

Air Force Association CyberCamp

Inspiring and Preparing Students for the Future

Pitt Cyber's annual CyberCamp inspires high school students to take an interest in cybersecurity. The free, week-long, interactive curriculum covers cyber ethics, systems security, network security, and future career opportunities.

Next Gen Cybersecurity Professional

"My school just started its introduction to cybersecurity course. Because I attended this camp the last two years, what I've learned is more advanced than an introductory course, so I can skip it and go right to the certification. It's a really great career opportunity."

Arielle M., student

Driving Interest

"[CyberCamp] had a powerful impact on [my son] at a crucial time in his development...he has shared that this camp and the CyberPatriot competitions afterwards were the primary reasons he chose to study cyber systems in college."

Toni S., parent and STEM teacher

Equipping Students for Tomorrow

"I could not believe the feedback I received from the students who attended from my district, Woodland Hills. It was an outstanding opportunity...a lot of what was accomplished and learned in those classrooms about teamwork and personal effort are things that will stay with those students for a lifetime."

Susan T., instructor
