School Registration Requirements

1. Birth Verification (one required)
   - ☐ Certified Birth Certificate
   - ☐ Baptismal Certificate
   - ☐ Passport
   - ☐ Other _____
2. Complete Immunization Record – Including TB Test (PPD) requirements
3. Proof of Residency

This worksheet will assist you in the residence verification process. Please bring the **original** and a copy of one item from Box One and the **originals** and copies of two items from Box 2 to your attendance area school. If you do not have access to a copy machine, we will make copies for you. **The originals will be returned** the same day and copies will be turned in with your student registration packet.

Please direct any questions to the school secretary at your attendance area school.

Proof of residency from each category listed below: (total of 3 current forms required)

Category 1 (One form required)	Category 2 (Two forms required)
☐Mortgage Statement ☐Property Tax Statement ☐Escrow Papers ☐Rental Agreement	☐ PG&E Bill ☐ City of Gilroy Bill / Water Bill ☐ Waste / Recycling Bill ☐ Internet Service Bill ☐ Cable/Satellite Bill ☐ Homeowners / Renters Insurance declarations

YOU MUST BRING THE ORIGINAL DOCUMENTS FOR VERIFICATION

Any irregularities discovered during the residency verification process may result in further review by the GUSD Residence Verification Specialist.

IMMUNIZATION REQUIREMENTS FOR SCHOOL ENROLLMENT

The following immunizations(s) are needed to meet the requirements of the California School Immunization Law Health and Safety Code Sections 120325-120375:

VACCINE:

POLIO		#1	#2	#3	#4
DTP/ DTaP/DT/Td	#1	#2	#3	#4	#5
Tdap Booster (1 Dose on or after 7th birthday)		#1			
MMR (Both must be given on or after the first birthday)		#1	#2		
HEPATITIS B		#1	#2	#3	
VARICELLA (chickenpox)		#1	#2		

TB TEST (Kindergarten entrants and transferring students from outside Santa Clara County into grades one through twelve must present a TB Risk Assessment for School Entry form completed by their health care provider. This must be completed within twelve months prior to first school registration or transfer. Students who have left the county for 12 months or more need a new TB Risk Assessment for School Entry form competed with in the last 12 months.) The Santa Clara County Public Health Department TB Risk Assessment for school entry is the only acceptable risk assessment form.

Copy of all Immunizations

YOU NEED TO DO ONE OF THE FOLLOWING IMMEDIATELY:

Take this form to your doctor or the local health department to get needed immunization(s). Then bring us your child's updated immunization record and/or TB Risk Assessment for School Entry form completed by your healthcare provider. Your child's record must include a date for the immunizations and the doctor's signature or stamp.

According to state law, we cannot allow your child to attend school/child care unless we receive evidence that the above requirements are met.

If you have any questions or require additional information please call the school nurse's office:

Sincerely,

Health Services

Rev. 01/2020

Parents/Guardians – Are Your Kids Ready for School?

REQUIRED IMMUNIZATIONS FOR SCHOOL ENTRY

Please bring your child's immunization records with you at the time of registration. You may view and print a digital copy of your child's California vaccine record at: MyVaccineRecord.CDPH.CA.gov

Students Entering Transitional Kindergarten or Kindergarten Need Records of:

- ☐ **Diphtheria, Tetanus, and Pertussis (DTaP, DTP, Tdap or Td) — 5 doses**
  4 doses OK if one was given on or after 4th birthday;
  3 doses OK if one was given on or after 7th birthday.
- ☐ **Polio (IPV or OPV) — 4 doses**
  3 doses OK if one was given on or after 4th birthday. Oral polio vaccine (OPV) doses given on or after April 1, 2016, do not count.
- ☐ **Hepatitis B — 3 doses**
- ☐ **Measles, Mumps, and Rubella (MMR) — 2 doses**
  Both doses must be given on or after 1st birthday.
- ☐ **Varicella (Chickenpox) — 2 doses**

New and Transfer Students Entering TK/K-12th Grade Need Records of:

- ☐ **All immunizations listed above**
  For 7th-12th graders: at least 1 dose of pertussis-containing vaccine is required on or after 7th birthday.
  Hepatitis B vaccine is required for any grade, except for entry into 7th grade.

