary repairs to damaged areas as Work progresses.

B. Place concrete in accordance with ACI PRC-304.

C. Place concrete for floor slabs in accordance with ACI PRC-302.1.

D. Cold-Weather Placement: Comply with ACI 301 and ACI 306.1 and as follows.
   1. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
   2. When average high and low temperature is expected to fall below 40 deg F (4.4 deg C) for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
   3. Do not use frozen materials or materials containing ice or snow.
   4. Do not place concrete in contact with surfaces less than 35 deg F (1.7 deg C), other than reinforcing steel.
   5. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
   6. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

E. Hot-Weather Placement: Comply with ACI 301 and ACI 305.1 (ACI 305.1M), and as follows:
   1. Maintain concrete temperature at time of discharge to not exceed 95 deg F (35 deg C).
   2. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor’s option.
   3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.
   4. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
   5. An alternate concrete mix design may be submitted for approval using a retarding admixture.

F. Notify Architect not less than 24 hours prior to commencement of placement operations.

G. Maintain records of concrete placement. Record date, location, quantity, air temperature, and test samples taken.

H. Ensure reinforcement, inserts, waterstops, embedded parts, and formed construction joint devices will not be disturbed during concrete placement.

I. Place concrete continuously without construction (cold) joints wherever possible; where construction joints are necessary, before next placement prepare joint surface by removing laitance and exposing the sand and sound surface mortar, by sandblasting or high-pressure water jetting.

J. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.
   1. Do not use vibrators to transport concrete inside forms.
   2. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches (150 mm) into preceding layer.
   3. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
   4. At each insertion, limit duration of vibration to time necessary to consolidate concrete, and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

K. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.
   1. If permitted, the contractor is required to clearly note on the delivery ticket the quantity of water withheld at the batching plant that can be added on site.
   2. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

L. Finish floors level and flat, unless otherwise indicated, within the tolerances specified below.

3.4 SLAB JOINTING

A. Locate joints as indicated on drawings.

B. Anchor joint fillers and devices to prevent movement during concrete placement.

C. Isolation Joints: Use preformed joint filler with removable top section for joint sealant specified in 07 9200 - Joint Sealants, total height equal to thickness of slab, set flush with top of slab.

D. Saw Cut Contraction Joints: Saw cut joints before concrete begins to cool, within 4 to 12 hours after placing when cutting action does not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks; use 1/8 inch thick shatterproof abrasive or diamond-rimmed blade and cut at least 1 inch deep but not less than one quarter (1/4) the depth of the slab.
   1. For slabs on grade where fiber reinforcment is used in lieu of WWR, saw cut shall be at least one third (1/3) the depth of the slab.

E. Construction Joints: Where not otherwise indicated, use metal combination screed and key form, with removable top section for joint sealant.

F. Construction Joints in Slabs on Steel Deck: Where not otherwise indicated,

1. Joints parallel to girder shall be located minimum 5'-0" off girder centerline.
2. Joints parallel to infill beams shall be located half way between adjacent beam.
3. Submit layout plan for A/E approval.

3.5 FLOOR FLATNESS AND LEVELNESS TOLERANCES

A. Minimum F(F) Floor Flatness and F(L) Floor Levelness Values:
   1. Exposed to View and Foot Traffic: F(F) of 20; F(L) of 15, on-grade only.
   2. Under Thick-Bed Tile: F(F) of 20; F(L) of 15, on-grade only.
   3. Under Carpeting: F(F) of 25; F(L) of 20, on-grade only.
   4. Under Thin Resilient Flooring and Thinset Tile: F(F) of 35; F(L) of 25, on-grade only.

B. Maintain F(F) numbers only for elevated slabs on steel deck for areas listed above.

C. Measure F(F) Floor Flatness and F(L) Floor Levelness in accordance with ASTM E1155 (ASTM E1155M), within 48 hours after slab installation; report both composite overall values and local values for each measured section.

D. Correct the slab surface if composite overall value is less than specified and if local value is less than two-thirds of specified value or less than F(F) 13/F(L) 10.

E. Correct defects by grinding or by removal and replacement of the defective work. Areas requiring corrective work will be identified. Re-measure corrected areas by the same process.

3.6 CONCRETE FINISHING

A. Repair surface defects, including tie holes, immediately after removing formwork.

B. Unexposed Form Finish: Rub down or chip off fins or other raised areas 1/4 inch or more in height.

C. Exposed Form Finish: Rub down or chip off and smooth fins or other raised areas 1/4 inch or more in height. Provide finish as follows:
   1. Smooth Rubbed Finish: Wet concrete and rub with carborundum brick or other abrasive, not more than 24 hours after form removal.

D. Concrete Slabs: Finish to requirements of ACI PRC-302.1 and as follows:
   1. Surfaces to Receive Thin Floor Coverings: "Steel trowel" as described in ACI 302.1R; thin floor coverings include Resilient Flooring, Resilient Athletic Flooring, Tile Carpeting, Tiling, and Fluid-Applied Flooring.
   2. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.
      a) Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.
   3. Other Surfaces to Be Left Exposed: Trowel as described in ACI PRC-302.1, minimizing burnish marks and other appearance defects.

3.7 CURING AND PROTECTION

A. Comply with requirements of ACI PRC-308. Immediately after placement, protect concrete from premature drying, excessively hot or cold temperatures, and mechanical injury.

B. Wet coverings should be laid over the concrete as soon as finishing operations are complete and surface marring can be avoided. Exposed concrete edges should be carefully covered. The coverings should be kept wet so that a film of moisture remains continuously in contact with the concrete throughout the curing period.

C. Maintain concrete with minimal moisture loss at relatively constant temperature for period necessary for hydration of cement and hardening of concrete.
   1. Curing Period: Not less than seven days.

D. Formed Surfaces: Cure by moist curing with forms in place for full curing period.

E. Surfaces Not in Contact with Forms:
   1. Slabs and Floors To Receive Adhesive-Applied Flooring: Curing compounds and other surface coatings are usually considered unacceptable by flooring and adhesive manufacturers. If such materials must be used, either obtain the approval of the flooring and adhesive manufacturers prior to use or remove the surface coating after curing to flooring manufacturer's satisfaction.
   2. Curing: Start as soon as free water has disappeared and before surface is dry. Keep continuously moist.
      a) Saturated Burlap: Saturate burlap-polyethylene and place burlap-side down over floor slab areas, lapping ends and sides; maintain in place.

3.8 TOLERANCES

A. Conform to ACI 117.

3.9 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

C. Provide free access to concrete operations at project site and cooperate with appointed firm.

D. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.

E. Tests of concrete and concrete materials may be performed at any time to ensure compliance with specified requirements.

F. All field quality control tests shall be performed at point of concrete placement.

G. Compressive Strength Tests: ASTM C39/C39M, for each test, mold and cure three concrete test cylinders. Obtain test samples for every 50 cubic yards or less of each class of concrete placed but not less than one per day. Test cylinders at 28 days except for foundation and footing mixes shall be tested at 56 days.

H. In the event that a compressive strength test of standard cured cylinders is more than 500 psi (3.5 MPa) below the design f'c, cores shall be drilled to verify the in-place strength. Three cores are required for each strength test failing to meet the specified criteria per ACI 214.4R.

I. Take three additional test cylinders during cold weather concreting, cured on job site under same conditions as concrete it represents. Test cylinders at 28 days except for foundation and footing mixes shall be tested at 56 days.

J. During cold weather concreting, a number of techniques are available for estimating the in-place strength of concrete per ACI 228.1R. When these have been correlated to standard-cured cylinders, they can be used to determine the concrete strength. Tests are performed using simple handheld equipment. Use one of the following to estimate concrete strength.
   1. Pullout strength testing (ASTM C900) requires placing bolts in the concrete before casting. Individual bolts are then pulled out of the structure.
   2. Penetration resistance (ASTM C803/C803M) is a technique that involves placing pins in the concrete using a powder-actuated tool.
   3. Pulse velocity measurements (ASTM C597) determines the propagation velocity of a pulse of vibrational energy through a concrete member.
   4. Rebound hammer measurements (ASTM C805/C805M) are also used to estimate concrete strength.

K. Perform one slump test for each set of test cylinders taken, following procedures of ASTM C143/C143M.

L. Air Content: Perform one test for each set of test cylinders taken, following procedures of ASTM C231/C231M, pressure method, for normal-weight concrete; ASTM C173/C173M, volumetric method, for structural lightweight concrete.

M. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 degrees F and below or 80 degrees F and above, and one test for each set of test cylinders taken.

N. Fresh Bulk Unit Weight: ASTM C138/C138M; For normal weight and structural lightweight concrete, perform one test for each set of test cylinders taken, but not less than one test for each day's pour of each concrete mixture.

O. Equilibrium Unit Weight: ASTM C567/C567M; For structural lightweight concrete, perform one test for each set of test cylinders taken, but not less than one test for each day's pour of each concrete mixture.

3.10 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to Architect and Contractor within 24 hours of test.

B. Defective Concrete: Concrete not complying with required lines, details, dimensions, tolerances or specified requirements.

C. Repair or replacement of defective concrete will be determined by the Architect. The cost of additional testing shall be borne by Contractor when defective concrete is identified.

D. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Architect for each individual area.

E. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete.
      a) Limit cut depth to 3/4 inch.
      b) Make edges of cuts perpendicular to concrete surface.
      c) Clean, dampen with water, and brush-coat holes and voids with bonding agent.
      d) Fill and compact with patching mortar before bonding agent has dried.
      e) Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
   2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement, so that, when dry, patching mortar matches surrounding color.
      a) Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching.
      b) Compact mortar in place and strike off slightly higher than surrounding surface.
   3. Repair defects on concealed formed surfaces that will affect concrete's durability and structural performance as determined by Architect.

3.11 PROTECTION

A. Do not permit traffic over unprotected concrete floor surface until fully cured.

END OF SECTION 03 3000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 3250 - CONCRETE POST-INSTALLED ANCHORS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Post installed anchors for concrete.

B. Post installed anchors for masonry.

1.2 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete.

B. Section 04 2000 - Unit Masonry.

C. Section 04 2900 - Engineered Unit Masonry.

D. Section 05 1200 - Structural Steel Framing.

1.3 REFERENCE STANDARDS

A. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware

C. ASTM A193/A193M - Standard Specification for Alloy-Steel and Stainless Steel Bolting for High Temperature or High Pressure Service and Other Special Purpose Applications

D. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength

E. ASTM A36/A36M - Standard Specification for Carbon Structural Steel

F. ASTM A510/A510M - Standard Specification for General Requirements for Wire Rods and Coarse Round Wire, Carbon Steel, and Alloy Steel

G. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts

H. ASTM A563M - Standard Specification for Carbon and Alloy Steel Nuts (Metric)

I. ASTM A615/A615M - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement

J. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel

K. ASTM C42/C42M - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete

L. ASTM C642 - Standard Test Method for Density, Absorption, and Voids in Hardened Concrete

M. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units

N. ASTM E1512 - Standard Test Methods for Testing Bond Performance of Bonded Anchors

O. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements

P. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions

Q. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions

R. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs

S. ASTM F594 - Standard Specification for Stainless Steel Nuts

T. ASTM F844 - Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use

U. ICC-ES AC01 - Acceptance Criteria for Expansion Anchors in Masonry Elements

V. ICC-ES AC58 - Acceptance Criteria for Adhesive Anchors in Masonry Elements

W. ICC-ES AC106 - Acceptance Criteria for Predrilled Fasteners (Screw Anchors) in Concrete or Masonry Elements

X. ICC-ES AC193 - Acceptance Criteria for Mechanical Anchors in Concrete Elements

Y. ICC-ES AC308 - Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements

1.4 SUBMITTALS

A. General: Submit in accordance with Conditions of the Contract and Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product specifications with recommended design values and physical characteristics for adhesive and mechanical anchors.

C. Quality Assurance Submittals:
   1. Test Reports: Certified test reports (ICC-ES Evaluation Report) showing compliance with ICC-ES AC193 , ICC-ES AC308 , ICC-ES AC01 or ICC-ES AC58.

D. Manufacturer’s installation instructions.

E. Installer Qualifications & Procedures: Submit installer qualifications. Submit a letter of procedure stating method of drilling, the product proposed for use, the complete installation procedure, manufacturer training date, and a list of the personnel to be trained on anchor installation.

F. Substitutions: Contractor shall submit for Structural Engineer's review calculations prepared and sealed by Contractors Professional Engineer indicating substituted product is capable of resisting loads indicated on Construction Documents. Substituted anchors shall be submitted with ICC-ES Evaluation Report indicating anchor conforms with ICC-ES AC308, ICC-ES AC193, ICC-ES AC01 or ICC-ES AC58 . Engineer shall be registered to practice in the State of the State in which the Project is located.

1.5 QUALITY ASSURANCE

A. Installer Qualifications:
   1. Drilled-in anchors shall be installed by a contractor with at least five years of experience performing similar installations. Contractor to be a certified installer of chemical anchors. Certification is achieved by completing the "basic anchor installation training program" prepared by manufacturer. Please call your local Hilti representative to schedule this no-charge service [800.879.8000].

B. Installer Training: Conduct a thorough training with the manufacturer or the manufacturer's representative for the contractor on the project. Training to consist of a review of the complete installation process for drilled-in anchors, to include but not limited to:
   1. Hole drilling procedure.
   2. Hole preparation & cleaning technique using the 2 x 2 x 2 method with compressed air or utilizing a hand-pump if compressed air is not available. 2 x 2 x 2 is equivalent to two passes with compressed air (min 90 psi @ 3.5 CFM), two passes with a manufacturer approved wire brush (correct diameter and length), and a final two passes with compressed air. If compressed air is not available, then the hand-pump requires 4 to 6 pumps or passes. Only two pumps with the hand-pump will not be sufficient for removing the dust and debris from the bore hole.
   3. Hole preparation and cleaning technique using Hilti Safe Set automatic hole cleaning with Hilti TE-CD or TE-YD hollow drill bits used in conjunction with a Hilti vacuum with a minimum value for the maximum volumetric flow rate of 129 cfm.
   4. Adhesive injection techniques and dispenser training/maintenance. Determining when to use the piston plug and extension hoses and when not too. Deep embedment's versus standard and shallow embedment's plus dispenser training. Deep embedment is considered to be greater than 10". Piston plug should be used in all overhead applications.
   5. Rebar dowel preparation and installation.
   6. Proof loading/torquing.

C. Certifications: Unless otherwise authorized by the Engineer, anchors shall have the following certification:
   1. ICC-ESR Evaluation Service Report indicating conformance with current applicable ICC-ES acceptance criteria's ICC-ES AC308 or ICC-ES AC193 reports for building code compliance. Acceptance Criteria.
   2. ACI 355.2 Evaluation Report

1.6 DELIVERY, STORAGE AND HANDLING

A. General: Deliver, store, and handle anchors in accordance with manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Fasteners and Anchors:
   1. Structural Bolts and Nuts: Carbon steel, ASTM A307, Grade A and galvanized in compliance with ASTM A153/A153M Class C.
   2. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563 or ASTM A563M nuts and ASTM F436/F436M washers.
   3. Carbon Steel Threaded Rod: ASTM A36/A36M; or ASTM A193/A193M Grade B7 or ISO 898 Class 5.8.
   4. Wedge Anchors: ASTM A510/A510M; or ASTM A108.
   5. Stainless Steel Bolts, Hex Cap Screws, and Studs: ASTM F593.
   6. Stainless Steel Nuts: ASTM F594.
   7. Zinc Plating: ASTM B633.
   8. Hot-Dip Galvanizing: ASTM A153/A153M.
   9. Metric Anchor Bolts, Screws, and Studs: ISO 898 Part 1.
   10. Metric Anchor Nuts: EN 24033.
   11. Metric Anchor Stainless Steel Bolts, Screws, and Studs: ISO 3506 Part 1.
   12. Metric Anchor Stainless Steel Nuts: ISO 3506 Part 2.
   13. Reinforcing Dowels: ASTM A615/A615M

2.2 POST INSTALLED ANCHORS

A. Screw Anchors: Screw type. Pre-drilling of the hole requires a standard ANSI drill bit with the same diameter as the anchor and installing the anchor will be done with an impact wrench. Provide anchors with a diameter and anchor length marking on the head. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors with zinc plating equivalent to DIN EN ISO 4042 (8mm min.).
   2. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
      a) Hilti Kwik-HUS EZ, ICC-ESR 3027 for concrete, ICC-ESR 3056 for masonry.
      b) Hilti Kwik-HUS EZ-I, ICC-ESR 3027.
      c) Hilti Kwik-HUS EZ-P, ICC-ESR 3027 for concrete, ICC-ESR 3056 for masonry.

