District Treasurer

CHRISTINE T. NOFRI
Elementary Principal

GLENN M. BROADBENT
Middle/High Principal

EMILY R. LOOMAN
Director of Special Programs

FELIX W. RAY JR.
Transportation Supervisor

October 2024

In accordance with New York State requirements, West Canada Valley Central School District tests drinking water outlets for the presence of lead every five years. Lead is known to pose serious health risks to adults and children.

West Canada Valley CSD works in conjunction with the Herkimer BOCES Safety Service to test every water outlet where a person might draw drinking water. Each line in the spreadsheet lists the building's outlet, the date of sampling, the date of analysis and the results. If a sample exceeded the safety threshold of 5 parts per billion of lead, the spreadsheet includes the steps taken to correct the issue. This may include taking the outlet out of service, replacing the outlet, placarding the outlet (posting an age-appropriate sign, warning the user not to drink the water), and installing lead-reducing filters. Note that lead is considered a hazard only if consumed. Water with lead levels greater than 5 parts per billion is still safe for washing.