Students Starting 7th Grade Need Records of:

- ☐ **Tetanus, Diphtheria, Pertussis (Tdap) —1 dose**
- ☐ **Varicella (Chickenpox) — 2 doses**

What other immunizations should I ask my health care provider about?

When you visit your health care provider for back-to-school immunizations, make sure to also ask about other vaccines that help keep your child healthy, including **hepatitis A, COVID-19, and the annual flu vaccine**. Preteens and teens should also get the **human papillomavirus (HPV) vaccine** to protect against certain cancers and **meningococcal vaccines**.

Learn more about vaccines your child needs according to their age (bit.ly/CDCVaccinesByAge) **and** where you can get your child immunized (bit.ly/Where2BVaxed).

California Immunization Requirements for

K–12th Grade (including transitional kindergarten)

Grade	Number of Doses Required of Each Immunization[1, 2, 3]				
K-12 Admission	**4 Polio[4]**	**5 DTaP[5]**	**3 Hep B[6]**	**2 MMR[7]**	**2 Varicella**
(7th-12th)[8]	**K-12 doses**	**+ 1 Tdap**			
7th Grade Advancement[9,10]		**1 Tdap[8]**			**2 Varicella[10]**

1. Requirements for K-12 admission also apply to transfer pupils.
2. Combination vaccines (e.g., MMRV) meet the requirements for individual component vaccines. Doses of DTP count towards the DTaP requirement.
3. Any vaccine administered four or fewer days prior to the minimum required age is valid.
4. Three doses of polio vaccine meet the requirement if one dose was given on or after the 4th birthday. Oral polio vaccine (OPV) doses given on or after April 1, 2016, do not count.
5. Four doses of DTaP meet the requirement if at least one dose was given on or after the 4th birthday. Three doses meet the requirement if at least one dose of Tdap, DTaP, or DTP vaccine was given on or after the 7th birthday (also meets the 7th-12th grade Tdap requirement. See fn. 8.) One or two doses of Td vaccine given on or after the 7th birthday count towards the K-12 requirement.
6. For 7th grade admission, refer to Health and Safety Code section 120335, subdivision (c).
7. Two doses of measles, two doses of mumps, and one dose of rubella vaccine meet the requirement, separately or combined. Only doses administered on or after the 1st birthday meet the requirement.
8. For 7th-12th graders, at least one dose of pertussis-containing vaccine is required on or after the 7th birthday.
9. For children in ungraded schools, pupils 12 years and older are subject to the 7th grade advancement requirements.
10. The varicella requirement for seventh grade advancement expires after June 30, 2025.

DTaP/Tdap = diphtheria toxoid, tetanus toxoid, and acellular pertussis vaccine
Hep B = hepatitis B vaccine
MMR = measles, mumps, and rubella vaccine
Varicella = chickenpox vaccine

Instructions:

California schools are required to check immunization records for all new student admissions at TK / Kindergarten through 12th grade and all students advancing to 7th grade before entry. See shotsforschool.org for more information.

Unconditionally Admit a pupil whose parent or guardian has provided documentation of any of the following for each immunization required for the pupil's age or grade as defined in the table above:

- Receipt of immunization.
- A permanent medical exemption.*

Conditionally Admit any pupil who lacks documentation for unconditional admission if the pupil has:

- Commenced receiving doses of all the vaccines required for the pupil's grade (table above) and is not currently due for any doses at the time of admission (as determined by intervals listed in the Conditional Admission Schedule, column entitled "Exclude If Not Given By"), or
- A temporary medical exemption from some or all required immunizations.*

Conditional Admission Schedule for Grades K-12

Before admission a child must obtain the first dose of each required vaccine and any subsequent doses that are due because the period of time allowed before exclusion has elapsed.