B. Wedge Anchors: Wedge type, torque-controlled, with impact section to prevent thread damage and wedge dimples to prevent spinning during installation, complete with required nuts and washers. Provide anchors with length identification markings conforming to ICC-ES AC193 or ICC-ES AC01. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors manufactured from materials conforming to ASTM A510/A510M or ASTM A108 with zinc plating in accordance with ASTM B633, Type III Fe/Zn 5 (SC1). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.

2. Exterior Use: As indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be AISI Type 304 and Type 316 stainless steel provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. Stainless steel nuts shall conform to ASTM F594 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
3. Acceptable base material: Normal weight concrete, light weight concrete, normal weight concrete on metal deck, light weight concrete on metal deck and grouted masonry units.
4. Base material compressive strength:
   a) Fastening into concrete: Between 2500 psi and 8500 psi
   b) Fastening into concrete over metal deck: Minimum of 3000 psi
   c) Fastening into grouted masonry units: CMU's must be fully grouted and compressive strength of masonry f'm at 28 days must be a minimum of 1500 psi. CMU must conform to ASTM C90 and minimum nominal dimensions of 8 inches wide by 8 inches high by 16 inches long.
5. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
   a) Hilti Kwik Bolt 3 [KB3], ICC-ESR 2302 for uncracked concrete, ICC-ESR 1385 for masonry.
   b) Hilti Kwik Bolt-TZ [KB-TZ], ICC-ESR 1917 for cracked concrete, ICC-ESR 3785 for masonry.

C. Heavy Duty Metric Sleeve Anchors: Torque-controlled, exhibiting follow-up expansion under load, with provision for rotation prevention during installation. Type and size as indicated on Drawings.
1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors manufactured from materials conforming to ISO 898 Part 1, with zinc plating equivalent to ASTM B633, Type III Fe/Zn 5 (5 mm min.). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.
2. Exterior Use: As indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be manufactured from materials conforming to ISO 3506 Part 1 and having corrosion resistance equivalent to AISI Type 304 and Type 316 stainless steel. Stainless steel anchors shall be provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ISO 3506 Part 2 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
3. Acceptable base material: Normal weight concrete and light weight concrete.
4. Base material compressive strength: Between 2500 psi and 8500 psi
5. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
   a) Hilti HSL-3, HSL-3-G, or HSL-3-B, ICC-ESR-1545 (carbon steel).

D. Heavy Duty Metric Undercut Anchors: Bearing-type. Installed anchor shall have a minimum tension bearing area in the concrete, measured as the horizontal projection of the bearing surface, not less than two times the net tensile area of the anchor bolt. The installed anchor shall exhibit a form fit between the bearing elements and the undercut in the concrete. Type and size as indicated on Drawings.

1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel anchors manufactured from materials conforming to ISO 898 Part 1, with zinc plating equivalent to ASTM B633, Type III Fe/Zn 5 (5mm min.). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.
2. Exterior Use: As indicated on the Drawings, provide sherardized or stainless steel anchors. Sherardized anchors shall be manufactured from materials conforming to ISO 898 Part 1 and having corrosion resistance equivalent to ASTM A153/A153M with sherardized dry diffusion zinc coating (50 mm min.). Stainless steel anchors shall be manufactured from materials conforming to ISO 3506 Part 1 and having corrosion resistance equivalent to AISI Type 304 and Type 316 stainless steel. Stainless steel anchors shall be provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ISO 3506 Part 2 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
3. Acceptable base material: Normal weight concrete and light weight concrete.
4. Base material compressive strength: Between 2500 psi and 8500 psi
5. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Engineer, provide the following:
   a) Hilti HDA, ICC-ESR-1546.

E. Cartridge Injection Adhesive Anchors: Threaded steel rod, inserts or reinforcing dowels, complete with nuts, washers, polymer [epoxy] or hybrid mortar adhesive injection system, and manufacturer's installation instructions. Type and size as indicated on Drawings.
   1. Interior Use: Unless otherwise indicated on the Drawings, provide carbon steel rods conforming to ASTM A36/A36M, ISO 898 Class 5.8 HAS-E rod, or ASTM A193/A193M Type B7 with zinc plating in accordance with ASTM B633, Type III Fe/Zn 5 (SC1). Anchors in contact with preservative-treated and fire retardant treated wood shall be zinc coated or stainless steel.
   2. Exterior Use: As indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be AISI Type 304 and Type 316 stainless steel provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ASTM F594 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.
   3. Reinforcing dowels shall be ASTM A615/A615M Grade 60.
   4. Acceptable base material: Normal weight concrete grouted masonry units.
   5. Base material compressive strength:
      a) Fastening into concrete: Between 2500 psi and 8500 psi
      b) Fastening into concrete over metal deck: Minimum of 3000 psi
      c) Fastening into grouted masonry units: CMU must be fully grouted and compressive strength of masonry f'm at 28 days must be a minimum of 1500 psi. CMU must conform to ASTM C90 and minimum nominal dimensions of 8 inches wide by 8 inches high by 16 inches long.
   6. Where anchor manufacturer is not indicated, subject to compliance with requirements and acceptance by the Architect, provide the following:
      a) Hilti HAS threaded rods with HIT-HY 200 Safe Set System using Hilti Hollow Drill Bit and VC 20/40 vacuum System for anchor and rebar anchorage to concrete, ICC ESR-3187.
      b) Hilti HIT-Z anchor rods with HIT-HY 200 Safe Set System for anchorage to concrete, ICC ESR-3187.

c) Hilti HAS threaded rods with HIT-RE 500 V3 Safe Set System using Hilti Hollow Drill Bit and VC 20/40 vacuum System for anchor and rebar anchorage to concrete, ICC ESR-3814.
d) Hilti HAS-E, HAS-B7 threaded rods with Hilti HIT-HY 70 Adhesive Anchor System for anchorage to fully grouted masonry units, ICC-ESR 2682; AC58

PART 3 - EXECUTION

3.1 INSTALLATION

A. Post Installed Anchors:
1. Drill holes with rotary impact hammer drills using carbide-tipped bits. Drill bits shall be of diameters as specified by the anchor manufacturer. Unless otherwise shown on the Drawings, all holes shall be drilled perpendicular to the concrete surface. Edge distance, spacing and required embedment depth of holes should be in conformance with the Construction Documents.
   a) Cored Holes: Where anchors are permitted to be installed in cored holes, use core bits with matched tolerances as specified by the manufacturer. Properly clean cored hole per manufacturer's instructions.
   b) Embedded Items: Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Exercise care in coring or drilling to avoid damaging existing reinforcing or embedded items. Notify the Engineer if reinforcing steel or other embedded items are encountered during drilling. Take precautions as necessary to avoid damaging prestressing tendons, electrical and telecommunications conduit, and gas lines.
   c) Base Material Compressive Strength: Unless otherwise specified, do not drill holes in concrete or masonry until it has achieved full design strength. If compressive strength is unknown, contractor shall take concrete core complying with ASTM C42/C42M and perform compressive strength test complying with ASTM C39/C39M to determine strength.
   d) Acceptable Base Material: If concrete density is unknown, contractor shall take concrete core complying with ASTM C42/C42M to determine concrete weight in conformance with ASTM C642 (normal or lightweight) and to determine if base material is suitable for post installed anchor.
2. Perform anchor installation in accordance with manufacturer instructions. Contractor shall contact manufacturer for proper overhead application installation procedure.
3. Wedge Anchors and Heavy-Duty Sleeve Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in part to be fastened. Set anchors to manufacturer's recommended torque, using a torque wrench. Following attainment of 10% of the specified torque, 100% of the specified torque shall be reached within 7 or fewer complete turns of the nut. If the specified torque is not achieved within the required number of turns, the anchor shall be removed and replaced unless otherwise directed by the Engineer.
4. Undercut Anchors:

5. Cartridge Injection Adhesive Anchors: Clean all holes per manufacturer instructions to remove loose material and drilling dust prior to installation of adhesive. Holes may be dry, damp or wet. Inject adhesive into holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive Follow manufacturer recommendations to ensure proper mixing of adhesive components. Sufficient adhesive shall be injected in the hole to ensure that the annular gap is filled to the surface [use of piston plug to achieve these results]. Remove excess adhesive from the surface. Shim anchors with suitable device to center the anchor in the hole. Do not disturb or load anchors before manufacturer specified cure time has elapsed.
6. Observe manufacturer recommendations with respect to installation temperatures for cartridge injection adhesive anchors.

3.2 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage a special inspector and qualified testing agency to provide continuous inspection during installation. Special inspector and qualified testing agency inspector shall be a certified installer of chemical anchors. Certification is achieved by completing the "basic anchor installation training program" prepared by manufacturer. Please call your local Hilti representative to schedule this no-charge service [800.879.8000].
Inspecting agency to provide field reports which document the following information:
   1. Anchor location and description, including adhesive product name, anchor type, nominal anchor diameter, and anchor length.
   2. Verify hole dimensions, hole cleaning procedures, drill bit, drilling procedures and anchor tightening torque are in compliance with the manufacturer's installation instructions.
   3. Verification of anchor spacing, edge distances, concrete base material thickness and anchor embedment depth are in conformance with Construction Documents and manufacturer's recommendations.

3.3 POST INSTALLED ANCHOR LOAD TESTING

A. Anchors which the structural engineer requires load testing or any anchor that the special inspector or inspecting agency is concerned with the anchor installation or was damaged after installation may require load testing. Load testing is to be performed by a qualified testing agency or the manufacturer and results of test shall be provided in a report to the Structural Engineer of Record. Structural Engineer of Record shall provide the desired load for the test.

B. Anchor tension test procedure is listed below and is derived from ASTM E488/E488M and ASTM E1512 . If Structural Engineer of Record requires a shear load test, agency performing test shall provide testing procedure to engineer for their review prior to performing test.
   1. Locate area in base material where test fasteners will not interfere with permanent connections unless noted otherwise.
   2. Using a rotary hammer drill, drill bore holes with matched tolerance drill bits to specified hole diameters and embedment depths.
   3. Bore hole preparation: Mechanical fasteners: use compressed air or Hilti hand pump. (wire brushing is not needed with mechanical or undercut fasteners).
   4. Bore hole preparation: Chemical anchors: wire brushing and blowing out the hole is required. With two repetitions, first wire brush and then use compressed air.
   5. The bore hole cleaning procedure is the 2x2x2 method. This consists of two passes with compressed air (4+ with hand pump), 2 passes with same size wire brush, and a final two passes (4+ with hand pump) to fully prepare the bore hole for injection.

6. For mechanical anchors, hammer in mechanical fastener until embedment depth is reached, then torque fastener to specified value.
7. For chemical anchors, discard the first two trigger pulls at minimum but not less than required by manufacturer of the adhesive, then start injecting into the bottom of the hole, moving outward, filling up approximately 1/2 to 2/3 full. If piston plugs are used to inject, then the bore hole is only filled half way. Insert threaded rod or rebar with a turning motion, (approximately 1 turn during insertion). Wipe away any excess chemical anchor and let sit until full cure time has been reached.
8. After post installed anchor is set, connect a coupler to test fastener, screw on pull rod to other end of coupler (recommended larger pull rod than test rod), set reaction frame or back to back angles on blocking over pull rod (this constitutes as a Unconfined test; of which this means we are testing bond, concrete and steel), set hollow core ram (i.e. load cell) through pull rod and rest on frame or angles, and then put a nut and washer on the top side of the pull rod to complete the connection.
9. Reaction frame shall span over the test fastener allowing visual inspection of test fastener. Reaction frame should ideally span around fastener equal to embedment depth of test fastener in all directions.
10. Pre-load system to approximately 5% of published failure load and let sit for 1 minute. Then apply incremental increases, i.e. approximately 10%, until desired load is reached. This is done slowly and evenly; the hand pump hand creates the tension force, again, continue this until failure is observed or a desired load is reached.
11. Hold test load for 60 a minumum of seconds.
12. Record load PSI gauge. Convert psi to pounds by multiplying by square inches of hollow-core ram.

3.4 REPAIR OF DEFECTIVE WORK

A. Remove and replace misplaced or malfunctioning anchors. Fill empty anchor holes and patch failed anchor locations with high-strength non-shrink, nonmetallic grout. Anchors that fail to meet proof load or installation torque requirements shall be regarded as malfunctioning.

END OF SECTION 03 3250

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 3511 - CONCRETE FLOOR FINISHES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Clear coatings.

B. Color coatings.

1.2 RELATED REQUIREMENTS

A. Section 01 3329.04 – Material Content Form.

B. Section 01 3566.42 - Sustainability Compliance Procedures

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordinate the work with concrete floor placement and concrete floor curing.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's published data on each finishing product, including information on compatibility of different products and limitations.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Maintenance Data: Provide data on maintenance and renewal of applied finishes.

E. Warranty Documentation: Manufacturer warranty; ensure that forms have been completed in Owner's name and registered with manufacturer.

F. Specimen Warranty: Manufacturer warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's sealed packaging, including application instructions.

1.6 FIELD CONDITIONS

A. Maintain light level equivalent to a minimum 200 W light source at 8 feet above the floor surface over each 20 foot square area of floor being finished.

B. Maintain ambient temperature of 50 degrees F minimum, or as required by the coating manufacturer's written installation instructions.

1.7 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a one-year period commencing on the Date of Substantial Completion.

PART 2 PRODUCTS

2.1 CONCRETE FLOOR FINISH APPLICATIONS

A. Color Coatings:
   1. Use at following locations: Floors with finish designations SC2, SC3 .

B. Clear Coating:
   1. Use at following locations: Floors with designation SC1.

2.2 COATINGS

A. High Gloss Clear Coating: Transparent, nonyellowing, acrylic polymer-based coating.
   1. Composition: Solvent-based.

B. Low Gloss Clear Coating **SC1**: Transparent, nonyellowing, acrylic polymer-based coating.
   1. Composition: Water-based.
      a) VOC Content: 100 g/L maximum.
      b) Number of Coats: Two.
      c) Application Temperature Range: 40 - 100 degrees F.
      d) Products:
         1) Basis-of-Design: **Prosoco**; **Consolideck PolishGuard**.
         2) _____.

C. Color Coating **SC2**, **SC3**: Pigmented coating recommended by manufacturer for finishing concrete floors and slabs.
   1. Gloss: Satin.
   2. VOC Content: Less than 50 g/L.
   3. Adhesion: 550 psi, per ASTM D541.
   4. Abrasion Resistance: 150 mg loss, per ASTM D4060 (CS17 wheel, 100 cycles, 1 kg load).
   5. Impact Resistance, per ADTM D2794:
      a) Direct: 100 in. lb.
      b) Indirect: 80 in. lb.
   6. Color(s): As indicated on the Finish Product List on the drawings.

7. Type: High solids epoxy; two-component.
   a) Products:
      1) Basis-of-Design: **Sherwin-Williams**; **Armorseal 8100**.
      2) Substitutions: See Section 01 6000 - Product Requirements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that floor surfaces are acceptable to receive the work of this section.

B. Verify that flaws in concrete have been patched and joints filled with methods and materials suitable for further finishes.

3.2 PREPARATION

A. Follow manufacturer's written instructions for substrate preparation and environmental limitations.

3.3 GENERAL

A. Apply materials in accordance with manufacturer's instructions.

3.4 COATING APPLICATION

A. Verify that surface is free of previous coatings, sealers, curing compounds, water repellents, laitance, efflorescence, fats, oils, grease, wax, soluble salts, residues from cleaning agents, and other impediments to adhesion.

B. Verify that water vapor emission from concrete and relative humidity in concrete are within limits established by coating manufacturer.

