Career Outlook

The Engineering program of study designed for students interested in the various disciplines of engineering and engineering technology. Course content is arranged around four sequenced, progressive courses that provide students with the opportunity to develop critical thinking skills and understanding of engineering concepts. Students then apply these skills in conjunction with the multi-step engineering design process to solve real-world problems. Careers range from Computer support specialist, Geographic Information systems technologist, Software Developer, or an Electrical, Mechanical, or Civil Engineering. Pay scales range from $45,000 - $95,000 per year.
