

#11 Casting to an Alternate Display Screen

This guide provides a straightforward method for casting your computer screen to an alternate display.

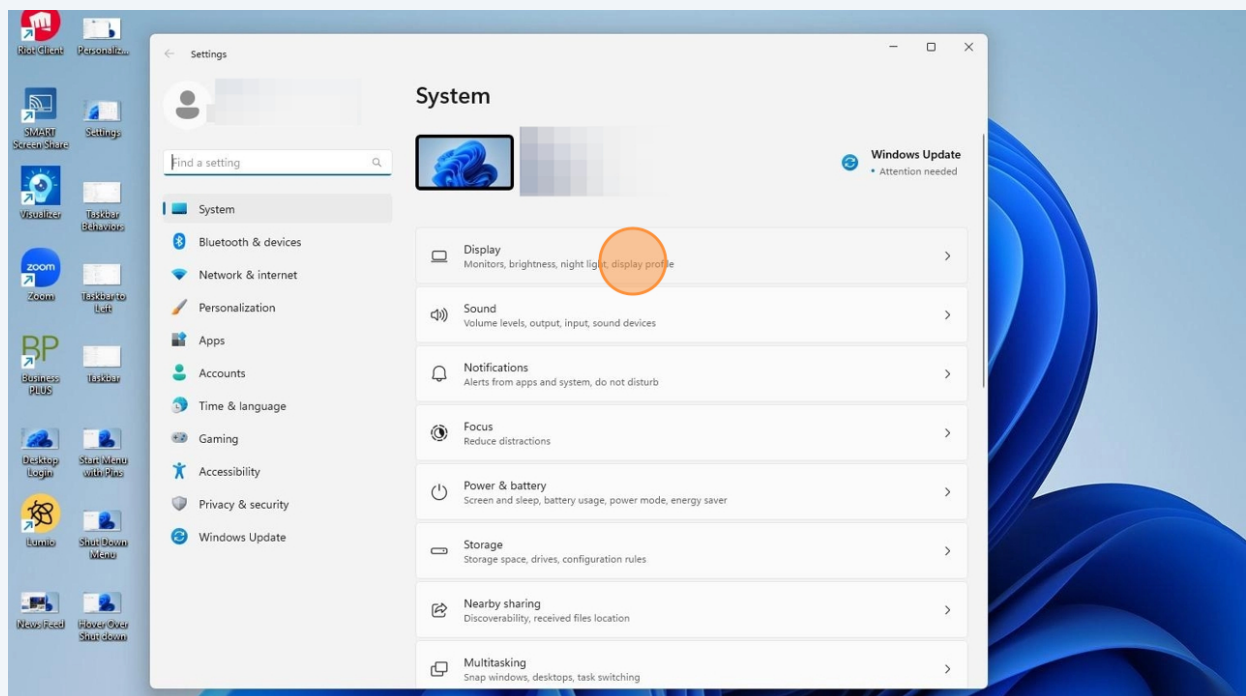

1 Click on the "Search box"

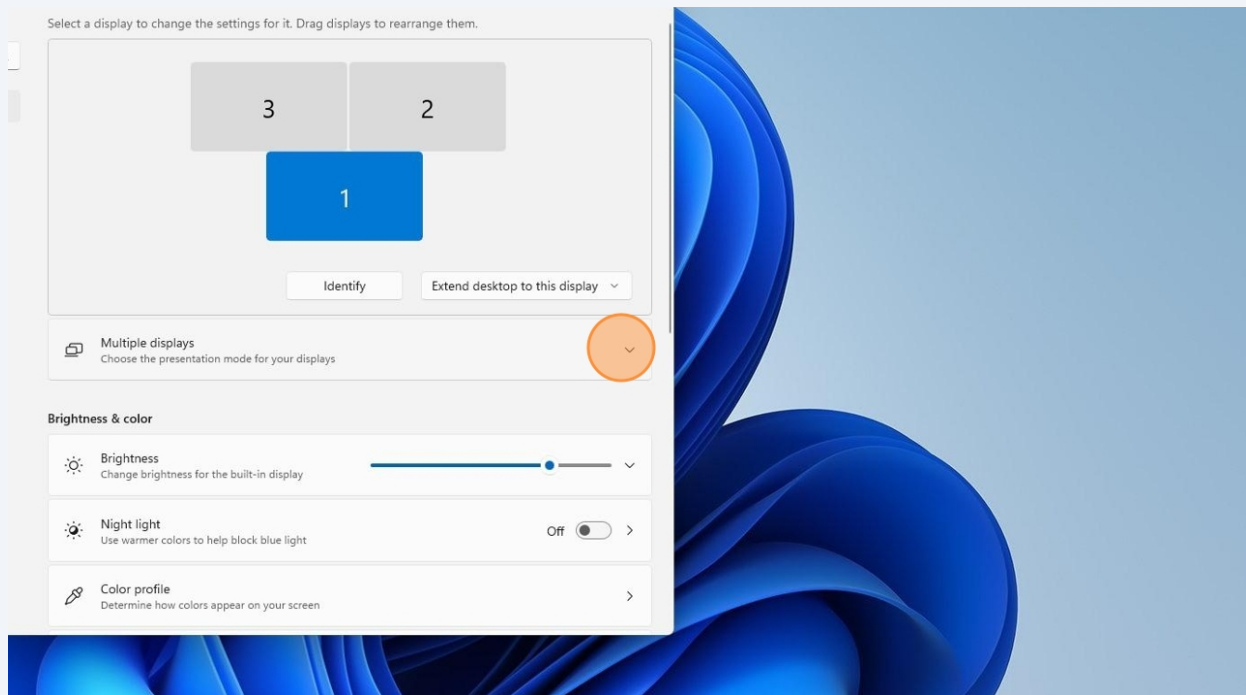

2 Click "Settings"