C. Protect adjacent non-coated areas from drips, overflow, and overspray; immediately remove excess material.

D. Apply coatings in accordance with manufacturer's instructions, matching approved mock-ups for color, special effects, sealing and workmanship.

END OF SECTION 03 3511

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 6213 - NON-METALLIC NON-SHRINK GROUTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. This Section specifies high-precision, fluid, non-shrink, grouting material formulated to be used for applications requiring high strength such as column base plates, beam bearing plates, and leveling plates.

1.3 RELATED REQUIREMENTS

A. Section 03 3000 - Cast-in-Place Concrete: For general foundation specifications and concrete for housekeeping pads.

B. Section 05 1200 - Structural Steel Framing

1.4 REFERENCE STANDARDS

A. AASHTO M 182 - Standard Specification for Burlap Cloth Made from Jute or Kenaf and Cotton Mats; 2005.

B. ACI 301 - Specifications for Concrete Construction; 2020.

C. ACI 305R - Guide to Hot Weather Concreting; 2020.

D. ACI 306R - Guide to Cold Weather Concreting; 2016.

E. ASTM C1107/C1107M - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink); 2020.

F. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete; 2019.

G. ASTM C33/C33M - Standard Specification for Concrete Aggregates; 2023.

H. ASTM C94/C94M - Standard Specification for Ready-Mixed Concrete; 2024.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: For each type of product indicated below.
   1. Non-Metallic, Non-shrink, Natural Aggregate Grout
   2. Curing Compound

C. Design Mixtures: For each grout mixture: Include the following information:
   1. Proposed consistency (Stiff, Plastic, Flowable, or Fluid)
   2. Amount of water to be added to manufacturer's pre-packaged material.
   3. Additional aggregate (required when manufacturer requires additional aggregate to be added to prepackaged material to extend grout heights, etc.).

1.6 QUALITY ASSURANCE

A. Source Limitations:
   1. Obtain all base and bearing plate grout from the same manufacturer.
   2. Obtain aggregate from one source

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver Materials to project in Manufacturer's original, unopened packaging, with labels clearly identifying product name, Manufacturer, and expiration date.

B. Store materials to permit easy access for inspection and identification.

C. Store grout in a cool, dry place, out of the sun.

PART 2 - PRODUCTS

2.1 FORMWORK

A. Furnish formwork and formwork accessories according to ACI 301.

2.2 GROUT MATERIALS

A. Non-Metallic, Non-shrink, Natural Aggregate Grout: Use one of the following:
   1. Five Star Fluid Grout 100, manufactured by Five Star Products, Inc. - www.fivestarproducts.com
   2. Masterflow 928, manufactured by BASF Construction Chemicals, LLC - Building Systems - www.master-builders-solutions.basf.us
   3. Crystex, manufactured by L&M Construction Chemicals, Inc. - www.lmcc.com
   4. 1107 Advantage Grout, manufactured by Dayton Superior - www.daytonsuperior.com
   5. Rapid Set/CTS Construction Grout, manufactured by CTS Cement Manufacturing Corp. - www.ctscement.com
   6. NS Grout, manufactured by Euclid Chemical - www.euclidchemical.com

B. Normal-Weight Aggregate: ASTM C33/C33M, graded, 3/8-inch nominal maximum aggregate size.

C. Water: ASTM C94/C94M; potable.

2.3 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) when dry.

B. Water: Potable.

C. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 1, Class B.

2.4 GROUT MIXTURES

A. Comply with manufacturer's written instructions for grout mixtures.

B. Prepare grout mixes as follows:
   1. Minimum Compressive Strength: 8000 psi at 28 days.
   2. Minimum Working Time: 20 minutes
   3. Consistency: As required for workability and to meet compressive strength requirements.

PART 3 - EXECUTION

3.1 FORMWORK

A. Comply with grout manufacturer's recommendations for form construction. Construct forms to be liquid tight.

3.2 PREPARATION

A. Mechanically remove all unsound concrete to the limits indicated on the drawings. Remove cement paste and laitance to expose sound aggregate.

B. Thoroughly clean the roughened surface of dirt, loose chips, and dust.

C. Clean rust from base plates and other metal surfaces to be grouted to obtain satisfactory adhesion. Remove loose rust and scale by grinding or sanding.

D. Maintain substrate in a saturated condition for 24 hours prior to grouting. Surface should be saturated, surface dry (SSD) at time of grout installation.

3.3 MIXING

A. Comply with grout manufacturer's recommendations for mixing procedures.

B. When using less than a full bag of grout, always mix the bag first so that a representative sample is obtained.

C. Adjust water temperature to keep mixed grout temperature in the range of 45°F (7°C) and 90°F (32°C) minimum/maximum.
   1. Use cold or iced water to extend working time in hot weather or in large placements.
   2. Use warm water in cold conditions to achieve minimum as mixed temperatures.

3.4 HOT AND COLD WEATHER GROUTING

A. Cold Weather Grouting: Follow ACI 306R - Guide to Cold Weather Concreting recommendations. Heat water, precondition (warm) the grout, heat the substrate and protect from freezing until sufficient compressive strength is reached to protect the grout from freeze-thaw damage

B. Hot Weather Grouting: Follow ACI 305R - Guide to Hot Weather Concreting recommendations. Use cold water, precondition (cool) the grout by removing shrink wrap & keeping out of the sun, cool the substrate

3.5 INSTALLATION

A. The use of a head box is recommended on larger applications

B. Bevel the edge of the grout at a 45^{o} angle from the underside of base plates.

C. Place grout mixture into prepared areas from one side to the other, rapidly and continuously, to reduce air entrapment. Avoid placing grout from opposite sides.

D. Ensure that foundation and baseplate are within maximum/minimum placement temperatures. Shade foundation from summer sunlight under hot conditions. Warm foundation when foundation temperature is below 45°F (7°C).

E. Cut back or form exposed shoulders when grout reaches initial set.

3.6 CURING

A. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

B. Wet cure exposed shoulders for 24 hours followed by two coats of curing compound.
   1. Wet Curing: Keep surfaces continuously moist for not less than 24 hours with the following materials:
      a) Water.
      b) Absorptive cover, water saturated and kept continuously wet.
   2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

C. Protect freshly placed grout from excessive cold or hot temperatures. Comply with applicable provisions of ACI 306R for cold-weather protection and with ACI 305R for hot-weather protection during curing.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to observe installation, sample materials, perform tests, and submit test reports during grout placement according to requirements specified in this Article.

B. Tests: Fabricate and test non-shrink grout specimens in accordance with the following:
   1. ASTM C1107/C1107M Article 12.1 Consistency:
   2. ASTM C1107/C1107M Article 12.5 Compressive Strength:
      a) Test three cubes for compressive strength at each age - 1, 3, 7, and 28 days.
   3. Testing Frequency: At least one composite sample shall be obtained for each day's pour of each grout mix.
      a) Obtain additional samples as necessary if any property of one particular batch is noticeably different from others.

C. Reports: Report test results in accordance with ASTM C1107/C1107M Article 13 with the following exceptions:
   1. Articles 13.1.7, 13.1.8, and 13.1.9 - Height change need not be reported
   2. Articles 13.1.11 - Yield need not be reported

3.8 REPAIRS

A. Remove and replace grout that does not comply with requirements in this Section.

END OF SECTION 03 6213

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 04 2000 - UNIT MASONRY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Concrete masonry units.

B. Sound-absorbing concrete masonry units.

C. Mortar and Grout.

D. Reinforcement and anchorage.

E. Flashings.

F. Accessories.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures

B. Section 03 2000 - Concrete Reinforcing: Reinforcing steel for grouted masonry.

C. Section 05 5000 - Metal Fabrications: Loose steel lintels and Fabricated steel items.

D. Section 07 2100 - Thermal Insulation: Insulation for cavity spaces.

E. Section 07 6200 - Sheet Metal Flashing and Trim: Through-wall masonry flashings.

F. Section 07 8400 - Firestopping: Firestopping at penetrations of fire-rated masonry and at top of fire-rated walls.

G. Section 07 9200 - Joint Sealants: Sealing control and expansion joints.

1.3 REFERENCE STANDARDS

A. ACI 315R - Guide to Presenting Reinforcing Steel Design Details; 2018.

B. ASTM A153/A153M - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware; 2023.

C. ASTM A580/A580M - Standard Specification for Stainless Steel Wire; 2018.

D. ASTM A951/A951M - Standard Specification for Steel Wire for Masonry Joint Reinforcement; 2016, with Editorial Revision (2018).

E. ASTM C114 - Standard Test Methods for Chemical Analysis of Hydraulic Cement; 2015.

F. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; Current Edition.

G. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method; 2023.

H. ASTM C90 - Standard Specification for Loadbearing Concrete Masonry Units; 2023.

I. ASTM C129 - Standard Specification for Nonloadbearing Concrete Masonry Units; 2017.

J. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar; 2018.

K. ASTM C150/C150M - Standard Specification for Portland Cement; 2022.

L. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes; 2018.

M. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019.

N. ASTM C476 - Standard Specification for Grout for Masonry; 2023.

O. ASTM C1072 - Standard Test Methods for Measurement of Masonry Flexural Bond Strength; 2019.

P. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms; 2018.

Q. ASTM C1714/C1714M - Standard Specification for Preblended Dry Mortar Mix for Unit Masonry; 2016.

R. ASTM E514/E514M - Standard Test Method for Water Penetration and Leakage Through Masonry; 2014a.

S. BIA Technical Notes No. 7 - Water Penetration Resistance – Design and Detailing; 2017.

T. BIA Technical Notes No. 13 - Ceramic Glazed Brick Exterior Walls; 2017.

U. BIA Technical Notes No. 28B - Brick Veneer/Steel Stud Walls; 2005.

V. BIA Technical Notes No. 46 - Maintenance of Brick Masonry; 2017.

W. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

X. UL (FRD) - Fire Resistance Directory; Current Edition.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene a preinstallation meeting at least one week before starting work of this section; require attendance by all relevant installers.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for masonry units, fabricated wire reinforcement, mortar, and masonry accessories.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit for the following:
   1. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315R. Show elevations of reinforced walls.

E. Samples: Submit four samples of decorative block units to illustrate color, texture, and extremes of color range.

F. Delegated Design Submittals: For anchorage for wide wall cavities, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

G. Manufacturer's Certificate: Certify that masonry units meet or exceed specified requirements.

H. Manufacturer's Certificate: Certify that water repellent admixture manufacturer has certified masonry unit manufacturer as an approved user of water repellent admixture in the manufacture of concrete block.

I. Cold-Weather and Hot-Weather Procedures: Submit detailed description of methods, materials, and equipment to be used to comply with requirements.

1.6 QUALITY ASSURANCE

A. Comply with provisions of TMS 402/602, except where exceeded by requirements of Contract Documents.

B. Fire Rated Assemblies: Conform to applicable code for indicated requirements for fire rated masonry construction.

C. Manufacturer Qualifications: Company specializing in manufacturing the type of products specified in this section with minimum five years of documented experience.

D. Installer Qualifications: Company specializing in performing work of the type specified and with at least five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, handle, and store masonry units by means that will prevent mechanical damage and contamination by other materials.

1.8 FIELD CONDITIONS

A. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in TMS 402/602.

B. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 402/602.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from a single source from a single manufacturer for each product required.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from a single manufacturer for each cementitious component and from a single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 4000, to design anchorage for wide wall cavities.
   1. Wide wall cavities are defined as those cavities where the nominal width of the wall cavity is greater than 4-1/2 inches.

2.3 CONCRETE MASONRY UNITS

A. Concrete Masonry Units (CMU): Comply with referenced standards and as follows:
   1. Size: Standard units with nominal face dimensions of 16 by 8 inches and nominal depths as indicated on drawings for specific locations.
   2. Special Shapes: Provide nonstandard blocks configured for corners.
      a) Provide bullnose units for outside corners, for all CMU at the building interior.
   3. Load-Bearing Units: ASTM C90, lightweight.
      a) Hollow block.
      b) Minimum Compressive Strength: As indicated on the drawings.
      c) Exposed Faces: Manufacturer's standard color and texture.
   4. Non-Loadbearing Units for Exterior Back-Up and Interior Partitions: ASTM C129.
      a) Hollow block, unless otherwise indicated on the drawings.
      b) Lightweight.
      c) Minimum Net Area Compressive Strength:3,000 psi
      d) Exposed Faces: Manufacturer's standard color and texture.
   5. Sound-Absorbing Units: ASTM C90 hollow block; with specially molded faces and apertures to provide sound absorption into the masonry unit cavity and allow placement of vertical reinforcement.
      a) Lightweight.
      b) Minimum Net Area Compressive Strength: 2000 psi.
      c) Acoustical Fillers: Noise attenuating, noncombustible fibrous filler.

d) Grout Shields: Manufacturer's standard.
e) Sound Absorption: ASTM ASTM C423.
1) 12 inch Units: NRC .74 minimum.
f) Basis-of Design Product: Sound Seal; **SOUNDBLOX Acoustical Concrete Masonry Units, Type RSC/RF4.**

6. Units with Integral Water Repellent: Concrete block units as specified in this section with polymeric liquid admixture added to concrete masonry units at the time of manufacture.
a) Performance of Units with Integral Water Repellent:
1) Water Permeance: When tested per ASTM E514/E514M and for a minimum of 72 hours.
(a) No water visible on back of wall above flashing at the end of 24 hours.
(b) No flow of water from flashing equal to or greater than 0.032 gallons per hour at the end of 24 hours.
(c) No more than 25 percent of wall area above flashing visibly damp at end of test.
2) Flexural Bond Strength: ASTM C1072; minimum 10 percent increase.
3) Compressive Strength: ASTM C1314; maximum 5 percent decrease.
b) Use only in combination with mortar that also has integral water repellent admixture.
c) Use water repellent admixtures for masonry units and mortar by a single manufacturer.

2.4 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I; color as required to produce approved color sample.
1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C114.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Aggregate: ASTM C144.

D. Grout Aggregate: ASTM C404.

E. Pigments for Colored Mortar: Pure, concentrated mineral pigments specifically intended for mixing into mortar and complying with ASTM C979/C979M.
1. Color(s): As selected by Architect from manufacturer's full range.

F. Water: Clean and potable.

G. Packaged Dry Material for Mortar for Unit Masonry: Premixed Portland cement, hydrated lime, and sand; complying with ASTM C1714/C1714M and capable of producing mortar of the specified strength in accordance with ASTM C270 with the addition of water only.
1. Application: Interior unit masonry partitions.
a) Type: Type N.
b) Color: Standard gray.
2. Application: Exterior back-up walls.
a) Type: Type S.
b) Color: Standard gray.
3. Application: Elevator shaft.
a) Type: Type S.

b) Color: Standard gray.

H. Packaged Dry Material for Grout for Masonry: Premixed cementitious materials and dried aggregates; capable of producing grout of the specified strength in accordance with ASTM C476 with the addition of water only.
1. Type: Fine.

2.5 REINFORCEMENT AND ANCHORAGE

A. Manufacturers:
1. Basis-of-Design: Hohmann & Barnard, Inc: www.h-b.com/sle.

B. Reinforcing Steel: Type specified in Section 03 2000; size as indicated on drawings; uncoated finish.

C. Anchorage for Wide Wall Cavities: Provide engineered masonry anchors where wall cavity exceeds 4-1/2 inches in depth (inclusive of cavity insulation thickness).

D. Single Wythe Joint Reinforcement: ASTM A951/A951M.
1. Type: Ladder.
2. Material: stainless steel complying with ASTM A580/A580M Type 304.
3. Size: 0.1875 inch side rods with 0.1483 inch cross rods; width as required to provide not less than 5/8 inch of mortar coverage on each exposure.

E. Adjustable Anchor System for Random Ashlar (Rubble Stone): ASTM A951/A951M. Anchors that permit differential movement between masonry veneer and structural backup.
1. Clip-style sytem with wire ties, vertical J-hooks, and backplates.
2. Material: stainless steel complying with ASTM A580/A580M Type 304.
3. Wire Tie: TYpe 304 stainless steel, 3/16 inch diameter.
4. J-Hooks: Type 304 stainless steel.
5. Backplate: 12 gauge, type 304 stainless steel, custom depth to accommodate insulation depth(s) indicated on drawings.
6. Basis-of-Design Product: Hohmann & Barnard; **Tie-HVR-195B Anchor System**.

