

## 17a Alert Zones

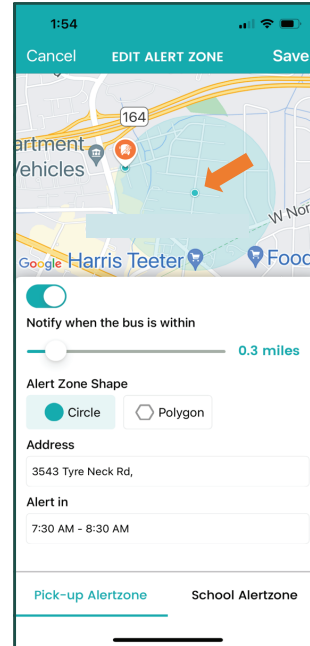

To modify notification settings, select the bell icon.

## 17b

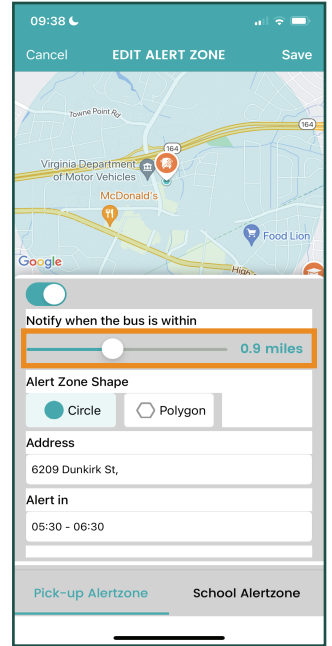

This is where you can set the time, distance, and center of your alert zone.

## 17c

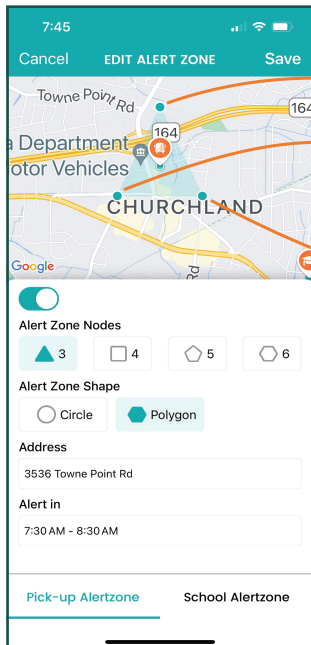

You can move the CENTER of your CIRCLE alert zone by tapping on the screen, then "Save". In the example, the bus is coming from the east and the parent does not want to receive notifications when the bus passes by on the main roads.

## 17d

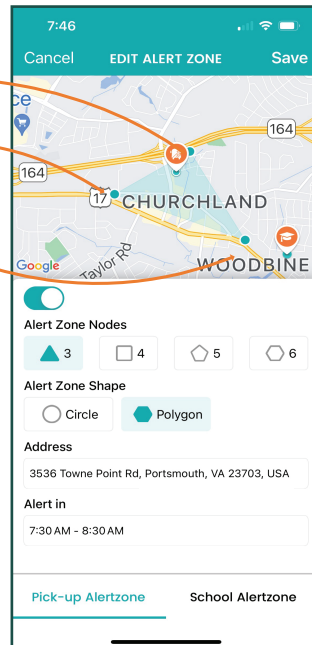

When selecting a Circle, you can also adjust the radius. After setting the alert zone circle's center and radius, you can make changes to your notification zones into a polygon with 3, 4, 5, or 6 points.

## 17e

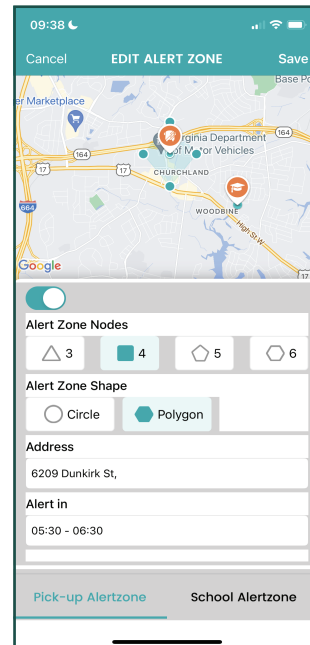

## 17f

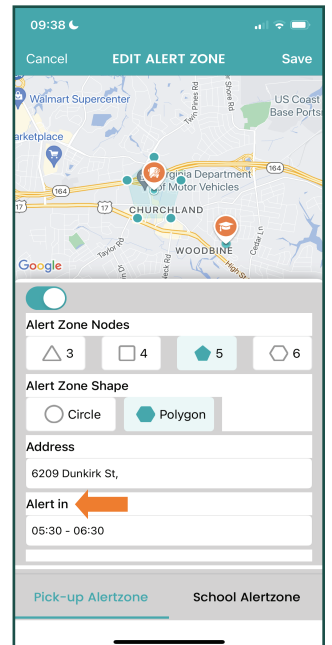

When selecting "Polygon" you can choose from a 3, 4, 5, or 6-sided area. You can move the individual points (nodes) to customize the alert zone to include some areas and exclude some areas. Press a node point for a second or two then move it to the desired location and "Save". Above you see the points of the 3-sided polygon in 17e moved to create a custom alert zone shown in 17f, designed so that the parent will not receive notifications when their bus travels the adjacent highways.

## 17g

## 17h

After setting your Alert Zone circle and radius, set the Alert time by tapping on "Alert in".
