COMMON TYPES

Synthetic Cannabinoids

- Also known as "Spice" or "K2," these substances are designed to mimic the effects of cannabis.

Synthetic Cathinones

- Also referred to as "bath salts," these substances are created to mimic the effects of stimulant drugs like amphetamines or cocaine.

Synthetic Hallucinogens

- These substances are created to mimic the effects of hallucinogenic drugs such as LSD or psilocybin mushrooms.

Other Synthetic Drugs

- There are various other synthetic drugs on the market, such as synthetic opioids including Fentanyl, and other synthetic stimulants.

Access Risk: Social media platforms are being used to market and sell synthetic drugs.
