**Auto Body/Collision Repair - Auto/Diesel Technology
Mechanics & Repair Technology**

Students in the **Auto Body & Collision Repair Program** learn the fundamentals of damage repair, metal straightening, panel replacement and preparation, and painting and refinishing.

Repairing actual cars and trucks, helps students gain real world experience. The Auto Body and Collision Repair Program emphasizes the use of industry tools and equipment and follows ASE guidelines.

The **Automotive/Diesel Technology Program** provides students with the technical knowledge and skills needed for employment in the automotive industry. Automotive Technology involves troubleshooting and repairing the complex components and systems found in today's automobiles. Instruction includes a combination of practical classroom theory and hands-on experience.

In The **Mechanics and Repair Technology Program** students learn the fundamentals of maintenance, repair and servicing outdoor power equipment, small gasoline engines, and powersports equipment. How to properly diagnose customer concerns is also extensively discussed. Students also learn

basic automotive theories and the fundamentals of service and repair.
