

MONTPELIER HIGH SCHOOL COURSE DESCRIPTIONS

2025/2026

ART

Specialized art classes are dependent upon enrollment numbers.

ART APPRECIATION

Length: One Semester
Credit: .5
Fee: \$30

This course explores the major areas of art which include, drawing, painting, printmaking, sculpture, clay work, and digital media. You will learn the terms and practice techniques that are required for specialized art classes.

DIGITAL ART

Length: One Semester
Credit: .5
Fee: \$20

This class focuses on learning the photoshop program and applying it to create digital works of art. You will learn how to use the program to design digital media. You will learn photography editing, drawing programs, logo design, and character design.

DRAWING

Length: One Semester
Credit: 0.5
Fee: \$30

Prerequisite: Must pass Art Appreciation OR 8th grade art with a C or better

This class focuses only on the different drawing and printing techniques. These skills are built on previous knowledge from Art 1/Art Foundations. Students must be creative and be willing to try new techniques and skills.

SENIOR ART

Length: One Semester with teacher approval
Credit: .5
Fee: \$20

Must be able to apply independent thinking skills and have your own original ideas. This class will be student driven and focus on the individual skill sets of each student.

GLASS/JEWELRY

Length: One Semester

Credit: .5

Fee: \$50

Prerequisite: Must pass Art Appreciation OR 8th grade art with a C or better

This class focuses on both jewelry and glass techniques. One quarter is spent creating jewelry and the other quarter is spent working with glass. Students must be creative and be willing to try new techniques and skills.

PAINTING

Length: One Semester

Credit: .5

Fee: \$30

Prerequisite: Must pass Art Appreciation OR 8th grade art with a C or better

This class focuses only on the different painting techniques. These skills are built on previous knowledge from Art 1/Art Foundations. Students must be creative and be willing to try new techniques and skills.

POTTERY

Length: One Semester

Credit: 0.5

Fee: \$30

Prerequisite: Must pass Art Appreciation OR 8th grade art with a C or better

This class focuses only on the different clay and sculpture techniques and skills. These skills are built on previous knowledge from Art 1/Art Foundations. Students must be creative and be willing to try new techniques and skills.

WORLD CRAFTS

Length: One Semester

Credit: .5

Open To: All Students

Fee: \$30

This class focuses on different crafts present in our culture and from cultures around the world. You will learn how to use patterns, special painting techniques, design techniques, and materials that are more craft based. You do not need to take Art I to take this class. After completion of this class you **MAY NOT** take other art classes until you take Art I.

BUSINESS AND TECH

ACCOUNTING

Length: One Year

Credit: 1.0

Open To: 10th-12th graders

Fee: \$15.00

Accounting is the language of business and an integral aspect of all business activities. Mastery of fundamental accounting concepts, skills, and competencies is essential to making informed business decisions. Regardless of students' chosen course of study or career path, accounting prepares them to be educated business professionals and informed consumers. This course will focus on the management of a company's financial resources including the accounting cycle, financial statements, and interpretation and use of financial data.

ENTREPRENEURSHIP

Length: One Semester

Credit: .5

Open To: All Students

This course is a general introduction to the business world. Fundamentals of business organizations, entrepreneurship, and small businesses are studied. This class will be a combination of lecture and discussion with projects being assigned that relate to the material being studied.

FINANCIAL LITERACY

Length: One Semester

Credit: .5

Open to: 10-12th graders

This course will focus on the basis for what all students should know and be able to do to be informed consumers by the time they graduate from high school. The course will help students develop the ability to make informed and reasoned financial decisions for themselves and prepare students for their role as consumers and decision makers in society.

MANAGEMENT

Length: One Semester

Credit: .5

Building business skills and management will be the focus of this course. This class will be a combination of lecture and discussion with projects being assigned that relate to the material being studied.

