

MATH CTP 5 RECOMMENDATIONS

If your child scored below 25% in Quantitative Reasoning or Mathematics (Part 1 and Part 2), we strongly encourage students to work on their individualized recommended skills. These skills are tailored to their current math levels determined in our most recent Diagnostic snapshot. Recommendations will automatically update throughout the summer as your child progresses

We encourage you to explore the options for the grade your child is finishing under “Learning > Skill Plans > IXL Plans”; these are thoughtfully crafted daily or weekly exercises designed to keep your student’s skills sharp over the break. Although summer IXL practice is not required for a “grade”, it is highly recommended and a great way to ensure your child starts strong in August!

Returning Students - Students have worked diligently this past school year in the Diagnostic Arena to target their current levels and identify recommended practice skills. We hope you will work with your student to set a goal and work to grow his or her overall math level using this guide.

- Returning students will maintain their current usernames and passwords. IXL student usernames take the format, "first initial + last name @grapevine." Students should also be able to login using their Google Student accounts at IXL.com.

New Students- Students should begin in the Diagnostic Arena on the IXL website and have their levels pinpointed at the start of school.

- New students will be added to our IXL account, and the school will email the issued login information at a later date. Sign in at IXL.com Thank you for your continued support and encouragement of your child's learning and growth in math! We appreciate you!
