

Updated August 2024

Marking Period	Unit Title	Recommended Instructional Days
3	Solving Quadratic Equations	15-20 days
<b>Conceptual Category: Functions</b>		
<p><i>NJ Student Learning Standards (Taught and Assessed):</i> <b>Key:</b></p> <ul style="list-style-type: none"> <li><span style="color: green;">■</span> Major Cluster</li> <li><span style="color: blue;">□</span> Supporting Cluster</li> <li><span style="color: yellow;">○</span> Additional Cluster</li> </ul> <p><span style="color: green;">■</span> <b>A.SSE.A.1</b> Interpret expressions that represent a quantity in terms of its context.</p> <p>a. Interpret parts of an expression, such as terms, factors, and coefficients.</p> <p>b. Interpret complicated expressions by viewing one or more of their parts as a single entity. <i>For example, interpret <math>P(1+r)^n</math> as the product of <math>P</math> and a factor not depending on <math>P</math>.</i> ★</p> <p><span style="color: blue;">□</span> <b>A.SSE.B.3</b> Choose and produce an equivalent form of an expression to reveal and</p>	<p><u><i>Progress Indicators:</i></u></p> <ul style="list-style-type: none"> <li>• <i>Tests</i> • <i>Quizzes</i> • <i>Homework and Classwork</i> • <i>Online Activities</i></li> <li>• <i>Projects</i></li> </ul>	<p style="text-align: center;"><b>Recommended Activities, Investigations, Interdisciplinary Connections, and/or Student Experiences to Explore NJSL-S-CLKS within Unit</b></p> <p><u><b>Essential Question(s):</b></u></p> <ol style="list-style-type: none"> <li>1. What is the relationship between a minimum or maximum, the vertex, and the range of a quadratic function?</li> <li>2. What do the zeros of the quadratic function represent?</li> <li>3. Which intercepts do you look for when looking for the zeros of functions?</li> <li>4. What is the discriminant?</li> <li>5. How do you use the quadratic formula and when is the best time to use it?</li> </ol> <p><u><b>Activity Description(s):</b></u></p> <ul style="list-style-type: none"> <li>• <b>Properties of radicals</b></li> <li>• <b>Solving quadratic equations by graphing</b></li> <li>• <b>Solving quadratic equations by using square roots</b></li> <li>• <b>Solving quadratic equations by completing the square (optional)</b></li> <li>• <b>Solving quadratic equations by using the quadratic formula</b></li> </ul> <p><b>Interdisciplinary Connections:</b> <u>(Standard F.BF.B.3)</u></p>

explain properties of the quantity represented by the expression.

c. Use the properties of exponents to transform expressions for exponential functions. *For example: the expression  $1.15^t$  can be rewritten as  $(1.15)^{1/12t}$  to reveal the approximate equivalent monthly interest rate if the annual rate is 15%. ★*

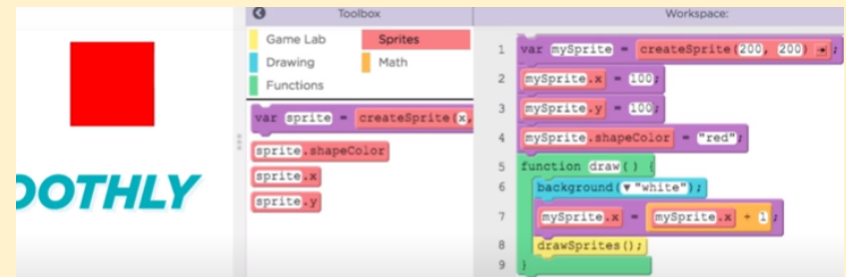

**□ F.IF.C.7** Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. ★

- Graph linear and quadratic functions and show intercepts, maxima, and minima.
- Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.

The purpose of this discussion is to start students thinking about how they might use the various sprite properties they've seen so far to make animations with purposeful motion. If students struggle to come up with ideas, you can narrow down the question to specific properties. For example:

- What would happen to a sprite if you constantly increased its **x** property?
- What would happen to a sprite if you constantly increased its **y** property?

Coding is used by game designers/software engineers to build their animations and websites. In this case we can compare sprites to variables. Line 1 is equivalent to our variables. Line 5 is our "function" and line 7 can be compared to a composition of function/translation of a function.

**AP - Algorithms & Programming**  
**CS Teachers**

**Highlight on:**

Lottery:  
Study how the Lottery works, why it is nearly impossible to win, and the economic damage it may cause.

c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.

d. (+) Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.

e. Graph exponential and logarithmic functions, showing intercepts and end behavior.

f. (+) Graph trigonometric functions, showing period, midline, and amplitude.

**F.LE.A.3** Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function.

**F.IF.C.8** Write a function defined by an expression in different but equivalent forms

### Example Tasks:

#### Task 1

The length of the rectangular prism is four times its width. The volume of the prism is 380 cubic meters. Find the length and width of the prism.

#### Task 2

The picture frame has three identical openings and a total area (including the openings) of 148 square inches. The distances between the openings are equal to the width  $x$  of the uniform border. Find the width of the border.

#### Task 3

The average difference  $y$  (in percent form) between declared fuel efficiency and actual fuel efficiency for cars in Europe  $x$  years after 2000 can be represented by  $y = 5 - 0.13x^2 + 1.01x - 1.9$ . In what year was there a 40% difference?

to reveal and explain different properties of the function.

- a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.
- b. Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as  $y = (1.02)^t$ ,  $y = (.97)^t$ ,  $y = (1.01)^{12t}$ ,  $y = (1.01)^{\frac{t}{10}}$ , and classify them as representing exponential growth or decay.

**□ F.IF.C.9** Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an

algebraic expression for another, say which has the larger maximum.

**F.BF.B.3.** Identify the effect on the graph of replacing  $f(x)$  by  $f(x) + k$ ,  $kf(x)$ ,  $f(kx)$ , and  $f(x + k)$  for specific values of  $k$  (both positive and negative); find the value of  $k$  given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. **Include recognizing even and odd functions from their graphs and algebraic expressions for them.**

**Mathematics Practices**

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.