F. Partition Top Anchors: Formed sheet metal, 4 inch wide by 8 inch long with 2 inch long legs, 12 gauge thick with two anchor holes.

G. Reinforcement for Stack Bond Masonry: Provide W1.7 horizontal reinforcing wire in every other course for 8 inch wide masonry, unless otherwise required by TMS 402/602.

H. Metal-to-Metal Fasteners: Self-drilling, self-tapping screws; corrosion resistant finish or hot dip galvanized to ASTM A153/A153M.

2.6 FLASHINGS

A. Metal Flashing Materials: Stainless Steel, as specified in Section 07 6200.

B. Factory-Fabricated Flashing Corners and End Dams: Stainless steel.

C. Flashing Sealant/Adhesives: Silicone, polyurethane, or silyl-terminated polyether/polyurethane or other type required or recommended by flashing manufacturer; type capable of adhering to type of flashing used.
   1. Manufacturers, Synthetic Rubber Products:
      a) Tremco Commercial Sealants & Waterproofing; Butyl Sealant: www.tremcosealants.com.
      b) Pecora Corporation; BC-158 One-Part Butyl Rubber Sealant: www.pecora.com.
      c) Substitutions: See Section 01 6000 - Product Requirements.

D. Termination Bars: Stainless steel; compatible with membrane and adhesives.

E. Drip Edge: Stainless steel; angled drip with hemmed edge; compatible with membrane and adhesives.

F. Water Cut-off Mastic: One-component, self-wetting butyl based mastic.

2.7 ACCESSORIES

A. Preformed Control Joints: Neoprene material. Provide with corner and tee accessories, fused joints.

B. Joint Filler: Closed cell neoprene; compressible up to 50 percent to joint width; self expanding; in maximum lengths available.
   1. Manufacturers:
      a) Hohmann & Barnard, Inc; NS - Closed Cell Neoprene Sponge: www.h-b.com/#sle.
      b) W.R. Meadows; X-Foam.
   2. Color: Black.
   3. Thicknesses as required for joints indicated on drawings.

C. Cavity Mortar Control: Semi-rigid polyethylene or polyester mesh panels, sized to thickness of wall cavity, and designed to prevent mortar droppings from clogging weeps and cavity vents and allow proper cavity drainage.
   1. Full-Height Airspace Maintenance and Drainage Material: Mesh panels fitted between masonry ties.
      a) Drainage Material Thickness: 1/2 inch.
      b) Manufacturers:
         1) Basis-of-Design: **CavClear, a Division of Archovations Inc; CavClear Masonry Mat:** www.cavclear.com/#sle.
         2) Acceptable Alternate Products: Subjet to compliance with the requirements.
            (a) Advanced Building Products, Inc; Mortairvent-CW: www.advancedbuildingproducts.com/#sle.
         3) Substitutions: See Section 01 6000 - Product Requirements.

D. Weeps:
   1. Type: Molded PVC grilles, insect resistant.
   2. Manufacturers:
      a) Blok-Lok Limited: www.blok-lok.com.
      b) Hohmann & Barnard, Inc; _____: www.h-b.com/#sle.
      c) WIRE-BOND; _____: www.wirebond.com/#sle.

E. Cavity Vents:
   1. Type: Molded PVC grilles, insect resistant.
   2. Manufacturers:
      a) Blok-Lok Limited: www.blok-lok.com.
      b) Hohmann & Barnard, Inc: www.h-b.com/sle.
      c) WIRE-BOND: www.wirebond.com.

F. Cleaning Solution: Non-acidic, not harmful to masonry work or adjacent materials.

2.8 MORTAR AND GROUT MIXING

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
   1. Do not use calcium chloride in mortar or grout.

B. Mortar for Unit Masonry: ASTM C270, using the Proportion Specification.
   1. Masonry below grade and in contact with earth: Type M.
   2. Exterior, loadbearing masonry: Type S.
   3. Exterior, non-loadbearing masonry: Type S.
   4. Interior, loadbearing masonry: Type N.
   5. Interior, non-loadbearing masonry: Type N.

C. Colored Mortar: Proportion selected pigments and other ingredients to match Architect's sample, without exceeding manufacturer's recommended pigment-to-cement ratio.

D. Grout: ASTM C476; consistency required to fill completely volumes indicated for grouting; fine grout for spaces with smallest horizontal dimension of 2 inches or less; coarse grout for spaces with smallest horizontal dimension greater than 2 inches.
   1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 402/602TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive masonry.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for roughing into masonry work.

3.2 PREPARATION

A. Direct and coordinate placement of metal anchors supplied for installation under other sections.

B. Provide temporary bracing during installation of masonry work. Maintain in place until building structure provides permanent bracing.

3.3 COLD AND HOT WEATHER REQUIREMENTS

A. Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

3.4 COURSING

A. Establish lines, levels, and coursing indicated. Protect from displacement.

B. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.

C. Concrete Masonry Units:
   1. Bond: Running.
   2. Coursing: One unit and one mortar joint to equal 8 inches.
   3. Mortar Joints: Concave.

D. Acoustical Concrete Masonry Units:
   1. Bond: Stacked, with open ends of acoustical cavity facing downward.
   2. Orientation of Slotted Units: Slotted face to face area where sound absorption and diffusion is desired.

3.5 PLACING AND BONDING

A. Lay hollow masonry units with face shell bedding on head and bed joints.

B. Buttering corners of joints or excessive furrowing of mortar joints is not permitted.

C. Remove excess mortar and mortar smears as work progresses.

D. Interlock intersections and external corners, except for units laid in stack bond.

E. Do not shift or tap masonry units after mortar has achieved initial set. Where adjustment must be made, remove mortar and replace.

F. Perform job site cutting of masonry units with proper tools to provide straight, clean, unchipped edges. Prevent broken masonry unit corners or edges.

G. Cut mortar joints flush where wall tile is scheduled or resilient base is scheduled.

H. Isolate masonry partitions from vertical structural framing members with a control joint.

I. Isolate top joint of masonry partitions from horizontal structural framing members and slabs or decks with compressible joint filler.

3.6 WEEPS/CAVITY VENTS

A. Install weeps in veneer and cavity walls at 24 inches on center horizontally on top of through-wall flashing above shelf angles and lintels and at bottom of walls.

B. Install cavity vents in veneer and cavity walls at 32 inches on center horizontally below shelf angles and lintels and near top of walls.

3.7 CAVITY MORTAR CONTROL

A. Do not permit mortar to drop or accumulate into cavity air space or to plug weep/cavity vents.

3.8 REINFORCEMENT AND ANCHORAGE - GENERAL, SINGLE WYTHE MASONRY, AND CAVITY WALL MASONRY

A. Unless otherwise indicated on drawings or specified under specific wall type, install horizontal joint reinforcement 16 inches on center.

B. Place masonry joint reinforcement in first and second horizontal joints above and below openings. Extend minimum 16 inches each side of opening.

C. Place continuous joint reinforcement in first and second joint below top of walls.

D. Embed longitudinal wires of joint reinforcement in mortar joint with at least 5/8 inch mortar cover on each side.

E. Lap joint reinforcement ends minimum 6 inches.

F. Reinforce stack bonded unit joint corners and intersections with strap anchors 16 inches on center.

G. Embed ties and anchors in mortar joint and extend into masonry unit a minimum of 1-1/2 inches with at least 5/8 inch mortar cover to the outside face of the anchor.

3.9 REINFORCEMENT AND ANCHORAGE - MASONRY VENEER

A. Masonry Back-Up: Embed anchors to bond veneer at maximum 16 inches on center vertically and 36 inches on center horizontally. Place additional anchors at perimeter of openings and ends of panels, so maximum spacing of anchors is 8 inches on center.

B. Stud Back-Up: Secure veneer anchors to stud framed back-up and embed into masonry veneer at maximum 16 inches on center vertically and 24 inches on center horizontally. Place additional anchors at perimeter of openings and ends of panels, so maximum spacing of anchors is 8 inches on center.

3.10 REINFORCEMENT AND ANCHORAGES - MULTIPLE WYTHE UNIT MASONRY

A. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

3.11 MASONRY FLASHINGS

A. Whether or not specifically indicated, install masonry flashing to divert water to exterior at all locations where downward flow of water will be interrupted.
   1. Remove or cover protrusions or sharp edges that could puncture flashings.
   2. Seal lapped ends and penetrations of flashing before covering with mortar.

B. Terminate flashing up 8 inches minimum on vertical surface of backing:

C. Install flashing in accordance with manufacturer's instructions and BIA Technical Notes No. 7.

D. Extend metal flashings through exterior face of masonry and terminate in a flat drip with hemmed edge. Install joint sealer below drip edge to prevent moisture migration under flashing.

E. Lap end joints of flashings at least 6 inches, minimum, and seal watertight with flashing sealant/adhesive.

3.12 LINTELS

A. Install loose steel lintels over openings.

B. Maintain minimum ____ inch bearing on each side of opening.

3.13 GROUTED COMPONENTS

A. Lap splices minimum 24 bar diameters.

B. Support and secure reinforcing bars from displacement. Maintain position within 1/2 inch of dimensioned position.

C. Place and consolidate grout fill without displacing reinforcing.

D. At bearing locations, fill masonry cores with grout for a minimum 12 inches either side of opening.

3.14 CONTROL AND EXPANSION JOINTS

A. Do not continue horizontal joint reinforcement through control or expansion joints.

B. Install preformed control joint device in continuous lengths. Seal butt and corner joints in accordance with manufacturer's instructions.

C. Size control joints as indicated on drawings; if not indicated, 3/4 inch wide and deep.

3.15 BUILT-IN WORK

A. As work progresses, install built-in metal door frames and glazed frames and other items to be built into the work and furnished under other sections.

B. Install built-in items plumb, level, and true to line.

C. Bed anchors of metal door and glazed frames in adjacent mortar joints. Fill frame voids solid with grout.
   1. Fill adjacent masonry cores with grout minimum 12 inches from framed openings.

D. Do not build into masonry construction organic materials that are subject to deterioration.

3.16 TOLERANCES

A. Maximum Variation from Alignment of Columns: 1/4 inch.

B. Maximum Variation From Unit to Adjacent Unit: 1/16 inch.

C. Maximum Variation from Plane of Wall: 1/4 inch in 10 ft and 1/2 inch in 20 ft or more.

D. Maximum Variation from Plumb: 1/4 inch per story non-cumulative; 1/2 inch in two stories or more.

E. Maximum Variation from Level Coursing: 1/8 inch in 3 ft and 1/4 inch in 10 ft; 1/2 inch in 30 ft.

F. Maximum Variation of Mortar Joint Thickness: Head joint, minus 1/4 inch, plus 3/8 inch.

G. Maximum Variation from Cross Sectional Thickness of Walls: 1/4 inch.

3.17 CUTTING AND FITTING

A. Cut and fit for chases, pipes, conduit, and sleeves. Coordinate with other sections of work to provide correct size, shape, and location.

B. Obtain approval prior to cutting or fitting masonry work not indicated or where appearance or strength of masonry work may be impaired.

3.18 FIELD QUALITY CONTROL

A. Inspections: Perform special inspections according to Level B in TMS 402/602.

B. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

3.19 CLEANING

A. Remove excess mortar and mortar droppings.

B. Replace defective mortar. Match adjacent work.

C. Clean soiled surfaces with cleaning solution.

D. Use non-metallic tools in cleaning operations.

3.20 PROTECTION

A. Without damaging completed work, provide protective boards at exposed external corners that are subject to damage by construction activities.

END OF SECTION 04 2000

SECTION 04 4313 - STONE MASONRY VENEER

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Dolomitic limestone masonry units.

1.2 RELATED REQUIREMENTS

A. Section 04 2000 - Unit Masonry: Joint reinforcement, Ties, Anchors, and Through-wall flashing.

1.3 REFERENCE STANDARDS

A. ASTM C270 - Standard Specification for Mortar for Unit Masonry; 2019.

B. ASTM C568/C568M - Standard Specification for Limestone Dimension Stone; 2015.

C. ASTM C1515 - Standard Guide for Cleaning of Exterior Dimension Stone, Vertical And Horizontal Surfaces, New or Existing; 2020.

D. ASTM C1714/C1714M - Standard Specification for Preblended Dry Mortar Mix for Unit Masonry; 2016.

E. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on stone units, mortar, and reinforcement.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Samples: Submit two stone samples illustrating color range, texture, and markings.

E. Samples: Submit mortar color samples.

F. Installer's Qualification Statement.

1.5 QUALITY ASSURANCE

A. Stone Fabricator Qualifications: Company specializing in fabricating cut stone with minimum ten years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type required by this section, with minimum seven (7) years of experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver masonry units in protective film. Prevent damage to units.

B. Protect stone from discoloration during storage on site.

C. Place polyethylene or other plastic film between wood and other finished surfaces of masonry units when stored for extended periods of time.

D. Cover stored masonry units with protective enclosure if exposed to weather.

E. Do not use salt or calcium-chloride to remove ice from masonry surfaces.

1.7 FIELD CONDITIONS

A. Cold Weather Requirements: Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers of dolomitic limestone having product considered acceptable for use:
   1. Basis of Design: **Arriscraft International**; **Adair Limestone Marble**.
   2. Substitutions: See Section 01 6000 - Product Requirements.

2.2 MATERIALS

A. Dolomitic Limestone: complying with ASTM C568/C568M Classification III - High Density; special shapes as indicated; having the following typical average properties when tested to the identified standard:
   1. Compressive Strength: 22,900 psi, to ASTM C170.
   2. Absorption: 0.75 percent, to ASTM C97.
   3. Density: 167 lbs/ft^3, to ASTM C97.
   4. Modulus of Rupture: 2,250 psi, to ASTM C99.
   5. Flexural Strength: 1,600 psi to ASTM C880.
   6. Abrasion Resistance: 18.0 to ASTM C241.

2.3 FABRICATED UNITS

A. Limestone Masonry Units: Dolomitic limestone masonry units, special; shapes as indicated; as described below:
   1. Bed Thickness: 3-5/8" thick.
   2. Unit Length: 15-5/8" long, unless otherwise indicated on drawings.
   3. Unit Height: 7-5/8" high.
   4. Finish Texture: As selected by Architect from limestone masonry fabricator's full range of finishes.
   5. Color and Pattern: As selected by Architect from limestone masonry fabricator's full range of colors and patterns.
   6. Backs: Sawn.

2.4 MORTAR MIXES

A. Packaged Dry Material for Mortar for Unit Masonry: Premixed Portland cement, hydrated lime, and sand; complying with ASTM C1714/C1714M and capable of producing mortar of the specified strength in accordance with ASTM C270 with the addition of water only.
   1. Type: Type S.
   2. Color: Mineral pigments added as required to produce approved color sample.

2.5 ACCESSORIES - ANCHORED VENEER

A. Mortar: 1:1:6 Portland cement-hydrated lime-sand mix, as specified in Section 04 2000.

B. Grout: maximum 6,500 psi at 28 days, as specified in Section 04 2000.

C. Horizontal Joint Reinforcement: See Section 04 2000.

D. Wall Ties and Anchorages: as specified in Section 04 2000.

E. Joint Sealants and Backer Rods: non-staining type, as specified in Section 07 9200.

F. Flashings: See Section 04 2000.

G. Weep/Cavity Vents: See Section 04 2000..

H. Cleaning Solution: Type that will not harm stone, joint materials, or adjacent surfaces.

2.6 FABRICATION TOLERANCES

A. Fabricate dolomitic limestone masonry units to the following tolerances:
   1. Unit Length: plus or minus 1/8 inch.
   2. Unit Height: plus or minus 1/8 inch.
   3. Deviation From Square: plus or minus 1/8 inch, with measurement taken using the longest edge as the base.
   4. Bed Depth: plus or minus 1/8 inch.
   5. Custom Unit Dimensions: plus or minus 1/8 inch.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that support work and site conditions are ready to receive work of this section.

