

DISASTER ZONE

BLIZZARDS

HOW HEAVY?

SNOWSTORM IN A CAN

What You Need:

- two cans—one large, one small
- ice
- salt
- dry ice
- towel
- flashlight

- 1 Mix ice with salt and put it in the large can.
- 2 Put the small can on the ice so that its top is level with the top of the large can.
- 3 Pack salt and ice in the space between the two cans.
- 4 The large can will get very cold. Put a towel around it.
- 5 The air in the small can will get cold. When this happens, breathe into the small can.
- 6 This will form a small cloud. Now, shave off small pieces of dry ice and drop them on the cloud.
- 7 Shine the flashlight into the cloud. You will see small crystals of ice.
- 8 Breathe into the cloud to give it moisture. Wait a minute, and then breathe into it again.
- 9 Keep breathing into the cloud until the crystals fall as snow!