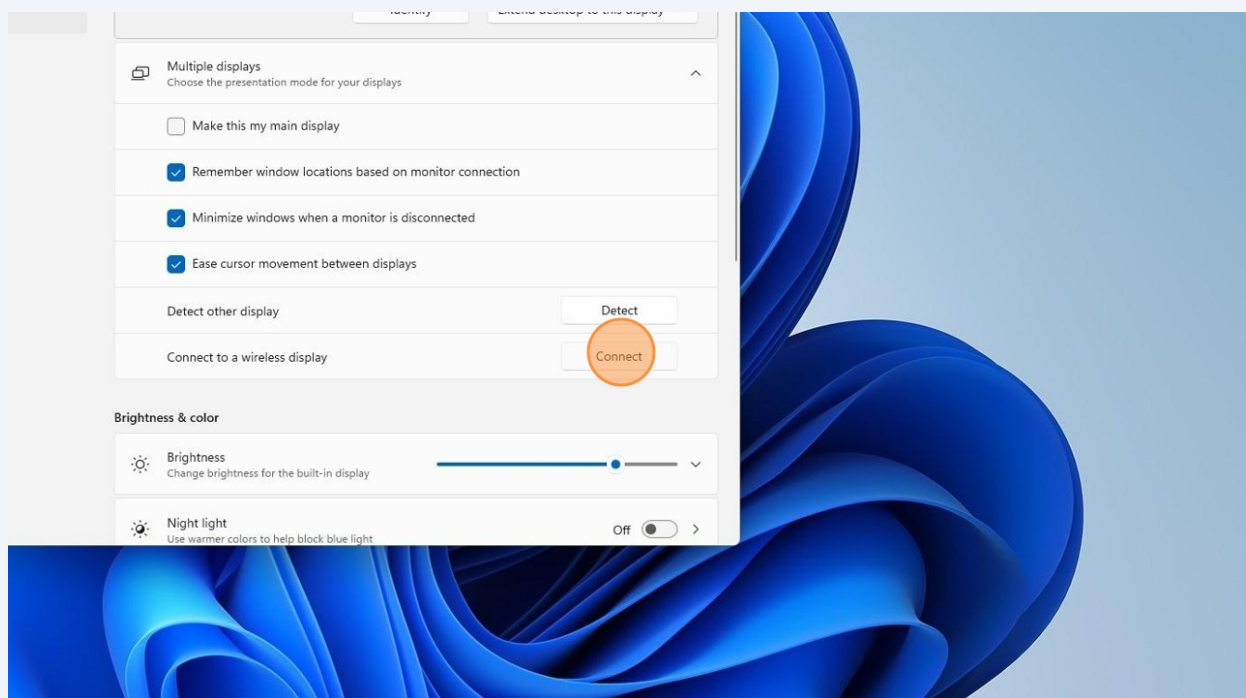

3 Click "Display"

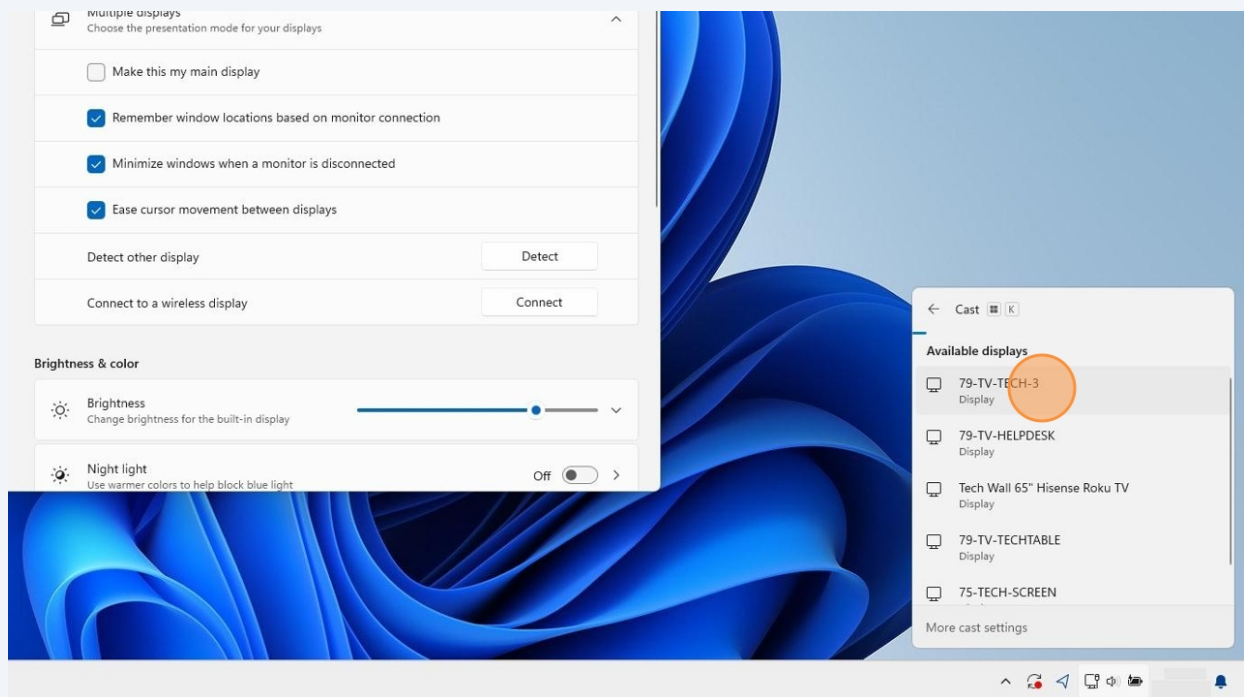

4 Click "Multiple displays"

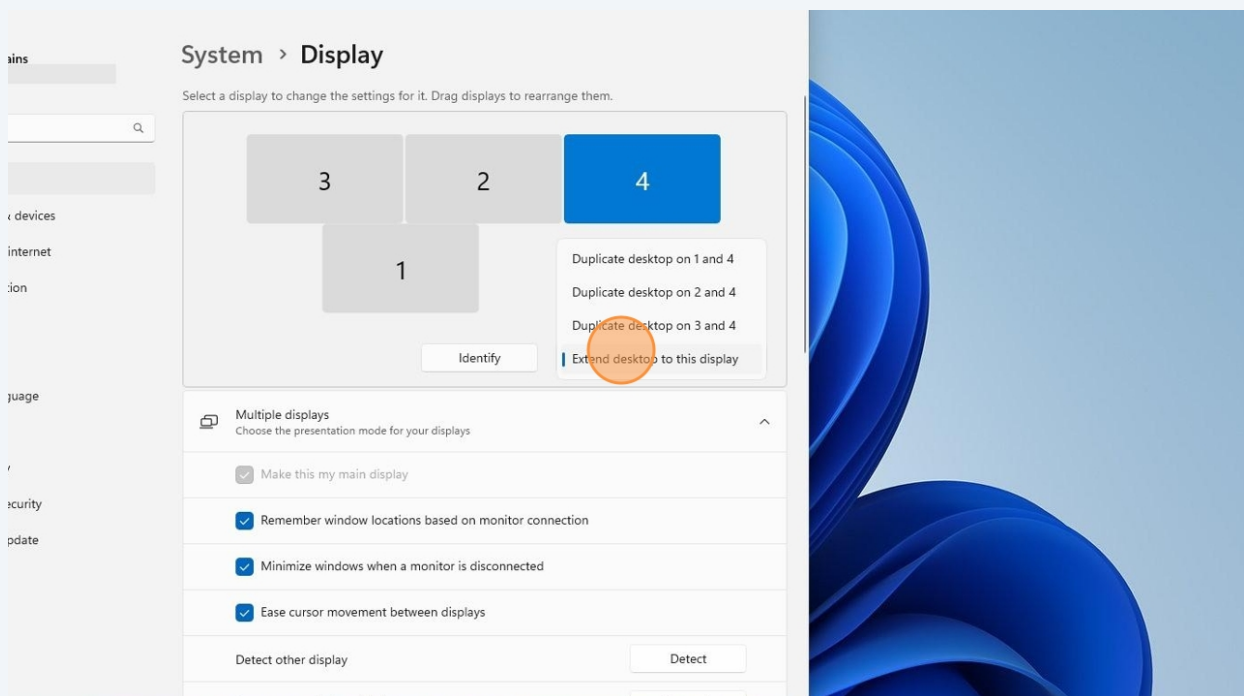

5 Click "Connect"

6 Select where you want to cast from the available displays

7 Choose if you want to "Duplicate or Extend desktop to this display"