Dose	Earliest Dose May Be Given	Exclude If Not Given By
Polio #2	4 weeks after 1st dose	8 weeks after 1st dose
Polio #3[1]	4 weeks after 2nd dose	12 months after 2nd dose
Polio #4[1]	6 months after 3rd dose	12 months after 3rd dose
DTaP #2	4 weeks after 1st dose	8 weeks after 1st dose
DTaP #3[2]	4 weeks after 2nd dose	8 weeks after 2nd dose
DTaP #4	6 months after 3rd dose	12 months after 3rd dose
DTaP #5	6 months after 4th dose	12 months after 4th dose
Hep B #2	4 weeks after 1st dose	8 weeks after 1st dose
Hep B #3	8 weeks after 2nd dose and at least 4 months after 1st dose	12 months after 2nd dose
MMR #2	4 weeks after 1st dose	4 months after 1st dose
Varicella #2	Age less than 13 years: 3 months after 1st dose	4 months after 1st dose
Varicella #2	Age 13 years and older: 4 weeks after 1st dose	8 weeks after 1st dose

1. Three doses of polio vaccine meet the requirement if one dose was given on or after the fourth birthday. If polio #3 is the final required dose, polio #3 should be given at least six months after polio #2.
2. If DTaP #3 is the final required dose, DTaP #3 should be given at least six months after DTaP #2, and pupils should be excluded if not given by 12 months after second dose. Three doses meet the requirement if at least one dose of Tdap, DTaP, or DTP vaccine was given on or after the seventh birthday. One or two doses of Td vaccine given on or after the seventh birthday count towards the requirement.

Continued attendance after conditional admission is contingent upon documentation of receipt of the remaining required immunizations. The school shall:

- review records of any pupil admitted conditionally to a school at least every 30 days from the date of admission,
- inform the parent or guardian of the remaining required vaccine doses until all required immunizations are received or an exemption is filed, and
- update the immunization information in the pupil's record.

For a pupil **transferring** from another school in the United States whose immunization record has not been received by the new school at the time of admission, the school may admit the child for up to 30 school days. If the immunization record has not been received at the end of this period, the school shall exclude the pupil until the parent or guardian provides documentation of compliance with the requirements.

* In accordance with 17 CCR sections 6050-6051 and Health and Safety Code sections 120370-120372.

Questions?

See the California Immunization Handbook at ShotsForSchool.org

Tuberculosis (TB) and Latent TB Infection FACT SHEET

Santa Clara County PUBLIC HEALTH

What is TB?

Tuberculosis (TB) is a disease caused by a bacteria that is spread through the air from person to person. Although TB most often affects the lungs, it can affect any part of the body including lymph nodes, bones, kidneys, and the brain. TB can cause very severe illness and it can be fatal. Fortunately, TB can be prevented, treated, and cured!

What Are the Symptoms of TB?

Symptoms of TB can include fever, weight loss, night sweats, and fatigue. When TB affects the lungs, symptoms can also include a cough that lasts more than 2-3 weeks, coughing up blood, and chest pain. If you have any of these symptoms you need to see a doctor!

Is TB a problem in Santa Clara County (SCC)?

Yes. SCC has the fourth highest number of TB cases among all counties in California, after Los Angeles, San Diego, and Orange counties. The rate of TB in SCC is over 3 times as high as the national rate. It is estimated that 8.5% of SCC residents have latent TB infection, though most do not know they are infected.

Who Does TB Affect in Santa Clara County?

TB can infect anyone who lives, works, or breathes in close proximity to someone with infectious TB disease, regardless of their age, race, sex, or socioeconomic status. Over 90% of patients with TB disease in SCC were born outside of the U.S., though most have lived in the U.S. for more than 5 years. In SCC, the majority of cases occur among people born in Vietnam, the Philippines, India, and China.

