High School

School is out for the summer, and construction is in! At the High School pool, demolition is complete across the pool deck and the clerestory windows have been removed. The first coats of paint have been installed on the walls and exposed ductwork. Installation of the new Tectum panels is underway.

Moving across the High School to the tech education wing, Findorff laborers have made quick work of the demo in the Fab Lab space. New openings for borrowed lite windows will soon be added to allow for visual access to Fab Lab from the corridor.

In the coming weeks, renovations to the art classrooms will begin and the new mechanical rooftop units will be set using a helicopter!

River Bluff Campus

With school out for the summer, activities inside the existing River Bluff school can now begin. Over the next few weeks, the building will receive a complete replacement of the fire alarm system. Remaining site work can now proceed, including the establishment of the new bus lane and utility disconnects at the main from the demolished maintenance facility and Armory building. Installation of the permeable parking lot pavers is complete, and landscaping will soon begin.

In the District Office, demo of the first-floor carpet is complete, and painting is underway. The new elevator has passed inspection, so the new elevator lobby addition is now open for staff use.

DID YOU KNOW?

The new River Bluff Middle School entrance will feature the eye-popping signage photographed above. These 2" thick aluminum letters are nearly 3' tall and span over 45' across the front of the school. This will be the view as students and staff enter River Bluff this fall!

Fox Prairie Elementary

The project team is excited to begin construction at the Fox Prairie Elementary School! This summer, Fox Prairie we undergo a complete transformation. Receiving new flooring, ceilings, paint, casework, marker boards, tack boards, doors/hardware, and furniture throughout nearly the entire school. In addition, the building will also see mechanical, electrical, and plumbing (MEP) upgrades including new air handling units, air-cooled condensing units, boilers, electrical switchgear, classroom and restroom sinks, and much more!

Later this summer, work will also begin at the Sandhill Elementary School. Sandhill will receive a handful of smaller but necessary upgrades including the replacement of exterior guardrails, the addition of a new roof hatch and access ladder, a divider wall to create a new classroom space, cabinet unit heater replacements, and drinking fountain replacements.

All work will be completed at Fox Prairie and Sandhill this summer and both schools will be ready for staff and students to return this fall for the 2025-2026 school year!