TECHNOLOGY I

Length: One Semester
Credit: .5
Open To: All Students

Technology 1 will serve as an introduction to applications that students should be proficient in to succeed in High School. Students will explore the basics of computer programming, Cloud Computing, and Digital Design. Students will begin to learn to use tools that focus on Computer Aided Design and 2D Computer Aided Manufacturing. Students will successfully complete multiple projects during the course of the semester.

TECHNOLOGY II

Length: One Semester
Credit: .5
Open To: Students who completed Tech I

Technology 1 is a prerequisite for Technology 2. Technology will build upon the skills that students have learned in Technology 1. Projects will be more student lead and student driven. Students will focus on additive and subtractive Computer Aided Manufacturing. Students will also explore concepts of photo editing and web-design.

HYPE & HIGHLIGHTS

Length: One Semester
Credit: .5

Get ready to dive into the world of media production! In Hype & Highlights, you'll learn the art of creating attention-grabbing social media posts and high-energy hype videos. Whether you're showcasing game-winning moments, behind-the-scenes action, or promoting a school club, this course teaches you how to harness video editing, storytelling, and digital marketing techniques to captivate your audience. Through hands-on projects, students will explore camera techniques, editing software, and social media trends to produce content that excites, engages, and elevates athletic performance as well as engages the readers on what is happening within the school. By the end of the course, you'll have the skills to create powerful social media content that boosts team spirit, builds athletic profiles, and makes a lasting impact online. Students interested in this class should expect to spend time outside of school to record at various school events.

FOREIGN LANGUAGE

SPANISH I, II, III, and IV

Length: One Year
Credit: 1.0

SPANISH I

Identify the main idea in things they read and hear with a lot of support from pictures and body language. Use memorized words, phrases and questions. Use manners and gestures to clarify meaning. Use memorized words and phrases with pictures and/or graphs etc. to make very short presentations

SPANISH II

Identify the main idea in things they read and hear with some support from pictures and body language. Use memorized words, phrases and questions. Use manners and gestures to clarify meaning. Use memorized words and phrases with pictures and/or graphs etc. to make short presentations. Add to their stock of memorized words, phrases and questions. Start to mix memorized language to create original phrases and questions

SPANISH III

Identify the main idea and some details in short and simple things they read and hear. Mix memorized words, phrases and questions from a larger stock into original language. Use words to clarify meaning. Make simple presentations with original language. Add to their stock of memorized words, phrases and questions. Engage in short, partially original conversations.

OL SIGN LANGUAGE

Length: One Year
Credit: 1.0

This online course teaches students beginning skills in sign language. It is an independent curriculum that students will learn online through NOVA.

LANGUAGE ARTS

ENGLISH 9

Length: One Year
Credit: 1.0

The class concentrates on improving reading and comprehension, grammatical skills, and writing ability. Assignments will consist primarily of reading short stories, poems, and non-fiction, to discuss, write, undergo vocabulary and

grammar exercises based on readings. Students will read two non-fiction novels and study the development and importance of the novels. Also, they will read a Shakespearean play, Romeo and Juliet. Students will complete four book projects. Three of the book projects will be presented in front of the class. Students will improve listening skills and recognize non-verbal communication. Students will organize ideas for their book project speeches and will also recognize and overcome stage fright.

ENGLISH 10

Length: One Year
Credit: 1.0

The class concentrates on improving each student's reading ability and comprehension, grammatical skills, and writing ability. Fundamental skills in grammar are reviewed. In writing, the mechanics of capitalization, punctuation, spelling, and vocabulary are emphasized and writing assignments are assigned frequently. The study of literature concentrates on short stories, poems, a non-fiction novel, and one Shakespearean play, Julius Caesar. Students will improve verbal communication skills and recognize audience analysis is an essential step in public speaking

GENERAL ENGLISH 11

Length: One Year
Credit: 1.0

This course is geared to the student who does not intend to further education at a four-year college. Standard English will be reviewed as will the mechanics of capitalization, punctuation, spelling, and vocabulary. There will be many writing assignments, including research based assignments, literary analysis, and personal writings. Short stories, novels, and non-fiction (autobiographies, biographies, and essays) will be used to develop reading comprehension. Students will be encouraged to develop vocabulary skills, and spelling will be emphasized. Students will also participate in discussions and interviews. Also there will be a comprehensive career unit that will last the whole semester.

