

# Digital Media Pathway

## Natomas High School

**Digital Media:** The pathway equips students with the foundational skills and knowledge required for success as independent media creators or in entry-level roles within the media industry. Through a structured, project-based course sequence, students are introduced to core principles of photography, including lighting, composition, equipment operation, and digital post-processing. The curriculum is designed to foster both creative expression and technical competency across a range of photographic genres such as portrait, landscape, action, and documentary/journalistic photography. In the second year, students advance their skills by engaging in content creation for the school's YouTube channel, NTV, and contributing to the development and production of the school yearbook, allowing for real-world application of their learning in collaborative media projects.