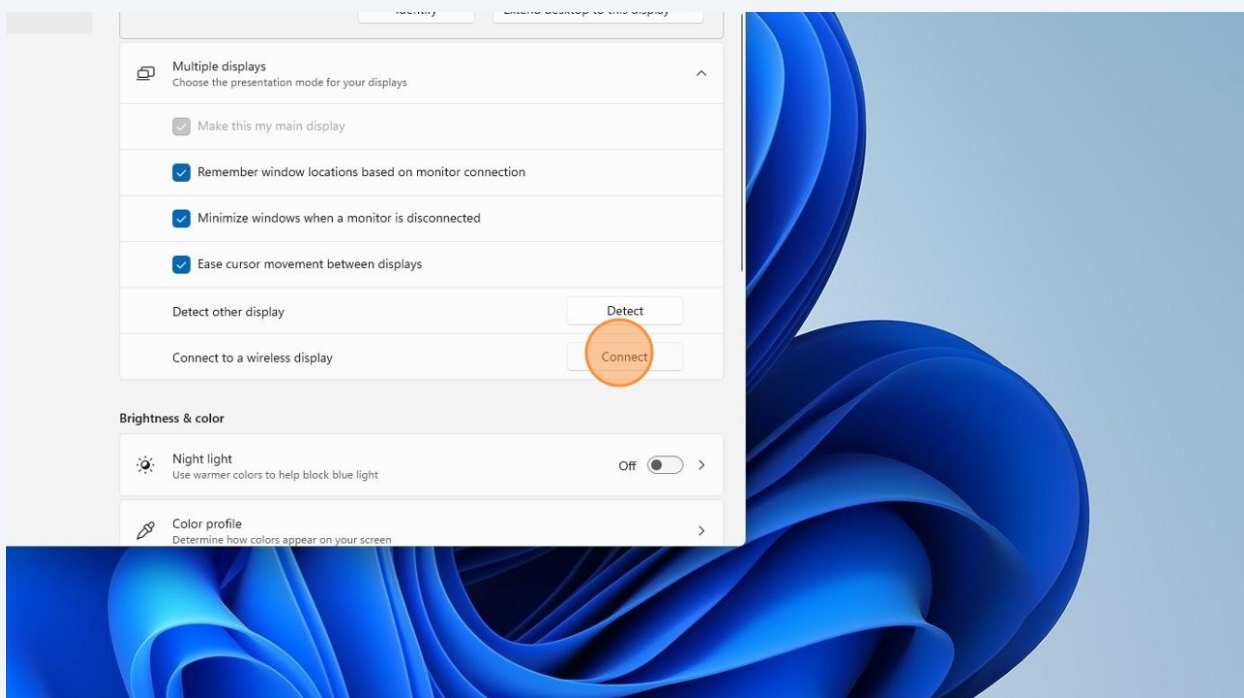

Duplicate: You're literally sending a "mirror image" of your main screen to the other display. Everything you see on your computer, including your cursor movements and open windows, will be shown on the mirrored display.