GENERAL ENGLISH 12

Length: One Year
Credit: 1.0

This course is intended for students who will be attending a two-year college, joining the military, or entering the workplace. Students will write essays, letters, stories, and reports, and read novels, short stories, and drama. Students will be encouraged to develop reading and writing skills throughout the course. Students will present a variety of speeches as well as complete a variety of writing assignments.

CP ENGLISH 11

Length: One Year
Credit: 1.0

This course is intended for students planning on attending college. Writing is stressed throughout the year. Students will complete informative, persuasive, narrative, and analytical essays. Students will read and analyze *Macbeth*, *Frankenstein*, *The Great Gatsby*, and *I Know Why the Caged Bird Sings*. The mechanics and processes of writing are stressed, as is the development of critical thinking skills. Rhetorical analysis will also be a major unit. Along with writing, students will participate in discussion and presentations throughout the class.

CP ENGLISH 12

Length: One Year
Credit: 1.0

This course is intended for those students who will be attending college. A continuation of C.P. English 11, the course stresses writing across the curriculum in preparation for college composition classes. Major essays will include argumentative, informative, narrative and literary analyses. Students will also read and write literary essays based on *Hamlet*, *For Everyone*, and *The Scarlet Letter*. Students will conduct debates, lead discussions, and take part in other in-class presentations.

CCP COMPOSITION I

Length: One Semester
Credit: 1 high school & 3 college
Prerequisite: Must be accepted to NSCC

This course is only offered if enough students sign up. An expository composition course emphasizing the expectations of college-level writing, including thesis development, support, and coherence. Students will gain experience using a variety of rhetorical modes. In addition to a number of full-length essays, a short documented paper, based on research materials and using parenthetical references, is required.

CCP COMPOSITION II

Length: One Semester
Credit: 1 high school and 3 college
Prerequisite: Must have earned a C or better in ENG 111.

This course is only offered if enough students sign up. Building on the skills learned in Composition I, this course further develops the student's writing and research experience, with an emphasis on analytical writing in response to critical reading and class discussion. Using MLA parenthetical documentation techniques, the student will write several short essays and a research paper.

ELECTIVE COURSE OPTIONS

WHODUNIT? MYSTERY & SUSPENSE

Length: One semester
Credit .5

What makes a reader hang on the edge of their seat? You'll be a master and have the answer to that question after taking this elective! Learn about the elements of mystery in literature, and apply these sneaky skills as you create your own suspenseful stories.

SPORTS LITERATURE

Length: One Semester
Credit: .5

Crazy about sports? Increase your reading and vocabulary skills by reading about all varieties of sports. Magazines, newspapers, books, and other sports media will be used to help students write descriptions, action stories, sports facts and rules of the game.

SPEECH

Length: One semester
Credit .5

Speech is an interactive, project based course, focused on developing one's public speaking skills through a variety of communication contexts. Projects include, but are not limited to a mock trial; a job interview; and Model United Nations.

PODCASTING

Length: One semester
Credit .5

In the first quarter of this course, students will listen to different types of podcasts. They will analyze the production and writing of the podcast, which includes but is not limited to, the purpose of and the design of the podcast as well as the elements of the speaker. In the next quarter of this course, students

will be focusing on designing their own podcasts. They will focus on planning, interviewing, story-telling, recording and editing, and possibly distributing.

PODCASTING II

Length: One semester
Credit .5
Prerequisite: Podcasting I

This class is a continuation of Intro to Podcasting where students will create a podcast series (15-18 podcasts total). This series will be published once a week for Montpelier listeners.

