Re: Collection and Analysis of Environmental Soil Samples for Site Screening at:

**Site: South Grove Elementary School
60 Colony Lane
Syosset, New York 11791
Site Visit: February 19 and 28, 2025**

JCB#: 25-60520

Dear Mr. Hamilton:

J.C. Broderick & Associates, Inc. (JCB) was retained by the Syosset Central School District to perform a soils investigation at the above referenced school campus. The purpose of this investigation was to assist in the determination for the proper use, transportation and disposal of any soils generated during the construction of a new school bus loop. The site visits were performed by experienced JCB technicians on the above referenced dates and consisted of the following:

- With the use of a truck mounted Geoprobe® Model 5410 direct push sampling rig, two (2) soil borings were advanced to a total depth of four (4) feet below surface grade (bsg) and one (1) soil boring was advanced to a total depth of 12 feet bsg in the locations selected by JCB based on the site plan provided by H2M Architects, Engineers, Land Surveying and Landscape Architecture, D.P.C (H2M). The borings were advanced to collect samples of soil proposed to be excavated for on-site reuse or removed for off-site disposal as part of the construction of a new school bus loop at the above referenced school campus. Upon completion, the borings were restored to original grade.
- With the use of a stainless-steel hand auger, two (2) additional soil samples were collected in the locations selected by JCB based on the site plan provided by H2M. These samples were collected to increase the available quantity of soil to be excavated for on-site reuse or off-site disposal.
- Based on similar scope of work, the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation recommends six (6) discrete samples for analysis of volatile organic compounds (VOCs) be collected and three (3) samples for analysis of semi-volatile organic compounds (SVOCs), priority pollutant metals, PCBs, herbicides, and pesticides be collected.

Section No. 1: Summary of Sample Collection and Submission

The following section summarizes the environmental sampling performed. Please refer to Table No. 2: Summary of Detected Compounds, Sample Locations Map, Field Photograph Logs, and Laboratory Analytical Reports located in the attachments of this report for additional details.

April 29, 2025

Mr. Gregory Hamilton of Syosset CSD

Collection and Analysis of Environmental Soil Samples for Site Screening at:

South Grove Elementary School

60 Colony Lane, Syosset, New York 11791

JCB# 25-60520

On February 19, 2025, a total of four (4) soil samples were collected utilizing a truck mounted Geoprobe® Model 5410 from the areas of the proposed bus loop at the above referenced school campus. On February 28, 2025, a total of two (2) additional soil samples were collected utilizing a stainless-steel hand auger from the areas of the proposed bus loop at the above referenced school campus. Details pertaining to the sample locations can be referenced in the Sample Locations Map, Attachment 2 located at the end of this report.

The collected samples were placed into laboratory supplied containers and under a chain of custody document delivered to an independent New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory for analysis of New York State Department of Environmental Conservation (NYSDEC) 6NYCRR Part 375 volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), herbicides and metals.

The following table summarizes the soil samples submitted for laboratory analysis:

Table No. 1: Summary Soil Samples Submitted for Laboratory Analysis			
Sample ID#	Date Sampled	Description of Sample	Analysis Method
S-1	02/19/2025	Soil Sample at 4 Feet bsg	NYSDEC Part 375 Table 6.8 VOCs, SVOCs, Pesticides, PCBs, Herbicides and Metals
S-2	02/19/2025	Soil Sample at 12 Feet bsg	NYSDEC Part 375 Table 6.8 VOCs
S-3	02/19/2025	Soil Sample at 4 Feet bsg	NYSDEC Part 375 Table 6.8 VOCs
S-4	02/19/2025	Soil Sample at 4 Feet bsg	NYSDEC Part 375 Table 6.8 VOCs, SVOCs, Pesticides, PCBs, Herbicides and Metals
S-5	02/28/2025	Soil Sample at 4 Feet bsg	NYSDEC Part 375 Table 6.8 VOCs, SVOCs, Pesticides, PCBs, Herbicides and Metals
S-6	02/28/2025	Soil Sample at 4 Feet bsg	NYSDEC Part 375 Table 6.8 VOCs

Notes:
NYSDEC = New York State Department of Environmental Conservation
VOCs = Volatile Organic Compounds
SVOCs = Semi-Volatile Organic Compounds
PCBs = Polychlorinated Biphenyls
bsg = Below Surface Grade

Section No. 2.0: Summary of Laboratory Analysis

The following section summarizes the laboratory analysis of the collected soil samples.