How Do You Get TB Infection?

The bacteria that causes TB is spread through the air from person to person when an individual with TB disease of the lungs or throat coughs, sneezes, or speaks. When people nearby breathe in the bacteria they may become infected, particularly if they are in close or prolonged contact. When someone has been infected, but they do not yet have symptoms or evidence of TB disease, this is called latent tuberculosis infection (LTBI).

What is the Difference Between Latent TB Infection (LTBI) and TB Disease?

When someone has been infected with the bacteria that causes TB, as long as their body is able to prevent the bacteria from growing, they will have no symptoms or evidence of TB disease. This is called latent tuberculosis infection (LTBI), which is not contagious to other people.

When your body can no longer prevent the bacteria from growing, the bacteria multiply and cause you to become sick with TB disease. People with LTBI may develop TB disease within weeks to many years after becoming infected. People with TB disease are usually sick and may be able to spread the bacteria to others if TB affects their lungs or throat. The risk of developing TB disease is highest among persons with weakened immune systems.

You Should Get Tested for Latent TB Infection (LTBI) if You...

- Were in close or prolonged contact with someone with TB of the lungs or throat.
- Were born in a country with an elevated TB rate (i.e. countries other than the U.S., Canada, Australia, New Zealand, or Western and Northern European countries).
- Have a condition that is associated with a higher risk of TB including HIV; diabetes; end stage renal disease; head, neck, or lung cancer; leukemia; lymphoma; silicosis; have a history of gastrectomy or jejunoileal bypass; or are significantly underweight.
- Take drugs that weaken your immune system (e.g. chemotherapy, anti-rejection drugs after organ transplant, TNF-alpha inhibitors, oral steroids equal to 15 mg of prednisone or more for at least one month).
- Have injected illegal drugs.
- Smoke.
- Have worked or stayed in a homeless shelter, correctional facility (e.g. prison or jail) or other group setting.

How Can I Tell if I Have Latent TB Infection (LTBI)?

A TB blood test (e.g. Quantiferon or T-spot) or TB skin test (TST or PPD) can be performed to find out if you have TB bacteria in your body.

A "positive" test result means you probably have TB bacteria in your body. Most people with a positive TB blood test or TB skin test have latent TB infection. To be sure that you do not have TB disease, your doctor will examine you and perform a chest x-ray. You may also need other tests to see if you have latent TB infection or TB disease.

What if I've Had the BCG vaccine?

A positive TB skin test should never be ignored. BCG vaccines (TB vaccines) are given in countries where TB is common. BCG vaccines may help protect young children from getting very sick with TB. However, this protection goes away as people get older. People who have had a BCG vaccine can still get latent TB infection and TB disease.

If you had the BCG vaccine, you can be tested with either a TB blood test or a TB skin test. If you have a choice, a TB blood test is best because the TB blood test is not affected by BCG vaccines. This means that your TB blood test will be "positive" only if you have TB bacteria in your body.

What is the Treatment for Latent TB Infection (LTBI)?

LTBI can be treated with medicine to prevent developing TB disease. Treatment options include:

- Isoniazid and Rifapentine once weekly for 12 weeks
- Rifampin daily for 4 months
- Isoniazid daily for 9 months

Ask your doctor which treatment is best for you.

Why Should I Take Medicine if I Don't Feel Sick?

