

MILLER AVID PROGRAM

AVID (Advancement Via Individual Determination) is an elective class that focuses on developing the academic skills necessary for success in high school and college.

College Exploration

Students gain exposure to college and career opportunities through campus visits, multi-day field trips, career exploration, and guest speakers. AVID helps students understand college admissions, financial aid, and scholarship opportunities. Students receive SAT & ACT preparation to improve their college readiness.

Skill Development

AVID teaches essential skills in organization, time management, and study habits that help students excel across all subjects. Through the program, students build critical thinking, public speaking, reading, and writing skills. Twice a week, students receive personalized tutoring from college tutors in small groups to help reinforce challenging concepts. In addition, after-school tutoring sessions are available for extra support.

Major & Career Research

AVID encourages students to explore different majors and career paths, helping them make informed decisions about their future. Through research projects and guest speakers, students learn what it takes to succeed in various industries.

Classroom Community

AVID students become part of a close-knit classroom community that encourages teamwork, leadership, and personal growth. Through team-building activities, mentorship, and AVID events, students develop confidence, responsibility, and interpersonal skills.

AVID Works!

AVID has a proven track record of helping students succeed in high school, get accepted into college, and develop the skills needed for lifelong success. The program provides structure, encouragement, and high expectations—helping students rise to their full potential.
