

Planning Process

Identify Concerns

I am concerned that teachers do not have many resources to integrate STEM activities in their classrooms and curriculum.

Set a Goal

My goal is to have an easy and fun way for teachers to integrate STEM activities into their classroom and show them the curriculum that the activities will cover.

Form a Plan

Who: I will talk with my advisors about the goals and setup for my project. I will use the internet and video platforms to make the video. I will make the video available to elementary teachers.

What: I will make a video showing how to perform a STEM activity.

Where: I will work on my project at home and school.

When: I will work on my project when I have free time.

Act

I acted by following the steps in my plan. I created an instructional video showing teachers a STEM activity to do with their students. I also included which curriculum standards the activity would cover to help teachers integrate the activity into their classroom.

Follow up

I followed up by thanking everyone who helped me put together my project.