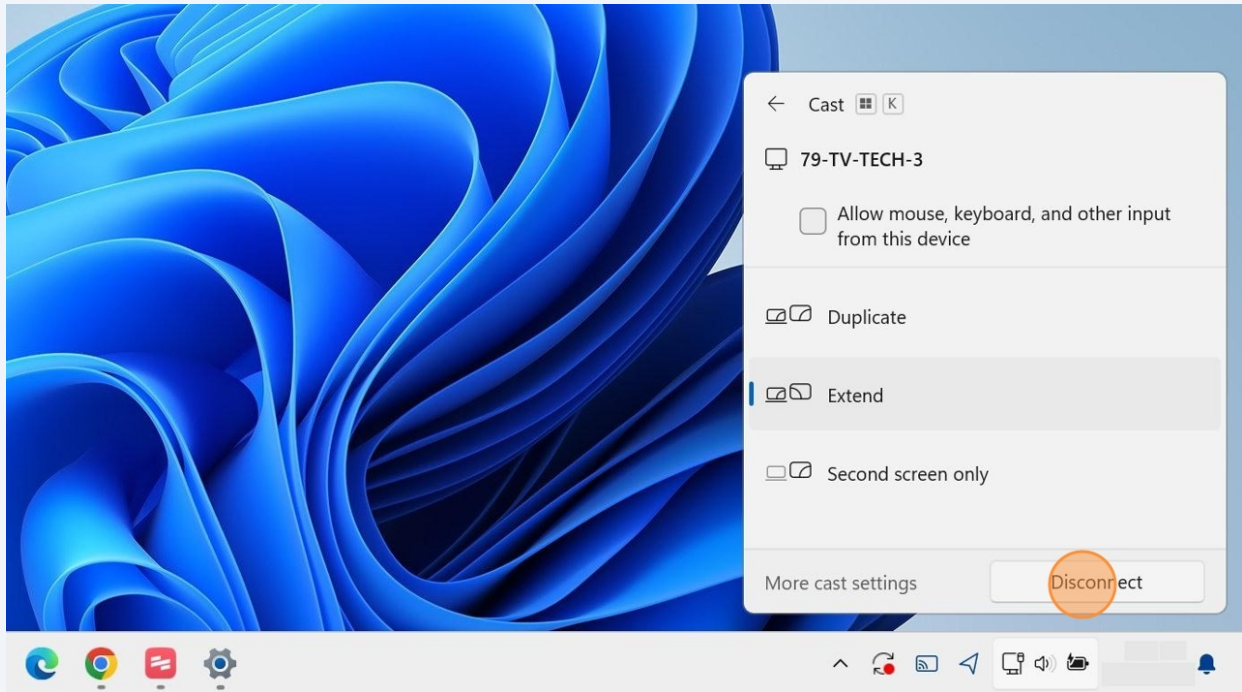

Extend: Instead of mirroring, you can "extend" your desktop, making the casting device act as a separate screen. This allows you to have different content displayed on each screen. For example, you could have a presentation open on the projector (extended display) while keeping your notes on your laptop (main display).

8

To Disconnect, click "Connect"

9 Click "Disconnect"

If you experience any issues, please fill out a tech ticket at <https://rochester.incidentiq.com/> and someone from our Tech Team will get back to you as soon as we are able.
