**RE: Addendum to Mariposa Landscapes IPM program dated November 14, 2023**

Dear Ryan

As discussed, we are struggling with the control of 2 pests, bees and sod grubs. I have provided the labels and our Pest Control Advisors recommendation for each of the 2 chemicals to be used and I believe you have received approval from the Board of Supervisors. The following will be used only at Top of the World, Elementary and El Morrow, Elementary schools.

1. Speedzone Southern EW will be used to eradicate the extensive clover population currently in full bloom that exists in all turf grass helping to reduce bee activity before school resumes. This product carries a caution signal word of which is ok to access areas sprayed after the chemical dries.
2. Acelepryn G will be used to control the high turf grub population that exists in all turf and sports field areas causing potential slip and fall injuries during sports activities. The reentry time is once dry.

Now is the ideal time to complete both applications prior to school re opening .

Respectfully submitted,

Michael Williams
