

Bayonne High School

Unit 3: Circular Motion & Gravitation

2024 - 2025

Aligned to the New Jersey Student Learning Standards 2020

Marking Period	Unit Title	Recommended Instructional Days
2	Two-Dimensional Motion, Universal Gravitation	23
NJSL-S - Science: <i>Title</i>	NJSL-S - Science: <i>Performance Expectations</i>	<p>Recommended Activities, Investigations, Interdisciplinary Connections, and/or Student Experiences to Explore NJSL-S within Unit</p>
<p>Motion and Stability: Forces and Interactions</p>	<p>HS-PS2-1: Analyze data to support the claim that Newton’s second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration. <i>[Clarification Statement: Examples of data could include tables or graphs of position or velocity as a function of time for objects subject to a net unbalanced force, such as a falling object, an object sliding down a ramp, or a moving object being pulled by a constant force.] [Assessment Boundary: Assessment is limited to one-dimensional motion and to macroscopic objects moving at non-relativistic speeds.]</i></p> <p>HS-PS2-4: Use mathematical representations of Newton’s Law of Gravitation and Coulomb’s Law to describe and predict the gravitational and electrostatic forces between objects. <i>[Clarification Statement: Emphasis is on both quantitative and conceptual descriptions of gravitational and electric fields.]</i></p>	

	<p>[Assessment Boundary: Assessment is limited to systems with two objects.]</p>	
<p>FOUNDATION Disciplinary: <i>Core Idea</i></p>	<p>FOUNDATION Disciplinary: <i>Statement</i></p>	
<p>Forces and Motion, Types of Interactions</p>	<p>HS-PS2.A: Newton’s second law accurately predicts changes in the motion of macroscopic objects.</p> <p>HS-PS2.B: Newton’s law of universal gravitation and Coulomb’s law provide the mathematical models to describe and predict the effects of gravitational and electrostatic forces between distant objects.</p>	<p><u>Essential Question/s:</u></p> <ul style="list-style-type: none"> • What causes an object to move in a circular path? • How do massive objects interact with each other at a distance? • How can you represent interactions between different objects visually and mathematically? <p><u>Activity Description:</u></p> <ul style="list-style-type: none"> • Bowling Ball on a Circular Path: Students try to move a bowling ball on a circular path using a rubber mallet. This along with similar qualitative observations such as the motion of planets around stars, a merry go round, etc. leads to the idea of a central net force that is responsible for an object's circular motion. <p><u>Career Readiness, Life Literacies & Skills Activity:</u></p> <ul style="list-style-type: none"> • Exploring Circular Motion using Whirly: Spin the whirly apparatus and brainstorm measurable variables, then identify pairs of dependent and independent variables, keeping the control variables in mind. Assume a horizontal plane of motion. Students work in small groups and collect relevant data for a pair of independent-dependent variables, then graph their data to look for patterns. Students investigate relationships between the total force, radius, mass, and tangential velocity of the rubber stopper in uniform circular motion. Teacher facilitates a discussion of the patterns and helps put the patterns together into one equation (Newton’s Second law for circular motion).
<p>FOUNDATION Science and Engineering Practices: <i>Core Idea</i></p>	<p>FOUNDATION Science and Engineering Practices: <i>Statement</i></p>	
<p>Planning and Carrying Out Investigations: Planning and carrying out investigations to answer questions or test solutions to problems in 9–12 builds on K–8 experiences and progresses to include investigations that provide evidence for and test conceptual, mathematical, physical and empirical models.</p> <p>Analyzing and Interpreting Data: Analyzing data in 9–12 builds on K–8 and progresses to introducing more</p>	<ul style="list-style-type: none"> • Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements and consider limitations on the precision of the data (e.g., number of trials, cost, risk, time), and refine the design accordingly. • Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in 	

<p>detailed statistical analysis, the comparison of data sets for consistency, and the use of models to generate and analyze data.</p> <p>Using Mathematics and Computational Thinking: Mathematical and computational thinking at the 9–12 builds on K–8 and progresses to using algebraic thinking and analysis, a range of linear and nonlinear functions including trigonometric functions, exponentials and logarithms, and computational tools for statistical analysis to analyze, represent, and model data. Simple computational simulations are created and used based on mathematical models of basic assumptions.</p> <p>Construction Explanations and Designing Solutions: Constructing explanations and designing solutions in 9–12 builds on K–8 experiences and progresses to explanations and designs that are supported by multiple and independent student-generated sources of evidence consistent with scientific ideas, principles, and theories.</p> <p>Engaging in Argument from Evidence: Engaging in argument from evidence in 9–12 builds on K–8 experiences and progresses to using appropriate and sufficient evidence and scientific reasoning to defend and critique claims and explanations about</p>	<p>order to make valid and reliable scientific claims or determine an optimal design solution.</p> <ul style="list-style-type: none"> • Use mathematical representations of phenomena to describe explanations. • Apply scientific ideas to solve a design problem, taking into account possible unanticipated effects. • Make and defend a claim based on evidence about the natural world or the effectiveness of a design solution that reflects scientific knowledge, and student-generated evidence. <p>Communicate scientific and technical information (e.g. about the process of development and the design and performance of a proposed process or system) in multiple formats (including orally, graphically, textually, and mathematically).</p>	<ul style="list-style-type: none"> • Solar System Simulation: In this virtual lab, students use the “My Solar System” simulation to investigate the effects of mass and distance on the velocity of objects in orbit. Students use the Law of Universal Gravitation and Newton’s Third Law to reason why the objects move this way. • The “Apple and the Moon” video: The video helps students follow how Newton reconciled Galileo’s ideas about kinematics with Kepler’s work in astronomy. After watching the video, students discuss how the physics principles paved the way for astronauts to reach the moon. • Apollo 11 Data Analysis: Students analyze data from the Apollo 11 lunar mission to find the gravitational field strength at different distances from a planet. <p>Interdisciplinary Connections: Content: NJSLS:</p> <p><i>Connections to NJSLS – English Language Arts</i></p> <ul style="list-style-type: none"> • RST.11-12.1: Cite specific textual evidence to support analysis of science and technical texts, attending to important distinctions the author makes and to any gaps or inconsistencies in the account. • RST.11-12.7: Integrate and evaluate multiple sources of information presented in diverse formats and media (e.g., quantitative data, video, multimedia) in order to address a question or solve a problem. <p><i>Connections to NJSLS – Mathematics</i></p> <ul style="list-style-type: none"> • MP.2: Reason abstractly and quantitatively. • MP.4: Model with mathematics. • HSN-Q.A.1: Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays. • HSN-Q.A.2: Define appropriate quantities for the purpose of descriptive modeling.

NJSLS CAREER READINESS, LIFE LITERACIES & KEY SKILLS	Disciplinary Concept: Technology Literacy	
	<i>Core Ideas:</i>	Digital tools differ in features, capacities, and styles. Knowledge of different digital tools is helpful in selecting the best tool for a given task.
	<i>Performance Expectation/s:</i>	9.4.12.TL.2: Generate data using formula-based calculations in a spreadsheet and draw conclusions about the data.
	Career Readiness, Life Literacies, & Key Skills Practices	
	<i>Practice:</i> Utilize critical thinking to make sense of problems and persevere in solving them.	<i>Description:</i> Students readily recognize problems in the workplace, understand the nature of the problem, and devise effective plans to solve the problem. They are aware of problems when they occur and take action quickly to address the problem; they thoughtfully investigate the root cause of the problem prior to introducing solutions. They carefully consider the options to solve the problem. Once a solution is agreed upon, they follow through to ensure the problem is solved, whether through their own actions or the actions of others.