If you have latent TB infection (LTBI), this means that you have TB bacteria living in your body, even though you are not sick. You may develop TB disease if you do not take medicine to treat LTBI. Treatment can decrease the risk of developing TB disease by over 90% when medications are taken as prescribed. It is important that you finish your medicine so that the treatment is effective and so that you do not develop drug resistance. ***For more information on TB, visit www.sccphd.org/tbinfo or contact Santa Clara County Public Health Department.***

TB Testing Methods - Children

An Interferon Gamma Release Assay (IGRA, i.e., QuantiFERON-TB Gold Plus (QFT) or T-SPOT.TB) or Mantoux tuberculin skin test (TST) should be used to test those at increased risk of TB exposure or disease-based on a standardized risk assessment tool. An IGRA can now be used in children of all ages and is especially preferred in BCG-vaccinated children to avoid a false positive TST result. A TST of ≥10mm induration is considered positive. If a child has had contact with someone with active TB disease, or the child is immunosuppressed, then a TST of ≥5 mm is considered positive.

Evaluation of Children with Positive TB Tests

- All children with a new positive IGRA/TST result must have a medical evaluation, including a symptom review, focused physical exam and CXR (frontal and lateral are recommended for children, especially those <5 years old). Since a positive TST may sometimes be caused by infection with nontuberculous mycobacteria or occasionally by BCG vaccination, some providers and parents prefer to verify a positive TST with an IGRA blood test. A CXR / symptom review and physical exam are still required to rule out TB disease before performing a second test as the TB tests may be falsely negative in the setting of TB disease. In this case, if the IGRA is negative, there are no symptoms or signs of TB disease and the CXR is normal, the child is considered free of TB infection.
- A child with a previous positive IGRA test should not undergo repeat testing as it may be positive for life. If the child received well-documented treatment for TB infection or disease in the past and has no symptoms to suggest TB disease, no further testing or imaging is required.
- For children with TB symptoms (e.g., cough for >2-3 weeks, shortness of breath, hemoptysis, fever, poor weight gain/weight loss, night sweats, etc.) or an abnormal CXR concerning active TB disease, report to the County of Santa Clara Public Health Department TB Program within one working day. The child will need to be fully evaluated for TB disease and treatment depending on the results. A negative TST or IGRA does not rule out active TB disease in a patient with an abnormal CXR or symptoms or signs of TB disease. A symptomatic child cannot enter school unless active TB disease has been excluded or treatment has been initiated.
- If the IGRA/TST is positive, there are no symptoms or signs of TB disease and the CXR is normal, the child should be treated for latent TB infection (LTBI), ideally through the medical home. Do not treat for LTBI until active TB disease has been excluded.
- Short-course regimens are preferred (except in persons for whom there is a contraindication, such as a drug interaction or contact with a person with drug-resistant TB) due to similar efficacy and higher treatment completion rates as compared with 9 months of daily isoniazid.

Treatment Regimens for Latent TB Infection

For more details: See AAP Red Book 33rd edition; LTBI Clinical Recommendations (tbcontrollers.org); TB-LTBI-Treatment (ca.gov)

- Rifampin daily for 4 months
- 12-dose Weekly Isoniazid/Rifapentine (3HP) Regimen
- Isoniazid and Rifampin daily for 3 months
- Not recommended: Isoniazid daily for 9 months

SCC Public Health Department Tuberculosis (TB) Risk Assessment for School Entry

Child's Name: _____ Date of Birth: _____ Sex: _____
Last, First Month/Day/Year

Address: _____ Phone:_____ School /Grade: _____
Street, City, Zip Code

This form must be completed by a licensed health professional in the U.S. Re-testing should only be done in persons who previously tested negative and have new risk factors since the last assessment

1. Was your child born in, resided, or traveled (for more than one month) to a country with an elevated rate of TB? Most countries other than the U.S., Canada, Australia, New Zealand, or a country in western or northern Europe. This does not include tourist travel for <1 month (i.e., travel that does not involve visiting family or friends, or involve significant contact with the local population).
2. Has your child been in close contact to anyone with TB disease in their lifetime?
3. Is your child immunosuppressed; current, or planned? (e.g., due to HIV infection, organ transplant, treatment with TNF-alpha antagonist or high-dose systemic steroids (e.g., prednisone ≥ 15mg/day for ≥ 2 weeks).

