

## General Project Information Bond 2023

### **Project: Central Maintenance Facility Expansion**

- Central opened 2002
- East opened 2001
- West opened 2003
- South opened 2015

### **Project Description:**

The central facility is the fourth satellite office for the district and is currently housed out of a portable building with no shop, storage, office, or employee support spaces.

- South, East, and West
  - Provide for office space, exterior open space, and parking

All these improvements will bring these spaces in line with district needs to support our growth.

**Background & Justification:** Expansions recommended to support growth. No changes have been made since the above noted facilities opened as listed above. As our student population increases, so does the need for space to support added staff.