TOMORROW'S LEADERS

Length: One Semester
Credit: .5

Tomorrow's Leaders is a course that focuses on preparing students to be leaders in our school, community, and society. This course will require students to delve into their inner self to find the leader within. The purpose of this course is to help students build self-confidence, empower them to succeed, lead them to the next level of leadership, and teach them how to influence others in a positive, selfless manner. To be eligible for this course, students are required to fill out the application with teacher recommendations.

YEARBOOK

Length: One Year Independent Study
Credit: 1.0
Open To: 9th- 12th graders

An elective course for students interested in participating in the production of the Montpelier High School annual. Emphasis is placed on actual production of the annual. Experience will be gained in the following areas: Planning and techniques of good layouts, types of design, basics of photography, cropping photographs, typography and copy preparations, financial planning, advertising and sales. This will be an independent study. Extra-curricular time will be required.

MATHEMATICS

ALGEBRA I

Length: One Year
Credit: 1.0

Algebra is a natural outgrowth of arithmetic. Up to now work in mathematics has been mostly arithmetic with some simple geometry and formula work. Arithmetic deals with definite problems while algebra deals with those

same problems in general. One of the main objectives of algebra is to make a transition from arithmetic, by thinking in terms of numbers alone, to principles of algebra dealing primarily with numbers and letters (variables) in the equation. Since algebra is cumulative, much time is spent in teaching the student how to approach and study new concepts and to recall concepts previously studied. Student should understand that completed homework is a necessity for course completion.

ALGEBRA I B

Length: One Year
Credit: 1.0

This is a continuation of Algebra 1A. This course will review Algebra 1A and also cover new material that involves exponential functions, rational functions, and quadratics. Teacher recommendation is mandatory.

STATISTICS & PROBABILITY

Length: One Year
Credit: 1.0
Prerequisite: Algebra I, Geometry

Statistics will introduce students to data distribution and probability. Students will explore a wide range of representations and concepts to build logic and reasoning around collecting and analyzing data. This course could replace Algebra II.

GEOMETRY

Length: One Year
Credit: 1.0

The basic objectives for the study: 1) it gives the student a chance to develop his understanding of mathematical proof 2) it provides an understanding of plane and space relationships 3) it helps to develop the student's sense of logic as applied at everyday living 4) it further develops concepts of arithmetic and algebraic operations. The course of geometry teaches the student how to think clearly. Geometry's practical value will be of use later, especially for those planning to pursue the professions of law, medicine, art, design, or any of a multitude of others. The habit of thinking properly can be acquired through geometry. Greater evaluation of what is read and more intelligent conversation can be acquired from the study of geometry. Logic is a by-product of geometry.

APPLIED ALGEBRA II

Length: One Year
Credit: 1.0
Prerequisite: Algebra I & Geometry; teacher recommendation only

This course will use algebra concepts applied to the everyday work force, with a concentration on the technical aspect of measurement.

ALGEBRA II

Length: One Year
Credit: 1.0

This course will build off of the skills and applications of Algebra I. It is designed to help students build reasoning in mathematics. Algebra II will cover expressions and equations that include linear, quadratic, polynomial, and exponential functions. Students will build on their knowledge of graphically representing different contexts.

PRE-CALCULUS

Length: One Year
Credit: 1.0

Pre-Calculus deals mainly with concepts that will be used in the study of college mathematics and/or calculus. Many of the Algebra II topics are studied in almost every chapter. Some of the new areas introduced include circular functions, trigonometry, application of trigonometry, sequences, series, limits, exponential and logarithmic functions, matrices, the conic sections, etc.

