<b><u>Grade, Subject/Course:</u> 7th - Physical Science</b>	
<b><u>Unit:</u> Structure and Properties of Matter</b>	<u>  X  </u> Essential <u>      </u> Important <u>      </u> Compact
<b><u>Big Idea:</u></b> All forms of matter exist as a result of the combination or rearrangement of atoms.	
<b><u>PA Core Content Standards/Anchors (or National Standards):</u></b> <ul style="list-style-type: none"> <li>• 3.2.6-8.A Develop models to describe the atomic composition of simple molecules and extended structures.</li> <li>• 3.2.6-8.B Develop a model that predicts and describes changes in the particle motion, temperature and state of a pure substance when thermal energy is added or removed.</li> </ul>	<b><u>Interdisciplinary Standards (if applicable):</u></b>
<b><u>Essential Questions:</u></b> How do particles combine to form the variety of matter one observes?	<b><u>Understandings (CCCs - Cross-cutting Concepts [themes]):</u></b> <ul style="list-style-type: none"> <li>• Students will know that...</li> </ul> <b>Scale, Proportion, and Quantity</b> Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small. <b>Cause and effect</b> Relationships may be used to predict phenomena in natural or designed systems.

<p><b><u>Knowledge (DCIs - Disciplinary Core Ideas [what they will know]):</u></b></p> <p>Substances are made from different types of atoms, which combine with one another in various ways. Atoms form molecules that range in size from two to thousands of atoms. Solids may be formed from molecules, or they may be extended structures with repeating subunits (e.g., crystals).</p> <p>Gasses and liquids are made of molecules or inert atoms that are moving about relative to each other. In a liquid, the molecules are constantly in contact with others; in a gas, they are widely spaced except when they happen to collide. In a solid, atoms are cause and effect relationships that may be used to predict phenomena in natural or designed systems.</p> <p>The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter.</p> <p>The term “heat” as used in everyday language refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. In science, heat is used only for this second meaning; it refers to the energy transferred due to the temperature difference between two objects. (secondary)</p> <p>The temperature of a system is proportional to the average internal kinetic energy and potential energy per atom or molecule (whichever is the appropriate building block for the system’s material). The details of that relationship depend on the type of atom or molecule and the interactions among the atoms in the material. Temperature is not a direct measure of a system's total thermal energy. The total thermal energy (sometimes called the total internal energy) of a system depends jointly on the temperature, the total number of</p>	<p><b><u>Do/Skills (SEPs - Science and Engineering Practices [what they do]):</u></b></p> <ul style="list-style-type: none"> <li>• Students will be able to...</li> </ul> <p><b>Developing and Using Models</b> Develop a model to predict and/or describe phenomena.</p>

atoms in the system, and the state of the material. (secondary)
