Michael Wise, Director of Transportation

Energy Efficiency & Air Quality

Whitehall City Schools is investing in healthier, more efficient learning environments through a \$3.8 million LED lighting and HVAC controls project, approved by the Board of Education in January 2024. This work enhances energy efficiency and improves indoor air quality by increasing fresh air circulation and reducing allergens and other contaminants.

As part of this effort, the district utilizes “air flushes” to regularly cycle in clean outdoor air across all buildings, thereby supporting a safer and healthier environment for students and staff. System performance is actively monitored through the building automation system.

Safety & Security

- **378** new high definition cameras throughout the district with facial recognition.
- **3** dedicated Student Resource Officers.