CALCULUS (IF ENOUGH INTEREST)

Length: One Year
Credit: 1.0

This class focuses on the three main topics of limits, derivatives, and integration. We'll take all of the mathematics that have been taught so far and apply them to such applications as related rates, area and volume of curved shapes, and velocity and acceleration. We will explore such fun problems as how fast the radius is increasing when a pebble is dropped in a pool of water and the ripple expands out to the sides of the pool. It's a difficult but fun course.

MUSIC

BAND

Length: One year
Credit: 1.0
Fee: \$10

High School Band builds on the skills already learned in grade 5-8 band. This course is made up of three components: Marching Band, Concert Band, and Pep Band. Students will learn about and perform music of different genres, and time periods throughout the year. Students are required to attend Band Camp for one week in August to prepare for the fall marching season. Because this is a performing ensemble, students are required to attend all performances, including scheduled football and basketball games.

MUSIC APPRECIATION

Length: One Semester
Credit: .5

This is a non-performance class that explores music of various styles through listening experiences. Students will have a basic understanding of music and to inspire an appreciation for music from a variety of genres and cultures

BEGINNING GUITAR

Length: One Semester
Credit: .5

This course is an introduction to guitar playing. Students will learn basic fingering and notes, how to read music, basic chords, and information about the guitar. Practice outside the school day is highly encouraged.

CARDIO DRUMMING

Length: One Semester
Credit: .5

This semester long course will explore different types of drumming combined with movement. Students will learn rhythm reading basics along with exploring different types of drum performance including: drumline, bucket drumming, drum circles, and cardio drumming.

CONCERT CHOIR

Length: One year
Credit: 1.0

This class is available to all students who have a drive and passion for singing. You will learn the basics of sight-reading music and be expected to bring a high level of dedication to this group. This year long course will teach you the basics of music notation, understanding music styles and genres, and include mandatory performances throughout the year.

JAZZ BAND

Length: One year
Credit: 1.0
Prerequisite: Must have permission from director.

Jazz band is for students looking to expand their playing technique and study a different type of music. Jazz band musicians will learn different jazz styles and complex rhythm patterns. Students will be expected to perform at many different performances both during and outside of the school day throughout the year.

THEATER PRODUCTION

Length: One Semester
Credit: .5
Fee: \$10

The purpose of this course is to provide the complete experience in behind the scene work for a show. Activities will be designed so students can learn how to research, design, and create the visual aspects of a show, including but not limited to the set, props, costumes, makeup and publicity documents. They will learn to explore the purpose of the show and the idea that desires to be expressed. This course will work towards the completion of several productions: 5th Grade Musical, 3rd Grade Musical and the High School musical, as well as other school displays. Students will work on many operations, including but not limited to: set design, costume plot design, program design, prop creation, light and sound operation and publicity. Because Theater Experience is a class that works toward final productions, students must cooperatively work with others, be industrious, and be eager to be creative.

PE & HEALTH

HEALTH

Length: One Semester
Credit: .5

Units of wellness, decision making in reference to drug, alcohol, and tobacco use, and their effects on each individual's quality of life, human sexuality, nutrition, and physical fitness. A textbook, notebook and audio visual aids are used to help in the instruction of healthy living.

LIFELONG FITNESS/PE I

Length: One semester
Credit: .25

This required course is designed to provide students with opportunities to develop knowledge, skills and necessary attitudes for a lifetime of personal fitness and activity. This class is conceptually based and promotes the development and maintenance of personal fitness and problem solving throughout life. Students will be expected to develop a physical activity program tailored to help them meet their own individualized fitness goals.

LIEFLONG SPORTS/PE II

Length: One semester
Credit: .25

Students will be introduced to various life time sports with the purpose of developing useful and desirable skills to serve as a basis for leisure-time activities. Students will practice developing analytical thinking and judgment through guided experiences in a wide variety of meaningful and challenging activities; a sense of individual responsibility for acceptable behavior involving life time activities; a realization of the importance of leisure time activities following graduation as a means of physical fitness in future years.

