

Dear UConn/AP Chemistry Student,

Welcome to UConn/AP Chemistry. This course is a second-year chemistry course designed to build on what you have already learned in your sophomore year. We will be following the University of Connecticut chemistry curriculum for CHEM-1127 and CHEM-1128. This is a dual enrollment course where you will receive credit at Amity as well as at UConn, should you choose to register. Successful completion of both semesters of UConn chemistry will allow you to earn 8 credits that may be transferable to other colleges and universities. In addition, you will be prepared to take the advanced placement chemistry exam.

To get ready for the school year, you are required to complete summer work. You are expected to complete one chapter of material that reviews concepts from your Level 1 or Level H chemistry class. This will be due the first week of school with the exact due date to be announced on the first day. At that time, I will review any questions you may have about the material; however, I will not teach the material from scratch. Be aware that this is a large assignment and waiting until the last week of summer will not be in your best interest. Work on it slowly over the summer and budget your time wisely.

To access the assignments, you will need to access a shared folder on OneDrive.

1. Click the link below. You may need to refresh the site several times to gain access to the folder.

[Summer Work Public](#)

2. Once in the folder, click on the circle next to “name” to choose all the files.

The screenshot shows the OneDrive web interface. At the top, there is a navigation bar with various application icons (Edpuzzle, SIS, PubChem, Worksheets, Am Update, OneDrive, S, Drain, Chem Club). Below this is the OneDrive header with a search bar. The left sidebar shows the user's profile (Laura Roessler) and navigation options (Home, My files, Shared, Favorites, Recycle bin, Quick access, Chem Club, More places..., Create shared library). The main content area shows the breadcrumb path: My files > Level AP > Summer Work Public. Below the path is a table of files. The table has columns: Name, Modified, Modified By, File size, Sharing, and Active. The 'Name' column header is highlighted with a red circle, and a red arrow points to it. Another red arrow points to the 'New' button in the top left of the file list area. A third red arrow points to the search bar in the top right of the file list area.

	Name	Modified	Modified By	File size	Sharing	Active
<input checked="" type="checkbox"/>	Chapter 1 Problem Set.pdf	9 minutes ago	Laura Roessler	115 KB	Shared	
<input checked="" type="checkbox"/>	Chapter 1.pdf	April 20	Laura Roessler	3.06 MB	Shared

3. If you are familiar with OneDrive, copy the files to a folder in your drive using the “copy to” button. Alternatively, you can download all the files. From there you can move them to a folder on your device or to your Google Drive.

The summer work files include:

1. A pdf of chapter 1 of your textbook. Read the chapter carefully.
2. A problem set for that chapter. You are expected to complete all work on a separate sheet of paper and write the answers to each question on the answer sheet. All work needs to be submitted with the answer sheet.
3. Links to Khan Academy videos. It is not required to watch these videos; they are an additional resource should you need more help with a topic.

As it is summer, I will not be checking email consistently. However, should you have questions, reach out and I will g'et back to you as soon as I can. Good luck and see you in August.

Mrs. Roessler
