

## Install GradeCam Plugin for Mac

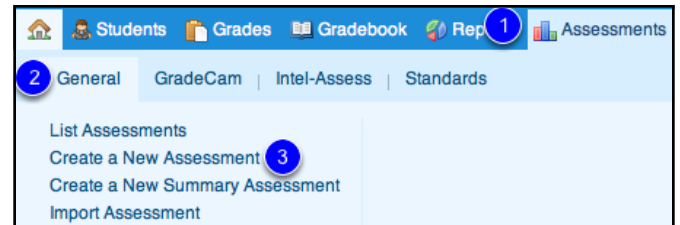

This lesson will walk you through the installation steps, which you will only have to complete once.

**Note:** If you are using a Mac OS X v10.4 **Tiger** (i.e., old) Operating System, see the "[Install GradeCam Plugin for 10.4 \(Tiger\)](#)" lesson, instead.

Some districts "lock down" computers so that teachers cannot install software on their computer or anything that is installed during the day is wiped away at night. If this is the case in your district, contact your I.T. dept. to help with the software installation.

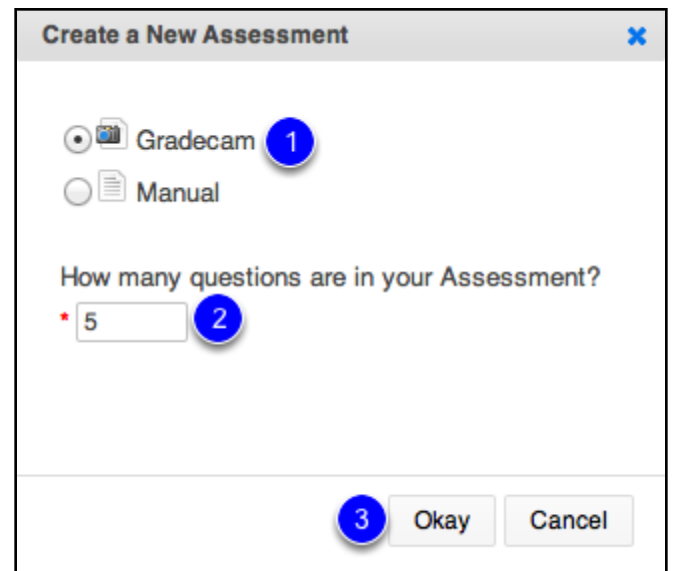

### Where to Start

Click **Assessments (1)**, then **General (2)**, click **Create a New Assessment (3)**.

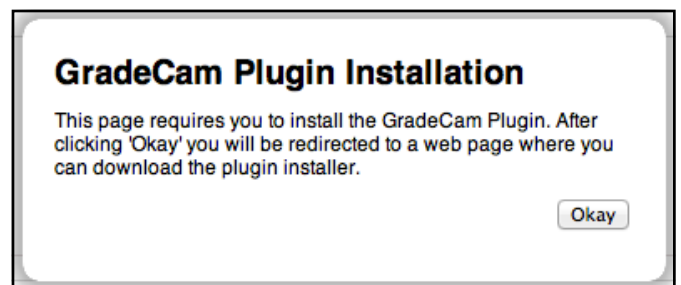

### Create a New Assessment

Leave the radio button at **Gradecam (1)**, enter the number of questions for your assessment (**2**), click **OK (3)**.

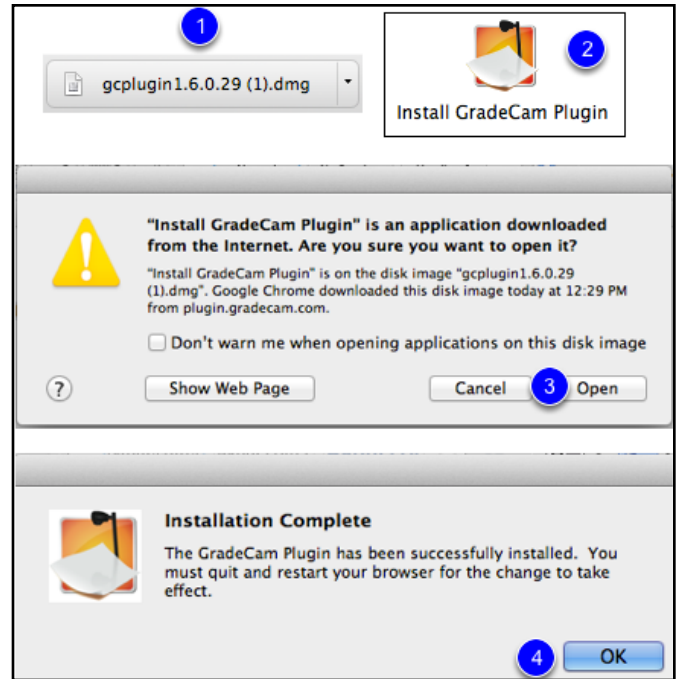

### Download the Plugin

When you arrive at the screen where you scan, you will see this prompt. Click **Okay**. You will be redirected to a new page. Then **Click here** to start your download.

You will see the plugin in the bottom left corner of your screen (1). Double click and a folder will be placed on your desktop. Open the folder and double click the Install icon (2). A warning screen will appear (3). Click **Open**. A message will appear that the plugin was successfully installed (4). **Restart your internet browser if it is open.**

## Next Steps

Try scanning again. Use the "[Scan Student Responses with GradeCam](#)" lesson if needed. If you are still unable to scan, please call Customer Support at 951-739-0186 for assistance.
