PRE-BID MEETING QUESTIONS AND ANSWERS

PROJECT: 2025 Filter First Grant Upgrades

OWNER: Dexter Community Schools

DATE: March 31st, 2025

BID DUE DATE: April 7th, 2025 (unchanged)

Questions or follow up comments:

Can we use stainless panels behind the new fountains? - Yes, the use of stainless panels behind the new water bottle fillers is acceptable.

Would you like to continue using the same models you are using? - Yes, we do want to have consistent new models installed. The district currently has some Elkay EZ H20 models.

Time frame for getting the work done? - We would like the work to happen over the summer of 2025. There are other projects happening this summer so we will need to coordinate a work schedule.

Many of the old fountains we are removing have a water bottle filler and two bubblers. Are we replacing them with a single or a double bubbler? They need to be replaced with a water bottling filler and one (single) bubbler.

The grant funding is not unlimited. Depending on the bid amount we may need to leave the current Elkay EZ H20 water bottle filling stations we have. There are currently 12 of these in the district.

Within the RFP it asks to give a bid breakdown per building. This needs to be included within the submitted document.
