Dear Student/Parent/Guardian:

Welcome to your Summer Mathematics Review Packet. To help students meet with success in Integrated Math I CP, students are provided with a packet of math problems that include topics that have been studied in middle school. In today's environment of rigorous academic standards with the newly implemented Common Core, students need to understand core topics to progress and progress in their mathematical learning. This **OPTIONAL** packet is intended to help students retain some basic skills they have learned as well as help them gain some new skills; it is designed to help students transition to High School Mathematics.

There are excellent, easy-to-understand tutorials online if students need to review how to complete the work. Most of the tutorials are under 10 minutes long. The references to different sites are given as one progresses through the packet. The site www.khanacademy.org is very popular with many topics. It can be scrolled down and clicked on **OR** can be searched using the box "*search for video or topic.*" Enter the topic students are working on for the day, and they will get a list of video tutorials. Watch as many as students need to help them complete the packet problems. There is also an opportunity to ask questions and get some online feedback. Students will find useful information there if time is taken to read the information.

The packet has nine sections. Students are suggested to work on at least one section weekly throughout the summer. At this rate, the packet will be completed in time for the start of school, and students will be ready for their Math class.

All work (all steps to each problem, including Calculator work) should be neatly shown on the packet or on a separate sheet of paper to be turned in with the packet. If work is done on separate paper, students should label their work and include the section and the problem number.

Good luck as you transition to high school.

Sincerely,

Faiza Khan

PEMDAS

Part 1: Determine which step to perform first. The first example has been done for you.

a) $14 + 7 \cdot 40 \div 8 - 7$ $7 \cdot 40$ because it is the first multiplication when reading left to right.	b) $50 \div 5 + (7 \cdot 2) \cdot 9 + 4$	c) $(11 - 5) \cdot 2 + 7 + 36 - 9$
d) $6^2 - 20 \div (2^3 - 3) + 1$	e) $4^2 - 5 \div 12$	f) $ 4 - 6 + 2 \cdot 5$

Part 2: Simplify each expression. The first problem has been solved for you.

$(34 - 4) \div 3 - 6^2$ $30 \div 3 - 6^2$ $30 \div 3 - 36$ $10 - 36$ 26	g) $(2 + 2)^2 + (12 \div 6)$	h) $(96 - 6^2) \div (9 + 6)$
i) $17 - (19 - 3^2)^2 \div 4$	j) $12 - -3 - 5 \cdot -2$	k) $5 \cdot (3^2 - 7)$
l) $(2 \cdot 6 - 8^2) - 10$	m) $(65 - 5^2) \div (15 + 5)$	n) $4 \cdot (12 + 4) + 5^2$
