

Resources

NOTE - These resources require the user to apply the changes to their browser for translation options within their personal devices.

Google Translate

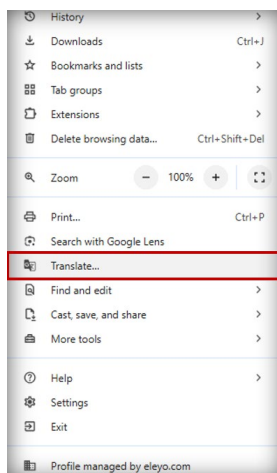

Google Translate Extension within Chrome Browser can translate webpages to a preferred language.

The Google Translate extension is a tool that allows you to translate web pages, text, and speech in over 100 languages. To use the Google Translate extension, you need to install it from the [Chrome Web Store](#). After installing the extension, you will see a Google Translate icon in your browser toolbar. You can click on the **blue** icon (top right) to access the extension's features.

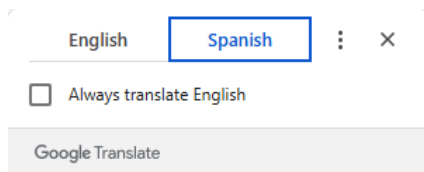

Use Extension Translation

1. Open Chrome Browser
2. Navigate to the desired Web Page
3. In the upper-right corner of the window, select the  icon
4. Select Translate

5. Select desired language within next pop up window

Change the default language in your Internet browser

Google Chrome

1. Open Chrome Browser
2. In the upper-right corner of the window, select the  icon
3. Click **Settings** in the drop-down menu.
4. On the *Settings window*, in the left navigation menu, select **Languages**.
5. On the right side of the *Settings window*, select the **Language** option.
6. Click the **Add Languages** link.
7. In the *Add languages* pop-up window, click the checkbox next to one or more languages, and select the **Add** button. *You can also search for languages using the search field in the upper-right corner.*
8. Your newly selected languages should appear in the *Language* section. To choose one, click the  icon to the right of the language and check the box next to **Display Google Chrome in this language**.
9. Click the **Relaunch** button, or close and reopen your Chrome browser to display the new language.

Firefox

Firefox has added translation features that allow users to browse the web in their preferred language. Users will need to have Firefox version 118 or newer to have options for translation.

Translate the full page

1. Open Firefox web browser and select the translation icon in the toolbar or select Translate page from the menu.
2. Firefox will detect the page language automatically for the “Translate from” section of the **top** dropdown menu. You may manually change it as well.
3. Select your desired translation language from the **bottom** dropdown menu.
4. Click **Translate** to translate the entire page

More Information can be found at <https://support.mozilla.org/en-US/kb/website-translation>

Safari

Safari has translation options available within their web browser.

1. Open the Safari App on Mac
2. Navigate to the webpage you want to translate. If the webpage can be translated, the Smart Search field will display the Translate Icon
3. Click on the Translate Icon and choose your preferred language.

Edge

Microsoft Edge automatically prompts for translation if the webpage shows as a different language than your preferred languages within the Edge Settings. A language is considered foreign if it is not included in the **Preferred Languages** list in Settings. To add or remove languages from the list, in Microsoft Edge, go to **Settings and more > Settings > Languages**.

If settings have not been adjusted correctly, a user is able to manually translate a webpage by following the steps provided below.

1. Select the translate icon in the Address bar,
2. In the **Translate to** menu, select which language you want to translate to.
3. Select Translate.

Mobile Devices

Google Chrome, Firefox, and Edge on mobile devices have the option to translate webpages by selecting Settings from the Browser App, and select Translate.

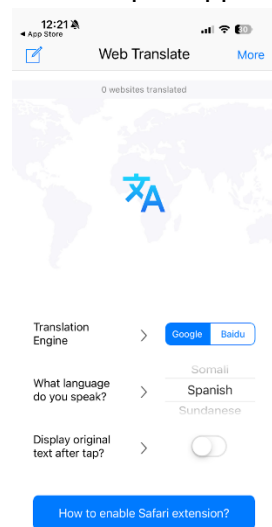

Safari on Mobile has a highlighted text translate option but an extension can be downloaded to have full webpages Translated.

1. Open App Store on your iPhone or iPad
2. Search for “Website Translator”

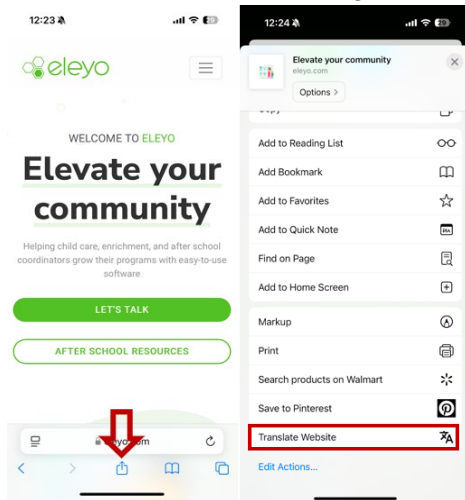

NOTE Ensure you download Website Translator Extension for Safari App as shown here.

3. Open app and select the preferred language

4. Close app and open Safari

5. From Safari webpage, tap on Share and scroll down to select Translate

6. Safari will then open within the Translator Extension App with your preferred language.
