

RFP #26-01 Questions and Answers

Q: Are these five detectors going to be used at one school? If so, we would also need to include a test piece for the units.

A: Two schools, so we would need two test pieces.

Q: Does the district currently have OPENGATE at the school? If not, we would need to include the training on the quote.

A: We do not currently have OPENGATE at the school, so please include the training.

Q: Are these units going to be used on tile flooring? If yes, would the district also be interested in the suction cup feet to be added to the quote?

A: These will be on tile floors, so if those are necessary, please include them.

Q: Is the district interested in the wall connectors for the OPENGATE or only using the batteries for a wireless connection? The OPENGATE comes with either (4 batteries and a charger per unit) OR (a set of 2 wall connectors per unit). To add the wall connectors, it would be an additional charge to have those with the batteries. The RFP listed the proper amount of batteries and chargers on the cost proposal form for only batteries on all five. Should the cost of wall connectors be listed for reference on cost but not included in the RFP cost?

A: The wall connectors can be listed as an optional line item for the district to consider after project award, but the award will be based on batteries only.

Q: The RFP states that you are looking for 5 OPENGATE detectors that can be used outdoors. Is the district going to be using them outside? Do we need to include base plates to the quote?

A: The district will be using these indoors and outdoors. The base plates can be listed as an optional line item unless they are required.
