Project: Campus Nurse Clinic Door Modification

Background & Justification: The 2019 -2020 Safety & Security Audit identified a vulnerability in 15 schools as

access control and visitor management of the campuses was upgraded over the past 2 years. In the process of applying the upgrades, it was identified that the campus visitor management process at these 15 schools was vulnerable due to the campus clinic only having one entrance that was accessible from the campus reception area. An example of a vulnerable situation include students being sent to visit the nurse, could inadvertently open the reception area door leading to the rest of the campus in order to proceed to the nurse's clinic. If the campus front office staff or leadership were contending with a threatening individual/situation in the reception area, the ability to contain the threat within the reception area is potentially subverted by someone simply visiting the clinic. The clinic having a second door leading directly to the main campus, allows the nurse and campus front office staff to better manage visitors in the reception area while allowing students and staff to freely visit the clinic without interfering with the campus visitor management process.

The following schools require modification of their nurse's clinic for installment of second door.

Exley Elementary

Franz Elementary

Griffin Elementary

Holland Elementary

King Elementary

Morton Ranch Elementary

Kilpatrick Elementary

Rhoads Elementary

Rylander Elementary

Schmalz Elementary

Stanley Elementary

Stephens Elementary

WoodCreek Elementary

Beckendorff Junior High

Mayde Creek High School