NUTRITION

Length: One Semester
Credit: .5
Fee: \$10.00

This course is designed to enable students to learn how to fuel their bodies and minds to function as optimally as possible. Students will study the science of food, exercise, and psychology in how they affect an individual's overall wellness. Students will conduct

experiments and prepare foods throughout the duration of the course.

SPORTS EDUCATION

Length: One Semester
Credit: .5

Sports education class will deal with learning about a variety of different sports around the world. The main sports that are offered by Montpelier would be taught such as football, basketball, baseball/softball, wrestling, cross country, track, golf, but also sports not offered such as bowling, swimming, cricket, etc. would also be part of the class. Students would learn the ins and outs of each sport, including the rules, strategy, and actual play of the games. Also allows the ability to gain the information needed within an online course to gain OHSAA licensure through innovative and interactive course material.

SPORTS PERFORMANCE

Length: One Semester
Credit: .5

Prerequisite: Should be in a sport

Students are expected to dress each day and bring a separate pair of athletic shoes. Students will learn basic strength training methods and work towards goals that were individually set at the beginning of the year while improving their overall physical fitness. Evaluation is based on class participation, attitude, proper attire and cooperation.

SCIENCE

SCIENCE 9

Length: One Year
Credit: 1.0
Fee: \$7.00

Science 9 is a freshmen level class required of all incoming freshmen. It is physical science, with ties to chemistry, physics and the universe. Topics covered in the course include: the study of matter, atoms, bonding and the periodic table. Energy, waves, electricity, forces and motion and the history of the universe. This course will reinforce concepts learned earlier as well as introduce new topics.

BIOLOGY

Length: One Year
Credit: 1.0
Fee: \$15.00

This course investigates the diversity, complexity and interconnectedness of life on Earth. Fundamental concepts of heredity and evolution provide a framework through inquiry-based instruction to explore the living world, the physical environment and the interactions within and between them. Students engage in investigations to understand and explain the behavior of living things in a variety of scenarios that incorporate scientific reasoning, analysis, communication skills and real-world applications.

EARTH SCIENCE

Length: One Year
Credit: 1.0
Open to: 11th graders

Earth Science is a science course designed for any student with an interest in geology. It is designed to study the following aspects of the earth: history, tectonics, the crust, erosion and weathering, landforms, rocks and minerals, and fossils. This class is activity and project oriented with written, video, and web based work.

CHEMISTRY

Length: One Year
Credit: 1.0
Fee: \$15.00
Open To: 11th and 12th graders

Chemistry is intended to help those students planning on furthering their education in the areas of science, medicine and engineering. It is also offered to those students with a strong interest in science. Topics will vary from the history of chemistry to the exploration and application of chemistry in the present and future. Laboratory procedures will be stressed as will lab safety.

CP CHEMISTRY

Length: One Year
Credit: 1.0
Fee: \$15.00
Open To: 11th and 12th graders

Chemistry is intended to help students planning on furthering their education in the areas of science, medicine and engineering. It is also offered to students with a strong interest in science. Topics will vary from the history of chemistry

to the exploration and application of chemistry in the present and future. Advanced topics will be covered in this class as a preparation to college courses with a higher work load of lab reports. Laboratory procedures will be stressed as will lab safety.

ELECTIVE COURSE OPTIONS

ASTRONOMY

Length: One Semester
Credit: .5

Astronomy is a science course that covers the different celestial bodies, space and the universe as a whole. Topics covered include: the history of astronomy, the Sun, Earth and Moon system, our solar system, galaxies, stars, the universe and space exploration. This class is a research and project-oriented class.

FORENSICS

Length: One Semester
Credit: .5
Fee: \$10.00

Forensic science is a laboratory-based introduction to the analysis of crime scenes by collecting and analyzing physical evidence. This course is designed to integrate the core scientific disciplines while giving students both theory and hands-on experience with the skills and knowledge required for a forensic crime scene investigator. This multidisciplinary approach will highlight topics in DNA, genetics, anatomy, chemistry, physics, entomology, botany, and investigative techniques with supplemental subject matter through case studies, earth science, mathematics, medicine, technology and sociology.

