Safety & Security

Project: Security Cameras

Background & Justification: The 2019 -2020 Safety & Security Audit reinforced the continued need to maintain and upgrade real time security cameras internal and external to the campuses. The addition of the Safety & Security Analysis Center in 2018 dramatically improved the utilization of the existing cameras and identified vulnerabilities that can be addressed by continuing to refine the district's security camera strategy. Moreover, a campus administration's ability to contend with the large population of students, staff and expanse of large campuses further validates the need for the supporting the on-going lifecycle of the security camera strategy. The ability to provide security around campuses and provide visibility back toward the campus would greatly improve overall security as well as district and campus proactive situational awareness. The application of security cameras in the high school athletic areas and campus parking lots would assist with any external vulnerabilities. The addition of cameras to the existing internal placement strategy for campuses would assist administrators and district security personnel to improve proactive situational awareness as well as minimize the existence of "blind spots". The upgrading of antiquated cameras and the addition of cameras (admin hallway) will assist to address internal vulnerabilities.
