Safety Window Tint

- **Tinting Proposal:** An engineered window tint is proposed as a long-term, effective alternative to manual blinds.
 - The tint maintains full daytime visibility but automatically turns opaque (almost black) when lights are turned off, reducing human error.
 - The plan includes installing tint on every window in every classroom, including large internal sliding windows.
 - Installation is expected to occur during the summer since it does not require structural changes and can be done outside normal school hours.

Safety Committee Meeting

Security Enhancements: Ongoing improvements include upgraded access control systems, and privacy fencing around school sites to prevent unauthorized recording.

School Traffic Control: Schools requiring a City waiver for there current traffic configuration:

Olympic View
Halecrest
Cook
Mueller
Eastlake