FORENSICS II

Length: One Semester
Credit: .5
Open to: Must complete Forensics I
Fee: \$10.00

Forensics II is laboratory-based class that will build on the topics introduced in forensics I. This course is designed to use the information gathered from forensics I and apply that to the science behind the job of a forensics crime scene investigator. This class will focus on the more in depth concepts in forensics such as DNA and genetics while building on the foundation that was set in forensics I. This is a multidisciplinary course that will use a range of science disciplines.

HUMAN ANATOMY

Length: One Year
Credit: 1.0
Fee: \$20.00
Open To: 12th graders

This course investigates the composition, diversity, complexity and interconnectedness of life on Earth. Fundamental concepts of heredity and evolution provide a framework through inquiry-based instruction to explore the living world, the physical environment and the interactions within and between them. Students engage in investigations to understand and explain the behavior of living things in a variety of scenarios that incorporate scientific reasoning, analysis, communication skills and real-world applications.

PHYSICS

Length: One Year
Credit: 1.0
Fee: \$10.00
Open To: 12th graders

Physics is primarily concerned with observation and understanding of physical phenomena. Emphasis is placed on the student's ability to appreciate and understand fundamental physical principles and to apply those principles to everyday usage. Topics studied include force, motion, work, energy, heat, waves, electricity, magnetism, sound, light, nuclear physics and limited research into advanced concepts. Laboratory experiments are scheduled on a regular basis and are designed to correlate with the classroom lectures, discussions and reading assignments. In some cases, juniors may be permitted to enroll in physics but only with permission from the instructor. It is also highly recommended that advanced math be taken concurrently with physics.

ROBOTICS I

Length: One Year
Credit: 0.5

Robotics focuses on learning computer code through the use of java language. After learning computer programming, students are required to build robots and program them to accomplish different tasks. This course will be an introduction to robotics including aspects such as autonomous robots, remote control robots, introduction to circuits, and problem solving.

ROBOTICS II

Length: One Year (Or Two Class Block)

Credit: 1.0

Fee: \$35.00

Prerequisite: Robotics I

This course will build on knowledge gained from Robotics I and focus on more difficult tasks with autonomous and remote-controlled robots. This course will include a competition in Marion, Ohio called The National Robotics Challenge (NRC) and students will compete in several different events with other high school students nationwide and a few schools from other countries.

ZOOLOGY

Length: Semester

Credit: 0.5

This semester long course will focus on zoology (the study of animals) while touching on ecology (the study of interactions between organisms and their environment) and paleontology (the study of fossils and early life forms). These variations of biology will come together for a deeper understanding of the animal kingdom. In addition to studying the structure and physiology of animals in all the major animal phyla, this course will examine how life forms have changed through time and how organisms interact in various ecological systems. There will be lab exercises, hands-on activities, and projects to assess mastery.

SOCIAL STUDIES

MODERN WORLD HISTORY

Length: One Year

Credit 1.0

Global History emphasizes political economic, social, and cultural aspects of world development since 1750. We will be developing research and study skills, map skills, as well as writing and critical thinking skills. Note taking is required.

AMERICAN HISTORY

Length: One Year

Credit: 1.0

This course will study American History in the realm of world events and will focus on the time beginning with the U.S. Industrial Revolution (1870s) through the Present. Class will involve reading, taking notes, multimedia projects, class discussions, and cooperative learning, in a way to engage students in multiple learning styles. The

goal of this course is to grasp the underlying themes, understand the major events, describe the contributions of diverse groups, identify the important individuals, and analyze the major decisions of each era.

GOVERNMENT

Length: One Year

Credit: 1.0

Prerequisites: Global and Am. Hist.