B. Inspect materials for fit and finish prior to installation. Do not set unacceptable units.

C. Verify that items built-in under other sections are properly located and sized.

D. Beginning of installation means acceptance of existing conditions.

3.2 COURSING

A. Place masonry to lines and levels indicated.

B. Maintain masonry courses to uniform width. Make vertical and horizontal joints equal and of uniform thickness.

C. Lay limestone masonry units in running bond.

D. Course one limestone masonry unit and one mortar joint to equal 8 inches.

E. Tool joints when thumbprint hard, to a concave finish.

3.3 PLACING AND BONDING

A. Lay masonry in full bed of mortar, properly jointed with other work. Buttering corners of joints, and deep or excessive furrowing of mortar joints are not permitted.

B. Fully bond intersections, and external corners.

C. Do not adjust masonry units after laying. Where resetting of masonry is required, remove, clean units and reset in new mortar.

D. Where applicable, install wall ties and anchorages as specified in Section 04 2000.

E. Where applicable, install flashings, vents, and masonry accessories as specified in Section 04 2000.

3.4 TOLERANCES

A. Maximum Variation From Unit to Adjacent Unit: 1/16 inch.

B. Maximum Variation from Plane of Wall: 1/4 inch in 10 feet and 1/2 inch in 20 feet or more.

C. Maximum Variation of Joint Thickness: 1/8 inch in 3 feet.

3.5 ADJUSTING AND CLEANING

A. Remove excess mortar as work progresses, and upon completion of work.

B. Replace defective mortar. Match adjacent work.

C. Repair chips with patch kits furnished by manufacturer.

D. Clean soiled surfaces with cleaning solution.

E. Clean exterior stone per ASTM C1515.

F. Use non-metallic tools in cleaning operations.

3.6 PROTECTION

A. During temporary storage on site, at the end of working day, and during rainy weather, cover stone work exposed to weather with non-staining waterproof coverings, securely anchored.

B. Protect units from damage resulting from subsequent construction operations.

C. B. Use protection materials and methods which will not stain or damage units.

D. C. Remove protection materials upon Substantial Completion, or when risk of damage is no longer present.

END OF SECTION 04 4313

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 04 7323 - MANUFACTURED BUILDING STONE MASONRY

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Manufactured stone masonry.
   1. Calcium silicate building stone units.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 04 2000 - Unit Masonry: Through-wall masonry flashings, masonry anchors and other masonry accessories.

1.3 REFERENCE STANDARDS

A. TMS 402/602 - Building Code Requirements and Specification for Masonry Structures; 2016.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Convene one week before starting work of this section.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data for manufactured building stone units.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Color charts.
   4. Installation methods.

C. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

D. Shop Drawings: Submit detail drawings depicting proper installation and flashing techniques. Coordinate locations with those found on drawings.

E. Verification Samples: Submit two sample boards of manufactured building stone units to illustrate color, texture, and extremes of color range. Minimum size 24 inches by 12 inches.

F. Manufacturer's Certificate: Certify that manufactured building stone units meet or exceed specified requirements.

G. Test Reports: Test results prepared by an independent testing agency, indicating tested material characteristics as part of a source quality control program, current within the past five (5) years.

H. Installer's Qualification Statement.

I. Specimen Warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, with minimum ten years of documented experience.

B. Installer Qualifications: Company specializing in performing work of type specified, with at least five years of documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Prevent mechanical damage and contamination by other materials.

C. Store units in a manner designed to prevent damage and staining of units.
   1. Stack units on timbers or platforms at least 3 inches above grade.
   2. Place polyethylene or other plastic film between wood and other finished surfaces of units when stored for extended periods of time.

D. Protect products from precipitation combined with freezing temperatures. Do not install products with visible frozen moisture.

E. Do not use salt or calcium-chloride to remove ice from masonry surfaces.

1.8 FIELD CONDITIONS

A. Cold and Hot Weather Requirements: Comply with requirements of TMS 402/602 or applicable building code, whichever is more stringent.

1.9 WARRANTY

A. See Section 01 7800 - Closeout Submittals for additional warranty requirements.

B. Correct defective work within a one year period after Date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer:

1. Basis of Design: **Arriscraft; Citadel Building Stone**: www.arriscraft.com.
2. Substitutions: See Section 01 6000 - Product Requirements.
   a) For any product not identified as "Basis of Design", submit information as specified for substitutions.

2.2 MANUFACTURED BUILDING STONE MASONRY MATERIALS

A. Calcium Silicate Building Stone Units: to ASTM C73, Grade SW; solid units that have been pressure formed and autoclaved; special shapes as indicated; four-size configuration as follows:
   1. Modular Sizes:
      a) CIT23: 2-3/8" high, 3-5/8" bed, various lengths up to 23-5/8".
      b) CIT36: 3-13/16" high, 3-5/8" bed, various lengths up to 23-5/8".
      c) CIT52: 5-1/4" high, 3-1/2" bed, various lengths up to 23-5/8".
      d) CIT81: 8-1/8" high, 3-1/2" bed, various lengths up to 23-5/8".
   2. Texture: Tumbled finish on exposed faces and ends.
   3. Color: "**French Country**" as manufactured by Arriscraft for Citadel Building Stone.

B. Mortar: 1:1:6 Portland cement-hydrated lime-sand mix, as specified in Section 04 2000.

C. Grout: maximum 6,500 psi at 28 days, as specified in Section 04 2000.

D. Wall Ties and Anchorages: as specified in Section 04 2000.

E. Joint Sealants and Backer Rods: non-staining type, as specified in Section 07 92 00.

F. Flashing, Vents, and Masonry Accessories: as specified in Section 04 2000.

2.3 FABRICATION TOLERANCE

A. Fabricate calcium silicate building stone units to a pressed tolerance of plus or minus 1/8 inch.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify site conditions are ready to receive work.

B. Inspect materials for fit and finish prior to installation. Do not set unacceptable units.

C. Beginning of installation means acceptance of existing conditions.

3.2 PREPARATION

A. Cutting Masonry Units:
   1. Cut masonry units to length with a masonry splitter.
   2. Dress split end to match face when exposed in wall.

B. Wetting Masonry Units:
   1. Where the ambient air temperature exceeds 100°F or exceeds 90°F with a wind velocity greater than 8 mph, pre-wet building stone units.

2. Lay wetted units when surface dry.

3.3 INSTALLATION

A. Place masonry to lines and levels indicated.

B. Maintain masonry courses to uniform width. Make vertical and horizontal joints equal and of uniform thickness.

C. Lay building stone units in random bond pattern, to the following percentage ratio, described from smallest to largest sized units: 20:20:40:20.
   1. Lay masonry in full bed of mortar, properly jointed with other work. Buttering corners of joints, [and] deep or excessive furrowing of mortar joints [and] [__] are not permitted.
   2. Fully bond intersections, and external corners.
   3. Do not adjust masonry units after laying. Where resetting of masonry is required, remove, clean units and reset in new mortar.

D. Construct movement joints as indicated on drawings.

E. Maintain mortar joint thickness of 1/2 inch.

F. Tool mortar joints by compacting the surface when thumbprint hard, to a concave finish.

3.4 CUTTING AND FITTING

A. Cut and fit for wall-penetrating pipes and conduit. Coordinate with other sections of work to provide correct size, shape, and location.

3.5 FIELD QUALITY CONTROL

A. Architect's Inspection: Architect, together with Owner's representative, will inspect installed masonry and reject masonry that is chipped, cracked, or blemished (streaked, stained or otherwise damaged), as described below.
   1. Masonry will be inspected to be free of cracks or other blemishes on the finished face or front edges of the masonry units exceeding 3/8 inch or that can be seen from a distance of 20 feet.
   2. Units shall exhibit a texture approximately equal to the approved sample when viewed under diffused daylight illumination at a 20 foot distance.
   3. Minor chipping resulting from shipment and delivery shall not be grounds for rejection. Minor chips shall not be obvious under diffused daylight illumination from a 20 foot distance.
   4. Efflorescence will not be cause for rejection

3.6 CLEANING

A. Remove excess mortar and mortar smears as work progresses.

B. Replace defective mortar. Match adjacent work.

3.7 PROTECTION

A. Protect units from damage resulting from subsequent construction operations.

B. Use protection materials and methods which will not stain or damage units.

C. Remove protection materials at Date of Substantial Completion, or when risk of damage is no longer present.

END OF SECTION 04 7323

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 0805 - FACTORY-APPLIED COATINGS FOR METAL

GENERAL

1.1 SECTION INCLUDES

A. General requirements for hot-dip galvanizing steel fabrications.

B. Requirements for preparing hot-dip galvanized surfaces for painting.

C. Hot-dip galvanizing and factory-applied prime-coat for the following metal fabrications including, but not limited to the items below. All items noted below are to receive a field-applied topcoating.
   1. Loose steel lintels.
   2. Steel framing for rooftop equipment screen.

D. Hot-dip galvanizing, factory-applied prime coat, factory-applied high performance color topcoat, and factory-applied clearcoat:
   1. Exposed steel columns at Main Entrance (no applied fireproofing required).
      a) Framing connection components, including but not limited to: bolts, angles, and washers, for these exposed steel columns.

1.2 RELATED SECTIONS

A. Section 05 1200 - Structural Steel: Design and surface preparation of structural steel indicated to receive hot-dip galvanizing and factory-applied primer coating

B. Section 05 500 - Metal fabrications: Non-structural metal fabrications indicated to receive hot-dip galvanizing and factory-applied primer coating.

C. Section 09 9113 - Exterior Painting: Field-applied topcoats.

1.3 NE-CHPS GENERAL REQUIREMENTS

A. The work of this section is required to comply with general requirements and procedures for compliance with certain prerequisites and credits needed for the Project to obtain CHPS Verified certification based on Northeast Collaborative for High Performance Schools Criteria Version 4.0 (NE-CHPS) as as outlined in Section 01 8113.63 - Sustainable Design Requirements.
   1. The Construction Manager is required to coordinate with the work of other sections and to comply with all NE-CHPS requirements in accordance with the Contract Documents such that the work carried out by this section does not compromise the achievement of any other NE-CHPS prerequisites and credits applicable to the entire project.

B. Related Sections for Sustainable Design Requirements:
   1. Section 01 3000 - Administrative Requirements: General submittal requirements, including NE-CHPS submittals.
   2. Section 01 7419 - Construction Waste Management and Disposal: Waste management, recycling and disposal requirements.

3. Section 01 8113.63 -Sustainable Design Requirements - NE-CHPS: General procedures for compliance with NE-CHPS requirements and credits; credit checklist.

1.4 REFERENCE STANDARDS

A. ASTM A 123 - Standard Specification for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.

B. ASTM A 143 - Safeguarding Against Embrittlement.

C. ASTM A 153 - Standard Specification for Zinc (Hot Dip Galvanizing) on Iron and Steel Hardware.

D. ASTM A 384 - Safeguarding Against Warpage.

E. ASTM A 385 - Providing High Quality Zinc Coatings.

F. ASTM A 780 - Repair of Hot Dip Galvanizing.
1. Refer to Section 01 8113.13 “Sustainable Design Requirements - LEED for New Construction” for LEED requirements affecting work in this section.

G. ASTM D6386 - Practice for Preparation of Zinc (Hot-Dip Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting.

1.5 SUBMITTALS

A. Product Data:
1. Galvanizer’s product literature for coatings specified in this Section indicating type of product and performance requirements.
2. Galvanizer's coatings data sheets for coatings specified in this Section including physical performance data.
3. Product data for shop-applied primer, for coordination with field-applied top coat.

B. Verification Samples: Submit five (5) 3-inch by 6-inch samples of factory-applied coating and colors proposed for use for approval prior to coating applications.
1. Verification samples shall be prepared on substrate of actual material to receive specified factory-applied coating systems. Fabricator shall furnish galvanizer with samples of actual materials (substrates). Galvanizer shall hot-dip and finish sample in selected color.
2. Architect will approve sample for surface color and gloss prior to full fabrication and production

C. Manufacturer's Certification: Coating applicator's notarized Certificate of Compliance that hot dip galvanized coating meets or exceeds the requirements of ASTM A123/A123M, ASTM A153/153M, or A767, as applicable.

D. Certificate of Compliance for Shop Drawing Review by Galvanizer: Submit galvanizer’s certificate that shop drawings for metal fabrications to receive metal coatings have been reviewed; and fabrications are acceptable to the galvanizer for proper application of galvanizing and factory-applied metal coatings. Drawings shall be stamped by the galvanizer to indicate approval of the design for galvanizing.

E. Certificate of Compliance for Items Coated by Galvanizer: Submit notarized Certificate of Compliance with application for payment for galvanizing, signed by galvanizer, indicating compliance with requirements of specifications. Include scope of services provided, and quantity and itemized description of items processed.
   1. Include galvanizer's certification that shop-applied primer is completely compatible with field-applied topcoats specified in Division 09 Section "Exterior Painting."

F. Paint Applicator shall provide a certificate of compliance that all coatings have been performed in accordance with SSPC QP3/AISC 420 - Qualification of Paint Shops, standards and procedures.

1.6 QUALITY ASSURANCE

A. Galvanizer Qualifications: Engage the services of a galvanizer who has demonstrated a minimum of five (5) years experience in the successful performance of the processes outlined in this specification.

B. Coating Applicator: Company specializing in coating hot-dip galvanized steel after fabrication and in following the procedures in the Quality Assurance Manual of the American Galvanizers Association and ASTM D6386.

C. Pre-installation Conference: Before starting factory-applied metal coating process, conduct conference at Project site. Comply with requirements for pre-installation conferences in Section 01 3000 - Administrative Requirements. Review methods and procedures related to factory-applied metal coatings for exterior metal fabrications indicated including, but not limited to, the following:
   1. Project schedule.
   2. Scope of services.
   3. Coordination between fabricator and galvanizer.
   4. Finish of metal surfaces.
   5. Application of coatings,
   6. Submittals and approvals process and schedule.

D. Coordination Between Fabricator and Galvanizer: Prior to fabrication, fabricator shall submit approved shop drawings to the galvanizer for all fabrications. Galvanizer shall review fabricator's shop drawings for suitability of materials for galvanizing and coatings and coordinate any required modifications to fabrications which shall be completed by the fabricator.

E. Steel Materials: For steel to be hot dip-galvanized, provide steel chemically suitable for metal coatings complying with the following requirements: Carbon below 0.25 percent, silicon below 0.04 percent, phosphorous below 0.05 percent, and manganese below 1.3 percent. Notify galvanizer if steel does not comply with these requirements to determine suitability for processing.
   1. Assemblies: Where size of assembly is too large for galvanizing kettle, galvanize components prior to fabrication and assemble after galvanizing.

1.7 WARRANTY

A. Warranty: Provide galvanizer's standard warranty that materials will be free from 10 percent or more visible rust for 20 years.

PART 2 - PRODUCTS

2.1 STEEL MATERIALS FOR GALVANIZING

A. Material for galvanizing to be geometrically suitable for galvanizing as described in ASTM A384 and A385. Steel materials suitable for galvanizing include structural shapes, pipe, sheet, fabrications, and assemblies

B. Material to be chemically suitable for galvanizing.

2.2 HOT-DIP GALVANIZING REQUIREMENTS

A. Hot-dip galvanizing practices shall be in accordance with the applicable portions of ASTM A123/A123M or A153/A153M.

B. Galvanizing Post-Treatments: For galvanized steel items to receive paint coating, water quenching or chromate conversion coating shall be avoided by the galvanizer as these processes interfere with paint adhesion and surface preparation.

C. Galvanizing finish shall be in accordance with ASTM A123 Section 6.2. After galvanizing, the presence of roughness, small dross inclusions, and zinc runs which negatively affect adhesion of the paint/powder coating shall be smoothed.
   1. Responsibility for surface smoothing after galvanizing shall be the responsibility of the galvanizer, performed prior to sending steel items to the liquid coating applicator. Scope includes items noted above and the following:
      a) Grinding off all zinc drips and runs.
      b) Grinding off excess zinc at welds.
      c) Visual criterion for smoothing: Not visible at a distance of 6 feet.
   2. Refer to Article 3.2 below for standards for surface preparation of galvanized steel to receive paint coatings.
   3. Surface smoothing, cleaning, and other required processing of galvanized steel to receive painting shall be in accordance with ASTM D6386 as noted in Part 3.

