

Lethal Dose Homework

Find at least 5 products at home with labels that warn of toxicity. For each product, give the name of the product, and answer the following questions:

1. How does each label advise you to avoid harmful exposure to the product?
2. What does each label tell you to do if a dangerous exposure does occur?
3. Using all of this information, what can you hypothesize about the chemical properties of each product?
4. Look at the recommended treatment for the product. What chemical and physical processes do you think might be involved in the treatment?