The American Government student should understand the United States government knowing the following things: the origins, structures, and functions of the governments; the rights and responsibilities included in the Constitution, and the people who are instrumental in government. The study of state and local government should be included in this course. The student should understand the structure and function of the state and city government and the importance of the state, county, and city government.

ELECTIVE COURSE OPTIONS

GEOGRAPHY I

Length: One Semester

Credit: .5

This semester-long course builds on students' understanding of geography and spatial thinking. This semester course focuses on Canada and the United States, Latin America, Europe and Russia. During this course, contemporary issues are explored through the lens of geography. In addition to understanding where physical and cultural features are located and why those features are located as they are, students examine the implications of these spatial arrangements.

GEOGRAPHY II

Length: One Semester

Credit: .5

This semester-long course builds on students' understanding of geography and spatial thinking. This course focuses on Africa, Southwest and Central Asia, Monsoon Asia, and Oceania and Antarctica. During this course, contemporary issues are explored through the lens of geography. In addition to understanding where physical and cultural features are located and why those features are located as they are, students examine the implications of

these spatial arrangements. Geography 1 is NOT a prerequisite to this course.

CURRENT EVENTS AND SOCIAL MEDIA

Length: One Semester

Credit: .5

In a world where so much of our information comes through Social Media, how can you separate fact from fiction? We all know you can't believe everything you see on the internet, but the question then becomes, "What can you believe?" Students will look at current events of the day while also navigating the world of Social Media. Students will look at multiple different news sources to analyze bias, misleading information, and various interpretations of information.

PSYCHOLOGY

Length: One Semester

Credit: .5

Open to: 12th graders

Psychology is an elective for college prep seniors. The class will deal with the history of psychology and the different schools of thought on psychology. The students will conduct polls and surveys. The class will be involved in some basic experimental psychology.

SOCIOLOGY

Length: One Semester

Credit: .5

Open to: 12th graders

This course will discuss how the social world guides our actions and life choices and explain how society works. It will look at how people behave in groups, recurring patterns in human behavior, and researching and questioning assumptions people make by learning to question conventional wisdom. All areas and assignments are designed for college prep seniors.

AMERICAN HISTORY IN FILM

Length: One Semester

Credit: .5

Films have been created which cover much of American history. This course will look at how various aspects of history are portrayed in films and contrast that with "how it really was." A

major goal of this course is to determine what is valid in contemporary films and historical dramas.

VOCATIONAL

TRADE SKILLS I

Length: 1 year

Credit: 1.0

Fee: \$20

This course will focus on skills where students will use their hands. These skills will include: scaled drawing, carpentry, woodworking, electrical, and basic automotive care. This course will focus on work ethic and productivity through an environment geared toward learning to safely operate machines and work with their hands.

TRADE SKILLS II

Length: One Year(single or double block)

Credit: .0

Fee: \$20

Open To: Students who successfully completed Trade Skills I

This course will focus on skills were students will use their hands. These skills will include: scaled drawing, carpentry, electrical, plumbing, metal work and basic automotive care. This course will focus on work ethic and productivity through an environment geared toward learning to safely operate machines and work with their hands.

LIFE SKILLS

Length: One Semester

Credit: 0.5

Fee: \$20

Students will be introduced to child development, family relationship concepts and how they relate to family dynamics. Additionally, students will identify financial literacy and consumer economic principles. Students will understand the concepts of design through textiles for personal and home use. Students will gain knowledge in food selection criteria and apply preparation methods to promote a healthy lifestyle. Students will apply cooking methods, ingredient selection and nutritional information in the context of selected food dishes. Throughout the course, basic food safety and sanitation techniques will be emphasized.

HIGH SCHOOL 101

Length: One Semester

Credit: 0.5

We will keep up with current events and explore a variety of essential skills such as communication, critical thinking, problem solving and working with a diverse population. In addition, we will explore some valuable skills in the workforce to help not only obtain a job, but also keep a job.