2.3 FACTORY-APPLIED PRIMER OVER HOT-DIP GALVANIZING

A. Provide factory-applied polyamide epoxy primer, 2.0 mils dry film thickness minimum, and as follows:
   1. Thickness: Minimum 2 mils dry film thickness (DFT).
   2. Performance Criteria: Coating shall meet or exceed the following performance criteria:
      a) Adhesion: 5000 psi when tested in accordance with ASTM D 4541.
      b) Corrosion Weathering: ASTM D 5894.
      c) Direct Impact Resistance: 140 in. lbs. when tested in accordance with ASTM D 2794.
      d) Dry Heat Resistance: 200 degrees F minimum.
      e) Wet Heat Resistance: 150 degrees F minimum.

f) Pencil Hardness: Tested in accordance with ASTM D 3363.
g) Moisture Condensation Resistance: Coating shall pass with no cracking or delamination when tested in accordance with ASTM D 4585, 100 degrees F., 1250 hours.

3. Color: Gray.

2.4 FACTORY-APPLIED TOP COAT OVER HOT-DIP GALVANIZING AND PRIMER

A. Provide factory-applied high-performance urethane color coating over primed galvanized steel as previously referenced, and as follows:
   1. Apply coating in a controlled environment meeting applicable environmental regulations.

B. Color: As selected by Architect from top coat manufacturer's standard range.

PART 3 - EXECUTION

3.1 SURFACE PREPARATION FOR GALVANIZING

A. Pre-clean steel work in accordance with accepted methods to produce an acceptable surface for quality hot-dip galvanizing.

3.2 SHOP REPAIR OF STEEL SURFACES AFTER GALVANZING

A. Grind and smooth zinc drips, runs, and areas of roughness that can impair adhesion of primer, powder, and / or paint coatings. Refer to Paragraph 2-C for full requirements.
   1. Applications:
      a) Steel indicated to be shop- or factory-primed and field-painted.
      b) Steel indicated to be shop- or factory-painted or shop- or factory-coated.
      c) Steel indicated as AESS.

3.3 REPAIR OF DAMAGED GALVANIZING

A. The maximum area to be repaired is defined in accordance with ASTM A123/A123M Section 6.2.

B. Repair areas damaged by welding, flame cutting or during handling, transport or erection, by one of the approved methods in accordance with ASTM A780/A780M. Minimum thickness requirements for the repair are those described in ASTM A123/A123M Section 6.2 current edition.

C. Zinc rich paint used for repair of hot-dip galvanized coatings shall be compatible with the paint system specified and applied in accordance with the manufacturer’s instructions.

D. Zinc rich paint used for repair of hot-dip galvanized coatings shall be top coated within the recommended overcoat time windows according to the manufacturers directions.

3.4 PREPARATION OF GALVANIZED STEEL FOR PRIMING/PAINTING

A. Comply with ASTM D6386 procedures for cleaning and surface preparation of galvanized steel for painting, as required for the applicable category:

1. Newly galvanized steel:
   a) Nominally, steel that has been galvanized within the past 48 hours prior to paint application. See 2-b below.
   b) Steel that has not received any surface treatment after galvanizing, such as water quenching or chromate conversion.
   c) Steel with no visible signs of zinc oxide or zinc hydroxide.
2. Partially weathered galvanized steel:
   a) Steel that has been galvanizd more than 48 hours and less than 1 year prior to paint application.
   b) Exposure of newly galvanized to humidity or moisture may reduce the 48-hour time period that galvanized steel remains free of zinc compounds that impact surface adhesion of coatings. It is coating applicator's responsibility to determine appropriate preparation in accordance with ASTM D6386.
3. Paint Shop Notification: Galvanizer to advise party responsible for painting galvanized items as to how the items were processed and which surface treatment(s), if any, were used.

3.5 APPLICATION OF GALVANIZING AND METAL COATINGS

A. Galvanize materials in accordance with referenced standards and this specification.
   1. Galvanizing shall provide an acceptable substrate for applied coatings.

B. Apply primer over hot-dip galvanizing in accordance with specified requirements and recommendations of galvanizer.

C. The primer and topcoat materials shall be certified VOC compliant, <2.9 lbs/gal., and conform to the following:
   1. Primer: High-solid polyamide epoxy applied to a DFT of 3 mils minimum.
   2. Topcoat: : Color pigmented, two-component high build aliphatic polyurethane applied to a DFT of 3 mils (0.08 mm) minimum.

3.6 INSTALLATION

A. Installation: Comply with fabricator’s, galvanizer’s, and coating applicator's requirements for installation of materials and fabrications, including use of nylon slings or padded cables for handling factory-primed or factory-finished materials.

B. Touch-Up and Repair: For damaged and field-welded metal coated surfaces, clean welds, bolted connections and abraded areas.
   1. On galvanized surfaces, apply organic zinc repair paint complying with requirements of ASTM A 780, modified to 95 percent zinc in dry film.
      a) Thickness of applied galvanizing repair paint shall be not less than coating thickness required by ASTM A 123 or A 153 as applicable.
      b) Touch-up of galvanized surfaces with silver paint, brite paint, or aluminum paints is not acceptable.
   2. On factory-primed surfaces, field-touch-up shall be performed in accordance with factory-applied metal coating manufacturer’s requirements and in the presence of a technical representative of the factory-applied metal coating manufacturer. If non-factory technicians are used for field touch-up, no warranties shall exist. Provide touch-up such that repair is not visible from a distance of 6 feet.

3. Provide touch up repair kit and touchup instructions with each order for each type of factory-applied finish coating.

END OF SECTION 05 0805 05 0805

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 1200 - STRUCTURAL STEEL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Structural steel framing members.

1.2 RELATED REQUIREMENTS

A. Section 03 6213 - Non-Metallic Non-Shrink Grouting: For grout beneath base and bearing plates.

B. Section 05 2100 - Steel Joist Framing.

C. Section 05 3100 - Steel Decking: Support framing for small openings in deck.

D. Section 07 8100 - Applied Fire Protection: Fireproof protection to framing and metal deck systems.

1.3 REFERENCE STANDARDS

A. AISC (MAN) - Steel Construction Manual; 2023.

B. AISC 303 - Code of Standard Practice for Steel Buildings and Bridges; 2010.

C. AISC 360 - Specification for Structural Steel Buildings; 2022.

D. AISC S303 - Code of Standard Practice for Steel Buildings and Bridges; 2016.

E. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

F. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

G. ASTM C518 - Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus; 2021.

H. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 2022.

I. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics; 2023.

J. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus; 2019, with Editorial Revision (2023).

K. ASTM D1187/D1187M - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal; 1997 (Reapproved 2018).

L. ASTM D638 - Standard Test Method for Tensile Properties of Plastics; 2022.

M. ASTM D790 - Standard Test Methods for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials; 2017.

N. ASTM D695 - Standard Test Method for Compressive Properties of Rigid Plastics; 2023.

O. ASTM D2863 - Standard Test Method for Measuring the Minimum Oxygen Concentration to Support Candle-Like Combustion of Plastics (Oxygen Index); 2023.

P. ASTM D696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30°C and 30°C with a Vitreous Silica Dilatometer; 2016.

Q. ASTM D732 - Standard Test Method for Shear Strength of Plastics by Punch Tool; 2017.

R. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2020.

S. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

T. EN 15804 - Sustainability of construction works - Environmental product declarations - Core rules for the product category of construction products; 2014.

U. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

V. ISO 14025 - Environmental labels and declarations -- Type III environmental declarations -- Principles and procedures; 2006.

W. ISO 14040 - Environmental management - Life cycle assessment - Principles and framework; 2006 (Amended 2020).

X. ISO 14044 - Environmental management - Life cycle assessment - Requirements and guidelines; 2006 (Amended 2020).

Y. ISO 21930 - Sustainability in buildings and civil engineering works -- Core rules for environmental product declarations of construction products and services; 2017.

Z. RCSC (HSBOLT) - Specification for Structural Joints Using High-Strength Bolts; Research Council on Structural Connections; 2020.

AA. SSPC-SP 3 - Power Tool Cleaning; 2018.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Meet at project site prior to beginning of installation to review requirements. Require attendance by representatives of the following:
   1. Contractor's superintendent.
   2. Independent testing agency.
   3. Structural steel erector.
   4. Steel subcontractor
   5. Special Inspector.
   6. Structural Engineer of Record.
   7. Other entities affected by the work of this section.

B. Review special inspection and testing and inspecting agency procedures for field quality control, temporary bracing of structure, shop drawing submittals, AESS requirements.

1.5 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Shop Drawings:
1. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.
2. Connections not detailed.
3. Indicate cambers and loads.
4. Indicate welded connections with AWS A2.4 welding symbols. Indicate net weld lengths.
5. Grid locations of the individual pieces shall be provided on the detail drawings.
6. Resubmitted drawings shall have all revisions clouded or clearly identified on the drawings.
7. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned. See AISC 303 Section 4.3 for additional information.

C. Steel Connection Calculations:
1. Fabricator's responsibilities include using a qualified registered professional engineer licensed in the State in which the Project is located to prepare structural analysis data for structural steel connections.
2. Submit shop standards for typical steel framing connections. Shop standards shall be signed and sealed by the registered professional engineer responsible for their preparation. Shop drawings will not be reviewed until applicable shop standards have been submitted and approved.
3. Submit calculations for bracing connections, splices, connections not covered by shop standards, and other connections as indicated in the Contract Documents. Calculations shall be signed and sealed by the registered professional engineer responsible for their preparation. Shop drawings will not be reviewed until applicable calculations have been submitted and approved.

D. Connection design Engineer shall review fabricators shop drawings for implementation of their connection design and provide letter stating such per AISC 303 Section 3.1.2 Option (3).

E. The connections shall be designed by a licensed professional engineer working for the fabricator.

F. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:
1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

G. Environmental Product Declaration (EPD): Submit in accordance with following.
   1. Publicly available, critically reviewed life cycle analysis having at least a cradle-to-gate scope conforming to one of the below criteria.
      a) Good: Product-specific; compliant with ISO 14044.
      b) Better: Industry-wide, generic; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      c) Best: Commercial-product-specific; compliant with ISO 21930, or with ISO 14044, ISO 14040, ISO 14025, and EN 15804; Type III third-party certification with external verification, in which the manufacturer is recognized as the program operator.
      d) Where demonstration of impact reduction below industry average is required, submit both industry-wide and commercial-product-specific declarations; or submit at least 5 declarations for products of the same type by other manufacturers in the same industry.
   2. For products delivered in multiple shipments to the jobsite, an EPD must be provided for each separate shipment from a different point of production, or from a a different supplier.
   3. Submit an EPD for each structural steel type specified in the Steel section of the structural general notes.

H. Bill of Materials: Material supplier(s) shall provide a report, at the completion of the primary structural frame, summarizing all structural steel quantities and the location where each material was obtained. Each unique ASTM material grade used on the project to be itemized.
   1. In addition to the requirements above, report the following in pounds and itemize as required for each unique steel product:
      a) Total Structural Steel Weight

I. Manufacturer's Mill Certificate: Certify that products meet or exceed specified requirements.

J. Field quality-control and special inspection reports.

K. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172 or that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant.

L. Delegated-Design Submittal: For structural-steel connections indicated to comply with design loads, include analysis data signed and sealed by the qualified professional engineer responsible for their preparation licensed in the State in which the Project is located.

1.6 QUALITY ASSURANCE

A. Fabricate structural steel members in accordance with AISC (MAN) "Steel Construction Manual."

B. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and no more than 12 months before start of scheduled welding work.

C. Fabricator Qualifications: A qualified steel fabricator that is accredited by the International Accreditation Service (IAS) Fabricator Inspection Program for Structural Steel in accordance with IAS AC172 or that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant.

D. Erector: Company specializing in performing the work of this section with minimum 10 years of documented experience.

PART 2 PRODUCTS

2.1 MATERIALS

A. As indicated on drawings.

B. Non-Shrink Cementitious Grout: Comply with requirements of Section 03 6213 - Non-Metallic Non-Shrink Grouting

C. Structural Thermal Break/Insulation Material:
1. Fiberglass-Reinforced Laminate Composite: Basis of design: Fabreeka-TIM® , as manufactured by Fabreeka International, Inc.
2. Include thermal break washers and bushings made from Fabreeka® material. **Steel fabricator note:** When bushings are used, the holes for standard bolt diameters have to be increased to account for these.
3. Material shall maintain structural integrity of connections. Refer to Structural Drawings for specific Load requirements.
4. Ultimate Material Properties:
   a) Tensile Strength: ASTM D638; 11,000 psi (75.8 MPa).
   b) Flexural Strength: ASTM D790; 25,000 psi (172.4 MPa).
   c) Compressive Strength: ASTM D695; 38,900 psi (268.2 MPa).
   d) Compressive Modulus: ASTM D695
      1) 1/2" (12.7mm) thick: 291,194 psi (2,007.7 MPa)
      2) 1" (25.4mm) thick: 519,531 psi (3,582.0 MPa)
   e) Shear Strength: ASTM D732; 15,000 psi (103.4 MPa)
   f) Thickness: 1" (25.4mm) or as indicated.
   g) Oxygen Index: ASTM D2863; 21.8%.
   h) Coefficient of Thermal Expansion: ASTM D696; 2.2.
   i) Thermal Conductivity: ASTM C177; 1.8 BTU/Hr/ft2/in/°F (0.259 W/m*°K).
   j) Density: 107.83 lb/ft3 (1727Kg/M3).

D. Bituminous Paint: Cold-applied water-based emulsion; asphalt with mineral colloid or chemical emulsifying agent; with or without fiber reinforcement; asbestos-free; suitable for application on vertical and horizontal surfaces.
1. Composition - ASTM D1187/D1187M, Type I.
2. VOC Content: Not more than permitted by local, State, and federal regulations.
3. Applied Thickness: 1/16 inch, minimum, wet film.
4. Products:
   a) W. R. Meadows, Inc; Sealmastic Emulsion: www.wrmeadows.com/#sel.
   b) KARNAC; 220 Fibered Emulsion (Brush or Spray):www.karnakcorp.com.
   c) BASF Corporation; MasterSeal ® 610, 614, 615: www.basf.com
   d) Uniflex®; Non-Fibered Asphalt Emulsion Dampproofing 40-324: www.uniflexroof.com
   e) Henry® Company; Non-Fibered Asphalt Emulsion Dampproofing 788: www.henry.com

5. Substitutions: See Section 01 6000 - Product Requirements.

E. Expanded Metal: Standard, Carbon Steel, Cold Rolled, 1/2" No. 20 Standard
   1. For use in radon pits.
   2. Products:
      a) McNICHOLS® EXPANDED METAL; www.mcnichols.com
      b) Direct Metals; www.directmetals.com
      c) MarCo Specialty Steel; www.marcospecialtysteel.com
      d) P+R Metals; www.prmetals.com
      e) Russell Metals; www.russelmetals.com
   3. Substitutions: See Section 01 6000 - Product Requirements.

F. Shop and Touch-Up Primer: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

G. Touch-Up Primer for Galvanized Surfaces: Fabricator's standard, complying with VOC limitations of authorities having jurisdiction.

H. Reinforced Thermoset Resin Structural Thermal Break Pads: High-strength structural framing accessory boards with the following characteristics.
   1. Structural Performance: Provide pads capable of withstanding or transferring structural loads.
      a) Load Types: Shear, moment, and wind loads.
   2. Pad Design: Allow for fabrication and construction tolerances, accommodating live load deflection, shrinkage, and creep of the building structure and other building movements; maintain structural steel deflections as required by applicable codes.
   3. Board Size: 48 by 96 inches.
   4. Pad Thickness: As indicated on drawings.
   5. Apparent Thermal Conductivity: K-value of 1.05 Btu-in/h sq ft degrees F when tested in accordance with ASTM C518.
   6. Compressive Strength: 40,000 psi, minimum, when tested in accordance with ASTM D638.
   7. Compressive Modulus: 673,400 psi, minimum, when tested in accordance with ASTM D695.
   8. Accessories: Manufacturer's standard bushings and washers, minimum 1/4 inch thick, designed to provide thermal break between structural steel washer/bolt and internal element.
   9. Manufacturers:
      a) Armatherm; FRR Structural Thermal Break Material: www.armatherm.com/#sle.

