Frederick County Public Schools

Virginia's Visualization and Analytics Solution (VVAAS) Student Assessment Summary Report FAQ

What is the Student Assessment Summary (SAS) Report?

Each school year the Virginia Department of Education provides testing information to VVAAS (Virginia's Visualization and Analytics Solution). This information was used to create an individualized SAS Report.

The Student Assessment Summary (SAS) Report is a compilation of your student's SOL testing history. This report gives you an opportunity to easily identify trends and performance within your student's testing history. Information about how your student's scores compare to other students who took the same test in Virginia is also included in the report.

How do I interpret the data in my student's SAS Report?

Line Graph—The line graph shows your student's state percentile and how your student's performance compares to other students in Virginia who took the same test.

Chart—The chart shows your student's state performance level for each completed test and the name of the SOL test. The performance level will show if your student received a passing or failing score.

This snapshot of your student's testing history will aid you in identifying areas of strengths for your student as well as areas to provide additional support.

Does my student need SOL scores to meet graduation requirements?

Virginia students must earn five verified credits to meet high school graduation requirements. You can read more about the graduation requirements by scanning the QR code.