Does your child have any of the above risk factors? ☐ Yes ☐ No

If YES, to any of the above questions (new TB risk factor since last screening), the child has an increased risk of TB and should have a TB blood test or a tuberculin skin test (TST) unless there is a documented prior positive IGRA or TST. All children with a positive IGRA/TST result must have a medical evaluation, including a chest x-ray (CXR) (posterior-anterior and lateral for children <5 years old). If there are no symptoms or signs of TB disease and the CXR is normal, the child should be treated for (LTBI) to prevent progression to TB disease. If a child has documentation of previous treatment for LTBI or TB disease and has no symptoms, they should not undergo skin or blood testing and do not need a new chest X-ray.

If child's X-ray is not normal and there are symptoms that suggest TB, call SCC TB Program (408)792-1381

Enter test results for all children with a positive risk assessment:

Date of IGRA: _____	Results: ☐ Negative ☐ Positive ☐ Indeterminate
Tuberculin Skin Test (TST/Mantoux/PPD) Date placed: _____ Date Read: _____	Induration: _____ mm Results: ☐ Negative ☐ Positive
Chest X-ray Date: _____	Impression: ☐ Normal ☐ Abnormal
☐ LTBI Treatment Start Date: _____ ☐ Rifampin daily - 4 months ☐ Isoniazid/Rifapentine - weekly X 12 weeks ☐ Isoniazid and Rifampin daily - 3 months ☐ Isoniazid daily - 9 months	■ Prior TB/LTBI Treatment (Rx/duration): _____ _____ ☐ Treatment Medically Contraindicated ☐ Declines Against Medical Advise

Please check one of the boxes below and sign:

☐ Child has no TB symptoms, no risk factors for TB, and does not require a TB test
☐ Child has a risk factor, has been evaluated for TB and is free of active TB disease.
☐ Child has no new risk factors since last negative IGRA/TST and has no symptoms.
☐ Child has no TB symptoms. Appointment for RA/TB test/chest x-ray scheduled on:

Oral Health Assessment Form

California law (*Education Code* Section 49452.8) says every child must have a dental check-up (assessment) by May 31st of his/her first year in public school. A California licensed dental professional must do the check-up and fill out Section 2 of this form. If your child had a dental check-up in the last 12 months, ask your dentist to fill out Section 2. If you are unable to get a dental check-up for your child, fill out the separate Waiver of Oral Health Assessment Requirement Form.

This assessment will let you know if there are any dental problems that need attention by a dentist. This assessment will also be used to evaluate our oral health programs. Children need good oral health to speak with confidence, express themselves, be healthy and, ready to learn. Poor oral health has been related to lower school performance, poor social relationships, and less success later in life. For this reason, we thank you for making this contribution to the health and well-being of California's children.

Section 1: Child's Information (Filled out by parent or guardian)

Child's First Name:	Last Name:	Middle Initial:	Child's Birth Date: MM – DD – YYYY
Address:			Apt.:
City:			ZIP Code:
School Name:	Teacher:	Grade:	Year child starts kindergarten: Y Y Y Y

Section 2: To be filled out by parent or guardian ONLY IF asking to be excused from this requirement

Please excuse my child from the assessment because (check the box that best describes the reason):	
☐	I cannot find a dental office that will take my child's dental insurance plan. My child's dental insurance plan is: ☐ Medi-Cal ☐ Covered California ☐ Healthy Kids ☐ None ☐ Other:_____
☐	I cannot afford an assessment for my child.
☐	I cannot find the time to get to a dentist (e.g., cannot get the time off from work, the dentist does not have convenient office hours).
☐	I cannot get to a dentist easily (e.g., do not have transportation, located too far away).
☐	I do not believe my child would benefit from an assessment.
☐	Other (please specify the reason not listed above for why you are seeking a waiver of this assessment for your child): _____ _____

If asking to be excused from this requirement:

▶_____ MM – DD – YYYY

Signature of parent or guardian ***Date***