2.2 FABRICATION

A. Shop fabricate to greatest extent possible.

B. Space shear stud connectors as indicated on drawings.

C. Fabricate connections for bolt, nut, and washer connectors.

2.3 FINISH

A. Prepare structural component surfaces in accordance with SSPC-SP 3.

B. Shop prime structural steel members. Do not prime surfaces that will be sprayed fire-resistive material (SFRM), field welded, in contact with concrete, high strength bolted, slip-critical connections, or galvanized.

C. Structural steel members to receive intumescent mastic fire-resistive coatings shall be shop primed with a special compatible primer. See Section 07 8100 - Applied Fire Protection for these requirements.

D. Galvanize structural steel members to comply with ASTM A123/A123M. Provide minimum 1.7 oz/sq ft galvanized coating.
   1. Fill vent and drain holes that will be exposed in the finished Work, unless they will function as weep holes, with tapered plugs.
   2. Provide tapered plugs with diameter at mid-point same as drilled hole in steel member. Install and hammer to a tight fit. File excess flush and touch-up if necessary.
      a) Tapered plugs shall be zinc or aluminum to match hole size.
   3. Galvanize lintels attached to structural-steel frame and located in exterior walls and other items indicated on the Drawings.

E. Refer to Architectural drawings for steel finishes plan.

2.4 SOURCE QUALITY CONTROL

A. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that conditions are appropriate for erection of structural steel and that the work may properly proceed.

3.2 ERECTION

A. Erect structural steel in compliance with AISC 303.

B. Allow for erection loads and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. Field weld components and shear studs indicated on shop drawings.

D. Use carbon steel bolts only for temporary bracing during construction, unless otherwise specifically permitted on drawings. Install high-strength bolts in accordance with RCSC (HSBOLT) "Specification for Structural Joints Using High-Strength Bolts".

E. Do not field cut or alter structural members without approval of Architect. Finish thermally cut sections within smoothness limits in AWS D1.1/D1.1M.

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.3 TOLERANCES

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 360 Specification for Structural Steel Buildings and AISC S303 Code of Standard Practice for Steel Buildings and Bridges.

3.4 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

3.5 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A780/A780M and manufacturer's written instructions.

END OF SECTION 05 1200

SECTION 05 2100 - STEEL JOIST FRAMING

PART 1 GENERAL

1.1 RELATED REQUIREMENTS

A. Section 05 1200 - Structural Steel Framing: Superstructure framing.

B. Section 05 3100 - Steel Decking: Support framing for openings less than 12 inches in decking.

1.2 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A563/A563M - Standard Specification for Carbon and Alloy Steel Nuts (Inch and Metric); 2021a.

C. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

D. ASTM F436/F436M - Standard Specification for Hardened Steel Washers Inch and Metric Dimensions; 2019.

E. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

F. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

G. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel AC172; 2019.

H. SJI 100 - Standard Specifications for K-Series, LH-Series, and DLH-Series Open Web Steel Joists, and for Joist Girders; 2020.

I. SJI Technical Digest No. 9 - Handling and Erection of Steel Joists and Joist Girders; 2008.

J. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

K. SSPC-SP 2 - Hand Tool Cleaning; 2018.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

C. Shop Drawings: Indicate standard designations, joist coding, configurations, sizes, spacings, cambers, locations of joists, joist leg extensions, bridging, connections, and attachments.

D. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

E. CTHPB Documentation Submittals: Comply with Division 01 Section "Sustainable Design Requirements" and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

F. Manufacturer's Qualification Statement.

G. Fabricator's Qualification Statement.

1.4 QUALITY ASSURANCE

A. Design connections not detailed on drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

B. Perform Work, including that for headers and other supplementary framing, in accordance with SJI 100 Standard Specifications Load Tables and SJI Technical Digest No. 9.

C. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications"
   1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

D. Fabricator Qualifications: A qualified steel joist fabricator who is a member of the Steel Joist Institute and has completed the Institute's examination of complete engineering design details and calculations of joists, bridging and accessories for which standards have been adopted.

E. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.5 DELIVERY, STORAGE, AND HANDLING

A. Transport, handle, store, and protect products to SJI requirements.

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Steel Joists:
   1. Canam Group Inc: www.canam-steeljoists.ws
   2. Nucor-Vulcraft Group: www.vulcraft.com/#sle.
   3. New Millennium Building Systems, LLC: www.newmill.com

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated including any hanging equipment or roof equipment supported by the joist not indicated. Coordinate exact location and magnitude of loads with the equipment supplier.
   1. Use ASD; data are given at service-load level.
   2. Design special joists to withstand design loads with live-load deflections no greater than the following:
      a) Roof Joists: Vertical deflection of 1/360 of the span.

2.3 MATERIALS

A. Open Web Joists: SJI 100 Type LH Joists:
   1. Provide bottom chord extensions as indicated.
   2. Minimum End Bearing on Steel Supports: Comply with referenced SJI standards.
   3. Minimum End Bearing on Masonry or Concrete Supports: Comply with referenced SJI standards.
   4. Finish: Shop primed.
   5. End Arrangement: Underslung.
   6. Top-Chord Arrangement: Pitched 1/4 inch per 12 inches (1:48), two ways.
   7. Camber joists according to SJI's "Specifications."

B. High-Strength Structural Bolts, Nuts, and Washers: ASTM F3125/F3125M, Type 1, with matching compatible ASTM A563/A563M nuts and ASTM F436/F436M washers.

C. Bridging: Comply with referenced SJI standards.
   1. Furnish additional erection bridging if required for stability.

D. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

E. Structural Steel For Supplementary Framing and Joist Leg Extensions: ASTM A36/A36M.

F. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

2.4 FABRICATION

A. Coordinate web configuation with mechanical duct runs.

2.5 FINISH

A. Shop prime joists as specified.
   1. Do not prime surfaces that will be fireproofed, field welded, or in contact with concrete.

B. Prepare surfaces to be finished in accordance with SSPC-SP 2.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

B. Coordinate layout of hanging equipment that imparts non-uniform loads to the joist top or bottom chords. These loads shall be included in the design of the joist.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ERECTION

A. Erect joists with correct bearing on supports.

B. Allow for erection loads. Provide sufficient temporary bracing to maintain framing safe, plumb, and in true alignment.

C. Coordinate the placement of anchors for securing loose bearing members furnished as part of the work of this section.

D. After joist alignment and installation of framing, bolt joist seats to steel bearing surfaces.

E. Position and bolt joist chord extensions and wall attachments as detailed.

F. Install supplementary framing for floor and roof openings greater than 12 inches.

G. Do not permit erection of decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.

H. Do not field cut or alter structural members without approval of joist manufacturer.

3.3 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, and requirements in this Section.

3.4 FIELD QUALITY CONTROL

A. Engage an independent testing agency to perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Visually inspect field welds according to AWS D1.1/D1.1M.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.5 REPAIRS AND PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

END OF SECTION 05 2100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 3100 - STEEL DECKING

PART 1 GENERAL

1.1 RELATED REQUIREMENTS

1.2 REFERENCE STANDARDS

A. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

B. ASTM A108 - Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished; 2018.

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

D. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

E. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

F. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

G. ICC-ES AC43 - Acceptance Criteria for Steel Deck Roof and Floor Systems; 2022.

H. ICC-ES AC70 - Acceptance Criteria for Power-Actuated Fasteners Driven into Concrete, Steel and Masonry Elements; 2019, with Editorial Revision (2021).

I. SDI (DM) - Publication No.30, Design Manual for Composite Decks, Form Decks, and Roof Decks; 2007.

J. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

1.3 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittals procedures.

B. Shop Drawings: Indicate deck plan, support locations, projections, openings, reinforcement, pertinent details, and accessories.

C. Reproduction of any portion of the structural contract drawings for resubmittal as shop drawings is prohibited. Shop drawings produced in such a manner will be rejected and returned.

D. CTHPB Documentation Submittals: Comply with Division 01 Section “Sustainable Design Requirements” and provide the following in addition to other action submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.

2. Product Certificates for Credit d10: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Certificates: Certify that products furnished meet or exceed specified requirements.

F. Powder Actuated Fasteners: For PAF submittals, for fastening metal deck to either structural steel or bar joist, the individual(s) performing the installation shall have submitted for record and approval a package, from the manufacturer of the PAF system, pertinent information such as: a summary table of the correct fastener, pattern, span, deck gauge & type, side-lap fastener and pattern, and shear capacity for the specific zone of work, fastener technical data (pullover & pullout allowable loads), fastening comparison tables for allowable tension and shear values of PAF/puddle welds/screws, proper roof and composite diaphragm shear tables for the given job design application showing the PLF at the correct span and with the correct number of side-lap stitch fasteners (from steel Deck Institute Diaphragm Design Manual), tool descriptions for the tools to be used, and details of each application.

G. Submit manufacturer's installation instructions.

1.4 QUALITY ASSURANCE

A. PAF: Use of powder actuated tools shall only be by a qualified operator, trained and licensed by the tool manufacturer in accordance with the manufacturers and OSHA requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Cut plastic wrap to encourage ventilation.

B. Separate sheets and store deck on dry wood sleepers; slope for positive drainage.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Steel Deck:
1. Canam Steel Corporation: www.canam-steeljoists.ws.
2. Cordeck, Inc: www.cordeck.com.
3. Nucor-Vulcraft Group: www.vulcraft.com.
4. ASC Profiles, Inc.: www.ascprofiles.com
5. Roof Deck, Inc.: roofdeckinc.com
6. New Millennium Building Systems, LLC: www.newmill.com
7. Epic Metals Corporation: www.epicmetals.com

2.2 STEEL DECK

A. Acoustical Cellular Roof Deck: Non-composite type, steel sheet with plain vertical flute faces with a perforated liner panel attached to the bottom flutes with 1/8 inch diameter holes staggered 3/8 inch on center:

1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Span Design: Triple.
3. Minimum Base Metal Thickness: As indicated on drawings.
4. Nominal Height: As indicated on drawings.
5. Profile: Fluted; As indicated on drawings.
6. Side Joints: Lapped, mechanically fastened.

B. Roof Deck: Non-composite type, fluted steel sheet:
1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Span Design: Triple.
3. Minimum Base Metal Thickness: As indicated on drawings.
4. Nominal Height: As indicated on dawings.
5. Profile: Fluted; As indicated on drawings.
6. Side Joints: Lapped, mechanically fastened.

C. Composite Floor Deck: Fluted steel sheet embossed to interlock with concrete:
1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G60/Z180 galvanized coating.
2. Span Design: Triple.
3. Minimum Base Metal Thickness: As indicated on drawings.
4. Nominal Height: As indicated on drawings.
5. Profile: Fluted; As indicated on drawings.
6. Side Joints: Lapped, mechanically fastened.
7. Extended Female Leg Option: Fabricate panels with an extended female leg at interlocking seams that allows for sidelap screws to be installed vertically.

D. Metal Form Deck: Corrugated sheet steel, with provision for ventilation of concrete:
1. Galvanized Steel Sheet: ASTM A653/A653M, Structural Steel (SS) Grade 33/230, with G90/Z275 galvanized coating.
2. Minimum Base Metal Thickness: As indicated on drawings.
3. Nominal Height: As indicated on drawings.
4. Side Joints: Lapped, mechanically fastened.

2.3 ACCESSORY MATERIALS

A. Bearing Plates and Angles: ASTM A36/A36M steel, galvanized per ASTM A123/A123M.

B. Stud Shear Connectors: Made from ASTM A108 Grade 1015 bars.

C. Welding Materials: AWS D1.1/D1.1M.

D. Fasteners: Galvanized hardened steel, self tapping.

E. Powder Actuated Mechanical Fasteners: Steel; with knurled shank and forged ballistic point. Comply with applicable requirements of ICC-ES AC70.
1. Design Requirements: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

2. Equivalent values in schedule on drawing.
3. Products:
   a) Basis-of-Design Product: Hilti: www.hilti.com
   b) Simpson Strong-Tie: www.strongtie.com.
   c) DEWALT Fasteners: www.anchors.dewalt.com
   d) Ramset: www.ramset.com
   e) Substitutions: See Section 01 6000 - Product Requirements.

F. Mechanical Fasteners: Steel; hex washer head, self-drilling, self-tapping.
   1. Design Requirements for Sidelap Connections: Provide number and type of fasteners that comply with the applicable requirements of SDI (DM) design method for roof deck and floor deck applications and ICC-ES AC43.

G. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

H. Touch-Up Primer for Galvanized Surfaces: ASTM A 780/A 780M, complying with VOC limitations of authorities having jurisdiction.

I. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to the deck.

J. Acoustical Insulation: Glass fiber type, minimum 1.1 lb/cu ft density; profiled to suit deck.

K. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Floor Deck Design Manual Latest Edition for overhang and slab depth.

L. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

2.4 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal closure strips, wet concrete stops, cover plates, finish strips, and reinforcing channels same gage as deck; of profile and size as indicated; finished same as deck.

B. Roof Sump Pans: Formed sheet steel, 14 gauge, 0.0747 inch minimum thickness, flat bottom, sloped sides, recessed 1-1/2 inches below roof deck surface, bearing flange 3 inches wide, sealed watertight.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

B. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Erect metal deck in accordance with SDI Design Manual and manufacturer's instructions. Align and level.

B. On concrete and masonry surfaces provide minimum 4 inch bearing.

C. On steel supports provide minimum 1-1/2 inch bearing.

D. Install temporary shoring before placing deck panels if required to meet deflection limitations.

E. Locate deck bundles to prevent overloading of supporting members.

F. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

G. The steel roof deck has been designed for uniformly distributed loads and must not be used as the equivalent of point loads or linear loads. Concentrated loads applied to steel roof deck shall not be permitted unless authorized in writing by the structural engineer.

H. Suspended ceilings, excluding acoustical ceiling tile (ACT) or single-layer gypsum wall board (GWB) types, light fixtures, ducts or other utilities shall not be supported from steel roof deck. Install carrying channels or supplemental supports that connect to main structural framing members.

I. The steel deck has not been designed or analyzed for their ability to support the load/weight of scaffolding, stored materials, etc. during construction. All contractors and/or sub-contractors shall hire their own independent engineer, licensed in the jurisdiction of this project, to determine the adequacy of the steel deck to support these loads/weight.

J. Fasten deck as indicated on drawings.

K. Fasten roof deck panels to steel supporting members with low velocity powder actuated fasteners. Installation of fasteners shall be in accordance with design requirements of SDI and installed by an operator licensed by the manufacturer which Hilti provides.
   1. For bar joist base material thicknesses between 3/16” to 3/8” use the Hilti X-EDN19 fastener. For base material thicknesses between 1/8” to 1/4” use the Hilti X-EDNK22 fastener. Mechanically fasten using Hilti DX 460 (hand-held) or DX 860 HSN (stand-up) tools.
   2. For heavy bar joists or beams with base materials thicknesses of Tf >= 1/4” use the Hilti X-ENP19 fastener. Mechanically fasten using Hilti DX76 (hand-held) or DX860 ENP (stand-up) tools.

L. Fasten floor deck panels to steel supporting members with low velocity powder actuated fasteners. Installation of fasteners shall be in accordance with design requirements of SDI or ICC and installed by an operator licensed by the manufacturer which Hilti provides.
   1. Mechanically fasten using Hilti DX76 (hand-held), DX860 ENP (stand-up). For heavy bar-joist or beam base material thicknesses greater than or equal to ¼” use the Hilti X-ENP19 fastener.

M. At mechanically fastened male/female side laps fasten at 18 inches on center maximum.

N. Drive mechanical sidelap connectors completely through adjacent lapped sheets; positively engage adjacent sheets with minimum three-thread penetration.

O. Weld deck in accordance with AWS D1.3/D1.3M.

P. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete. Provide stops of sufficient strength to remain stationary without distortion.

