WHAT IS DIESEL TECHNOLOGY?

ASU-Beebe's Diesel Technology program is designed to enable **YOU** to become part of the thriving field that powers heavy-duty engine systems and other industry equipment in the world of diesel technologies. Mechanics who can repair medium- and heavy-duty trucks can often expect higher wages than gasoline engine mechanics.

The ASU-Beebe Diesel Technology Program is one of only two National Automotive Technicians Education Foundation (NATEF) Accredited programs in the State of Arkansas.

HIGH SCHOOL CURRICULUM

Year 1

- **Diesel Engine Technology**
- **Medium- and Heavy-Duty Truck Electronics**
- **Steering and Suspension Systems**

Year 2

- **Climate Control**
- **Brake Systems**
- **Preventive Maintenance**

*** High school students can receive college credit for classes completed with a grade of "C" or higher.**

The Altec Technician Education Program partnership is a 12-month residential program that provides students with the opportunity to achieve a technical certificate or associate degree. Students will learn how to troubleshoot, repair, and service equipment that Altec customers use to build and maintain utility lines across the nation and in numerous foreign countries. Altec recruits and hires individuals interested in pursuing a career in their maintenance technician field. Successful applicants are then sponsored by Altec to attend training at ASU-Beebe's Searcy Campus in the college's Diesel Technology program. Students are provided housing, meals, books, and a stipend while attending the program. Paid internships are incorporated into the summers at one of Altec's service centers, where participants will have the opportunity to work side-by-side with seasoned Altec service professionals.

WHAT DO DIESEL TECHNICIANS DO?

Diesel service technicians and mechanics inspect, repair, and overhaul buses, trucks, or any vehicle with a diesel engine. Some diesel technicians specialize in a specific type of vehicle or equipment.
