STEAM Magnet

5th Grade Newsletter - March 2025

Unit 4 - Essential Question: How can we convince others to use Earth's resources in a more sustainable way?

We will learn about sustainable systems, including ecosystems, recycling systems and food webs. Students will eventually choose a practice at Sullivan to create an instructional video teaching our school community how to make it more sustainable.

Math- Bridges Unit 5 - Multiplying and Dividing Fractions

In Unit 5 we will expand our multiplication and division strategies to include the multiplying whole numbers by different types of fractions.

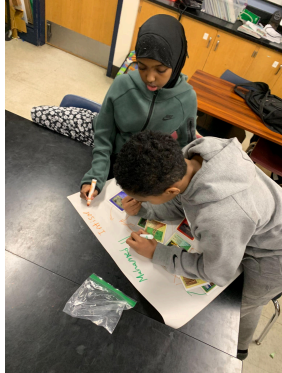

March Number Corner

In March, we will collect data on our classroom pencils and analyze the graphs we create together. We will also explore patterns in place value.

Specialist

Beginning March 17th, Ms. Olson and Ms. Harness will have Make Space with Mr. Kimmel and Health with Ms. Amy. Mrs. Adams will have Music with Mr. Nate and Gym with Mr. Jeff. These will be our final specialist classes for the year!

Science from Scientists

We started our spring partnership with Science from Scientists. Every two weeks, we have guest scientists come to do investigations with 5th graders. We get to do these lessons in the middle school science lab, thanks to Mr. Woldum!

So far we have learned about how companies use data to target advertising to consumers online and food webs.