The laboratory analysis results from the soil samples were reviewed and compared to the Restricted-Residential Use Soil Cleanup Objectives (land use category for schools) as listed in Table 375-6.8(b) of the 6NYCRR 375 New York State Department of Environmental Conservation Remedial Program Soil Cleanup Objectives, dated December 14, 2006, and all available updates.

The laboratory analysis results from the soil samples were also reviewed and compared to the Fill Material Beneficial Use as listed in Table 2 of Section 360.13(f) in the 6NYCRR 360 Solid Waste Management Facilities, dated July 22, 2023, and all available updates.

April 29, 2025

Mr. Gregory Hamilton of Syosset CSD

Collection and Analysis of Environmental Soil Samples for Site Screening at:

South Grove Elementary School

60 Colony Lane, Syosset, New York 11791

JCB#: 25-60520

- The laboratory analysis performed revealed results for VOCs, SVOCs, Pesticides, PCBs, Herbicides and Metals below the Restricted Residential Use, Protection of Groundwater, and Commercial Use designation as per NYSDEC Part 375 Table 375-6.8(b) at four (4) sample locations (S-1, S-2, S-3, and S-6).
- The laboratory analysis performed indicated an elevated level of Arsenic at two (2) sample locations (S-4 and S-5) with a concentration of 25.5 mg/kg and 39.2 mg/kg respectively in exceedance of the Restricted-Residential Use, Protection of Groundwater, and Commercial Use designations of 16.0 mg/kg as per NYSDEC Part 375 Table 375-6.8(b).

The USEPA considers any concentration of arsenic in soil less than 68 mg/kg within the acceptable risk range and protective of human health (USEPA Memorandum dated 12/13/2016).

- The laboratory analysis performed indicated an elevated level of Mercury at one (1) sample location (S-5) with a concentration of 1.60 mg/kg in exceedance of the Restricted Residential Use and Protection of Groundwater designations of 0.81 mg/kg and 0.73 mg/kg respectively as per NYSDEC Part 375 Table 375-6.8(b).

The USEPA does not have a universal risk level for mercury in soil; however, the National Institutes of Health (NIH) suggests a countermeasures standard in farmland of 10 mg/kg. New York State considers a level greater than 1.6 mg/kg a higher risk and steps should be taken to limit exposure such as washing hands.

The soil analytical results of detected compounds are presented in Table No. 2: Summary of Detected Compounds located in **Attachment 1**. The soil analytical laboratory report is located in **Attachment 4**.

Section No. 3.0: Quality Assurance and Quality Control (QA/QC) Procedures

In order to prevent cross-contamination between sampling locations, all re-usable sampling equipment which came into contact with sample materials was decontaminated prior to each use. Equipment used for sample collection was wiped clean, washed in a solution of Alconox and thoroughly rinsed with potable water. All down-hole equipment which did not come into contact with sample material was pressure rinsed with potable water prior to the start of each boring. All sampling personnel wore disposable latex, nylon, or nitrile gloves during sampling events. At a minimum, gloves were changed between boring locations and before each laboratory sample were collected. All collected samples were placed into an appropriately conditioned cooler for storage and transported to the laboratory. Samples were maintained between 0°C and 8°C.

Section 4.0: Conclusions

The review of the laboratory analytical report revealed the following significant findings:

Pertaining to Use of Generated Soils on School Property

The sampling and laboratory analysis from soil samples S-1, S-2, S-3, and S-6 revealed results for VOCs, SVOCs, Pesticides, PCBs, Herbicides and Metals below the Restricted Residential Use SCOs as per NYSDEC Part 375. As such the proposed excavated or disturbed soils associated with this area may be utilized onsite where the material meets the engineering criteria for use.