Q. At openings between deck and walls, columns, and openings, provide sheet steel closures and angle flashings to close openings.

R. Close openings above walls and partitions perpendicular to deck flutes with single row of foam cell closures.

S. Position roof drain pans with flange bearing on top surface of deck. Fusion weld at each deck flute.

T. Weld stud shear connectors through steel deck to structural members below.

U. Immediately after welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, with touch-up primer.

V. When installation of deck is complete and prior to placing concrete, all deck shall be cleaned of all debris.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Section 01 4000 - Quality Requirements.

B. Special Inspections: Owner will engage a qualified special inspector to perform the inspections indicated in the Statement of Special Inspections.

C. Comply with quality assurance inspection requirements of SDI (QA/QC), "Standard for Quality Control and Quality Assurance for the Installation of Steel Deck", as modified by Table C1 contained in the Commentary to that Standard and the Statement of Special Inspections.

D. Welds: Verify compliance with AWS D1.3/D1.3M; continuous.

E. PAF: The manufacturer of the powder actuated system (tools and fasteners) shall be involved in the inspection and quality control process. This will require site visits for training and during installation to assist in the proper installation. Proper installation is determined by pin-head standoff.

F. Remove and replace work that does not comply with specified requirements.

G. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.4 REPAIRS AND PROTECTION

A. Prepare and repair damaged galvanized coatings on both surfaces of roof deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Touchup Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas on both deck surfaces are included in Section 09 9113 - Exterior Painting and Section 09 9123 - Interior Painting.

END OF SECTION 05 3100

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 4000 - COLD-FORMED METAL FRAMING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Formed steel stud exterior wall framing.

B. Cold-formed framing accessories.

C. Exterior wall sheathing.

D. Water-resistive barrier over sheathing.

1.2 RELATED REQUIREMENTS

A. Section 01 3566.42 - Sustainability Compliance Procedures.

B. Section 06 1000 - Rough Carpentry: Wall sheathing.

C. Section 07 9200 - Joint Sealants.

D. Section 09 2116 - Gypsum Board Assemblies: Gypsum-based sheathing.

1.3 DEFINITIONS

A. General: See AISI S240 for definitions of terms used in this section.

B. Connection: A combination of structural elements and joints used to transmit forces between two or more members.

C. Connector: A device used to transmit forces between cold-formed steel structural members or between a cold-formed steel structural member and another structural element.

1.4 REFERENCE STANDARDS

A. AISI S100 - North American Specification for the Design of Cold-Formed Steel Structural Members; 2016, with Supplement (2020).

B. AISI S240 - North American Standard for Cold-Formed Steel Structural Framing; 2015, with Errata (2020).

C. AISI S200-12 - North American Standard for Cold-Formed Steel Framing – General Provisions, 2012 Edition; 2012.

D. AISI S211-07 - North American Standard for Cold-Formed Steel Framing - Wall Stud Design, 2007 Edition (Reaffirmed 2012); 2012.

E. AISI S212-07 - AISI North American Standard For Cold-Formed Steel Framing - Header Design, 2007 Edition (Reaffirmed 2012); 2012.

F. AISI S213-07 w/ S1-09 - North American Standard for Cold-Formed Steel Framing – Lateral Design, 2007 Edition With Supplement 1 (Reaffirmed 2012); 2012.

G. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

H. ASCE 7 - Minimum Design Loads and Associated Criteria for Buildings and Other Structures; Most Recent Edition Cited by Referring Code or Reference Standard.

I. ASTM A780/A780M - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings; 2020.

J. ASTM A1003/A1003M - Standard Specification for Steel Sheet, Carbon, Metallic- and Nonmetallic-Coated for Cold-Formed Framing Members; 2015.

K. ASTM C1513 - Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections; 2013.

L. ASTM C1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories; 2020.

M. AWS B2.1/B2.1M - Specification for Welding Procedure and Performance Qualification; 2021.

N. ASTM E329 - Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection; 2021.

O. AWS D1.3/D1.3M - Structural Welding Code - Sheet Steel; 2018, with Errata (2022).

P. ICC (IBC) - International Building Code; Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.

Q. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

1.5 ADMINISTRATIVE REQUIREMENTS

A. Pre-Installation Meeting: Conduct meeting attended by Owner, Architect, manufacturer's technical representative, and other trade contractors at project site prior to beginning of installation to review requirements.
   1. Convene one week before starting work of this section.

B. Coordinate with work of other sections that is to be installed in or adjacent to metal framing systems, including but not limited to structural anchors, cladding anchors, utilities, insulation, and firestopping.

C. Coordinate cold-formed metal wall and soffit framing with masonry veneer, EIFS system, metal wall tile system, phenolic wall panel system, composite soffit panel system, and terra cotta clay tile cladding system, as specified in Divisions 04 and 07 sections.

1.6 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements for submittal procedures.

B. Product Data: Provide data on standard framing members; describe materials and finish, product criteria, limitations.

C. Product Data: Provide manufacturer's data on factory-made framing connectors, showing compliance with requirements.

D. CTHPB Documentation Submittals: Comply with Section 01 3566.42 - Sustainability Compliance Procedures and provide the following in addition to other submittals:
   1. Product Data for Credit d8: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Product Data for Credit d10: For products and materials required to comply with requirements for regional materials, documentation indicating location and distance from Project of manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

E. Delegated Design Submittal: For cold-formed metal framing, including cantilevered partial wall support system(s) for low wall partitions.

F. Shop Drawings: Indicate component details, framed openings, bearing, anchorage, loading, welds, and type and location of fasteners, and accessories or items required of related work.
   1. Indicate stud and ceiling joist layout.
   2. Indicate cantilevered partial wall support system layouts.
   3. Describe method for securing studs to tracks and for bolted framing connections.

G. Steel Framing Industry Association (SFIA) Certification:
   1. Submittals that do not bear the Contractor's Professional Structural Engineer's seal and signature will be returned, without review.

H. Designer's Qualification Statement.

I. Manufacturer's Qualification statement.

J. Welders' Qualification Statement: Welders' certificates in accordance with AWS B2.1/B2.1M and dated no more than 12 months before the start of scheduled welding work.

1.7 QUALITY ASSURANCE

A. See Section 01 4000 - Quality Requirements for additional requirements.

B. Professional Structural Engineer Qualifications: A professional engineer who is legally qualified to practice in Connecticut and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this project in material, design, and extent.

C. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, and with minimum ten years of documented experience.

D. Welder Qualifications: Welding processes and welding operators qualified in accordance with AWS D1.1/D1.1M and AWS D1.3/D1.3M and dated no more than 12 months before start of scheduled welding work.

E. Installer Qualifications: Company specializing in performing the work of this section with minimum five years documented experience.

F. Welding Qualifications: Qualify procedures and personnel according to the following:
   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

G. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Structural Framing:
   1. ClarkDietrich Building Systems; : www.clarkdietrich.com.
   2. The Steel Network, Inc; : www.SteelNetwork.com.
   3. Substitutions: See Section 01 6000 - Product Requirements.

B. Basis-of-Design Framing Connectors and Accessories: The design of connector devices is based on products manufactured by The Steel Network, Inc. Subject to compliance with requirements, provide either the named products or comparable products by one of the following, as approved by the Architect.
   1. Same manufacturer as metal framing.

2.2 PERFORMANCE REQUIREMENTS

A. Comply with requirements for Contractor's design-related professional design services indicated in Section 01 4000 - Quality Requirements.

B. Design Requirements: Design cold-formed framing systems, components, framing accessories, and connectors to withstand specified design loads in compliance with ICC (IBC), ASCE 7, AISI S100, and AISI S240.

C. Regulatory Requirements: Comply with applicable building code criteria for loads, including seismic loads.
   1. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100-12, AISI S200-12, and the following:

a) Wall Studs: AISI S211-07.
b) Headers: AISI S212-07.
c) Lateral Design: AISI S213-07 w/ S1-09.

2. Design Loads: As indicated on the drawings.
   a) Wind Loads: Calculate wind loads in accordance with ASCE 7.
      1) Design Criteria: As indicated on Structural Drawing S001.
   b) Seismic Loads: Calculate seismic loads in accordance with ASCE 7.
      1) Design Criteria: As indicated on Structural Drawing S001.
3. Live load deflection meeting the following, unless otherwise indicated:
   a) Floors: Maximum vertical deflection under live load of 1/480 of span.
   b) Roofs: Maximum vertical deflection under live load of 1/360 of span.
4. Exterior Walls and Parapets: Maximum horizontal deflection under wind load 1/600 of span, unless otherwise indicated.
5. Exterior Soffit Framing: Vertical deflection of 1/240 of the span under total load, and 1/360 of the span under the live load, unless otherwise indicated.
6. Design non-axial loadbearing framing to accommodate not less than 3/4 in vertical deflection.
7. Able to tolerate movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
8. Able to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

2.3 MATERIALS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.

2.4 STRUCTURAL FRAMING COMPONENTS

A. Wall Studs and Track Sections: AISI S240; c-shaped studs and u-shaped track sections in stud-matching nominal width and compatible height.
   1. Structural Grade: As required to meet design criteria.
   2. Corrosion Protection Coating Designation: CP 90 CP 90 in accordance with AISI S240.

B. Non-Load Bearing Wall and Parapet Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths as indicated on the Drawings, punched, with stiffened flanges, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than thickness indicated.
      a) Exterior Applications: 0.0538 inch.
      b) Interior Applications Using Abuse-Resistant/Impact Resistant Gypsum Board: 0.0312 inch.
   2. Flange Width: 2 inches minimum.
   3. Punched openings shall not be located within 12 inches from the ends of in-place wall framing.
   4. Galvanized in accordance with ASTM A653/A653M, and coating indicated.
      a) Coating for Exterior Framing: G90/Z275.
      b) Coating for Interior Framing: G60/Z180.
   5. Grade: As required by structural performance.

C. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flange, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than thickness of steel studs.
   2. Flange Width: As required to comply with structural performance requirements, but not less than 1-1/4 inches.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than 0.0538 inch.
   2. Flange Width: A minimum of 3 inches, and as required to comply with structural performance requirements, and to accommodate upward and downward deflection of 3/4 inch.

E. Exterior Soffit Framing: Manufacturer's standard C-shaped steel studs, of web depths as indicated on Drawings, unpunched, with stiffened flanges; U-shaped steel track, in matching nominal width, unpunched, with unstiffened flanges, and as follows:
   1. Minimum Uncoated-Steel Thickness: As required to comply with structural performance requirements, but not less than 0.0538 inch.
   2. Stud Flange Width: 2 inches minimum.
   3. Track Flange Width: As required to comply with structural performance requirements, but not less than 1-1/4 inches.

F. Accessory Items: Manufacturer's standard cold-formed plates, angles,

2.5 LATERAL FORCE-RESISTING SYSTEMS

A. Steel Sheet: ASTM A1003/A1003M, subject to the ductility limitations indicated in AISI S240.
   1. Structural Grade: As required to meet design criteria.
   2. Corrosion Protection Coating Designation: CP 90 in accordance with AISI S240.

B. Cantilevered Partial Wall Support System (Low Wall Partitions): Manufacturer's standard partial height wall support system capable of supporting out-of-plane loading in cantilevered partial wall systems that are unsupported at the top track. The out-of-plane loads shall be transferred to the floor system through a 1/2-inch thick plate nested in the flanges of the framing member with two 3/8-inch diameter fasteners.
   1. Products:
      a) Clark Dietrich; **Pony Wall**.
         1) Provide **Pony Wall Heavy** and / or **Pony Wall Lite** as required to comply with the structural design criteria for each condition indicated on drawings.
      b) The Steel Network; **Midwall**.

2.6 MISCELLANEOUS CONNECTIONS

A. Self-Drilling, Self-Tapping Screws, Bolts, Nuts and Washers: Hot dip galvanized per ASTM A153/A153M to match coating level of framing member.

B. Mechanical Fasteners: Self-drilling, self-tapping screws, bolts, nuts and washers per ASTM C1513 corrosion-resistant-coated.
   1. Head Type: Low-profile head beneath sheathing and gypsum board, manufacturer's standard elsewhere.

C. Anchorage Devices: Powder actuated.

2.7 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from ASTM A1003/A1003M, Structural Grade, Type H, metallic coated steel sheet, of same grade and coating designation used for framing members.

B. Framing accessories are subject to the delegated design requirements.

C. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. CFMF Plates for Parapet Support: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.
   2. Bracing, Furring, Bridging: Formed sheet steel, thickness determined for conditions encountered; finish to match framing components.
   3. Plates, Gussets, Clips: Formed Sheet Steel, thickness determined for conditions encountered; finish to match framing components.
   4. Stud kickers.
   5. Angles.
   6. Backer plates.

2.8 MISCELLANEOUS MATERIALS

A. Galvanizing Repair: Touch up bare steel with zinc-rich paint in compliance with ASTM A780/A780M.

B. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

C. Touch-Up Primer for Galvanized Surfaces: ASTM A780/A780M, complying with VOC limitations of authorities having jurisdiction.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

B. Verify field measurements and adjust installation as required.

3.2 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

B. Before sprayed fire-resistive materials are applied, attach continuous angles, clips, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

C. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistive rating indicated. Protect remaining fire-resistive materials from damage.

3.3 INSTALLATION - GENERAL

A. Install structural members and connections in compliance with ASTM C1007 and approved shop drawings.

3.4 INSTALLATION OF STUDS

A. Install wall studs plumb and level.

B. Construct corners using minimum of three studs. Install double studs at wall openings, door and window jambs.

C. Provide deflection allowance in stud track, directly below horizontal building framing at non-loadbearing framing.

3.5 INSTALLATION OF EXTERIOR SOFFIT FRAMING

A. Install perimeter track sized to match stud framing. Align and securely anchor or fasten track to supporting structure at corners, ends, and spacings indicated on approved shop drawings.

3.6 TOLERANCES

A. Stud Spacing: 1/8 inch from the designated spacing, provided that the cumulative error does not exceed the requirements of the finishing materials in accordance with ASTM C1007.

END OF SECTION 05 4000

SECTION 05 5000 - METAL FABRICATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Miscellaneous framing and supports.
   1. General: Provide miscellaneous steel framing and equipment support framing not specified in other Sections as needed to complete the work. Applications include but are not limited to:
      a) Secondary support framing for basketball backstop assemblies.
      b) Support of equipment, ducts, piping, and other items indicated to be suspended from the floor/roof deck above.
         1) Slotted channel framing.
      c) Above ceiling support of cubicle curtain track.
      d) Miscellaneous steel trim.
      e) Elevator machine beams, hoist beam, and /or divider beams.
      f) Supports for overhead doors and grilles.
      g) Tube reinforcement for low partitions.
      h) Miscellaneous steel angles, plates, and channels.
      i) Tower stanchion for automatic door operator activation device.

B. Metal ladders and ships ladders

C. Products furnished, but not installed, under this section include the following:
   1. Loose steel lintels.
   2. Shelf (relieving) angles.
   3. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge type inserts indicated to be cast into concrete or built into unit masonry.

1.2 RELATED REQUIREMENTS

A. Section 01 3573 - Delegated Design Procedures.

B. Section 01 3566.42 - Sustainability Compliance Procedures.

C. Section 01 7419 – Construction Waste Management and Disposal.

1.3 REFERENCE STANDARDS

A. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014 (2015 Errata).

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2019.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2022.

D. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2017.

E. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2018.

F. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2021.

G. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2021.

H. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2023.

I. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2023.

J. ASTM B210/B210M - Standard Specification for Aluminum and Aluminum-Alloy Drawn Seamless Tubes; 2019a.

K. ASTM B211/B211M - Standard Specification for Aluminum and Aluminum-Alloy Rolled or Cold Finished Bar, Rod, and Wire; 2019.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2021.

M. ASTM F3125/F3125M - Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength; 2023.

N. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2020, with Errata (2023).

O. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 2004.

P. SSPC-Paint 20 - Zinc-Rich Coating (Type I - Inorganic, and Type II - Organic); 2019.

1.4 SUBMITTALS

A. See Section 01 3000 - Administrative Requirements, for submittal procedures.

B. Product Data:
   1. Slotted channel framing.
