

Displaying from Computer to Board

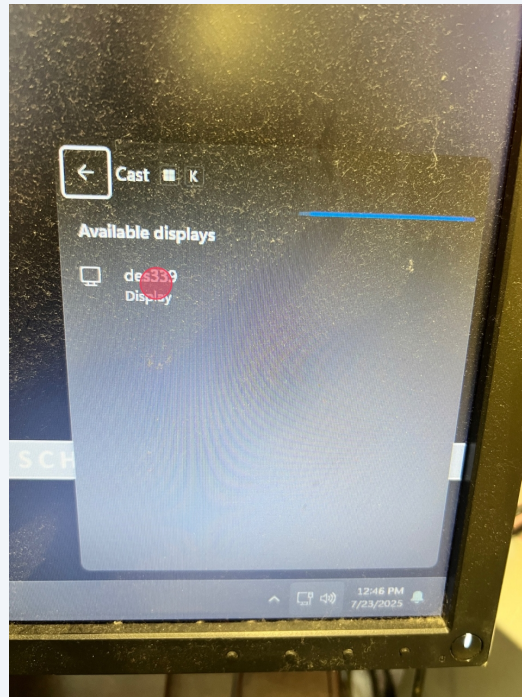

This will only work after you provide us with your PIN and we come in to adjust a setting. PLEASE SEND US YOUR PIN. Once we have your PIN, we will get you set up ASAP.

- 1 Make sure your board is on.

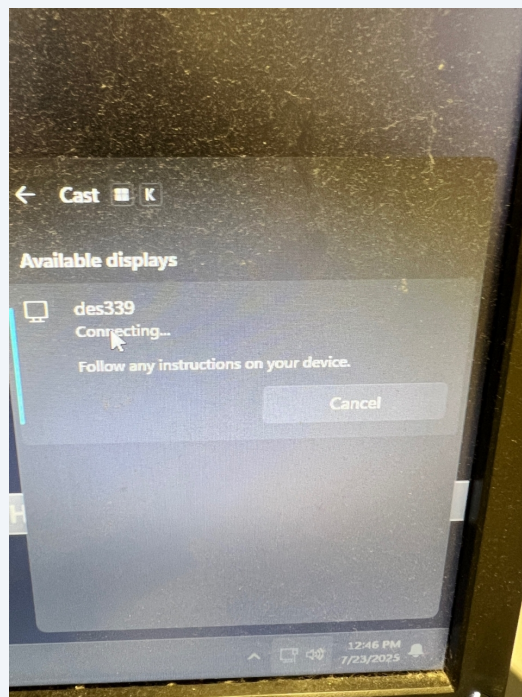

Click the Windows key and k at the same time.

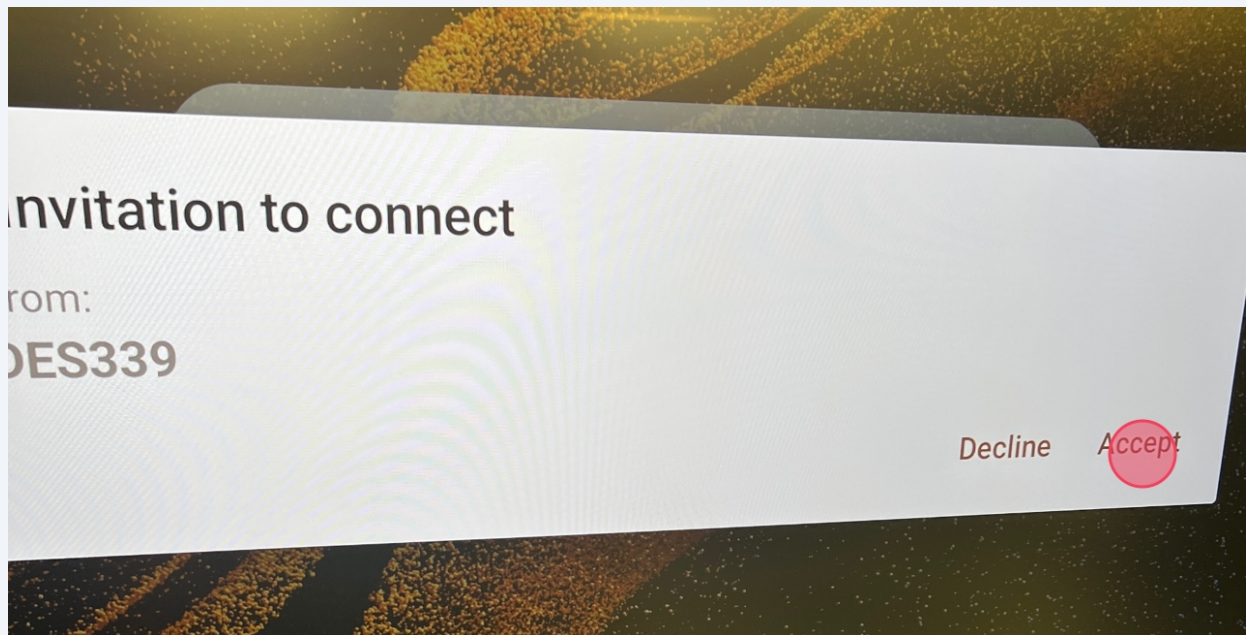

- 2 Select the board that corresponds to your room number.

- 3 You will get this message telling you to follow any instructions on your device.

- 4 You have to click accept ON the board in order to connect.

- 5 Make sure to allow mouse, keyboard, etc. You can also choose to duplicate (same on computer and board) or extend (pull over like you did before with old Promethean boards).

Once you've done that, click anywhere outside of the black box to make the menu go away.

You are ready to project.