The sampling and laboratory analysis performed from two (2) sampling location S-4 and S-5 revealed results for Arsenic and Mercury above the Restricted-Residential Use SCO as per NYSDEC Part 375. As

April 29, 2025

Mr. Gregory Hamilton of Syosset CSD

Collection and Analysis of Environmental Soil Samples for Site Screening at:

South Grove Elementary School

60 Colony Lane, Syosset, New York 11791

JCB#: 25-60520

such all proposed excavated or disturbed soils from the approximate 12,000 square foot area associated with sample locations S-4 and S-5 cannot be reused on site for any purpose.

Pertaining to Transportation and Disposal of Generated Soils

The sampling and laboratory analysis performed from soil sampling locations S-1, S-2, S-3, and S-6 revealed results below Residential Use and Protection of Groundwater SCOs as per NYSDEC Part 375-6.8(b) and therefore meets Fill Type 2 (F2) as defined by 6NYCRR 360 Solid Waste Management Facilities Table 2 of Section 360.13(f). As such the soils excavated or disturbed from the area associated with these sampling locations may be transported off site and utilized at any setting where the fill meets the engineering criteria for use, except agricultural land used for raising livestock of producing animal products for human consumption.

The sampling and laboratory analysis performed from two sampling locations S-4 and S-5 revealed results for Arsenic and Mercury above Commercial Use as per NYSDEC Part 375-6.8(b); therefore, all soils associated with these sample locations which represent approximately 12,000 square feet do not meet the pre-determined beneficial use of 6NYCRR 360 and must be managed at a facility authorized to receive the excavated material.

This may impact the procedures and/or costs for the material to be transported and managed at a facility authorized to receive it. Therefore, the attached laboratory analytical report should be provided to all proposed contractors for assistance in estimating their costs for the proper removal and disposal of the generated soils. It should also be noted that based upon the disposal facility requirements, additional soil sampling may be required.

The contractor shall be required to perform excavation, stockpiling, and loading activities in such a manner as to avoid any surface or atmospheric migration. The owner may implement a community air monitoring program (CAMP) to determine the contractor's compliance with this requirement.

The following project information is included in the attachments of this document.

1. Table No. 2: Summary of Detected Compounds
2. Sample Locations Map
3. Approximate Area of Soil Disposal Map
4. Field Photograph Logs
5. Laboratory Analytical Results

If there are any questions, or if additional information is needed, please feel free to contact our office.

Sincerely,

J.C. Broderick & Associates, Inc.

Steven Muller, P.G.

Director, Subsurface Division

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 20, 2025 and listed below. The project was identified as your project: **25-60520 South Grove ES**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25B1152

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

- S-08 The recovery of this surrogate was outside of QC limits.
- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
- ICVE20 The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 20% of expected value).
- ICVE The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
- CCVE The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

Definitions and Other Explanations

- * Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
- ND NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
- RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
- LOQ LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
- LOD LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
- MDL METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
- Reported to This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
- NR Not reported
- RPD Relative Percent Difference
- Wet The data has been reported on an as-received (wet weight) basis
- Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

York Analytical Laboratories, Inc. (YORK's) Standard Terms & Conditions are listed on the back side of this document. This document serves as your written authorization for YORK to proceed with the analyses requested below. Your signature binds you to YORK's Standard Terms & Conditions.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on February 28, 2025 and listed below. The project was identified as your project: **25-60520 South Grove ES**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 25B1600

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854, NJ Cert No. CT005, PA Cert No. 68-04440, CT Cert No. PH-0723; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058, NJ Cert No. NY037, CT Cert No. PH-0721, NH Cert No. 2097, EPA Cert No. NY01600.

Sample and Data Qualifiers Relating to This Work Order

- S-08 The recovery of this surrogate was outside of QC limits.
- QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
- ICVE The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration verification (recovery exceeded 30% of expected value).
- CCVE The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
- B Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants.

Definitions and Other Explanations

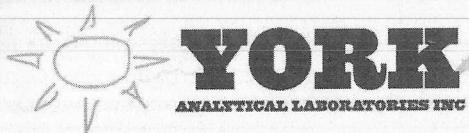

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence . This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon current NELAC/TNI Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.
If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.	
If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.	
2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.	

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record

YORK Project No.

25B1600

York Analytical Laboratories, Inc. (YORK)'s Standard Terms & Conditions are listed on the back side of this document.
This document serves as your written authorization for YORK to proceed with the analyses requested below.
Your signature binds you to YORK's Standard Terms & Conditions.
