

Marietta City Schools

2024–2025 District Unit Planner

| Grade 7 Honors Mathematics | | | | | | | |
|----------------------------|-----------------------------------|----------|---|---------------------|--|--|--|
| Unit title | Unit 5: Investigating Probability | MYP year | 2 | Unit duration (hrs) | Enter Hours MSGA- (5 hours per week) MMS- (4.5 hours per week) MHS- (7.5 hours per 2 weeks) | | |

Mastering Content and Skills through INQUIRY (Establishing the purpose of the Unit): What will students learn?

GA DoE Standards

Standards

7.PR.6 Using mathematical reasoning, investigate chance processes and develop, evaluate, and use probability models to find probabilities of simple events presented in authentic situations.

7.MP: Display perseverance and patience in problem-solving. Demonstrate skills and strategies needed to succeed in mathematics, including critical thinking, reasoning, and effective collaboration and expression. Seek help and apply feedback. Set and monitor goals.

Gifted Standards

Strand 2: Creative Thinking Skills

Students will develop and utilize creative thinking through a variety of products and problem solving.

Strand 3: Higher Order Thinking and Problem Solving Skills

Students will develop and utilize critical thinking, higher order thinking, logical thinking and problem solving skills in various situations.

Strand 4: Advanced Communication and Collaboration Skills

Students will develop advanced communication and collaboration skills in working toward a common goal with shared accountability for the final outcome.

| | Expectations | Evidence of Student Learning (not all inclusive; see Grade Level Overview for more details) | | | | | |
|----------|---|--|---|---|---------|--|--|
| 7.PR.6.1 | Represent the probability of a chance event as a number between 0 and 1 that expresses the likelihood of the event occurring. Describe that a probability near 0 indicates an unlikely event, a probability around $\frac{1}{2}$ indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event. | Strategies and Methods Students should be able to represe probability as a fraction, decimal number or percentage. | | Terminology ■ Descriptions may include impossible, unlikely, equally likely, likely, and certain. | | | |
| 7.PR.6.2 | Approximate the probability of a chance event by collecting data on an event and observing its long-run relative frequency will approach the theoretical probability. | Strategies and Methods Students should be able to predict approximate, relative frequency gives theoretical probability. | 1 | number cube 600 times, predict that a 3 olled roughly 200 times, but probably not es. | | | |
| 7.PR.6.3 | Develop a probability model and use it to find probabilities of simple events. Compare experimental and theoretical probabilities of events. If the probabilities are not close, explain possible sources of the discrepancy. | Strategies and Methods Probability models may include various random generation devices including, b limited to, bag pulls, spinners, number coin toss, and colored chips. Students should have multiple opportur collect data using physical objects, grap calculators, or web-based simulations. | ut not tossing a coin to be tubes, Tiffany tosses a co 10 times. When Tifties to coin landed on hea | Kim calculates the probability of landing on heads when tossing a coin to be 50%. She uses this to predict that when Tiffany tosses a coin 20 times, the coin will land on heads 10 times. When Tiffany performed the experiment, the coin landed on heads 7 times. Explain possible reasons why Kim's prediction and Tiffany's results do not match. | | | |
| 7.PR.6.4 | Develop a uniform probability model by assigning equal probability to all outcomes at use the model to determine probabilities of events. | Example If a student is selected at rai | ndom from a class, find the probab | oility a student with long hair will be selec | ed. | | |
| 7.PR.6.5 | Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. | Uniform probability models are those where | Find the approximate probabilit a tossed paper cup will land ope | ty of each outcome in a spinner with unec ty that a spinning penny will land heads u en-end down. Do the outcomes for the sp ly based on the observed frequencies? | or that | | |
| 7.PR.6.6 | Use appropriate graphical displays and numerical summaries from data distributions with categorical or quantitative (numerical) variables as probability models to draw | | Age/Developmentally Appropriate Limit category counts to be less than or equal to ten. | Compare the heights of the baskets the tennis teams. | all and | | |

| | _ | | _ | | | |
|--|----|---------------------------------|---|------------------------------|-----------|--|
| informal inferences about two samples or | | of samples from two | • | Limit quantitative variables | | all team's heights (in inches): 72, 75, |
| populations. | | populations. | | to less than or equal to 20. | 76, 76, 7 | 9, 79, 80, 80, 81, 81, 81 |
| | • | Students should compare data | | | | |
| | | of two samples or populations | | | Tennis te | eam's height (in inches): |
| | | displayed in box plots and dot | | | 67, 67, 6 | 8, 70, 70, 71, 72, 75, 76, 76, 77 |
| | | plots to make inferences using | | | | |
| | | probabilistic reasoning. | | | 1) | How much taller is the basketball |
| | • | Students should be able to | | | , | team than the tennis team? |
| | | draw inferences using | | | | |
| | | measures of central tendency | | | 2) | Two students are trying out for the |
| | | (mean, median, mode) and/or | | | _, | basketball team. What is the |
| | | variability (range, mean | | | | probability their height will be greater |
| | | absolute deviation and | | | | than 79 inches? |
| | | interquartile range) from | | | | than 75 menes: |
| | | random samples. | | | | |
| | | Conclusions should be made | | | | |
| | • | | | | | |
| | | related to a population, using | | | | |
| | | a random sample, by | | | | |
| | | describing a distribution using | | | | |
| | | measures of central tendency | | | | |
| | | (mean, median, mode) and/or | | | | |
| | | variability (range, mean | | | | |
| | | absolute deviation, and | | | | |
| | | interquartile range). | | | | |
| | ١. | , ,, | | | | |
| | • | Students should be given | | | | |
| | | multiple opportunities to | | | | |
| | | compare quantitative data | | | | |
| | | distributions of samples from | | | | |
| | | two populations. | | | | |

Concepts/Skills to support mastery of standards

- Represent the probability of a chance event between 0 and 1. (PR. 6.1)
- Approximate the probability by observing its long-run relative frequency. (PR.6.2)
- Compare experimental and theoretical probabilities of events.(PR.6.3)
- Develop a uniform probability and determine probabilities of events(PR.6.4)
- Develop a probability model by observing frequencies.(PR.6.5)
- Draw inferences about two samples or populations from different graphical displays.(PR.6.6)

Vocabulary

| Probability | Theoretical probability | Simple Event | Relative Frequency | Experimental Probability |
|-------------|-------------------------|---------------------|--------------------|--------------------------|
